Expand Your PC To A Multi-User System With Advanced Digital's PC-Slave

Up To 32 Users

Expanding your PC to a multi-user system is easy. Simply plug in a PC SLAVE processor board and ASCII terminal for each user. With ADC's unique Master/Slave concept, each user runs independent of other users without speed degradation.

RTNX executive software turns your PC into a master processor and shares disks, peripherals and data with the slaves. ADC's **PC-File Server** provides you with additional expansion slots, hard disk drive and a high-speed streaming tape back-up for your IBM PC System.

PC SLAVE FEATURES:

- 8 MHz, 8088 CPU
- 256 kB of RAM, expandable to 768 kB
- Two Serial I/O Ports

3 simple ways to bury yourself in floppies.

UP TO YOUR WAIST

UP TO YOUR NECK

UP TO YOUR EARS

1 simple way to dig yourself out.

Remember the days when a little box of floppies kept harmony among your files? Now, you feel as if you'd invited an entire orchestra to play in your studio apartment. You're going to have to borrow a lot of chairs.

So, what to do? The answer comes from Kamerman Labs: hard disk storage.

With our hard disk, you can play with as much volume as you like — from 10 to 240 megabytes. Up to 667 times the capacity of a floppy.

And speed? It's up to ten times faster. Before you can say, "I can't believe how fast this hard disk is," you've loaded a 30-page text file. And you can boot directly off the hard disk without time-consuming intermediate steps.

What's more, a hard disk from Kamerman Labs is protected from the disasters that can befall floppies.

You don't have to handle it with kid gloves. In fact, you don't have to handle it at all; it's hermetically sealed inside a metal casing. Your data is safe with us.

So instead of drowning in a sea of floppies, save your life with a hard disk from Kamerman Labs. And while you're

at it, ask about our streaming tape backup, removable hard disks, and acceleration boards for the IBM PC, XT, AT, and compatibles.

For more information, call toll-free 1-800-522-2237. Ask for Dept. 217. In Oregon and Alaska call 503-626-6877. Ask for Dept. 217. Dealer and OEM inquiries welcome.

SixPakPlus™

The #1 Multifunction Card Now Includes

The Best Multifunction Card Just Got Better. We've enhanced our SixPakPlus multifunction card with a new extra feature: Borland's SideKick desktop management software. Now you can get the best the industry has to offer together in one package—in 1984 SixPakPlus was voted the #1 multifunction card in PC World's World Class User Survey and chosen as Softsel's Best Selling New Product, while SideKick was selected as InfoWorld's Software Product of the Year.

The Best In Performance. Over 400,000 satisfied customers will tell you SixPakPlus provides the power for today's demanding requirements, whether you use an IBM® PC, XT, 3270 PC or compatible.

First there's more memory—an additional 64K to 384K RAM—to process more data, or to run today's software programs such as the SideKick multipurpose software we've included. Our extra memory and SideKick's features also work beautifully with your other favorite software pack-

ages like Lotus 1-2-3™, WordStar®, Symphony™ and dBASE III™.

Next, more Input/Output ports—one serial, one parallel and an optional game adapter—to add peripherals such as printers, modems, a mouse, plotters or joysticks. Then there's our built-in clock-calendar for automatic time and date stamping.

And we've included another of our "World Class" award winners, SuperPak™ utility software. Selected top in its class for two consecutive years, SuperPak features Super-

SideKick™

The #1 Desktop Management Software

Drive™ which works like a drive but fifty times faster, and SuperSpool™ which lets you print and input at the same time.

The Best in Quality. If the industry's lowest rate of return is a good indicator, then SixPakPlus can't miss when it comes to quality. And we back this dedication to quality with a dedication to service and support. The AST commitment even extends to documentation, with our comprehensive user informa-

tion you'll find SixPakPlus is also the easiest to install and operate.

It takes an industry standard to advance the standard. When you want the best, look to AST's SixPakPlus—with the added value of SideKick software. For more information call our Customer Information Center (714) 863-1333. AST Research, Inc. 2121 Alton Avenue, Irvine, CA 92714 TWX: 753699 ASTR UR.

SIXPAKPLUS FEATURES

- Includes SideKick Desktop Management Software
- Memory Expansion to 384Kb, allowing total PC memory expansion to 640Kb
- Serial port for connecting to a printer, mouse, modem or other asynchronous devices
- Parallel port for use with parallel printer, plotters
- Optional game adapter port—plug in joysticks and other cursor-control devices
- Battery backed Clock/Calendar for automatic time and date stamping
- AST's SuperPak includes SuperDrive electronic disk and SuperSpool print spooler

SixPakPlus, SuperPak, SuperDrive and SuperSpool trademarks AST Research, Inc. SideKick trademark of Borland International. IBM registered trademark of International Business Machines Corp. Lotus, 1-2-3 and Symphony trademarks of Lotus Development Corp. WordStar registered trademark of MicroPro International Corp. dBASE III trademark of Ashton-Tate.

AST RESEARCH INC.

Picture this on a \$2

With movie budgets in the tens of millions, and television production costs soaring with every day of filming, the professionals in the entertainment industry demand the best of tools. When Ultracam Incorporated set out to design Ultracam™ K35, a new top-of-the-line \$200,000 movie camera, they knew that their design tool needed to be as professional as the camera they were designing. That's why they chose AutoCAD™ the most

widely used computer-aided design and drafting tool in the world today.

Mainframe CAD Capability at 5% of the Price

If you have an IBM PC, PC/XT, PC/AT, NEC, DEC, TI, Tandy, Wang, or one of over 30 desktop computers AutoCAD supports, you already own the most expensive part of a CAD system. Add AutoCAD for only \$2500 more, and you can have the power of CAD on your desktop at a price you can afford. With a pointing device and a plotter (the choice is yours, we support over 50 popular peripherals), you can assemble a complete CAD workstation

for less than \$10,000.

Once you've installed AutoCAD on your computer, you'll have a tool at your fingertips which removes the drudgery from designing. You can draw, modify, copy, and scale objects, or define commonly used parts and insert them anywhere in your drawing. You can fill an area with any of our 38 pre-defined patterns, or make up your own. Use an unlimited number of layers, like overlays in drafting, and automatically dimension distances, angles, radii and diameters with full ANSI standard dimensioning. You can even do three-dimensional visualization with AutoCAD.

Quick to Learn, Easy to Use

The beauty of AutoCAD is that you need no prior knowledge of computers. Even if you've never seen a CAD system, you'll pick it up in a matter of days,

and feel comfortable within a week.

Sound too good to be true?

Simple pop-up menus point you in the right direction. You can also easily create your own menus. On-line HELP keeps you on track.

Sailboats, Landscapes, and Contact Lenses

Tens of thousands of AutoCAD users are creating PC

,500 CAD program.

board layouts, elevator designs, electronic schematics, technical illustrations, architectural designs, civil, structural, mechanical engineering drawings, trade show floor plans, and race car suspension designs. Since AutoCAD is general-purpose and user-customizable, it doesn't matter what type of drafting your work requires.

Technical illustration is a snap.

Camera designs provided courtesy of Ultracam Incorporated.

The Heart of Your CAE System

Drawings are only part of the story. Pre-defined standard symbols, translators to allow AutoCAD to exchange drawings with mainframe CAD systems, data base analysis programs for bill of material lists, job costing and drawing distribution by telephone are only some of the capabilities available with AutoCAD. These capabilities make AutoCAD the central component in your desktop computer-aided engineering (CAE) system.

Whether you're in a two-person shop or a two-billion dollar company, you'll find that AutoCAD pays for itself in just a few months.

In the future, AutoCAD will run on newer, more powerful computers as they become available—so that you can be sure your investment in creating drawings and training staff won't be wasted.

Powerful New Capabilities

Call or write us today for the name of the dealer nearest you and a demonstration of the latest in AutoCAD capabilities, including polylines, curves, and 3D visualization with hidden line removal. Also ask about other cost-effective Autodesk products: AE/CADD™ and CAD/camera™.

AutoCAD will save you time and money.

Mechanical drawings with accuracy and speed.

SIMPLE.

SIMPLY POWERFUL.

It's true. PFS® has proven to the world that software can indeed be simple.

But on the other hand, there's Electric Desk™ from ALPHA® Software, which has proven that simple-to-use software can indeed be powerful.

That's because Electric Desk is a single integrated program that combines word processing, spreadsheet, file management with report writing, and communications. All on one disk.

So you not only get to do more work with one Electric Desk than several PFS's, you also get to do things that PFS simply can't. Like jump instantly from a letter to budget to customer list, over to a stock report and back, with just a couple of keystrokes.

Plus, Electric Desk lets you do something else that's remarkable—save money. Because for just \$345.00* you get a complete IBM® PC/XT/AT version of Electric Desk with all capabilities included. That's far more computing power than PFS delivers for over \$700.00.*

Which all goes to show, that when it comes to serious business software, it's not how simple you make it, it's how you make it simple. To try out Electric Desk for yourself, send \$3.00 for a full function demo disk. Or call us at 1-800-451-1018 (in MA call 1-800-462-2016) for the name of the ALPHA Software Dealer nearest you.

Available for the IBM PCjr. for \$295.00.

30 B St., Burlington, MA 01803

Testing Your Computer Skills

The making of an advanced user and some thoughts on how you can become one of the technology tamers

When I met *PC World's* Technical Editor, Karl Koessel, in 1981, he was a cab driver who just happened to own one of the first Radio Shack TRS-80s.

I was an editor for a microcomputer book publishing company at the time—and we just happened to need someone to evaluate a TRS-80 book we were planning to publish. We didn't know any TRS-80 experts, so we asked Karl if he could do the job. His expertise surpassed all our expectations, and we contracted with him to work on other TRS-80 books. Before long Karl was our resident TRS-80 guru. Over the years Karl's computer wizardry has expanded to encompass almost any personal computer made. He is one of the most knowledgeable "PC people" I know. Not only is he an excellent source of information—invariably we all turn to him for advice on how to customize a system or maximize its power—but he also has a variety of interesting opinions about the future of the personal computer industry and where all this technology is leading us.

Although Karl began computing at age 10, he has no formal computer training; his office walls are not papered with computer science degrees. However, his knowledge of personal computing equals or exceeds that of most "experts" who have classy computer science credentials. One fascinating aspect of the personal computing industry is that whether you acquire your skills from courses at UC Berkeley or from religiously reading copies of *Creative Computing* isn't as important as your performance.

There is more than one road to microdom. We are all pathfinders struggling to control a machine that is evolving exponentially. The PCs we use today will be archaic in five years; the software we use today will be a joke in less than two. Different PC users develop their own means of dealing with the machine. Some learn only as much as they have to. Others, like Karl, thrive on garnering as much knowledge of the machine as possible.

(continues)

Why people choose an IBM PC in the first place is why people want IBM service...in the first place.

After all, who knows your IBM Personal Computer better than we do?

That's why we offer an IBM maintenance agreement for every member of the Personal Computer family. It's just another example of blue chip service from IBM.

An IBM maintenance agreement for your PC components comes with the choice of service plan that's best for you—at the price that's best for you.

Many customers enjoy the convenience and low cost of our carry-in service. That's where we exchange a PC display, for example, at any of our Service/Exchange Centers.

And for those customers who prefer it, we offer IBM on-site service, where a service representative comes when you call.

No matter which you choose for your PC, an IBM maintenance agreement offers you fast, effective service.

Quality. Speed. Commitment. That's why an IBM maintenance agreement means blue chip service. To find out more about the specific service offerings available for your PC, call 1 800 IBM-2468, Ext. 553 and ask for PC Maintenance.

Blue chip service from **IBM**

IDEA is shipping new ideas for IBM's System 36.

Whether you have an IBM minicomputer or mainframe, IDEA offers a complete line of cost effective solu-

tions for linking your IBM PC, XT, AT or Portable to your host.

Introducing the new IDEAcmm 5251.

The IDEAcmm 5251 communications card supports a twin-axial cable connection allowing your IBM PC, whatever the model, to communicate with IBM System 34, 36 and 38 minicomputers. Communications may be local or to an IBM 5251 Model 12 display controller.

Complete 5250 terminal emulation is supported for monochrome and color displays, including IBM 5251 Model 11, IBM 5291 Model 1 and 2, and IBM 5292 Model 1 terminals. Since IDEAcmm 5251 does not use DMA channel resources, there is no interference with hard disks or network cards.

And our new IDEAcmm 5251 D card supports the full 32 attributes of the IBM 5251 screen, or the card acts as a conventional monochrome display adapter.

Our new IDEA Minicomm is amazingly versatile.

If you need a truly versatile communications card for your IBM PC, you need the IDEA Minicomm. Supporting both Bisync and SNA/SDLC protocols, the Minicomm transmits data at 19.2 kilobits per second. The card allows remote communications over synchronous modems, and may be used locally with a modem eliminator.

And now IDEA offers four new software packages for the Minicomm:

- IDEAcmm 3270/BSC
- IDEAcmm 3270/SNA
- IDEAcmm 3770/SNA
- IDEAcmm 3780/BSC

These packages turn your IBM PC into a terminal or remote job entry station transferring program, data, or text files to the mainframe.

IDEAcmm 3278 is fast and flexible.

The IDEAcmm 3278 offers powerful file transfer that moves data up to 60% faster than IRMA. In benchmark studies, IDEAcmm 3278 transmission speed on a local mode 3274 was up to 60% faster than IRMA. And it takes just one key stroke to upload or download files. TSO and VM/CMS file transfer is standard.

Designed for maximum performance, IDEAcmm software lets you change colors and reconfigure the keyboard to best suit specific applications.

Our great ideas work with the IBM AT.

At IDEA, we believe that one good idea deserves another. Our products now work with the IBM AT. You can network and share resources with the AT on IDEAnet, mount our 20MB IDEAdisk internally to the AT, or connect our 5MB to 120MB IDEAdisks externally to the AT. And, of course, the new AT can communicate to IBM host computers.

Call **800-257-5027** for the IDEA dealer nearest you. You'll see why lately, IBM has been getting some great ideas from IDEA.

This special issue is a salute to those of our readers who have learned how to tame the PC pachyderm and teach it to dance: the advanced users. Those of us who are still feeding it peanuts regard the PC tamers' success with admiration. (Yes, I still run to Karl for advice on hard disks.)

Unfortunately, in our search to find new PC converts we forget the voraciousness of our advanced users, sometimes leaving them uncomfortably unsatisfied with our "getting started" fare. Therefore we present this *Official Advanced Guide*, a whole issue full of beef for the hungry users who are no longer teething. The articles are geared toward getting the maximum amount of power and profitability out of your PC.

Here's a taste of the offerings contained in this special issue. "Inside Modems" looks at the best internal 1200-bps modems around. These expansion boards not only conserve endangered desk space but minimize cable chaos, and they are perfect for transportable computers. "COBOL Comeback" examines the resurgence of this mainframe workhorse on the PC and highlights four of the top compilers. "Advanced Screening" pinpoints the picks in high-resolution alternative displays for lap-

EVEREX EVER FOR EXCELLENCE

Innovative Backup and Hard Disk Drive Systems For Your IBM PC, XT and AT

The Standard of Excellence in Backup Software

- Revolutionary Everex Backup systems give you the backup/retrieve flexibility you want while saving you hours of time. You can backup your hard disk drive in minutes with a fast "mirror image," then retrieve this information either file-by-file or the entire hard disk image.
- High speed backup/retrieve—up to 5MB per minute.
- Menu Driven software includes the largest selection of file selectable options—choose from name, date, time interval, global, qualifier and more.
- Advanced installation program automatically configures the optimal backup/retrieve speed with your hard disk drive.

The Leader in External Expansion Systems

- All external systems are available with any combination of Everex Backup and Hard Disk Drive systems.
- Slimline systems include one short and three long expansion slots for adding more accessory boards.
- Half-Size system includes four long expansion slots.

- Full-Size system (looks like your PC) includes eight long expansion slots.
- External systems include one high quality, round shielded cable.

The Total Solution For Backup That Plugs Right Into Your Computer

- A wide selection of backup solutions with the price and performance to meet your needs:
- The EXCEL 4500, 45 and 60 MB high performance ¼-inch Streaming Tape systems, the EXCEL 200, 20 MB Cassette system and the EXCEL 10 MB Floppy Tape system.
- Space-saving half height units with single board controller.
- Combine with Everex hard disk drives for lower cost and higher performance.
- Unique "piggyback" power supplies ensure dependable operation and save space.

Visit your local Everex dealer today and ask to see Everex products in action. For the name of your nearest Everex dealer, please call (415) 498-1111.

A perfect report card. It wasn't necessarily our goal when we added the most recent enhancements to WordPerfect. We were more interested in responding to the suggestions of our users and dealers.

But a perfect report card is like icing on the cake. And it makes us more confident than ever that WordPerfect 4.0 is the most perfect WordPerfect, yet.

Easier.

Most WordPerfect 4.0 functions require only one keystroke, a simple press of a finger. And new comprehensive documentation makes learning a breeze.

Faster.

Document orientation means WordPerfect 4.0 never makes you

wait between pages. No matter how fast you type, WordPerfect won't slow you down.

Better.

WordPerfect 4.0 includes several features not found on many word processors. Like a 100,000-word phonetic dictionary; multi-page footnoting capability; table of contents and index generation; automatic outlining and para-

graph numbering; and a 4.0 network version.

Get the word processor that lives up to its name (and its report card):

Dac-easy accounting

\$49.95

Introductory Price

The software revolution of the year!

All 7 complete modules on 1 disk! Compare our features with other packages costing thousands more!

General

- Menu Driven •Fully Integrated
- MS-DOS & PC-DOS
- RUNS ON PCjr, PC, XT, AT, AND COMPATIBLES
- Password Protection In All Programs
- Slipcased Binder
- OVER 300 DIFFERENT REPORTS!!
- OVER 90 ROUTINES!!
- File Capacity Limited Only By Disk Space
- Service Contract Available
- ONLY \$49.95 FOR ALL 7 MODULES
- Money Back Guarantee

General Ledger

- Double Entry •Unlimited # Of Accounts
- Multi-Level Accounting
- Unlimited Departments
- 3 Year Account History For CRT Inquiry
- Pencil & Pen Feature To Correct Mistakes Without Reverse Entries
- UNIQUE Budgeting Routine (See Forecasting)
- CRT Voucher Inquiry
- All Reports Compared to Last Year or Budget
- Unlimited Journals

Accounts Receivable

- Open Item or Balance Forward
- 7 Customized Columns For Aging Report
- Unlimited # Of Customers
- Mailing Labels With 4 Different Sorts
- Automatic Finance Charges
- Supports Partial Payments •Directories
- 3 Year Customer History for # Of Invoices, Sales, Costs, And Profits
- Customized Text On Statements
- Cash Flow Analysis •Sales Analysis
- Automatic Sales Forecasting By Customer, Salesman, Or Customer Type

Accounts Payable

- Check Printing •Automatic Allocation Of Available Cash To Payables
- Vendor Directories With Sorting By Vendor Code, Name, Or Territory
- Aging Reports With 7 Customized Columns
- Unlimited # Of Vendors
- Mailing Labels •3 Year Vendor History For CRT Inquiry And Printing
- Flexible Payment Calendar
- Automatic Forecasting of Purchases
- Unlimited Allocations Per Invoice
- Up To 10 Invoices Paid Per Check

Inventory

- Supports Average, Last Purchase, And Standard Costing Methods •Physical Inventory
- Accepts Any Measure Units Per Case Like Fractions/Dozens/Gross/Etc
- Automatic Changing Of Costing Methods
- Time And Product Inventory
- 3 Year Product History In Units, Dollars, Cost, And Profits
- Automatic Forecast Of Product Sales
- Automatic Pricing Assignments
- Alert And Activity Reports With 11 Sorts
- CRT Shows On-Hand/On-Order/Committed/Sales/Cost/Profit/Turns/GROI

Purchase Order

- Allows Up To 99 Lines Per Purchase Order
- Per Line Discount In %
- Purchase Order Accepts Generic Discounts/Freight/Taxes/Insurance
- Purchase Order Accepts Back Orders & Returns
- Purchase Journal
- Automatic Interfacing With General Ledger, Payables, And Inventory

Billing

- Invoicing On Plain Or Pre-Printed Forms
- Prints Sales Journal
- Automatic Updating Of Committed Products In Inventory
- Ability To Customize Invoice For Remarks
- Allows Return Credit Memo

- Interfaces With Inventory, Accounts Receivable And General Ledger

Forecasting

- Unique program that automatically forecasts using your 3 year history
- Forecast Revenue And Expense Accounts
- Forecast Vendor Purchases
- Forecast Customer Sales, Cost, And Profit By Customer Or Salesperson
- Forecast Inventory Item Usage By 4 Automatic Methods
- Forecast By Same As Last Year, Or % Base From Last Year, Or Trend, Or Least Square Trend Line Analysis Method

Minimum Hardware Requirements:

128K memory, one 5 1/4 DSDD floppy disk, 132 column printer, 80X24 CRT, MS-DOS, PC DOS 2.0 or later.

Runs on your: IBM (PCjr/PC/XT/AT), AT&T, EPSON, TANDY (1000/1200/2000), TI, COMPAQ, CORONA, SANYO, COLUMBIA, ETC.*

size computers. The pièce de résistance is the "PC World Advanced Users Quiz," a test of skill, knowledge, and intellectual stamina cooked up by the editors of *PC World*. Although most of the questions measure your familiarity with the PC and computing concepts, some teasers require your mental detective work. Good luck!

We apologize if this *Advanced Guide* is a bit beyond the comprehension of our new and intermediate users. If you are not on the same level as this issue, browse through it anyway—you may find it interesting, and it may inspire you to develop your PC expertise.

For our advanced readers, we hope this issue helps secure our technical base. We also hope we've managed to keep up with you and that you haven't shot off into the PC ozone. If you have, *Dr. Dobb's Journal* may be your last resort. However, we're proud of this issue and feel it has a lot to offer. ●

A FULL C COMPILER FOR \$49.95

The Ecosoft Eco-C88 compiler for the 8088 and MSDOS is going to set a new standard for price and performance. Consider the evidence:

Compiler	Eco-C88	Lotus (1)	C86 (1)
Seive	13	11	13
Fib	44	58	46
Deref	13	13	—
Matrix	21	29	27
Price	\$49.95	\$500.00	\$395.00

(1) *Computer Language*, Feb., 1985, pp.73-102. Reprinted by permission.

The Eco-C88 compiler is a full K&R C compiler that supports all data types and operators (except bit fields). Now look at the other features we offer:

- ★ 8087 co-processor support using a single library. If you install an 8087 later, the software will use it without having to recompile.
- ★ A robust standard library with over 150 functions, including transcendental, color, and others.
- ★ OBJ output for linking with the MSDOS linker (LINK).
- ★ Error messages in English — no cryptic numbers to look up. A real plus especially if you're just getting started with C.
- ★ Easy-to-read and complete user's manual.
- ★ Works with all IBM and compatibles running MSDOS 2.0 (or later).
- ★ Plus many other features.

For \$10.00 more, we will include the source code for the C library functions (excluding transcendental). For an additional \$15.00, we will include our ISAM file handler in OBJ format (as published in the *C Programmer's Library*, Que Publishing). The discount prices for the library source and ISAM only apply at the time the compiler is purchased. Please add \$4.00 to cover postage and handling. To order, call or write:

Ecosoft Inc.
6413 N. College Avenue
Indianapolis, IN 46220
(317) 255-6476

Two very important reasons for using an amber monitor.

Amberchrome™. The "easy viewing" amber monitor from Quadram.

Working in front of a PC can be tough on your eyes. But now you can get your work done without giving your eyes a workout. With Amberchrome, the "comfortable" monochrome monitor from Quadram.

Amberchrome combines a soft amber-tone display with sharply focused characters for a no-smearing, no-ghosting, state-of-the-art screen image that's easy on the eyes. Amberchrome lets you spend more time at the computer, reducing irritating eye strain caused by other monitors.

Amberchrome. More than just a sight for sore eyes. Amberchrome gives you more than just easy

viewing. Like a 12" high resolution (720 x 350) screen image that's perfect for any data processing task. Word processing to complex business graphics. Plus Amberchrome features a special dark glass, anti-glare tube; full IBM compatibility; and low power, stay-cool operation.

The Comfortable Choice in personal computer displays.

All this adds up to one lesson that's easy to learn. Visit your local authorized Quadram dealer today and ask to see Amberchrome in action. One look and you'll agree: Amberchrome is the comfortable choice in personal computer displays.

Look for this seal. It's your assurance that you're buying the best in personal computer enhancements.

We

Sigma Designs challenges the belief that tape backup and random file access are mutually exclusive.

Introducing the OneReel Tape™

Sigma Designs has reinvented the classic "magnetic tape," replacing its inherent limitations with new functional diversity.

Much more than "just backup," the OneReel Tape meets the standards for speed and capacity while exceeding them with the flexibility of random access. And packages it all in a single, portable, device.

Movable Drive, Removable Media

As the OneReel Tape plugs directly into external floppy controller connectors, a single drive makes the rounds of all the PCs, in the office and at home.

reinvented the wheel

Its random access ability permits reading and updating of individual files directly from the tape. Proprietary software allows true working duplicates to be made of partial or entire disks. With removable reels of 10 MB each, and at a fraction of the cost of cartridges, the OneReel Tape performs unlimited backup, with unique attention to economy.

Precision is Everything

The integral microcomputer is the key to continuous, precise control of all drive and tape operations. The tape transport system never touches the sensitive data surface.

The result: the ultimate in data integrity and in media interchangeability.

Do you deserve any less?

Compact, elegant, powerful and surprisingly affordable, it is difficult to imagine what function has been omitted.

Sigma Designs even offers the carrying case, leaving just one question: when will you convert to the OneReel Tape?

If you, too, refuse to accept the limitations of today's personal computers, call Sigma Designs. For the Sigma Designs source nearest you, call us at (408) 943-9480.

And reinvent your own computing procedures.

Intelligent solutions
for your PC.

AST makes modems Short 'n Sweet

Introducing Reach!™

Our new intelligent 1200 baud modem fits where the old standard can't—into a single short slot on the IBM® PC-XT or Portable. Or any available expansion slot on the PC, AT and PC-compatibles. And its packed with advanced features.

The Reach! half-card design is about a half a pound lighter too.

So it makes a much nicer traveling companion than old fashioned external modems or heavier, long slot internal modems.

Tapping into services such as news from Dow Jones®, information from THE SOURCE™ and electronic mail delivery from MCI Mail™ and performing PC-to-PC data transfer has never been more convenient.

AST's reputation is built on quality products, quality support and quality service. Our com-

plete documentation makes Reach! exceptionally easy to install and use, but if it's not enough we're always here to help.

Reach! from AST—the short and sweet solution to your telecomputing needs. Call our Customer Information Center (714) 863-1333 Ext. 5249 for more information and dealer locations. Or write, AST Research, Inc., 2121 Alton Ave., Irvine, CA 92714 TWX: 753699AST UR.

AST RESEARCH INC.

Sweet Performance

Crosstalk XVI® Software:

The industry's best async communications software and its excellent documentation is included at no extra charge.

High Noise Immunity And Low Bit Error Rate: Insures data integrity even at 1200 bps over noisy, low-grade phone connections, eliminating the inconvenience and cost of retransmission because of noise-induced data errors.

On-Board Speaker: Lets you hear all the signals, just as if you were dialing the phone yourself, a convenient indication of proper operation.

Remote Digital Loopback: Used with a remote site, these diagnostics provide "real world" data transmission testing over the phone line.

Hayes® Compatibility: Opens up a world of popular, immediately available software to you.

Telecommunications

Flexibility: Enjoy a choice of 110, 300 or 1200 baud speeds, Bell 103, 113 and 212A compatibility, automatic-dial, answer and speed selection, and both half- and full-duplex communications.

Call Progress Monitoring:

Provides complete knowledge of communications progress, monitors dial tone (important in offices where you must dial "9" first), ringing, busy signal and automatically disconnects no answer calls.

REMark: The Rise and Fall of a Maverick

Brian Jeffrey

With the departure of the PC's founder and leading light, IBM has returned to business as usual.

Don who? Remember Don Estridge? The guy who used to head up IBM's Entry Systems Division (ESD)? It was Philip "Don" Estridge, perhaps more than any other individual, who put IBM in the personal computer business to stay. For more than three years, as he peddled his smile around trade shows and granted interviews to the press, he seemed proof that stodgy old IBM could show the same nimble, entrepreneurial footwork as the smaller, younger firms that had grown up with the personal computer marketplace.

Estridge was offbeat by IBM standards. His division relied on developers and suppliers, sold its wares through retailers, even farmed out the manufacture of its various products. More than that, however, he ran his own show within IBM, and few had that opportunity.

Estridge's rise in IBM was mercurial, and his PCs turned in a performance that had IBM's number crunchers cheering when revenues and earnings were announced. In three years, profits from PC sales had propelled

IBM's start-up endeavor into a more than \$5 billion international operation. In retrospect, Estridge and ESD had more in common with their competitors in the personal computer business than they did with IBM brass in Armonk.

And suddenly, last March, it was over; there was even a touch of Greek tragedy about it. ESD had suffered failures born of overconfidence and sloppy planning. PCjr. The Portable PC. The Cluster Kit. The PC Network. The PC AT's 20MB hard disk drive. The Software Showcase. *TopView*. By the end of 1984 Estridge and the rest of ESD found themselves apologizing profusely and often.

Estridge's nemesis arrived in the person of John Akers, newly appointed IBM chairman—only a little older than Estridge and, like him, a company veteran. Akers, unquestionably an organization man, loomed as the leader IBM was grooming for the next decade. He became president in 1983, CEO in 1984, chairman in 1985. Akers had helped found ESD in

(continues)

The Project Scheduler NETWORKTM

As a manager, you know the key to a successful project is good planning. You can't afford to overlook critical costs and deadlines.

COMPREHENSIVE PROJECT MANAGEMENT

The Project Scheduler Network will help you meet deadlines and beat cost targets using effective project scheduling, resource planning, costing, and status tracking.

Advanced screen graphics. Produce Network diagrams, Gantt charts, and color graphs to provide the concise information you need for timely decision making.

Work Breakdown Structure (WBS). Organize project activities to produce summary level schedules and reports. Multiple projects can be integrated to present project level schedules and total resource utilization.

Baseline schedules. Save them to compare with current schedules for schedule tracking. Actual, original plan, and current plan costs can be graphically compared for cost tracking.

Comprehensive report generator.

Simplify communications with management by synthesizing project information into presentation-quality hardcopy reports and graphs.

SCHEDULE WITH THE CLICK OF A BUTTON

The Project Scheduler Network provides the most advanced software technology available. Start with our mouse-controlled menus to select spreadsheet-style input templates to enter your project data.

Graphically build your dependency Network with only a "click of a button." Zoom to view the Network at selectable resolution levels. Now use the mouse to edit the Network to your satisfaction.

Select a Gantt chart and obtain schedules at any WBS level with a single click. Window resource graphs with the schedule to analyze resource allocations. And finally, select our integrated graphics to view color histograms, bar charts, and line plots of project resources and costs.

FEATURES

- Critical Path Method
- Network Analysis
- Gantt Chart
- Work Breakdown Structure (subtasks)
- Multiple Project Integration
- Tracking with Baseline Schedule and Complete Status
- Resource Scheduling
- Financial Planning and Tracking
- Presentation-quality Graphics

REQUIREMENTS

- IBM® PC, XT, or AT
- PC-DOS 2.0, 2.1, or 3.0
- Monitor plus IBM graphics adaptor
- IBM or Epson graphics printer
- 320K RAM (minimum)
- Mouse (Microsoft compatible)
- Two disk drives (one double-sided)
- IBM or HP plotter optional

1980 but by 1984 was on a mission to dismantle it. For Akers, the time for an "intrapreneurial" approach to personal computing had passed. PCs were an established arena of IBM business, so it became fitting to treat them as such.

The renegades of Boca Raton had played havoc with IBM planning. Their dealers had undercut all of IBM's direct sales forces and dispatched the IBM Product Centers to never-never land. Their office automation strategy ran through a Cuisinart the efforts of other IBM units to develop a coherent scenario for large end users. ESD undercut IBM's mini-computer business and insisted on procuring its own local area network, called (what else?) the PC Network—which didn't make it

any easier for IBM proper to construct a more comprehensive token ring network.

When Estridge's people were delivering, IBM's corporate chieftains had left them alone. As 1984 drew to a close and the list of ESD failures and gaffes continued to swell, ESD's protectors at IBM corporate began to defect. Estridge could count a fair number of critics within IBM even when he had ESD humming, and now the piper had to be paid.

In August 1984 a new IBM unit assumed responsibility for supporting PCs in IBM office environments. Another new unit, Information Programming Services, took charge of PC software. The PC Network was then shuffled to a group empowered to coordinate LAN strategy. In January 1985

IBM stripped PC dealer marketing from ESD and awarded it to the National Distribution Division, a New Jersey-based conglomerate that also runs third-party distribution programs, Product Centers, and direct mail marketing. Suddenly Estridge was invisible, and new faces began to emerge whenever IBM had something to say about the PC.

By March of this year, Estridge was gone from ESD, bumped up to corporate headquarters at Armonk to oversee worldwide manufacturing. On paper, it was a promotion. In practice, it wasn't, and IBM insiders knew it. Faced with a public relations disaster if Estridge were to quit, IBM cooked him up a high-level job. His salary

Introducing the new and improved IBM PC. \$49⁹⁵

Actually, it's not a new IBM® PC. It's GEM DESKTOP™. The \$49.95 software breakthrough that makes your old IBM PC so astonishingly easy to use that it seems like a new one.

So long PC DOS, hello GEM.™

GEM DESKTOP software looks like an ordinary floppy for your PC. But slide it into your IBM's disk drive, and the change begins.

From this moment on, you can run most of the important PC programs—but instead of typing cryptic commands to get into your program menu, you simply point and click your mouse* or use your cursor keys to open a window. It's like a breath of fresh air compared to the complex PC DOS operating system you've been using.

Point and click vs. stroke, stroke, stroke.

Next, instead of typing and retyping long file names, you simply point and click again at the appropriate symbols. And voila! Your file appears on screen. But it's not quite the same screen you've been used to.

Simple menu headers at the top to guide you effortlessly from one function to the next. So instead of making more complex keystrokes that can easily be mistyped, your IBM PC is easier and faster to use than ever before. There is also a clock and a calculator both built right in.

Indispensable. And only \$49.95.

Your GEM Desktop includes all operating system interface software and comes with amazingly simple instructions. In fact, GEM DESKTOP software makes it possible, for the first time, for anyone to learn to use an IBM PC. (Who knows, maybe even the most dedicated computerphobes in your company will warm up to the PC, after this.)

And you can just as easily justify the cost—only \$49.95 for complete operating package. Which makes it affordable enough to have several.

If you can use a phone, you can have GEM DESKTOP. Right Now.

To order GEM DESKTOP, just call toll-free (800) 443-4200. Charge your order to your Visa, MasterCard or American Express. While you're on the line ask us about GEM DRAW,™

our nifty \$149.00 graphics package with an extensive gallery of art.

Or mail this order form, along with your payment.

The mass memory market has become a real battle zone! Chaos, confusion and buyer uncertainty have resulted from too many products and not enough answers.

The truth of the matter is, anyone can sell a winchester disk drive. The problem is that hard drives, by their own nature, are sensitive devices that require appropriate handling and customer support.

Don't be misled into believing that a disk drive can be sold and booted around the country without any risk.

There is no room for the weak, when it comes to delivering a product you can depend on!

Peachtree Technology Inc. has cleared the path of confusion with a comprehensive line of mass memory expansion systems that have established themselves as leaders in advanced hard drive technology, backed by strong customer support. Every Peachtree Technology Inc. product has been through stringent diagnostic testing as a complete system. To assure they not only meet, but surpass specifications. (On the outside of every box is a documented certificate of inspection signed by our techni-

cian). Plus we stand behind our products with a complete one year parts & labor warranty.

FLEXIBILITY AND COMPATIBILITY A MUST!

To eliminate frustration, Peachtree Technology Inc. has provided a complete line of mass memory storage systems. They are fully compatible with IBM PC, XT, & PORTABLE, AT&T, CORONA PORTABLE, COMPAQ DESK PRO & PORTABLE, COLUMBIA TAVA, ZENITH 150 AND MANY MORE. (If your computer is not listed, please contact us for further information).

We offer a complete line of products including:

- External winchester hard drives • 10, 20, and 30 megabyte (formatted capacity). Our 10 and 30 megabyte drives utilize a hard carbon coating on the disk platter surface.
- Internal mounted winchester hard drives • 10, 20 and 30 megabyte (formatted capacity)
- Removable hard disk • Half height winchester, 10 megabyte, utilizing new and advanced head positioning technology
- Cartridge tapesystems • Capacity - up to 60 mbytes • Half high 5.25" form factor add-in/add-on to IBM-PC and compatibles.

- A 135 watt internal power supply that replaces the standard unit in the PC.

We'll supply everything you need to give your micro new speed and storage capacity: Disk drive, controller, cables, software, and associated custom firmware.

One stop shopping for your mass memory requirements.

Don't become a victim! The frustration and inconvenience of not having customer support may not be worth the few dollars you save buying from an unreliable source. There is no substitute for a complete hands on demonstration and face to face commitment to customer service from a reputable dealer. So don't be left standing in the smoke. To find out more about Peachtree Technology Inc. and our complete line of memory expansion systems, ask your local computer dealer for a complete demonstration. If he does not have our products, have him call 404-662-5556, and we will deliver a demonstration unit & literature within 24 hours!

PreCursorTM Makes The Hard Disk Easy.

Only
\$69.00

PreCursorTM is an amazingly compact and sophisticated indexing system for your hard disk. It runs just ahead of your other applications and makes some very user-friendly arrangements. And at a very businesslike price.

Without PreCursorTM, it takes a whole manual of commands to find and execute programs from your hard disk. In a business setting, where novice users must access your system, this is aggravating and expensive.

Tailoring PreCursorTM to your system is an easy operation. On-line help is available at the touch of a function key. A triple level of password protection is built right in. You don't need to know paths or subdirectories or other complicated syntax. You can even change the color of PreCursorTM.

After PreCursorTM is setup on your hard disk, it greets you each time the machine is turned on with a list of available programs. You can make simple index choices of even the most complex DOS commands. And set up your printer with the speed and ease of an old pro.

If you're a sophisticated user, you'll love the convenience of full interaction with batch files, passable parameters and user prompts. Home users will appreciate the sure ease of operation.

If you depend on your hard disk for businesslike performance, you can rely on PreCursorTM for instant access.

Thanks to PreCursorTM, The Hard Disk isn't so hard anymore.

Dealer Inquiries Welcome
PreCursorTM will run on IBM compatible MS-DOS systems.

rose, his perks no doubt increased, but at Armonk he became one of 20 decision makers. At IBM, manufacturing decisions are made several years ahead—and by committee. Estridge could exercise only a fraction of the real authority he had possessed at ESD.

ESD employees gave Estridge standing ovations as he toured division facilities on a farewell trip, and then they began musing about what would happen next. Estridge's successor, Bill Lowe, is known as a good administrator, a "chain-of-command guy," as one IBM staffer put it. The consensus is that IBM corporate is going to have a much bigger hand in IBM's PC business now; headquarters has been talking about things like integrated voice/data workstations, intelligent terminals, micro-mini-

computers, OEMs. They haven't been talking personal computers, and they certainly aren't talking about entrepreneurship.

Sometime during the transition, Don Estridge cleaned out his office in Boca Raton. There, he had kept a large gray stuffed elephant, outfitted with pink ballet shoes—his symbol that the new, entrepreneurial IBM was tantamount to an elephant dancing. The fleet-footed pachyderm wasn't needed up in Armonk.

Estridge's departure signaled the end of an era. IBM had proved, ultimately, that it hadn't really changed. The company was centralizing again, and top management was yanking away the reins of control; the chain of com-

mand was being firmly re-established. Big changes, changes toward conservatism, are afoot in IBM's PC business—the kind of changes old-line IBMers have been demanding for years.

Estridge and his team have much to recall and to savor. After all, they fueled the personal computer revolution and sparked their own small revolution in a traditionally sluggish and bureaucratic company. But then, revolutions have a nasty way of devouring those who incite them. ●

Brian Jeffrey is director of research for the International Technology Group, a Palo Alto, California-based firm that specializes in the monitoring and analysis of IBM.

1-2-3™

Introducing the Most Powerful Business Software Ever!

FOR YOUR TRS-80 • IBM • APPLE • KAYPRO • COMMODORE 64 • MSDOS OR CP/M COMPUTER*

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSA RECEIVABLES™

\$99.95

VERSA RECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSA RECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSA LEDGER II™ and VERSA INVENTORY™.

VERSA PAYABLES™

\$99.95

VERSA PAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSA PAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSA PAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSA PAYROLL™

\$99.95

VERSA PAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSA LEDGER II™ system.

VERSA INVENTORY™

\$99.95

VERSA INVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSA INVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSA RECEIVABLES™ system. VERSA INVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VERSA LEDGER II™

\$149.95

VERSA LEDGER II™ is a complete accounting system that grows as your business grows. VERSA LEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software.**

- VERSA LEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSA LEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSA LEDGER II™ manual will help you become quickly familiar with VERSA LEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module. All CP/M-based Computers must be equipped with Microsoft BASIC (MBASIC or BASIC-80).

What's a win doing with a da

"Cornerstone lets me do things on my personal computer I would never have tried before."

Until now, unless you had time to learn computer programming, you were unable to realize the full potential of your personal computer.

That's why we created Cornerstone,™ the first sophisticated database system specifically designed for the non-programmer.

And Cornerstone isn't one of those lightweight systems that handles only a few simple jobs. On the contrary, it's a full-featured relational database system that can help you solve the wide range of information management problems you face every day.

"I use it to keep in touch with my customers."

Keeping in touch with customers is critical in every business. Cornerstone gives you a fast, efficient way to do it.

For example, our wine merchant started by building a database to keep track of his customers. Then he used it to generate mailing labels and letters, so he could inform them about new wines and special sales.

You'll be able to build your own database easily with Cornerstone. Our *Beginner's Guide* and *On-Screen Tutorial* teach you everything you need to get started. And if there's any doubt about what to do next, our unique Help and Options keys always explain where you are and what to type next.

"I can personalize my customer files."

Cornerstone's flexible design makes it easy to modify your database as your needs change.

As our wine merchant learned more about his customers, for example, he was able to add notes to his database about

L. L., Owner,
Wine Emporium

e merchant tabase system?

individual preferences. Now he can easily organize wine tastings and other events.

Unlike other systems, with Cornerstone you won't have to decide in advance how much space you'll need for any item in your database. Cornerstone automatically makes room for a second phone number, an additional address, or even several pages of notes. And Cornerstone is efficient—it only uses as much space as you do.

"Now I always know when to reorder."

Business people often need to use the same information in different ways. Because Cornerstone is a full-featured relational database, you only type in information once, but you can use it in as many ways as you want.

For instance, now when our wine merchant

takes an order, Cornerstone fills in the customer's address, totals the sale and adjusts inventory levels.

It even tells him which wines need reordering and the distributor to call.

WINE	PRICE	STATUS	DETAILS
Chateau - Chardonnay 1988	Chardonnay	\$52.00	\$78.75 International
Tasting Notes: (Tasted 6/84) Fluffy dry chardonnay. Unusually deep color of oak. Nose with slight fruitiness. Pale golden color. Extremely good value - convertible to chardonnay selling for twice the price.			
Ridge Zinfandel - 1975	Zinfandel	\$75.00	\$13.39 International
Tasting Notes: (Tasted 12/84) Full-bodied zinfandel reminiscent of Ridge's early '70's vintage. High in tannin. Deep purple.			
File: wines	Previous mode: Initial	File: wines-1	

"I can create new reports in seconds."

Providing information to others is an essential part of every professional's job. With Cornerstone's built-in report writer, you can give people the information they want, the way they want it. Our wine merchant easily creates reports on everything from monthly sales to the year's top-rated Bordeaux.

With Cornerstone, you can produce reports in seconds—even when it requires information from different files.

Cornerstone is also designed to exchange information with word processors and spreadsheets like 1-2-3.

Cornerstone is a different kind of database system. Created by a company committed to eliminating the barriers between computers and people. It's now available for the IBM® PC, PC XT, PC AT™ and compatibles, and soon for the Tandy® 1000, 1200 HD and 2000. Suggested retail price \$495.

Send for your free demo disk.

To fully appreciate how different Cornerstone really is, you have to try it yourself. For a free demo disk and brochure, call 617-574-0644. Or write to Infocom, Inc., Dept. D, 125 Cambridge Park Drive, Cambridge, MA 02140. **INCOM™**

John C. Dvorak

Conversation With a Coho

A new twist on an old fable: it's a fish-eat-fish world and companies big and small are the bait.

Last January a peculiar article appeared in the *Washington Post*. On the surface it's about coho salmon, but I think that it's an allegory about the microcomputer world.

Researchers in Canada discovered that the coho salmon has two genetically distinct types of males.

Here's the meat of the article: "In most animal species, there is one basic form of female and one basic form of male. Not so among the salmon fishes. Evolution has given the coho salmon two kinds of males that differ markedly in form and behavior. One weighs eight to ten times as much as the other and takes half again as long to reach maturity. The two use completely different strategies for gaining access to the species' one kind of female. The big red-colored males, called hooknoses because of the shape of their snouts, fight one another to achieve classical hierarchy. The top-ranked male gets the female. The little silver-colored males, called jacks, have more ordinary snouts and gain their mating opportunities by hiding among the rocks until they can sneak into the

females' nests while the big males are busy fighting. These differences have been known for some years by fish biologists, who have also seen the same differences among the chinook, or king, salmon.

"Scientists have generally assumed that the little males were pathological in developing sexual maturity while still so small. The jacks' practice of sneaking their mating opportunities was presumed simply to be making the best of a bad situation.

"Now a Canadian biologist [Mart R. Gross] has found evidence that the two kinds of males are about equally successful in reproducing. This, along with another study finding that the differences between the two kinds of males is hereditary, indicates that evolution has produced two different but equally stable strategies for the survival of males within a single species."

Does this story ring a few bells and toot a few whistles? Is it possible that the evolution of fish spe-

(continues)

IBM's best efforts are now going into Macintosh.

Macintosh and IBM PC software. Compatible at last, thanks to MacCharlie, a rather innovative coprocessing system.

And imagine the consequences.

Nearly 10,000 IBM PC software programs designed for general business and specific applications in real estate, insurance, law, medicine, banking, etcetera, can now join forces with Macintosh's own popular programs.

And, the myriad of IBM PC-compatible software adopts Macintosh's many beloved features, including desktop utilities such as the clipboard and the calculator.

In addition, MacCharlie allows

IBM PC and Macintosh data files to be exchanged. Talk about flexibility.

But the good news gets better.

You see, MacCharlie delivers hardware compatibility, as well. For example, IBM letter-quality printers can be easily used with Macintosh.

Furthermore, MacCharlie

now allows Macintosh to perform virtually any networking an IBM PC can perform. Even to the extent of tying in with IBM mainframes.

In other words, your networking capability goes beyond the Apple family.

The Macintosh keyboard slides right into MacCharlie's keyboard. About as easy as slipping a letter in an envelope.

Macintosh sets snugly beside MacCharlie, on a custom-fit pedestal.

Once you plug in MacCharlie's power and keyboard cords, you're ready to enjoy a very happy marriage.

How does it happen? As easily as slipping on penny loafers.

In mere moments, MacCharlie combines the best features of the world's premier personal computers.

And despite the fact that it turns one computer into two,

MacCharlie adds but a handful of square inches to Macintosh's physique.

In short, one of life's most perplexing decisions—whether to buy a Macintosh or an IBM PC—can now be made with the greatest of ease.

Ask for MacCharlie at your local computer store. Suggested retail price for the 256K single disk drive model is only \$1195, and just \$1895 for the 640K dual disk drive version.

For more information, call Operator 12 toll-free, 1-800-531-0600. (In Utah, call 801-531-0600.)

MacCharlie offers 256K RAM, with optional upgrade to 640K RAM; 360KB disk drive, and optional second disk drive.

MacCharlieTM

THE BEST OF BOTH WORLDS.

More manufacturers are using MCS-3 ...

than any other microcomputer
manufacturing software.

Field Proven.

MCS-3, the system developed by the innovators in microcomputer software (Micro Manufacturing Systems), is designed specifically to help manufacturers control the functions unique to their industry.

Written For The Microcomputer On A Microcomputer.

Because MCS-3 is designed for use on the microcomputer, information gathering is quick and easy (You needn't have a data processing background to put this system to work for you.)

You'll get user-friendly screens, professional reports, operator prompts, easy-to-understand documentations, and rapid computer response times. You'll also have representatives at your disposal from

MMS's worldwide service and support network.

MCS-3 runs on the latest hardware available, including equipment from: IBM, NCR, DEC, TI, Hewlett-Packard, Wang, ALTOS and Tandy (to name a few).

A Manufacturing System Integrated To Accounting.

By integrating MMS's seven manufacturing systems to MBSI's (A Division of RealWorld Corp.) accounting packages, our combined MCS-3 system eliminates the need for double data entries. This saves processing time (and time IS money).

For more information write: Micro Manufacturing Systems, 2600 Corporate Exchange Drive, Suite 190, Columbus, Ohio 43229, or call: (614) 895-0738.

cies with two types of males competing for one type of female is a phenomenon mirrored in the business world? The females represent the customer, the buyer—the cash. The males represent companies of contrasting style and size. One group is the big and the powerful, the IBMs, the Digital Equipments, the Wangs. The other group is the clone makers, the peripheral makers, the nimble small-fry that always seem so pathetic in comparison to the big boys.

I wondered what could we learn from these fish and visited my friend, the Berkeley professor, in his laboratory high in the Berkeley hills. The professor had developed some electronic gear that allowed me to converse with the coho. I arranged to have both a hooknose and a jack in the lab in two separate tanks. The conversation was quite revealing.

First I talked to the hooknose, the big fish. I asked him if he was familiar with the little jack fish. "Yeah, those pip-squeaks that hang around all the time," he said. "Yeah, I'm familiar with them. They're useful and we welcome them. Although I'm not really sure how they survive, they help us."

"They help you?" I queried.

"Yeah, somehow. We've got these herds, I'd guess you'd call 'em, of female fish, and some of them can't be part of our harems, and the little fish somehow keep them from straying too far away. The little fish are kind of like sheepdogs."

"Are you aware that the jacks are mating with the female salmon? They're male salmon, just like you."

Introducing
the new
and improved
IBM PC.

Introducing GEM.

*Suggested retail price. GEM requires that your computer have appropriate graphics capability and that the pointing device be compatible. GEM, GEM COLLECTION, GEM DESKTOP, GEM WRITE, GEM PAINT, GEM DRAW, GEM GRAPH and GEM WORDCHART are trademarks and Digital Research is a registered trademark of Digital Research Inc. GEM WRITE is by Lifetree Software, Inc. IBM is a registered trademark of International Business Machines Corporation. © 1985, Digital Research Inc. All rights reserved.

Congratulations.

You just found the perfect way to get a brand new and improved IBM® PC without buying one.

Get GEM™ software from Digital Research instead. And your IBM PC, PC/XT, AT or compatible will become something it's never been before.

Easy to use.

Now instead of getting lost in PC DOS,

you can actually use your PC to get something done. (An astonishing idea, if ever there was one.)

It all starts with GEM DESKTOP™, a clever little \$49.95* program that hides the rigmarole of PC DOS. And lets you work with a simple header menu, icons, drop-down menus and a pointer.

So opening a file, for instance, is as easy as pointing with your mouse (or your cursor keys, if mice make you uneasy) to the file folder you want to work on. And click. It's open.

That's how GEM works. Here's what it works with. First of all, you can still run most important programs ever written for the IBM PC. And GEM software will make them easier to get into.

Then there are GEM programs we've written ourselves.

Like the GEM COLLECTION™, a bundle that includes GEM DESKTOP™, GEM WRITE™* and GEM PAINT™. So you can process words and pictures together.

GEM DRAW™ with an extensive gallery of art to help you create everything from fine art to line art. GEM GRAPH™ to turn numbers into something more tangible. And GEM WORDCHART™, the simplest last word (and chart) in presentation graphics.

And soon you'll see important programs from a host of major software houses.

Now, GEM is as easy to find as it is to use. Call (800) 443-4200. Ask for our GEM brochure. The name of your GEM software dealer. Or simply place an order.

Because with GEM, the best new computer on the market isn't a computer at all.

 **GEM**

“Those wimps! Give me a break.” The hooknose angrily sloshed the water at the thought of it. “Don’t be silly. Do they look or act like me? Do they want to fight among the great hooknoses? Of course not. They simply help the stragglers. I have no idea what breed of fish they are. Surely they aren’t great salmon.” The fish laughed an inimitable fish cackle.

So I went over to the jack fish and quizzed him. I asked him his purpose in life and his relationship to the hooknose.

“Ah yes, the hooknose. Big and dumb. I could be a hooknose if I wanted. Yup, no doubt about that. I just don’t want to be, that’s why I’m not. You get big like that and you lose control of the harem and other big hooknoses want to fight you all the time. We jacks believe in cooperation. We have all kinds of associations, for example. Lots of clubs where we exchange ideas and help each other. We also like to help the female who doesn’t want to be dependent on the hooknose.”

“I see that you realize you’re a salmon just like the hooknose. The hooknose doesn’t see it that way. Also you say that you can become a hooknose. According to recent studies you can never be a hooknose.”

“Yeah sure. Look, I’m no different than the hooknose. I just don’t eat as much. It’s a known fact that we can become big hooknoses anytime. Ask any jack and he’ll tell you the same. It’s just that we choose not to. We can do a better job than the hooknose if we stay

Borland's SideKick™ Will Clear Your Desk In 30 Minutes And Increase Your Productivity By 50%

SideKick is a combination of seven desktop accessories, which makes SideKick the single most effective business tool. Just a keystroke suspends your application program, giving you a window into SideKick. Another keystroke brings you back to where you were. Instantly. It's that easy.

A FULL-SCREEN WORDSTAR™-LIKE EDITOR

You may jot down notes and edit files up to 25 pages long.

AN ASCII TABLE for easy reference.

AN AUTODIALER for all your phone calls. It will look up and dial telephone numbers for you. (A modem is required to use this function.)

A PHONE DIRECTORY

for your names, addresses and telephone numbers. Finding a name or a number becomes a snap.

A MONTHLY CALENDAR functional from year 1901 through year 2099.

A DATEBOOK to remind you of important meetings and appointments.

A FULL-FEATURED CALCULATOR

ideal for business use. It also performs decimal to hexadecimal to binary conversions.

Kimtron

MULTI-USER SOLUTION for IBM PC, XT, AT

Compare the Solution!

The Multi-User Solution of the future is now available.

Convert your IBM PC, XT, AT or Compatibles to a true multi-user system while maintaining display, keyboard and software compatibility.

Since the KT-7/PC display is the same as your PC monochrome monitor, with its look-alike keyboard, operators will feel they're using an IBM PC and can also use the same software manual. Kimtron's multi-user solution includes file and record locking, shared data access, and communication between users. It is **the** intelligent alternative.

The KT-7/PC supports Time Sharing, Enhanced Time Sharing

and Multi-Processor implementation under PC DOS, MS DOS, UNIX, XENIX, CPM 86, Multilink, Concurrent PC DOS, and other compatible multi-user operating systems.

Kimtron's multi-user solution may be tailored for cost effectiveness; as low as \$1095 for an additional user, and for speeds more than ten times faster than LAN. You can add one or as many as 31 additional users per PC. Kimtron delivers the future now by allowing an ever-widening network of multi-user PC's.

The KT-7/PC may be complemented with one (or more) I/O Card, Memory Card, 8086 Speed

Enhancer Card, 80286 AT Card, 8088 Multi-Processor Card, 80186 Speed Enhancer Card, 68000 Card, and related software.

For more information about Kimtron's Multi-User Solution, or general video data terminals for other mini or micro multi-user systems, call your local computer dealers, distributors or Kimtron Corporation Today!

ATTENTION SIDEKICK USERS: SUPERKEY IS
SIDEKICK'S BEST COMPANION. GET SUPERKEY TODAY!

Borland's SuperKey™ lets one powerful keystroke do the work of hundreds and helps keep your confidential files ... confidential!

SUPERKEY TURNS 1,000 INTO 1! Yes, SuperKey can record lengthy keystroke sequences and play them back at the touch of a single key. Instantly. Like Magic. Say, for example, you want to add a column of figures in 1-2-3. Without SuperKey you'd have to type seven keystrokes just to get started. ["shift-@-s-u-m-shift-(")]. With SuperKey you can turn those 7 keystrokes into 1.

SUPERKEY HELPS PROTECT YOUR CAPITAL INVESTMENT. SuperKey, at your convenience, will make your screen go blank after a predetermined time of screen/keyboard inactivity. You've paid hard-earned money for your PC. SuperKey will protect your monitor's precious phosphor ... and your investment. This feature alone justifies your SuperKey purchase!

SUPERKEY KEEPS YOUR 'CONFIDENTIAL' FILES ... CONFIDENTIAL! Time after time you've experienced it: anyone can walk up to your PC, and read your confidential files (tax returns, business plans, customer lists, personal letters ...). With SuperKey you can encrypt any file, even while running another program. As long as you keep the password secret, only YOU can decode your file. SuperKey implements the U.S. government Data Encryption Standard (DES).

SUPERKEY PROTECTS YOUR WORK FROM INTRUDERS WHILE YOU TAKE A BREAK.

Now you can lock your keyboard at any time. Prevent anyone from changing hours of work. Type in your secret password and everything comes back to life ... just as you left it.

small. As far as the hooknose thinking that we're not as good as it is: what do you expect? They are fish who have become ruthless and unfeeling. Look at the way they fight with each other."

So I put both fish in the same tank to see what would happen. The hooknose paid little attention to the jack. The jack skittered around nervously. "Boy I'll bet that big slob would like to destroy me," the jack mumbled to himself.

I asked both fish why females liked them. "Because I'm the meanest of the mean," said the hooknose. "I can outswim and outfight and outfox any other hooknose within ten miles. I can handle 100 females."

"Females like me because I give them special attention. One at a time," said the jack. "Most of the female fish aren't impressed by the hooknose. Most of them would rather not be in a harem, except for the females who are insecure."

Meanwhile the hooknose was still extolling his big fish bravado. "I'm so mean that even bears fear me." He laughed. "Watch this!"

Before I could stop him, the big salmon leaped into the air, dove back into the tank, and in a split second ate the jack fish! "Am I some kinda fish?" he said.

He looked around the tank and said, "Hey! Where'd the little guy go?" ●

Speed, Power, Price.

Borland's Turbo Pascal Family.

The industry standard. With more than 250,000 users worldwide Turbo Pascal is the industry's de facto standard. Turbo Pascal is praised by more engineers, hobbyists, students and professional programmers than any other development environment in the history of microcomputing. And yet, Turbo Pascal is simple and fun to use!

Jeff Duntemann, PC Magazine: "Language deal of the century... Turbo Pascal: It introduces a new programming environment and runs like magic."

Dave Garland, Popular Computing: "Most Pascal compilers barely fit on a disk, but Turbo Pascal packs an editor, compiler, linker, and run-time library into just 29K bytes of random-access memory."

Jerry Pournelle, BYTE: "What I think the computer industry is headed for: well documented, standard, plenty of good features, and a reasonable price."

Portability. Turbo Pascal is available today for most computers running PC DOS, MS DOS, CP/M 80 or CP/M 86. A XENIX version of Turbo Pascal will soon be announced, and before the end of the year, Turbo Pascal will be running on most 68000 based microcomputers.

\$69.95

High resolution monochrome graphics for the IBM PC and the Zenith 100 computers

Dazzling graphics and painless windows. The Turbo Graphix Toolbox will give even a beginning programmer the expert's edge. It's a complete library of Pascal procedures that include:

- Full graphics window management.
- Tools that will allow you to draw and hatch pie charts, bar charts, circles, rectangles and a full range of geometric shapes.
- Procedures that will save and restore graphic images to and from disk.
- Functions that will allow you to precisely plot curves.
- Tools that will allow you to create animation or solve those difficult curve fitting problems, and much, much more.

No sweat and no royalties. You may incorporate part, or all of these tools in your programs, and yet, we won't charge you any royalties. Best of all, these functions and procedures come complete with commented source code on disk ready to compile!

\$54.95
NEW

Searching and sorting made simple

The perfect complement to Turbo Pascal. It contains: **Turbo-Access**, a powerful implementation of the state-of-the-art B+ tree ISAM technique; **Turbo-Sort**, a super efficient implementation of the fastest data sorting algorithm, "Quicksort on disk". And much more.

Jerry Pournelle, BYTE: "The tools include a B+ tree search and a sorting system; I've seen stuff like this, but not as well thought out, sell for hundreds of dollars."

Get started right away: free database! Included on every Toolbox disk is the source code to a working data base which demonstrates how powerful and easy to use the Turbo-Access system really is. Modify it to suit your individual needs or just compile it and run.

Remember, no royalties!

\$54.95

From Start to Finish in 300 pages. Turbo Tutor is for everyone, from novice to expert. Even if you've never programmed before, Turbo Tutor will get you started right away. If you already have some experience with Pascal or another programming language, Turbo Tutor will take you step by step through topics like data structures and pointers. If you're an expert, you'll love the sections detailing subjects such as "how to use assembly language routines with your Turbo Pascal programs."

A must. You'll find the source code for all the examples in the book on the accompanying disk ready to compile. Turbo Tutor might be the only reference on Pascal and programming you'll ever need.

Compare the HerculesTM Color Card to IBM's.

Five reasons why the Hercules Color Card is better.

IBM Color Adapter \$244

Hercules Color Card \$245

- | | | |
|------------------|--|--|
| 1. Compatibility | Runs hundreds of graphics programs. | Runs the same hundreds of graphics programs. "The Hercules Color Card is so nearly identical to the IBM Color/Graphics Card that it's almost uncanny." PC Mag. |
| 2. Printer port. | None. | Standard. Our parallel port allows you to hook up to any IBM compatible printer. |
| 3. Size. | 13.25 inches. Limited to long slots. | 5.25 inches. Fits in a long or short slot in a PC, XT, AT or <i>Portable</i> . |
| 4. Flexibility. | Can't always work with a Hercules Graphics Card. | Always works with a Hercules Graphics Card by means of a software switch. |
| 5. Warranty. | 90 days. | Two years. |

Any one of these five features is enough reason to buy a Hercules Color Card. But perhaps the most convincing reason of all is just how easy the Hercules Color Card is to use: "Right out of the box, the Hercules Color Card goes into an empty expansion slot, ready for you to plug in. . . and go to work—no jumpers, no software. For most applications, it's just that easy." PC Magazine.

Call **1-800-532-0600 Ext. 432** for the name of the Hercules dealer nearest you and we'll rush you our free info kit.

Hercules.
We're strong on graphics.

Draw Your Way to the Top

*PC-Draw Will Increase Your Office Productivity.
And Upward Mobility.*

Imagine. You now have the capability to graphically depict your best ideas, plans, designs and proposals. *In color or black & white.* Accurately. Completely. Dramatically. Concepts presented so forcefully—yet so simply—that you leave that critical meeting with upper management... *totally* confident of success.

And you win. Your secret weapon? PC-Draw. A powerful interactive graphics program for the IBM PC or XT[™]—*unlike anything else* on the market. Using PC-Draw you create virtually anything that can be drawn with pencil and paper. Quickly. Easily. With far greater detail.

PC-Draw is ideal for presentation graphics, proposals,

**10 DAY
TRIAL
PERIOD**

systems design, forms, diagrams... and an endless variety of charts, graphs and illustrations. PC-Draw allows you to produce drawings *up to 99 pages* long. Several templates come with PC-Draw including Flowcharting, Electrical Design, Office Layout, and Alternate Text. In addition you create and store your *own* unlimited supply of user defined symbols.

PC-Draw includes an *easy-to-follow* interactive tutorial. Requires IBM PC or XT[™] or compatible, graphics adapter and graphics monitor. Version for PCjr available. Graphic boards, plotters at competitive prices.

Shhh! Don't tell your office competition about PC-Draw. They'll catch on soon enough. For free brochure or to order call 800/2PC-DRAW. In Texas or for customer service call 214/234-1769. Micrografx, Inc., 1701 N. Greenville Ave., Suite 305, Richardson, Texas 75081.

Letters

Reactions and responses from the PC World community

What Price Glory?

In the February issue of *PC World* ["Adding Up the Costs," *PC World View*], the management consulting firm of Schonfeld & Associates claims IBM will spend \$1.3 billion in 1985 for television, radio, print, and direct mail advertising.

We consider IBM advertising expenditures to be confidential and do not make those figures public. I can, however, say that \$1.3 billion is an absolutely ridiculous overestimate. Such an amount would make our advertising expenditures about half a billion dollars greater than those of Procter & Gamble, which is by most estimates the nation's largest advertiser.

Charles Francis
Director of Advertising
IBM
Armonk, New York

Schonfeld & Associates stands by its projection for IBM's 1985 advertising expenditures. But according to the Television Bureau of Advertising in New York, IBM's 1984 outlay for TV ads promoting computer hardware and software totaled \$58 million, with an additional \$1 million for its product centers. Adscope, an advertising industry trade publication, reports that IBM spent \$17 million for advertising in business and industry journals last year. —Ed.

Park Your Portable

Edward Fischer's article, "The Practical Portable" [*PCW*, April 1985], omits an important warning: Before transporting any machine with a hard disk, always run a utility program to "park" the drive head. This is true even if the computer is merely being moved across a room. Failure to park the

read/write head can mean permanent data loss should the head come in contact with the platter. The parking procedure moves the head away from the data area of the platter; if the computer receives a jolt, there is a reasonable chance that your data will survive intact.

Software to park IBM's hard disk is supplied on the Diagnostics disk; third-party drives usually come with a disk containing a utility for parking. Some hard disk machines park the head automatically when the power is shut off, but these are rare.

Randy Peck
Bell, California

Thanks for pointing out the oversight. As you mention, parking the read/write head is good practice regardless of the length of your journey. Incidentally, portables equipped with hard disks that automatically park the head are becoming even rarer. Effective last December, the Compaq-Plus no longer comes with an automatic head-parking capability. The company says it's convinced that each hard disk's triple shock mounting is adequate to protect the platter and prevent data loss. —Ed.

Accountants Accountable?

Regarding Robert Leach's reply to James Spinelli [*Letters, PCW*, April 1985]: Mr. Leach and the rest of the accounting profession are kidding themselves if they believe that the client decides what computer hardware or software to buy.

When advising clients on the implementation of computer systems, accounting firms follow cer-

New Generation Communications

Our new Crosstalk Mark 4 behaves just as reliably as the Crosstalk you've always trusted. But when you ask it for a bit extra, you're in for some surprises.

Up To 15 Concurrent Sessions

Mark 4 supports the X.PC multiple-session protocol, so it's capable of up to 15 concurrent communications sessions, each with the end-to-end error-checking needed for tomorrow's higher speed modems.

With more than one session going on at once, you need some way to keep track of them all. Crosstalk Mark 4 has that, too.

What You Get Is What You See

Mark 4 identifies each session with a "page" number. You can flick from one session to another with one keystroke. See each one full screen.

But if you'd like to keep an eye on more than one session at once, you can create windows — as many as you need in any size or shape — to display them all.

Menu? Or Command?

No matter how expert you are, Mark 4 is just your speed. It operates on command, or with a menu, or any combination of the two.

If you need help at any point in your command sequence, Mark 4 gives you suggestions that apply precisely to the task at hand.

Why Repeat Yourself?

If you make the same calls often, as most people do, Mark 4 can save you a lot of dull repetition. It has built-in command programs to call up and log in to most of the major information utilities.

But Mark 4 goes one step further. It can "memorize" any command sequence you perform, then repeat it that way any time you ask it to. You can't make programming much easier than that.

And Now, By Popular Request ...

— Mark 4 has a text-editor built in. You can create and edit files without having to leave Crosstalk.

— Mark 4 emulates the most popular terminals, including

IBM 3101, DEC VT-52, VT-100, and the TeleVideo 900 series. Most other programs emulate one or two.

— In addition to X.PC, Crosstalk Mark 4 supports Kermit, Xmodem, and of course our own Crosstalk protocol.

How New Is New Generation Communication?

New enough for the advanced breed of modem that's already coming around the corner. New enough to give you the best high-speed, error-checked communication possible on noisy phone lines — or secure dedicated lines.

Finally, because Crosstalk is already the industry standard for small business computers, Mark 4 is at home in a broader universe than any other communications software.

It may be new and improved and revolutionary — but it's still Crosstalk.

MICROSTUF®

1000 Holcomb Woods Parkway / Roswell, Georgia 30076

IBM is delivering PC Network, now our gateway hands you the Mainframe.

Our unique PCNetwork/SNA 3270 GateWay™ adds full 3270 emulation capabilities to your IBM® PC, XT, AT and compatible workstations using IBM's PC Network to share your expensive SNA host connection.

True 3270 capability insures easy installation, giving you unlimited access to mainframe applications such as TSO, CICS, and IMS, while reducing costs over older solutions like 3270 coax adapters and dedicated point-to-point SDLC cards and modems.

Our HotKey™ allows you to toggle between 3270 functions and other DOS applications such as Lotus 1-2-3,™ further reducing your connection costs.

This PCNetwork/SNA 3270 GateWay product family includes software or a combination of hardware and software. Our entry level configuration supports 12 concurrent SNA sessions using an IBM SDLC card with our software. The next configura-

*Or any IBM NETBIOS-compatible network.

tion replaces the SDLC card with our PC-compatible 8-Mhz 80188 ComCard,™ to provide more processing power than an IBM AT for up to 24 users, while maintaining workstation performance.

Moving the ComCard to our NetServer™ Communications System maintains performance for up to 48 concurrent users. Three additional ComCards can be installed in the NetServer to provide 192 concurrent sessions to 4 mainframes. As a bonus, the NetServer gives you the architecture to add additional inter-networking capabilities, such as shared asynchronous modems, public data network access (X.25) and remote LAN bridging capabilities.

At last, you get the PC-to-SNA mainframe solution you've been looking for - Available now from a company committed to open architecture

products, compatibility warranties and customer support.

tain procedures designed to document their activities and protect them from liability. Inherent in those procedures is a bias toward the most conservative alternatives—a bias that tends to rule out products from new or very small companies in favor of those from established suppliers (like IBM).

When auditing a client for whom it has made purchase and installation recommendations, the firm is in the position of reviewing its own work. I don't see how an auditor's independence can fail to be compromised.

While Mr. Spinelli's evaluation of Arthur Andersen's marketing strategy may be a little harsh, his criticism has merit. Mr. Leach, on

the other hand, needs to descend from his ivory tower and recognize that along with the authoritative image Arthur Andersen and the other Big Eight firms have worked so hard to promote comes a disproportionate amount of power to influence the public and its perceptions of the computer industry.

*Eric Weiss
Akron, Ohio*

Focus on Focus

I found your misleading description of *PC/Focus* in *PC World's* February issue ["A New Focus on Data Management"] a cause for

amazement and concern. I've participated in an evaluation of Focus as a replacement for COBOL on a large corporation's mainframe system. We encountered so much difficulty that we were forced to hire a veteran Focus programmer. I've recently spent some time looking at *PC/Focus* and to my dismay found it almost exactly like mainframe Focus.

PC/Focus is poorly documented, ambiguous, and confusing. It is certainly not easy for the novice to master. To become proficient with the program you must work with someone who already knows it. The manual is disorganized almost to the point of uselessness.

"I'm having that printed right now."

Through omission, your article implies that PC/Focus on a stand-alone PC is adequate for business applications. My experience has shown that the costs for initial acquisition and training can only be justified in a multiuser environment. Stand-alone projects are generally not sophisticated enough to take advantage of the program's complex data structures.

There's usually an immediate wave of interest in any product reviewed in your magazine, and I expect to see an epidemic of PC/Focus-itis.

Mark Gerow
Palo Alto, California

My article ran in the "State of the Art" section and was not a product review. Accordingly, I concen-

trated on the conceptual advances inherent in PC/Focus and other fourth-generation systems.

I concur with Mr. Gerow that PC/Focus is flawed, but I don't accept many of his conclusions. As my article made clear, it is true that PC/Focus is poorly documented. Its "confusing" and "ambiguous" nature can be attributed to both the poor documentation and some programming quirks.

The ease-of-use issue is interesting. As the article states, a casual programmer may have difficulty setting up a PC/Focus data base and data entry system; indeed, a professional may be required. What Mr. Gerow overlooks is that a data management system's main

day-to-day function is report creation—and that is where PC/Focus shines. Virtually anyone can spend a few hours learning the program's TableTalk feature and then be able to create reports that would normally take a dBASE II programmer several days to code.

The similarity of PC/Focus to mainframe Focus that so dismays Mr. Gerow has been a major boon to the many corporations that already use mainframe Focus and do not need to retrain programmers to write PC applications. FileTalk and TableTalk, both part of PC/Focus but not yet part of mainframe Focus, demonstrate that Information Builders is attempting to tailor its product to the PC market.

NCR's new PC2PC™ has the PC world talking. NCR to IBM to Compaq. PC to PC.

PC2PC not only puts all the IBM-compatibles in your office on speaking terms, it puts every PC on-line to every other computing resource. To printers. To plotters. To storage devices.

To enhanced efficiency.

PC2PC eliminates redundant purchases of expensive peripherals and duplication of effort on reports and spreadsheets. So you save time and money.

Put your PCs in touch with PC2PC. You'll be one step further down that road from rags to riches.

Your
PC to PC
Connection.

SOFTWARE SHOULDN'T TIE YOU UP IN KNOTS.

INTRODUCING ABILITY.™

**THE BUSINESS SOFTWARE THAT
WORKS WITH YOU. NOT AGAINST YOU.**

Hard to learn software can tie you to your chair. Great way to spend your evenings?

That's not the way it has to be any more. Now you have the ABILITY™

It's the new business software for people who don't want to marry a computer simply in order to get great results.

ABILITY—spreadsheet, database, word processing, telecommunication, graphs and "Presentation!", an exclusive new feature to present ideas with new impact.

It's powerful and sophisticated. Sophisticated enough to be easy.

A good example of what easy means is the exclusive ABILITY library. This unique product feature organizes your work to help you achieve what you want.

Not the typical, aimless files in which you hunt for the one you need. Instead, an easy to use arrangement—neatly grouped by the type of work you're doing.

Alphabetical. Truly easy.

With some business software, even adding a simple file is a hassle. A deletion can require awkward commands and irritating changes.

Not with ABILITY.

You want to make a change? No problem. You don't have to worry about remembering juicy phrases like ".xtx", ".ovl", or other popular favorites, like ".exe" and ".bas".

Not when you have the ABILITY. We took the time and effort to shield you from that kind of nonsense.

To us that's the whole point. Software shouldn't make you struggle.

You can learn ABILITY in less than a day. It will make your job easier, faster and even more fun.

To learn more about ABILITY, please check with your local, IBM-authorized dealer, or write us at Xanaro Technologies, Inc., 3100 Mill Street, Suite 219, Reno, Nevada 89502.

(In Canada write to Xanaro at 321 Bloor Street East, Suite 815, Toronto, Ontario M4W 1G9).

	ABILITY	SYMPHONY	FRAMEWORK

NOW YOU HAVE THE ABILITY.

THE HARD ONE IS RIGHT TO FIND!

We've Got it at
ALPHA OMEGA
COMPUTER PRODUCTS

TURBO 10 HARD DISK PACKAGE \$949.00 *

- TURBO 10 is a 10 MB hard disk system, designed for the IBM PC®, to achieve IBM PC/XT® capacity, and full PC/XT compatibility.
- Access seek time 300% faster than IBM PC/XT® hard disk.
- Ideal with the use of serious application programs, such as Ashton-Tate™, 1,2,3 and Symphony™, Micropro Wordstar, etc....
- 13 month defective exchange policy, covering both parts and labor.
- TURBO 10 comes complete with all necessary interfacing and cabling, professionally written installation and user documentation.
- Speed, Convenience, Affordability, and Reliability...at Alpha Omega Computer Products we put it all together for you.

Corporate purchase orders are welcome. Please call for personal service on terms and quantities.

Contact your local dealer,
and ask for the TURBO 10.
or call:

**(213)
(818) 345-4422**

18612 Ventura Blvd., Tarzana, CA 91356

All products are pre-tested before delivery, and are guaranteed for 13 months. Within this period, defective returns must accompany an RMA number. All other returns subject to a 10% restocking fee. Please include \$6 for shipping and handling. There will be an additional \$4 surcharge on COD orders. Calif. residents include 6.5% sales tax.

* suggested retail price

Letters

Finally, I never intended to imply that every small business should buy PC/Focus. Neither do I regard Focus as the ultimate fourth-generation language. But I stand by my contention that fourth-generation languages are the data processing workhorses of the future and that PC/Focus is an extremely powerful product with a few unsettling idiosyncracies and a terrible manual. —Warren Sirota

The Lonely LAN

In "Six Leading LANs" [PCW, February 1985] why was there no mention of NBI's Multinet? It is a proven, top-rated system, offering features and capabilities unmatched by most LANs.

James Lee
Cleveland, Ohio

The article in question focused on a select handful of the approximately 225 local area networks now on the market. Each of the six LANs reviewed is an entry-level offering from a market leader in the PC-based LAN field, and each company boasts an installed base of networks. The selection was not intended to be comprehensive but rather to offer PC World's assessment of products from a half dozen major players. —Ed.

What can you do with 1000 colors, a few pennies and a few minutes?

NCC '85

Create the best presentations you've ever made using slides, video or paper. With VideoShow,™ the only complete hardware and software presentation graphics system, you can:

- Create professional-quality charts and graphs yourself on any IBM® PC compatible, even if you've never before used a computer or made your own graphics.
- Use 1000 colors to brighten your images... hundreds of colors more than any other PC-based system.

■ Show your pictures on a color monitor or a video projector. VideoShow's quality and resolution are more than five times better than any PC graphics product available.

■ Add slides, overheads or paper copy in 1000 colors and professional-quality resolution.

■ Change the information in any picture as often as you like in minutes at no extra cost.

■ Save preparation time and expense because VideoShow costs less than a single slide show. Suggested retail price: \$3,499.

Find out how to use your PC and VideoShow to make your best presentations in minutes for pennies by calling 1-800-556-1234, Ext. 234. In Calif., call 1-800-441-2345, Ext. 234.

TAPE IT EASY.

Boy, are you in for a surprise. You know you need mass storage. And you know you need some kind of backup.

But what you don't know is that making a backup from your hard disk can take the patience of a saint. And tax the memory of an elephant.

Unless, of course, you have a little TLC. The new TrimLine Combo from Corvus. You get mass storage (20 Mbytes). The incredible speed and efficiency of a hard disk. And an integral tape backup.

But there the similarity between a Corvus and anything else ends.

First of all, your TLC fits in beautifully. Between your IBM PC's monitor and base. No bulky boxes. And no clumsy cables and wires to trip over.

Next, you get the world's easiest tape

backup system. If you like using command lines, fine. The TLC will accommodate you. But if you're more interested in simplicity, just use one of the TLC's menus. And one of your fingers.

You can back up the entire disk. All your data for the day. A group of selected files. Or just one single file. As a matter of fact, you can back up whatever you want. Which will save you quite a bit of time and aggravation.

You'll also find backed up files in seconds with the TLC's Directory. No more searching an entire tape just to find one file.

Finally, you'll enjoy the backup speed of the TLC. There's no formatting of blank tapes (which can save you about two hours). And no worry about losing data to bad sectors the format has called good.

Scared? Don't be. Just tape it easy. Check out the TrimLine Combo from Corvus.

In addition to all the features, it's one of the lowest-priced tape backup systems you can find.

For more information and the name of your nearest Corvus TLC dealer, call (800-4-CORVUS).

CORVUS

ITSoftware

Uniquely designed for business needs . . . integrated software for decision support *and* data processing

Most integrated PC software can provide the quick answers that managers need in day-to-day decision-making. Quick budget projections. A graph of sales.

But for serious business use, software must offer more. Full support for the data processing applications that form the heart of corporate computing. And links to mainframes where critical data often resides.

ITSoftware offers eleven full-function packages that can stand alone or work together to meet your business needs.

ITSeries Programs

KeepIT™, the core of the series, is a menu-driven relational data base management system that integrates your applications . . . lets you share data and calculations with other ITSeries programs, with other popular PC-based software, and with mainframe data bases such as Martin Marietta's RAMIS II.

AskIT™ is a KeepIT front end that provides data base power at the touch of a finger.

CalcIT™ offers advanced arithmetic and graphing features in a powerful 3-D spreadsheet.

WritIT™ is a private label release of MultiMate with the power of a dedicated word processor on a PC.

ShowIT™ provides state-of-the-art business graphics.

StatIT™ offers a complete array of statistical routines.

LinkIT™ is a menu-driven asynchronous communications package offering PC-to-PC or PC-to-mainframe links.

PassIT™ offers high-speed bisynchronous file transfers between an IBM mainframe and a PC.

SortIT™ is the fastest sort/merge utility available for a PC.

EditIT™ is a full-screen color program editor with easy-to-use windows.

CallIT™ offers a network-based telephone messaging and calendar program that's especially easy to use.

For IBM, IBM-compatible, and MS-DOS microcomputers.

ITSoftware . . . ask for IT by name.

For more information, return the coupon below or call us toll-free at (800) 222-0592. In New Jersey, call (609) 799-7500.

We'll send you our free brochure.

PC WORLD

Me and My Shadow

Compaq is successfully vying with AT&T for the affections of corporate buyers who'd rather not try IBM.

It just may evolve into a rite of spring.

Twice now, AT&T and Compaq have unveiled major, strikingly similar products within hours of each other. This past March, AT&T's UNIX PC and Compaq's TeleCompaq said hello to the world virtually in unison. Both products marry the computer to the telephone in quest of an elusive, but supposedly lucrative, market for integrated voice/data (IVD) capability.

PC World View reports new developments in computer technology, items of interest to computer enthusiasts, and the most significant and enticing insights about industry trends and personalities. We've reserved the "Grapevine" section of this column for industry reports that are still at the speculative stage.

—Ken Greenberg

View

News and notes for the computing community

This funny coincidence reminded me that it's been a year since last summer's opening skirmish, which began a tendentious and expensive campaign to supply the corporate exception to IBM. Last month Compaq's Deskpro and AT&T's PC 6300 marked their first birthdays on dealer shelves and executive desk tops.

As fiscal realities whittle down the number of manufacturers in IBM's ring, and as Fortune 500 buyers line up behind the few viable alternatives to the PC, the XT, and the AT, these two disparate contenders find themselves squaring off aggressively. Based on the available evidence, round one clearly went to the upstart from Texas.

This is a tale of two machines, one market—albeit two sometimes indistinguishable machines. Ticking inside both the Deskpro and the PC 6300 is Intel's 8086 CPU; both computers support text and graphics on the same monitor; both occupy the same niche as high-performance alternatives a step above the PC and the XT and

a step below the AT. The two are similarly priced; the Deskpro ranges from \$2495 to \$7195, the PC 6300, from \$2745 to \$6170. Even marketing ploys for the two machines strike similar chords: some dealers who carry both have priced and promoted them as if they were interchangeable. And in paired promotional tactics, AT&T gave its top dealer free tickets and an expenses-paid jaunt to the Super Bowl; Compaq delivered a BMW 325E sedan to its favorite retailer.

But sales figures tell all. By December 31, the Deskpro was out-selling the PC 6300 by 1.5 to 1. AT&T had reportedly projected first-year sales of 250,000 units; carve that down by a factor of 10 and you're close. The former Ma Bell shipped some 29,000 units, according to Dataquest, a San Jose-based market research firm. On the other hand, Dataquest reports, Compaq exceeded its 40,000-unit goal by 2000 machines. And Dataquest's preliminary figures indicate the trend will continue this year, with Compaq selling 167,000 machines to AT&T's 87,000. (The Dataquest estimate does not take into account the market's response to Compaq's new 286 family.)

The crucial distinction between AT&T and Compaq is marketing. Compaq is good at it, AT&T isn't—at least not yet. Compaq sells computers exclusively through the dealer channel. AT&T uses both dealers and direct sales, which compete with each other but, if delicately balanced, can offer a double whammy in revenues. While AT&T bungled the balancing act, Compaq courted dealers, found out what they ate for lunch, considered their every need—and offered irresistible margins. Everyone knows AT&T, but name recognition must be attached to something; Compaq's blossoming recognition counted for a great deal more than three initials with no track record in personal computing.

Most observers initially expected a clash of the titans rather than a sideshow of elephant versus mouse. AT&T, \$33 billion strong, seemed primed to go head-to-head

(continues)

Me and My Shadow (continued)

against IBM, at \$46 billion and counting. "Here's a company that can afford to sit there and blow money all day long," says Dataquest analyst Peter Teige. Indeed, AT&T bought its way into the personal computer business through 25 percent ownership of Ing. C. Olivetti & Company, manufacturer of the PC 6300. But Teige and other analysts are still wondering whether AT&T's conservative management style is sufficiently fast and flexible to succeed in the personal computer business.

Compaq benefited from a quick start. At COMDEX Fall, Compaq president Rod Canion estimated Deskpro sales at 5000 per month, and product marketing vice president Mike Swavely reported counting 800 dealers the day the Deskpro was announced. That's substantially more than the 97 Teige tallied for AT&T on release day. AT&T has since cranked up to 900 dealers, a number it hopes to increase to 2000 by year's end. Compaq dealers reportedly now exceed 1000.

Part of the initial problem was AT&T's approach. Jan Lewis, senior analyst for the market re-

search firm InfoCorp, recalls a major dealer who expressed interest in the PC 6300 and was subsequently deluged with 17 forms inquiring why he was worthy of carrying the machine. Seymour Merrin, chairman of Connecticut-based ComputerWorks, offers a somewhat different lament: "No one bothered to come by and talk to me. AT&T's marketing act is not together. It has no real commitment to the dealer channel. You can trust Compaq." Businessland cofounder Enzo Torresi says his firm looked at the PC 6300 when it was introduced but backed off because the AT&T machine seemed superfluous. Dealers also are irked by the discounts AT&T offers large corporate customers through its direct sales force. These reductions range from 10 percent with the purchase of 5 to 9 machines, to 40 percent for 1000 machines or more.

Evidence indicates, however, that AT&T has begun to catch on to the dealer side of the equation; recent reports suggest margins may have crept above those of Compaq and IBM. That trend tends to confirm suspicions that AT&T is dead serious about the MS-DOS marketplace. Based on figures from Adscope of Golden-dale, Washington, which tracks computer-oriented advertising, during the last half of 1984 AT&T spent \$4.3 million in print advertising for the PC 6300, compared with Compaq's \$1.4 million

for the Deskpro. But the big bucks wound up on the tube. In its first deregulated year AT&T peeled off nearly \$27 million for television ads, ranking as 1984's third-highest spender in the computer sweepstakes (behind IBM and Apple). Compaq placed eighth, dishing out \$9 million, according to the Television Bureau of Advertising.

In AT&T's brash ad campaign launching the PC 6300, the machine is plopped in the middle of a game board, and the adjoining text celebrates the telecommunications king's century-long tradition. Are we playing monopoly? It's not clear. "Now the game begins," AT&T informs consumers. Someone should remind AT&T that no one's starting from scratch in this game. —Jane Ferguson

Postscript: *PC World* Technical Editor Karl Koessel recently endured that post-AT&T-dissection ritual of obtaining telephone service from a Baby Bell and a telephone from what's left of Mother. Koessel wasn't surprised to see AT&T staffers plunking away on NCR hardware, but he raised an eyebrow—and a smile—at Pacific Bell employees equipped with PCs ... from IBM.

Grapevine

Spreadsheets

Just when you thought you were safe from compatibles, work-alikes, and copycats, it's time to gird yourself for a new round of cheap (but potentially worthwhile) imitations. It's the summer of 1-2-3 clones, so be on the lookout for releases from the aforementioned Paperback Software and Borland International. At under \$100 each, these packages may force even 47th St. Photo to duck.

Jr Redux

According to a technical writer we know who possesses impeccable connections with IBM, PCjr production will resume eventually, although the machine will probably be sold under a different guise. This information meshes nicely with a report that layoffs at Tele-dyne—actual manufacturer of the late, lamented Jr—were not as extensive in the Jr division as was first reported.

It seems that a number of companies that had ordered the Jr in bulk were particularly irked by the machine's abrupt cancellation; they promptly received assurances from IBM that Jr would rise again.

Rubbing Two Chips Together

When you're a Boy Scout and you're camping out under the stars on a cold night, there's nothing quite like the glow of a warm CRT to take the chill off the evening. Assuming you're supported by plenty of floppy disks and a surge protector, you can brave the elements with ease—and earn that merit badge in computing.

Twenty San Francisco Bay Area Boy Scouts embarked on precisely that quest a short while back, converting the roof of a 45-story Financial District skyscraper into a high-tech bivouac dubbed Sky-camp. The three-day foray into the urban wilderness ranged from the traditional—cooking, pitching tents—to the esoteric—meteo-

rology, astronomy, communications. Training Works, an arm of ComputerLand San Francisco, developed the Scouts' computing regimen. These hardy would-be hackers received a smattering of computer history, architecture, and languages and topped off their research with exercises in programming. Thirteen Scouts ultimately descended with merit badges in hand.

Next thing you know, SYSOPs will be angling for Scout Master.

Honk if You Love Lotus

The best-laid plans of software companies don't always compute.

Last year Lotus Development ran a promotional contest to determine which of its authorized dealers could sell the most copies of *1-2-3*, the company's popular spreadsheet program. The prize, appropriately enough, was the company's wire-wheeled namesake, a crimson Lotus coupe.

The results confirmed that New York City's 47th St. Computer, a division of 47th St. Photo, had moved more copies of *1-2-3* than any dealer in the country. Imagine Lotus's surprise when the largely mail-order concern turned out to be a sometime participant in the notorious "gray market"—that netherworld between authorized distribution and outright bootlegging where discounts are deep enough to give software developers gastric upset. According to a spokesperson for 47th St. Photo, Lotus delivered the car anyway, quietly consigning its faux pas to history. Lotus declined comment on the episode.

Last we checked, 47th St. Photo, which has slid in and out of the gray market, has apparently again gone gray. The company's frequent spreads in the *New York Times* advertise *1-2-3* at a "special" undisclosed price.

OptionWare's Oops

"Never," says Murphy of Murphy's Law, "write anything down that might go into a 'Pearl Harbor file.'"

Someone should have whispered that to the earnest programmers at OptionWare. The company's product line includes roughly 60 *1-2-3* templates on everything from budgets to sales. If the prospect of using *1-2-3* fills you with fear and trembling, OptionWare's just the ticket: it tames Lotus effectively (see *From the Software Shelf* in this issue).

During the course of ripping through *1-2-3*, the OptionWare developers compiled a lengthy list of Lotus offenses—and left it on a demo disk under the file name *Wishlist*. That disk recently found its way, innocently enough, to *PC World*.

The OptionWare litany includes detailed recommendations for exterminating bugs and enhancing *1-2-3*'s data functions, graphics, programming, and macro capabilities. It's just a shame the folks at OptionWare neglected, in a few places, to heed their own advice.

Item one: OptionWare sincerely wants *1-2-3* to be able to export

records to another source, such as a data base; *1-2-3* can import data, of course. OptionWare can do neither.

Item two: OptionWare would like the capability of reassigning <F1>, the *1-2-3* help key, to be its own help facility; pending that, OptionWare opted to drop *1-2-3*'s help menus but didn't bother to replace them with adequate help screens of its own.

Item three: OptionWare would like Lotus to expand the means of defining the dimensions of a worksheet (to print in segments, for example). OptionWare, however, wasn't able to overcome this deficit; its templates lack a meaningful way of eluding the web of macros that form the foundation of the program. Accessing portions of a worksheet directly can't be done without invalidating the macros themselves.

In hindsight, a Range Erase might have been a prudent fate for *Wishlist*.

The Big Fix?

Are the big boys of computer retailing purposely bypassing products from software vendors whose pricing they consider too low?

Adam Osborne is miffed. Packages from Paperback Software International (PSI), Osborne's latest venture, aren't showing up on ComputerLand's shelves, and he's making his gripe public. He claims that the mammoth chain's corporate office has snubbed PSI's product line because its price range—\$19.95 to \$69.95—is “too low to fit into their current marketing plan.”

Ron Ogg, PSI's executive vice president, suggests the move is part of a trend that tends to shut out bargain-basement vendors. (Bookstores are PSI's preferred channel of distribution.) Retail profitability appears to be the key issue. “Major retail chains like ComputerLand don't want to carry low-priced, high-quality software that might compete with

a similar but higher-priced product,” Ogg says. He reports that Entre Computer Centers and Businessland have likewise given Paperback's products a cool reception.

PSI isn't alone. Borland International, which has made a bundle selling lots of product for not a lot of money, has experienced similar difficulty in distributing its popular line to some major chains. According to a Borland insider who asked not to be identified, “We were surprised that ComputerLand, Businessland, and some of the other big chains were reluctant to deal with us on the corporate level. But most stores are used to getting incredible markups on high-priced software. With us, they feel they're not making the profit they should be.”

ComputerLand says its decision not to carry PSI stems from the product line's content, not its cost. Dianne Douglas, ComputerLand's manager of public relations, doesn't dispute PSI's contention that its products don't jibe with the chain's marketing strategy. “Pricing is not the issue,” she says. “From a business standpoint we see no reason to add PSI, because its products contain no significant features to distinguish them from packages we already carry.” At the same time, Douglas notes that ComputerLand's buyers “disagree

with the concept of PSI and feel that the company cannot compete successfully with our existing products.” ComputerLand does, however, stock *SideKick*, Borland's runaway hit.

At Businessland, corporate communications director Susie Crocker acknowledges that her company stocks neither Borland nor Paperback products. “Every product we carry is evaluated by the same criteria—and price is not one of the factors we consider,” Crocker explains.

For Robin Tygh, Borland's director of corporate communications, this current tiff illuminates the larger issue of how—and at what level—software should be priced. “Since we've been dealing with ComputerLand for some time now, pricing is no longer an issue,” she says, “although it was early on. Our products weren't taken seriously because they were priced low. We think there's an inkling of a trend here: software prices are starting to come down.”

Buyer prepare. —*Wes Nihei*

An Altered Mindset: Too Much, Too Soon?

It was supposed to be the definitive graphics engine, the perfect marriage of PC compatibility and cutting-edge technology. Born about the same time as the Mac, it shared magazine covers with Apple's pride, got great press, even won a home in New York's Museum of Modern Art—and then all but disappeared.

It was and still is the Mindset PC. When Mindset Corporation priced its machine well above the less artistically endowed competition, it bet on the importance of graphics in the PC marketplace—and lost. The Sunnyvale, California, company recently reorganized, cut its 67-member staff by half, and, in the words of company spokesperson Chris Berg, “scaled back our expectations.”

According to Berg, Mindset relied on the imminent introduction of products like *Microsoft Windows* to spotlight the machine's graphics capabilities; the Mindset can handle the graphics needs of windowing programs with speed and grace. But *Windows* isn't out yet, and the crowd awaiting the fireworks has given up and gone home. Berg also notes that soon after the product's introduction in March 1984, “market positions changed considerably. The supply of IBM PCs swelled tremendously, and it became very tough for a non-brand-name machine to succeed” (see *Compatibles Update*, PCW, March 1985).

As Mindset's sagging fiscal posture became public, industry scuttlebutt hinted at a possible reunion with Atari, the firm from which Mindset cofounders Roger Badertscher and Bruce Irvine hailed. Word was that Atari chief Jack Tramiel would acquire Mindset—perhaps to counter Commodore's dazzling-but-unseen Amiga—but merger talks ultimately fizzled. In the absence of a buy-out, Mindset went back to its marketing drawing board.

The Mindset PC was originally sold alongside other PC compatibles in 120 outlets nationwide, with CompuShop a major retail vendor. Mindset also wooed ComputerLand franchisees and won shelf space at a few southern California stores. But shelf space wasn't enough: most dealers had neither the time nor the expertise to show the computer's capabilities to best advantage. Mindset's new policy, based on what Berg calls “natural selection,” is to remove the machine from retail channels and concentrate exclusively on the only outlets where it has sold well—value-added resellers (VARs) catering to vertical markets.

“Our typical buyer wasn't the kind of person who would walk into a computer store,” says Berg. Mindset customers were interested in graphics, not computers, and the machine's PC compatibility was “tertiary in importance” to its potential market. (In hindsight, Mindset's refusal to tailor its machine to the business graphics

market may have been its downfall. One of this year's hot items—the VideoShow 150, a dedicated computer that excels at presentation graphics—is aimed straight at the hearts and aesthetics of the Fortune 500; see “Show Business,” PCW, June 1985.)

Instead of stressing its product's kinship with the PC, the company intends to cultivate a following by playing up features like the computer's sophisticated video production system. Berg cites design departments in universities and CAD (computer-aided design) markets as possible founts of interest.

Is the design-and-draw market sufficient for the Mindset? Berg thinks so. “We have a much smaller organization to support,” he says wistfully. —Darcy DiNucci

A \$39 training program can get your \$3900 computer out of the closet

The computer is a wonderful invention. But the truth is that computers are not as easy to use as you've been told. In fact, a recent independent survey found out that 60% of computers in corporate America today see little or no use. ATI thinks its skill-based training programs are the answer. For as little as \$39.95, anyone can learn how to operate a computer in less than two hours—without attending a class or reading a technical manual.

Over 500,000 users have happily achieved computer literacy with ATI. In fact, ATI was voted the Educational Product of 1984 in a highly publicized survey. So, whether it's training for 1-2-3 dBASE III or getting started with your PC, look to ATI.

You can find ATI training programs at your nearby computer store or use the coupon below if your favorite program is out of stock.

Please rush me the following training programs:

To err is human; to backup with Irwin, divine.

Let's face it—people make mistakes. And even when people are near-perfect, accidents do happen. Hard disks fail and software bombs. Power fluctuates and files disappear.

There isn't anything you can do to prevent the loss of information... except be prepared for the inevitable.

That's why we developed the Irwin BACKUP™ Tape Subsystem. It provides a fast, inexpensive way to copy data. So easy you'll use it every day.

Whether you own a PC-XT or the new PC-AT; whether you need to store 10, 20, even 40 megabytes of information, we have the backup for you.

The Irwin BACKUP is the perfect companion to your IBM PC-XT or PC-AT. It's color coordinated to match your PC beautifully. Small enough to fit conveniently on your desk, it comes with a self-contained power supply, and 30 times the storage capacity of a

floppy. The tape cartridges are rugged, built to last.

Now there's no more crying over spilled milk (or short circuits). No more swapping floppies. No more costly mistakes. Because now the Irwin BACKUP Tape Subsystem backs you up with a heavenly combination: the reliability you need... for only \$995.*

Irwin Magnetics has installed over 30,000 drives worldwide. We back you up with integrity.

YOUR DAYS OF BUYING TERMINALS ARE OVER!

Now there's SmarTerm terminal emulation software for your IBM* PC, XT, AT or compatible system. All SmarTerm products offer comprehensive and exact terminal emulation, powerful ASCII and binary file transfer facilities, and include TTY mode to link you to The Source, CompuServe, Dow Jones, Easylink, Tymnet or other popular services. We've included features such as multiple setup configurations, XMODEM and PDIP*

protocol support, "smart" softkeys, plus European DOS support.

NEW! SmarTerm 220 supports A-to-Z and other software which requires DEC* VT220 terminals. It includes the full capabilities of **SmarTerm 100**: DEC VT102, VT100, and VT52 emulation. If you need VT125 ReGIS graphics support, choose **SmarTerm 125**. For Data General Dasher* D400, D200 or D100 emulation you need **SmarTerm 400**.

SmarTerm 100 now available for:

- DATA GENERAL/One • IBM PCjr
- TANDY 2000 • TI Professional

More than 25,000 users are already "hooked" on SmarTerm. Try it for 30 days with full refund privileges, and you will be too.

Persoft, Inc. - Madison, WI

Clear advantage!

This board will expand to 4 Megabytes, 4 serial ports and starts at \$395. That's only part of the story...

We love a good story. Better than that, we love a great product. After researching the expansion needs of AT users, we have concluded that the Basic Time AT4X4Plus provides the best array of standard features and upgradeability available. Compare the AT4X4Plus, feature by feature, to the AST Research Advantage!™ expansion board in terms of main board memory, total expansion memory, I/O capability, and price. You will then discover who has the clear advantage.

You Can Never Have Enough Memory.

That is the oldest saying in computers. Two years ago, customers asked us what they could do with 256K on a PC. How times have changed... AT4X4Plus can hold up to 4 Megabytes of memory—2 Megabytes on the board itself and 2 on the 4X4RamPak. An important feature for future multi-user systems.

The 4X4's "double split memory addressing" capability gives you the choice of using 64K or 256K RAM chips in the first bank of memory. A single row of 64K chips gives you 128K and is just right for the enhanced AT. Using 256K chips in the first row enables you to "max out" user memory to 640K on an unenhanced AT with a single row of chips. The remaining 128K will be available above the 1 MEG memory boundary. A first

row using 256K chips added to a enhanced AT will give you 640K user memory and 384K above the 1 MEG boundary. The memory above 1 MEG can be used by DOS 3.X for VDISK, a virtual ram disk. We think that a 512K board (a first row of 256K chips) is your best buy.

Want Real I/O Power?

Multifunction boards only start with memory. The AT4X4Plus comes standard with a parallel printer port and an asynchronous serial (RS-232C) communications port. Have more than one serial device? No problem, 3 more are optional, 1 on the AT4X4Plus itself and 2 more on the 4X4DualSerialPak piggy-back board. Need a game port for a joystick or mouse? It's also available as an option.

Your Satisfaction Is Guaranteed.

With apologies to AST Research's advertising, we think at least 4 out of 5 AT expansion board buyers want more capability at lower cost. The AT4X4Plus is the clear choice and we guarantee it. If you are not completely satisfied with your AT4X4Plus within 30 days of purchase you may return it for a full refund, including the freight to return it. And if you should ever have a problem during the twelve month warranty period, we will fix or replace your board within 48 hours of receipt.

AT4X4Plus Prices:

AT4X4-128 1 parallel, 1 serial, 128K	\$395
AT4X4-512 1 parallel, 1 serial, 512K	495
AT4X4-1MB 1 parallel, 1 serial, 1 MEG	695
AT4X4-2MB 1 parallel, 1 serial, 2 MEG	1095

AT4X4Plus Option Prices:

AT4X4-2S second serial port on 4X4 board	\$50
AT4X4-RAM 2 MEG 4X4RamPak	995
AT4X4-SER 2 serial port 4X4DualSerialPak	295
AT4X4-GAME game port	35
AT4X4-PCP preferred customer plan (24-month warranty, 24-hour repairs)	75

All prices include UPS surface charges. For fast delivery, send cashier's check, money order, or order by Mastercard/Visa. Personal checks, allow 18 days to clear. In a hurry? UPS Blue Label is just \$5.00. Company purchase orders accepted, call for prior authorization. California residents, add 6% sales tax.

The Help Screen

PC World offers answers and advice at every level

This month: fixing the 'ANSI.SYSSI.SYS' error, handling simultaneously OPEN BASIC files, patching WordStar for COM2:, linear programming packages, and a correction of April's discussion on transferring worksheet ranges.

Karl Koessel

ANSI Systemic

Q. I'm interested in using WordStar on my Key Tronic keyboard, which follows the Dvorak layout. I am, however, having difficulty accomplishing the ANSI.SYS keyboard redefinition as described in your January 1985 column. I believe I have accurately followed the directions to construct the CONFIG.SYS file; I've also Compared the original ANSI.SYS file on my DOS disk with the copy on the disk I am using. But when I boot that disk, the message 'Bad or missing ANSI.SYSSI.SYS' appears at the top of my screen. The command TYPE CONFIG.SYS displays the line 'DEVICE = ANSI.SYS', so I don't understand why I'm receiving this error message. Any ideas?

Maureen McClenman
San Francisco, California

A. Both DOS 2.00 and DOS 2.10 contain a bug that prevents them from finding a device driver file if an end-of-file marker (^Z) immediately follows the driver's file name in the CONFIG.SYS file. When using the command COPY CON CONFIG.SYS or COPY CONFIG.SYS + CON to create a CONFIG.SYS file for these versions of DOS, remember to press the <Space> bar or the <Enter> key after entering the line *DEVICE = ANSI.SYS* but before pressing <F6>. This ^Z bug has been eliminated from DOS 3.00. To fix your CONFIG.SYS file so DOS 2.00 or 2.10 can read the driver's file name, place your disk in drive A: and type **COPY CONFIG.SYS + CON**, press <Enter> twice, press <F6>, and press <Enter> once more. Reboot the PC, and the ANSI.SYS driver will be installed.

If you're curious about reassigning <Ctrl> key combinations, you may be interested in a note I received from C. J. Puotinen, author of *The Last Word on WordStar, Using the IBM PC: WordStar*, and *Using the IBM PC: Multi-Mate* (Holt, Rinehart & Winston, New York, 1984). Ms. Puotinen reports testing several Dvorak conversion programs and finds PC-Pedal from Brown & Company to be an elegant solution (\$59.95, P.O. Box 2443, South Hamilton, MA 01982, 617/468-7464). She describes PC-Pedal as "a foot pedal/software combination that allows the <Ctrl> key (or any other state key, such as the <Shift> key or the <Alt> key) to be activated with one's foot. For fast typists using any keyboard with any program, the foot control is a time-saver; for WordStar users, who must depress the <Ctrl> key with every letter-key command, it's especially convenient."

BASIC Switches and Concurrently OPEN Files

Q. My problem concerns a batch file that calls a BASIC program. Here's a portion of that batch file:

```
:  
SORT /+ 15 <A:SUBCEN.DAT  
> B:BAIN.DAT  
BASICA BARPT  
SORT /+ 73 <B:BAOUT.DAT  
> B:CASE.DAT  
BASICA /F:7/S:512 CASRPT  
:
```

The batch file works fine until it encounters that last line. Isn't it possible to call a BASIC program from DOS, as shown in the second line, and still use the BASIC

(continues)

LOTUS PRESENTS THE SYMPH

The evolution of American business has entered a new stage. It takes a new style of management to successfully conduct business in this rapidly-changing world.

• That is why Lotus® created Symphony.™

THE ULTIMATE MANAGEMENT TOOL.

Symphony is just what its name implies—a symphony of essential tools for managing a company in the age of advanced technology. It is five-function software

for the PC—including spreadsheet, word processing, database, graphics, and communications.

And since these can be used separately or can work together in any combination, Symphony can grow with you.

You can even tailor Symphony to meet your needs. And since times change, so does Symphony. With new enhancements and accessory products. Which means that Symphony could be the only business software a manager will ever need.

A MANAGER IS A CONDUCTOR.
HE MUST LEAD, ORCHESTRATE, PROJECT,
COMMUNICATE, CONTROL, PERFORM
AND THEN, TAKE THE BOWS.

ONY STYLE OF MANAGEMENT.

THE NEW WAY TO CONDUCT BUSINESS.

Symphony allows you to command the endless streams of information that must be analyzed for today's decision-making. It lets you harmonize the logistics of production, distribution, sales, and marketing. It allows you to communicate more creatively, more forcefully. It gives you a better idea of what tomorrow will bring, and a better chance of getting it done

when it has to be done yesterday.

Start practicing the Symphony style of management yourself. Visit your authorized Lotus dealer today.

Circle 223 on reader service card

switches /F (to set the maximum number of files that may be OPEN simultaneously) and /S (to set the file buffer size to match the maximum record length the BASIC program uses)?

James V. Maier

Charleston, West Virginia

A. You can use BASIC's switches and a file name with the DOS commands BASIC or BASICA, but the name of the BASIC program you're calling must be the second parameter on the DOS command line. The last line of your batch file excerpt should read

BASICA CASRPT /F:7/S:512

You can also include <stdin and >stdout redirection when calling a BASIC program with switches. Unlike the first line of your batch file excerpt, however, the redirection parameters in a BASIC call must precede the switch parameters.

You will also need to include the line `FILES = 11` in your CONFIG.SYS file. The `FILES = x` parameter sets the number of simultaneously OPEN files by reserving enough RAM for `x` file handles. (When a program wants to use a file, that file is assigned a handle. All file accesses—reads, writes, and closes—can then be performed by telling DOS which file handle to use. But because DOS uses three file handles for `stdin`, `stdout`,

`stderr`, `stdaux`, and `stdprn`, and BASIC uses one more file handle for the LOAD, SAVE, CHAIN, NAME, and MERGE commands, the `FILES =` parameter in the CONFIG.SYS file must be set to exceed by four the number in BASIC's /F: switch.

WordStar Seeks Port

Q. I recently added a Hayes Smartmodem 1200B internal modem board to my PC. I'm using the modem primarily to communicate with my bank. The bank's software requires that the modem be addressed as COM1:. Before I bought the modem board I was using WordStar 3.3 to run a Canon AP 300 typewriter from a serial port designated as COM1:. I switched my system's serial port to be COM2: and changed my AUTOEXEC.BAT file's printer port reassignment command to `MODE LPT1: = COM2:80,6,P`. Now, however, I find that WordStar does not print on the Canon AP 300. The problem seems to lie with WordStar rather than with the hardware, because both <Shift>-<PrtSc> and BASIC print to the typewriter. How can I get WordStar to print through COM2:?

The Rev. John Mariano
Jamaica, New York

A. With a bit of tinkering, WordStar will print through COM2:. WordStar's program file, WS.COM, contains two bytes that determine the serial port for print-

ing. You simply need to change the 0 (for COM1:) in each of these bytes to a 1 (for COM2:). To do so, place a copy of DEBUG.COM (the original of which can be found on the DOS *Supplemental Programs* disk) in drive A: and a copy of your WordStar disk in drive B:. (Using a copy is advisable because you may one day need the original to print through COM1:.) Type A:DEBUG B:WS.COM <Enter>. When you see a hyphen, DEBUG's prompt, type E81E <Enter>. A string of numbers ending in '00.' will be displayed. Type 1 <Enter>. The DEBUG prompt will reappear. Type E833 <Enter>. Another string of numbers ending in '00.' will be displayed. Type 1 <Enter>. When the prompt appears again, type W <Enter> Q <Enter>. This patched version of WordStar will now print to your typewriter on COM2:.

Getting Linear

Q. My company mines kaolin clays and produces a pigment used by the paper industry. In our process, different clays are blended and then benefited by plant techniques. The blends consist of components of varying qualities, and we use a computer to ensure that these blends meet certain specifications. At present we perform this analysis through time-sharing on a mainframe.

Let David Rose tell you about our powerful new ProKey4.0.

David Rose, inventor of ProKey.

Spend 2 minutes learning how to add a powerhouse of function to your keyboard with a terrific new version of ProKey!

"Suddenly others have discovered what RoseSoft has known since we invented the ProKey concept. If your keyboard could work a whole lot harder, your life would be a whole lot easier.

The original idea behind ProKey was a program that would let you store strings of keystrokes you could recall at a touch. Now there's ProKey 4.0 and it's better than ever."

ProKey 4.0 keyword macros unsnarl PC use.

"If you're a serious PC user, you probably use a variety of software programs. Spreadsheet. Word processing. Database. Communications. Plus the special-function programs you use to run your business or department.

And all these programs have different complicated commands that are tedious to type and easily forgotten. How much easier life would be if all you needed to operate your program was a small vocabulary of sensible words.

Want to log onto Dow Jones with your communications package to check on how your IBM stock is doing? Just type the keyword you previously selected for this function, "IBM". Need to print a profit and loss statement? Typing "p&l" is all it takes.

Behind the scenes, ProKey 4.0 checks its memory for the string of commands required to carry out the task and executes them automatically. Forgotten what functions you have available? Just call up the built-in menu that describes them in plain English.

Need to add a function? Enter the commands. Enter a description. Store them both away without leaving the program you're working with.

Built-in editing, English language menus, multi-character macro names and the ability to instantly change sets of functions. These are just four of the exciting new features that make ProKey 4.0 the most powerful macro processor you can buy."

ProKey 4.0 lets you customize your keyboard.

"Only ProKey has the unique Layout program that lets you redesign your keyboard to correct design flaws the manufacturers built in. You can change the location of any key, create a DVORAK layout, or make a duplicate set of arrow keys away from the keypad."

ProKey Is the Industry Standard.

"ProKey has all the features you need to make your life a whole lot easier. And RoseSoft has three years experience supporting customers who use macros. Including over 80% of the Fortune 100.

Don't be misled by the recent claims of ProKey imitators; they're comparing themselves against old versions of ProKey.

The choice is simple. Do you want an unknown, untested product in its first generation, or ProKey 4.0's power and features? The difference in price will hardly pay for dinner. The difference in performance is like night and day."

ProKey 4.0 runs on IBM and other compatible MS-DOS computers, and works with 99% of the software they use. \$130 suggested retail price at software dealers everywhere. Or call RoseSoft. (206) 524-2350.

Seattle, WA 98105
(206) 524-2350

**“...okay, okay,
so I can't get it cheaper,
but what about service
and technical advice?”**

“Pal, our service department is top drawer!”

Price is important when you make a commitment to purchase PC hardware, software and peripherals. But sound advice and good service are equally essential.

As a PC user or corporate micro manager, you have the right to expect first-rate treatment from your PC vendor. Treatment that includes fast response to service requests. Regular product information updates. And immediate answers to your technical questions.

One company makes it easy for you to obtain the kind of service and support you deserve.

is Applied Computer Products.

APPLIED COMPUTER PRODUCTS, INC.
1633 Republic Road
Huntingdon Valley, PA 19006

Think about it...what you need

OUR NAME SAYS IT ALL . . .

Applied Computer Products. The key word is "Applied." It says we take your business computer application seriously and provide a kind of service you just cannot get from most other telemarketing firms.

You need expert analysis and advice on systems, knowledgeable recommendations for applying the right equipment to solve your business problems. You need this service *before* you purchase hardware, software and peripherals.

And then, you need worry-free operation and an ongoing commitment to service from a company that's fully capable of delivering it!

CONSULTING . . . Problem solving is what sets us apart from the other telemarketing and direct retail companies. We don't just take orders.

Due to space limitations we cannot list all of our more than 700 products so, to find out how competitive we are in a fast changing market, call for an up-to-date price quotation on any item. We'll send you a free catalog!

SPECIALS

Word Perfect	\$245

We apply our knowledge and experience to analyzing the special needs of your business and recommend a system of hardware and software components best suited to perform the job. And we do it in a manner that describes our proposal clearly and precisely.

ON-TIME DELIVERY . . . We fulfill the order accurately and ship on-time! We never make promises we can't keep. So, you'll be given a realistic date for delivery . . . usually an early date, because we stock a comprehensive inventory.

COMPETITIVE PRICING . . . Purchasing in large volume gives us an advantage, and we pass that advantage along to our customers. So, you don't have to be concerned about paying for our extraordinary service. It's the thing that gives us a competitive edge, it's our difference.

OUR POLICY

- VISA or MC, no surcharge.
- Pre-approved company check, certified check or COD.
- Allow time for company checks to clear.
- Volume purchase agreements available. Government, corporate and institutional PO's accepted.
- Call for shipping charges. No additional charge for split shipments.

TECHNICAL SUPPORT . . . Our dedicated support team is available to answer any of your questions and to provide continuing service *after* your purchase. Installation, setup, on-site problem solving and exchange or repair service are vital parts of our customer commitment.

WARRANTY AND MAINTENANCE . . . We are a factory authorized maintenance center for hundreds of products. The warranty on any equipment is at least 90 days parts and labor. If you encounter any problems just call our technical department for a prompt resolution.

Just a few of the reasons why you should call now and learn what a difference "Applied" makes when a company stakes its name on it.

- Full warranties, up to 5 years on many products.
- Orders subject to availability. Prices subject to change without notice.
- Returns may be subject to restocking fee.

TRAINING

YOUR WINNING TEAM FOR HIGH QUALITY PRINTERS

FX 80 +

A versatile workhorse. Epson's SelectType feature puts over 160 character fonts with 9 different types and 2 utilities at your fingertips. Create up to 256 personalized characters... print charts and graphs in a choice of six densities from 60 to 240 dots per inch... even mix text and graphics on the same line. Optional single-bin cut sheet feeder and NLQ board (32 cps Roman and sans serif).

- 160 CPS, bi-directional
- 2K RAM print buffer
- uses single sheet or pin feed paper
- logic-seeking electronics yield 20% faster throughput

FX 100 +

Get down to better business with Epson's new wide-carriage FX-100 + printer. One-touch SelectType makes choosing typefaces easy. For company forms or letterheads it prints fanfold or individual sheets 4 to 16 inches wide. The FX-100 + prints originals and three carbons—even mixes text and graphics on the same page!

- 160 CPS, bi-directional
- logic-seeking electronics yield 20% faster throughput
- built-in 2K buffer lets you compute as you print
- 136 columns wide for spreadsheets and ledgers

LQ 1500

Upgrade your office with one of Epson's best. The LQ-1500 is two in one—a high-speed draft printer and a high-quality letter printer. Its 24-pin print head produces letter quality type indistinguishable from an office typewriter at speeds almost four times that of an average daisy wheel printer. Optional tractor feed and single-bin cut sheet feeder.

- prints reports at 200 cps in draft mode, 67 cps in LQ mode
- amazingly high-resolution graphics

EPSON and Applied Computer Products

Applied Computer Products and Epson have teamed up to bring you versatile Epson FX-80 +, FX-100 + and LQ-1500 printers. They're in stock right now, ready for immediate shipment to anywhere in the U.S.

Applied Computer Products backs each unit with a comprehensive support program that includes prompt, free technical assistance, a liberal return policy, and thorough pre-testing of all equipment, at no cost, before it leaves our warehouse. In addition, we offer some of the industry's lowest Epson prices and best quantity discounts.

As an authorized Epson maintenance center, we

can provide fast, quality service on any Epson printer, whether purchased here or elsewhere. And, Epson's one-year printer warranty entitles you to service at any authorized Epson maintenance center in the U.S.

Call Applied Computer Products
at 1-800-223-3880.

In PA call 215-322-6500. Visa, MasterCard and C.O.D. accepted. Purchase orders accepted from qualified corporate institutions. Applied Computer Products, Inc. 1633 Republic Road, Huntingdon Valley, PA 19006.

Only an EPSON is an EPSON.

We're now interested in bringing this blending scheme in-house and running it on a PC. To accomplish this we need a linear programming package capable of providing solutions in integer form. Do you know of anything that fits this description?

John M. Grosshans
Sandersville, Georgia

A. I'm aware of three linear programming packages that may meet your requirements: *Maxmin*, \$100, from Nexus Scientific Software Corp., 4419 Dalgetty Hill NW, Calgary, Alberta, T3A 1J6 Canada, 403/288-5791; *Kinetics Linear Programming System*, \$45, from Kinetics Software, 3060 Scott St. #1, San Francisco, CA 94123, 415/567-5136; and *LP88—Linear Programming for the PC*, \$99, from Eastern Software Products, Inc., P.O. Box 15328, Alexandria, VA 22309, 703/360-6942. I encourage you to contact these companies for further information.

Valued Correction

Several sharp-eyed readers noted that the procedure described in April's column for copying a range from one 1-2-3 worksheet to another left something to be desired (see "Transferring Worksheet Ranges," *The Help Screen, PCW*, April 1985). If the range to be copied contains worksheet formulas, these formulas—rather than their

(continues)

Ever wish you could access data 200,000 times faster on your IBM Personal Computer?

Or IBM
compatible
systems

Now it's possible...with the new solid state
MegaRam-PC Disk Emulator.
(Worst case access time: 1.2 microseconds.)

The MegaRam-PC boosts your IBM disk drive accesses by more than 200,000 times. Provides dramatically increased performance. Compared to a floppy disk, the MegaRam-PC reduces access time by 267,000. Or, compared to a hard disk, it's reduced by 75,000 times.

Not only that, the MegaRam-PC
increases data transfer rates by 30 times.
(0.95 megabytes/second.)

The ideal solution for any disk intensive application: networking, graphics, process control, etc.

Just plug in the MegaRam and watch
your wishes come true.

With capacities from 2.0 to 16.0 megabytes, the MegaRam-PC is supplied with an I/O driver which installs into your IBM operating system. It responds like another disk drive and is compatible with existing software. A battery back-up option is available to protect stored data if input power is removed. A comprehensive error detection and correction option is also available.

INTRODUCING 5

**WE INTERRUPT
PRODUCT
BRING**

THIS MAJOR INTRODUCTION TO YOU SOMETHING REALLY IMPORTANT.

THE BIG NEWS IN DISK/TAPE IS PC/T, A SENSIBLE NEW APPROACH TO ARCHIVAL STORAGE.

We've tamed tape. And made it docile. By making it DOS-like.

So, while this started as an ad for our five new HardFile™ subsystems, which deliver 25 to 80 megabytes of hard disk storage and 60 megabytes of tape backup, instead we want to introduce you to PC/T™.

PC/T is a new format that makes tape a more sensible storage solution for personal computers. It puts tape on line, in real time, for instant access. And frees your hard disk for your most current data.

You already know how to use PC/T. Because it responds to standard DOS commands.

Here's the big news: just like any DOS-controlled hard or floppy disk, PC/T enables you to create directories and files on tape. Then you can call up the exact file you need, and change a portion of the tape without having to erase and overwrite the entire cartridge.

Without PC/T, you have to rewrite the entire 60 MB cartridge each time you make a single change.

With PC/T, you create and directly access files on tape, just like with floppy or hard disk.

PC/T formats each new tape cartridge, just like you format any hard or floppy disk, locking out bad blocks to assure that every bit of data you write to tape is recorded with utter accuracy.

What's more, PC/T gives tape true error correction capability. 50% redundancy during write operations ensures 100% reconstruction of data lost because of operator error, dust and dirt, or everyday wear and tear.

There is a catch. You can get your hands on PC/T just one way: Buy one of our powerful new HardFile subsystems. With disk plus tape. Or tape alone. Which brings us back to where we started. And gives you a place to start. Just call 1-800-228-DISK for the Tallgrass dealer nearest you.

**TALLGRASS SELLS MORE HARD DISK
STORAGE WITH CARTRIDGE TAPE
BACKUP THAN ANYONE IN THE
WORLD.**

Circle 294 on reader service card

current values—are transferred to the second worksheet. This does not solve the problem of transferring values.

Richard Bellin of Washington, D.C., offers the best solution. "The answer, of course, is to use the */File Combine Add* command," Bellin writes. "Because this command adds the value of the cells from the first worksheet to whatever is in the target cells in the second worksheet, it's a good idea to preface this command with a */Range Erase*, just to make sure that the cells in the second worksheet are empty."

To amend the procedure described in the April column, edit the macro for worksheet TWO to read

```
{goto}C22~
'/reC22..C72~
'/fcanTRANSFER LIST~
ONE~
{calc}
```

Do you have any questions concerning the IBM PC or compatibles? Send them to The Help Screen, PC World, 555 De Haro St., San Francisco, CA 94107, or electronically to CompuServe 74055,412 or The Source STE908. ☉

Make Stat Magic

Now for the IBM PC/AT*
with hard disk

Statistics, reports and plots happen magically with SPSS/PC™—the Statistical Package for IBM PC/XTs.*

SPSS/PC is the most comprehensive statistical package for performing simple or complex tasks, regardless of data size. It maintains feature and language compatibility with mainframe SPSS; while optimizing for the PC environment.

Statistics range from simple descriptive to complex multivariate, including Multiple Regression, ANOVA, Factor and Cluster analysis. Loglinear and nonparametric procedures are also included.

Simple facilities allow transfer of files between

SPSS/PC and programs like Lotus 1-2-3, dBase II and SAS. A complete Report Writer, Plotting facilities and a Communications program for mainframes round out a fully integrated product.

For more information, contact our Marketing Department without further ado. And see what a little stat magic can do for you.

Expand your network's horizon.

Functionality. Compatibility. Connectivity. Those are the requirements to effectively integrate PCs into your network. That's why CXI developed the CONNECTWARE™ 3270 Series.

Now you can emulate a 3270 PC, a 3278/79 terminal or a 3287 printer. You can attach your PC using coaxial cable to a 3274/76 controller, or via a synchronous modem emulating a 3274.

CXI even provides a uniform application program interface (API) across all of its products and also provides, on selected products,

CONNECTWARE is a trademark of CXI, Inc. IBM is a registered trademark of International Business Machines Corp. IRMA is a trademark of Digital Communications Associates, Inc. © 1985, CXI, Inc.

either the IRMA™ or IBM® 3270 PC API.

And you can have a consistent keyboard interface, screen presentation, windowing capability and file transfer software to meet your unique requirements.

For information about our CONNECTWARE™ 3270 Series of micro-to-mainframe solutions, call us at 800/221-6402. In California, call 415/424-0700. Or write CXI, Inc., 3606 West Bayshore Road, Palo Alto, CA 94303 TELEX 821945.

We don't have all the answers, just more of them.

CXI

From the Software Shelf

PC World offers first impressions of recent software releases

This month we delve into the splendors of tax preparation, learn to draw pretty pictures, boost WordStar's function key macros, and turn the PC into a high-class Selectric.

Edited by Darcy DiNucci

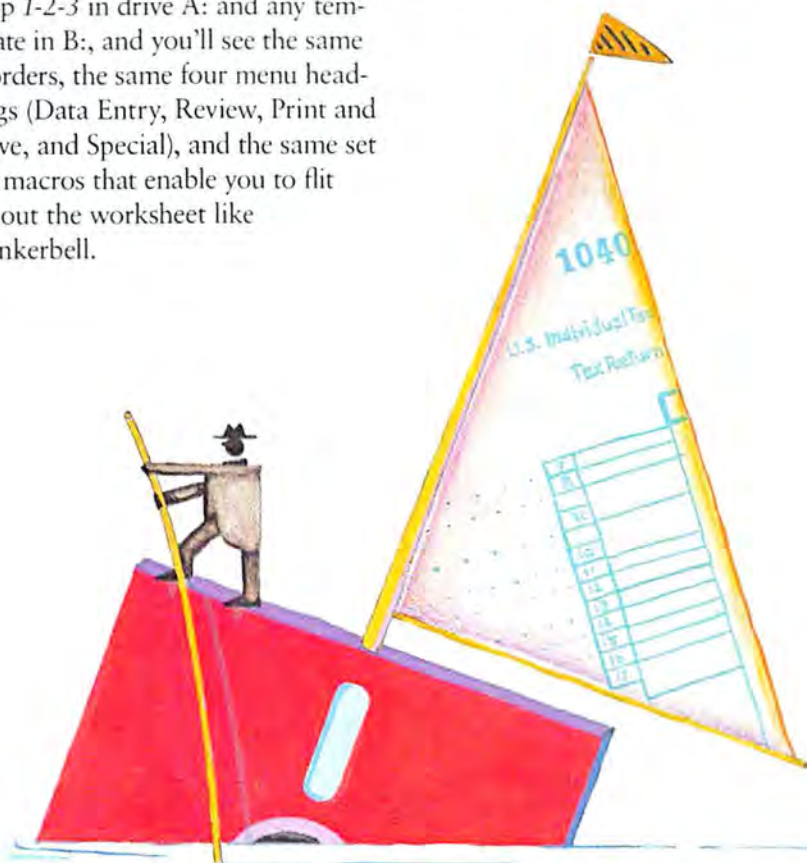

Personal Income Tax

April 15 is old news, but for some of us the panic lingers. If you were able to cajole the IRS into delaying the day of reckoning until August 15, listen up. OptionWare has a nifty little template that just might make income tax preparation—Uncle Sam's way of adding insult to injury—considerably less onerous.

OptionWare is in the business of domesticating 1-2-3 by providing spreadsheet users, particularly neophytes, with useful canned applications. At last count, the company's library of 1-2-3 templates topped 60, grouped according to such genera as financial statistics, sales and marketing, budget preparation, cash and asset management, and personnel maintenance.

OptionWare programs are appealingly simple and consistent. Pop 1-2-3 in drive A: and any template in B:, and you'll see the same borders, the same four menu headings (Data Entry, Review, Print and Save, and Special), and the same set of macros that enable you to flit about the worksheet like Tinkerbell.

Lacking a leakproof tax shelter and having no stomach for a face-off with an IRS auditor, I found the OptionWare *Personal Income Tax* template reassuring. Its prodigious appetite for RAM—a minimum of 512K, including room for 1-2-3—signifies that buried within the template are the voluminous 1984 tax tables. More visible is an amalgam of IRS forms and schedules seamlessly linked to one another. *Personal Income Tax*, I surmised, was cognizant of the fine print and assorted tax arcana that I, working alone, would invariably miss. As I gently fed it data, the template completed Forms 1040, 2210, and 6251 and Schedules A, B, C, D, and G. A program supplement includes Schedule E and Forms 2106, 2241, and 5695. For forms and schedules not fully provided, such as Schedule W, *Personal Income Tax* uses "calculation screens" to generate totals.

SAMNA EXPLODES MORE MYTHS

"PC'S JUST CAN'T MATCH THE POWER OF DEDICATED WORD PROCESSORS."

This myth is well grounded in fact. Because before SAMNA, it was true. But SAMNA Office Automation software can make a microcomputer outperform even the most advanced dedicated word processors in power, functionality, and user interface.

SAMNA delivers high-powered word processing features like screen-to-paper fidelity, with on-screen display of special formats. Split screen editing. Easy addition, deletion, and movement of text. Automatic merging of names and addresses into form letters. Automatic pagination and footnoting. Index and Table of Contents generation. Glossary of standard paragraphs with automatic insertion. Automatic search and replacement. Outline generation. Automatic spell checking and correction. Electronic fold to see both sides of a wide page at the same time. Zoom that shows the layout of a large page on your screen. Three levels of Help that guide you through every command. Extensive documentation and support. And much more.

SAMNA also offers the Seamless Integration™ of other functions for your other business needs. So it doesn't just match the performance of these old standards.

SAMNA blows them all away.

"PC WORD PROCESSING SOFTWARE ISN'T FAST ENOUGH FOR ME."

Until recently, PC word processing didn't run at hare-racing speed.

But SAMNA's Turbo-powered software is fast enough for even the most demanding word processing users. One demonstration will prove it to you. Very quickly.

ABOUT WORD PROCESSING.

**"WORD PROCESSING
HAS TO BE COMPLICATED
TO BE POWERFUL."**

Balderdash.

SAMNA makes powerful word processing on your PC as easy as I, II, III (and of course, +).

Even if you've never done *any* word processing before, SAMNA's Interactive Tutorial quickly teaches you how to get started. SAMNA's 3 levels of Help give you more information as you need it. The first level of Help reminds you of your next keystroke. The next level leads you through the function step by step. And the third level gives you a complete explanation. If you make a mistake, SAMNA automatically gives you the next level of Help. So you always know what to do. And if there's anything you can't solve with all that Help, you can refer to SAMNA's extensive user manuals. They're extraordinarily clear, and generously illustrated with screen shots.

You also get unlimited use of SAMNA's toll-free INFO-LINE for 30 days (extendable on an annual basis) and a free applications newsletter.

So no matter which SAMNA product you choose—from our basic Word I word processing to SAMNA +, our integrated office automation package—you're taking the easiest way out of your word processing problems.

You're in Good Company When You Program in BetterBASIC

All of these companies rely on BetterBASIC to write their software programs. They have found that BetterBASIC combines the features they need from BASIC, Pascal, C and Forth in one familiar environment. Some of these features include the following.

640K Now you can use the full memory of your PC to develop large programs.

STRUCTURED Create well organized programs using procedures and functions that are easily identified and understood and completely reusable in future programs.

MODULAR Use procedures and functions grouped together to form "library modules."

INTERACTIVE BetterBASIC acts like an interpreter, responding to the users' commands in an immediate mode. However, each statement is actually compiled as it is entered.

EXTENSIBLE Create your own BetterBASIC modules which contain BetterBASIC extensions (ideal for OEMs).

COMPILED Each line of the program

is compiled as it is entered into the computer's memory rather than interpreted at runtime. The optional Runtime System generates EXE files.

BetterBASIC Runs on IBM PC, IBM PC/XT and compatibles.

CALL 1-800-225-5800 Order BetterBASIC now, or write Summit Software Technology, Inc.,TM P.O. Box 99, Babson Park, Wellesley, MA 02157. Prices are listed below.

BetterBASIC: \$199 Runtime System: \$250
8087 Math Module: \$99

Still not convinced? Order the BetterBASIC sample disk which includes a demo, a tutorial, compatibility issues, 50 lines of BetterBASIC and more. Only \$10.

MasterCard, VISA, P.O. Checks, Money Order, C.O.D. accepted.

Better
BASICTM

ALSO AVAILABLE FOR THE TANDY 2000, 1200 AND 1000

Depending upon your patience, you can opt for either Full Tax, a meticulous guide through 45 separate tax categories, or Quick Tax, a 1040 estimator that doubles as an informal tax planner. Since completing an electronic form is no more thrilling than filling out its printed counterpart, both modules enable you to plug numbers into a series of blanks and let OptionWare put the figures where they belong. Full Tax and Quick Tax do not share data.

Both components provide superb summary screens, encapsulating at a glance your debt to Uncle Sam. Included are income summaries (total, adjusted, taxable, tax due), income breakdown, itemized deductions by category, and income averaging. Should you want to analyze the benefits of, say, income averaging, you can turn to *Personal Income Tax*'s graphing component—a snappy way to produce bar charts and line graphs without ever touching 1-2-3's Graph command.

You can print likenesses of IRS forms on plain paper or roll the genuine articles through your printer. (Watch out, though—*Personal Income Tax* truncates words on some printers.) If you'd prefer not to load the entire 231K template file, you can use regular 1-2-3 commands to extract chunks for printing.

Now the bad news. The flip side of OptionWare's "no training, no programming, no trauma" approach is, well, no fun. *Personal Income Tax* does indeed harness the

power of 1-2-3, but with some restrictions. If you know 1-2-3 like your old neighborhood, the OptionWare series may be frustrating now and then. The OptionWare roadway is littered with admonishments. "Nonexpert" users are advised not to tinker with titles, headings, formulas, macros, protected cells, or any other grown-up toys.

The landscape outside the template is not a pretty sight; if you'd rather your data input screens not mingle with macro code, don't scroll right or left. Should your prompt disappear—as it inevitably, inexplicably will—you'll drop effluvia into your work area. You'll want to clean up the mess, of course, but leaving the command line often means temporarily disabling *Personal Income Tax's* macros.

Context-sensitive on-line help would certainly be a plus, but given the size of the tax preparation file, there's probably no room. A separate file provides a credible template overview, but it's perfunctory at best.

Personal Income Tax sets aside three blank worksheet screens, but a good deal of data consolidation will still have to be done outside the program. If you're interested in feeding *Personal Income Tax* a separately prepared 1-2-3 worksheet of itemized deductions, prepare for indigestion—it won't work.

Need help with the local revenuers? Dig out your Casio. *Personal Income Tax* doesn't do state taxes, but the company promises to release an update for the 1985 federal tax year if you're good enough to register your program.

I've got just one other beef with the template: I didn't like the results one bit. And don't tell me that isn't a software problem. —Ken Greenberg

ProType

At PC World seven editors have PCs but share one typewriter. When I joined the staff, I quickly discovered that addressing a single envelope on the typewriter involved SALT-level negotiations and more than a modicum of patience. Since getting my hands on the Selectric is akin to getting Springsteen tickets at the door, I turned to my PC and printer. I knew that printing out my four lines would involve performing any number of software gymnastics with *WordStar*. Fortunately, *ProType* from Photon Software arrived just before insanity set in.

Circle 907 on reader service card

DOES WORKING ON LOTUS 1-2-3 MAKE YOU SEE RED?

Granted, Lotus 1-2-3™ can be a fast spreadsheet.

Except when you first buy it, take out the five floppy disks, study the manual to figure out which ones do what, put the plastic doo-hickey over the keyboard, and begin reading about all the installation procedures you need to get the thing up and running.

Or if you never make a circular calculation (any simultaneous equation, even something as simple as "bonus equals 10% of profit after bonus") when doing a complicated spreadsheet.

By the time 1-2-3 calculates it correctly, you may have retired.

Or if you'd like to plot your data with a single keystroke, because it can take several minutes (including a disk change) just to start the process.

Or if you'd like to quickly create a file directory under program control. 1-2-3 can't do that at all.

What's the point of all this?

We'd like you to go down to your software dealer and see a new product called SuperCalc® 3 Release 2, which, unlike Lotus 1-2-3, does all of the above.

Along with a larger spreadsheet. Vastly superior graphics. Incredible speed (that becomes even faster when used with the 8087 or 80287 math co-processors, which 1-2-3 doesn't support). And more.

For a lot less money.

All on one disk that you can run right out of the box.

(Our lawyers want you to know we include an additional file disk.

Which also contains the popular printing program Sideways,™ so you'll never have to cut and paste wide printed reports together again. Unless you use 1-2-3.)

For more information on SuperCalc 3 Release 2, call Terry Smith at 1-800-645-3003. Or even better, go take a look.

After you do, one thing should become obvious.

What are you waiting for?

Circle 823 on reader service card

ProType is a memory-resident utility that temporarily turns your PC into a typewriter. Unlike other such programs, *ProType* can co-habit with *SideKick*, *ProKey*, and other comrades-in-RAM.

Tapping <Alt> twice displays *ProType*'s 1-2-3-style command line that offers access to Edit, Type, and Form modes; cut-and-paste, font selection, print, and erase functions; and insert and word-wrap toggles. On-screen help is available, and, for stickier problems, a toll-free number is provided.

I turn to Edit mode when I need to compose a memo that must be distributed at a meeting that started 10 minutes ago. Within any program I simply pop up *ProType*'s composition window and enter an entire short document (up to 90 lines), then send it to the printer. Though the available editing functions are rudimentary, they're handy in a pinch.

Type mode operates like a memory typewriter; text is sent to the printer each time you press <Enter>. Unlike a typewriter, Type mode does not permit underlined text; as with some word processors, backspacing deletes text.

ProType's cut-and-paste function makes easy work of printing any section of currently displayed text produced by a word processor, a spreadsheet, a data base manager, or another application. Choose the Cut-and-Paste command, mark the text you want to print, paste it into *ProType*'s composition window, and send it to the printer. The same task in *WordStar* entails marking a block, writing it to a new file, saving the current docu-

(continues)

How Do I Choose the Right Personal Computer Monitor?

If you don't have a Hercules Graphics Card, you could end up looking like this:

"I know, because one day it happened to me . . .

"I was running some routine tests on a non-Hercules monochrome graphics card when I was struck by a severe case of *low resolutionitis*. I'm the president of Hercules and that's me exhibiting the symptoms of the disease in its advanced stages. Not a pretty sight, is it?

"What causes *low resolutionitis*? Experts point to ordinary monochrome graphics cards with coarse, hard-to-read graphics. A bad case of eyestrain may develop if action is not taken immediately.

"Fortunately for me, a Hercules Graphics Card was nearby. A quick change brought soothing 720 x 348 graphics. That's twice the resolution of ordinary 640 x 200 graphics cards.

"Which means better graphics for Lotus[®] 1-2-3[™], Symphony[™], Framework[™], pfs:Graph[®], Microsoft[®] Chart and Word, SuperCalc3[®], AutoCad[™], and dozens of other programs.

"Including Microsoft Flight Simulator, now Hercules compatible!

"Oh, and don't forget that a parallel printer port is standard on the Hercules Graphics Card, not an extra cost option.

"Now, if you're worried about buying a new product that hasn't had all the bugs

worked out, relax. Hercules has sold more monochrome graphics cards for the IBM[®] PC, XT[™] and AT[™] than anyone else in the world.

"So . . . you're convinced that you should buy a Hercules Graphics Card. Now, steer clear of cheap imitations.

You may save a few bucks, but you won't get all of these five essential features which only Hercules has:

"1) A safety switch that helps prevent damage to your monitor, 2) the ability to keep a Hercules Color Card in your

system, 3) the ability to use the PC's BASIC to do graphics, 4) a Hercules designed chip that eliminates 30% of the parts that can go wrong, and 5) a two year warranty, because we think reliability is something you should deliver and not just talk about."

"Call 1-800-532-0600 Ext 401 for the name of the Hercules dealer nearest you and we'll rush you our free info kit.

Hercules. We're strong on graphics.

ment, and then printing the new file. Since *ProType* captures data from the PC's video buffer, no file conversions are necessary, and of course, nothing is truly cut out of the original file.

The Form mode is designed to help you fit information into the blanks on printed forms. If any task can send you running to a typewriter, this is it. Form mode is *ProType*'s trickiest function, but with the help of the manual, I quickly mastered the creation of fields—a process that defines screen areas that correspond to the spaces in a form. Positioning a form in the printer so that fields defined on screen match up with those on paper takes more practice. Once a form template is created, however, it can be saved for future use.

There's no arguing that word processors are great time-savers, but often the procedures that handle large tasks with speed and elegance get in the way when all you need to do is print an envelope or a short note. *ProType* is a real boon for those tasks that tempt you to turn to a typewriter. And at \$119.95 it costs less than an extra typewriter for the department.

Will It Work with My PC?

Before you can experience the full capabilities a high performance monitor offers, it has to work with your personal computer. That's why Princeton Graphic Systems makes high resolution monitors compatible with most popular brands of personal computers. IBM, Compaq, Corona, Apple and more. But we go one step further. By paying close attention to ergonomic detail, we make Princeton Graphic Systems monitors compatible with you, the computer system user. . .

How we improved Structured Query Language.

Actually, we didn't change a thing.

We just combined it with the best relational database management system.

Introducing INFORMIX®SQL.

It runs on either UNIX™ or MS™-DOS operating systems. And now with IBM's SQL as part of the program, you can ask more of your database. Using the emerging industry-standard query language.

To make your job easier, INFORMIX-SQL comes with the most complete set of application building tools. Including a full report writer and screen generator. Plus a family of companion products that all work together.

Like our embedded SQLs for C and COBOL. So you can easily link your programs with ours. File-it!™, our easy-to-use file manager. And C-ISAM™, the de facto standard ISAM for UNIX. It's built into all

our products, but you can buy it separately. And when you choose RDS, you'll

be in the company of some other good companies. Computer manufacturers including AT&T, Northern Telecom, Altos and over 60 others.

And major corporations like Anheuser Busch, First National Bank of Chicago and Pacific Bell.

Which makes sense. After all, only RDS offers a family of products that work so well together. As well as with so many industry standards.

So call us for a demo, a manual and a copy of our Independent Software Vendor Catalog. Software vendors be sure to ask about our new "Hooks" software integration program. Our number: 415/424-1300.

Or write RDS, 2471 East Bayshore Road, Palo Alto, CA 94303.

And we'll show you how we took a good idea and made it better.

RELATIONAL DATABASE SYSTEMS, INC.

INFORMIX is a registered trademark and RDS, C-ISAM and File-it! are trademarks of Relational Database Systems, Inc. IBM, UNIX and MS are trademarks of International Business Machines Corporation, AT&T Bell Laboratories and Microsoft, respectively. © 1985, Relational Database Systems, Inc.

Draw-It

I recently reviewed *PC Paintbrush* and *PC Paint*, two trickles in the flood of PC painting programs (see "Icon Painting," *PCW*, June 1985). Both are clearly inspired by *MacPaint*, using pull-down menus, icons, and a mouse instead of the keyboard to choose program functions. These programs make free-hand drawing a breeze and can also enhance graphs imported from other programs such as *1-2-3*.

Draw-It from Paperback Software International (PSI) is yet another painting program, though it doesn't run in the same crowd as other Mac-inspired applications. Instead of pointing to icons, you select functions from a command line similar to *1-2-3*'s—an approach that is perhaps less desirable for beginners but nonetheless quick and easy. (The PC's function keys provide a shortcut to program commands.) Another difference is that the program uses the arrow keys instead of a mouse for moving the cursor—a tedious process at best. PSI claims that the Mouse Systems Mouse works with *Draw-It* functions, though the configuration process involves some extra steps. *Draw-It*'s most significant difference is its price—it's only \$29.95.

(continues)

Does It Give Me A Bright, Sharp Image?

Take a close-up look at the display. Bright, crisp characters and sharp, colorful graphics mean you're getting a high-quality image. The kind of image that comes with every Princeton Graphic Systems' monitor. Because Princeton Graphic Systems combines flicker-free technology, a fine dot pitch, and a nonglare screen to give you an image that *PC World*'s World Class Survey rates number 1 . . .

The IBM-PC...

HOT-LINE

Two Exceptional Modems For Your IBM-PC

Internal

Our ProModem 1200B Gives You A 3rd Serial Comport Free

\$399

When you plug our \$399 1200/300 baud modem card into your IBM or Compatible PC, you suddenly have an additional serial Comport available to use.

This means you don't have to disconnect your printer, plotter or other serial device from Comport 1 or 2 when you use our ProModem 1200B to communicate with the outside world.

And that's just the beginning. The unit has a host of features such as auto answer and auto dial, programmable intelligent dialing, built-in speaker with volume control, help commands, extensive diagnostics, separate voice and data jacks, and Hayes command set compatibility.

If you check prices, you'll find our \$399 ProModem card costs less than modems that don't do nearly as much. ProModem 1200B comes with a sophisticated communications package from Mycroft Labs called "MITE" which provides for transfer of any type of text and binary files, with five error checking protocols including X-Modem. You can't lose. Buy our ProModem 1200B and get a Comport free!

External

Transfer 50 Pages Of Text Without Tying Up Your PC

\$495

Priced at just \$495, our Hayes Compatible ProModem 1200 is the best 1200/300 baud standalone modem you can buy. It runs rings around Hayes and the rest.

One reason is our optional Communications Buffer and Alphanumeric Display which turn our ProModem into a veritable genius.

Imagine, unplugging your computer, taking it home for the weekend, and while you're gone having ProModem 1200 answer the phone, collect messages, send out electronic mail, and when you return, review all messages sent and received, and the exact time of each event. And we're talking about 50 pages of text or data!

Our \$99 Communications Buffer is a card that plugs into ProModem 1200's motherboard. It comes with 2K of CMOS battery backed-up memory, expandable to 64K. Part of the memory is used as a dialing directory, with the balance reserved as a buffer. Plus, for \$99 more an Alphanumeric Display can show time, date, and status and help messages.

Whether you go internal or external you'll be the winner if you choose Prometheus.

Those who like to cut a wild and colorful swath will find *Draw-It's* lack of freehand drawing functions a bit disappointing. Your artistic creations are limited to combinations of straight lines, boxes, ovals, circles, and arcs. *Draw-It* also allows you to generate boxes by entering their dimensions expressed in pixels. To make up for its lack of drawing functions, the program handily generates line, pie, and bar charts from *x* and *y* values you supply in a table format.

Draw-It images are limited to medium resolution. The program offers three palettes of three colors each and a choice of one of eight background colors in either normal or bright intensity. *Draw-It* provides 11 patterns that can fill the entire screen or any area enclosed by a rectangular window—making it hard to fill a circle. Unfortunately, only pattern names, not the patterns themselves, are displayed when you make a selection; the pattern is displayed only after it has been selected. *Draw-It* features eight text fonts and lets you enter text vertically or horizontally when labeling graphs.

After using a window to define the area of a picture you want to edit, you can copy or move it quickly to another part of the screen. Other options allow you to zoom in for detail work and to outline a figure. *Draw-It* also offers a Scale function, which shrinks or enlarges a picture, and a Rotate

(continues)

How About Dependability?

You rely on your personal computer system to help get your work done. That's why it's important to choose a monitor built for reliability. Princeton Graphic Systems monitors are built under the highest quality control standards, backed by a full one-year warranty and supported by a nationwide service network*. The result: monitors that perform when you need them, day in and day out . . .

*Bell & Howell, Xerox, MAI Sorbus Service and Princeton Graphic Systems.

function, which turns it by any degree. Most programs rotate only in 90-degree increments. Two other unusual *Draw-It* features are Step-size and Reflect. With the former you can draw with variously spaced dotted lines; with Reflect, drawn lines are instantly mirrored to create symmetrical figures.

PSI claims that *Draw-It*'s Save-Screen program lets you import and enhance any medium-resolution graphics screens produced by another program. You can also import numeric data from PSI's *Number Works* spreadsheet, 1-2-3, or any ASCII file to create graphs with *Draw-It*.

Draw-It's price, excellent documentation, and on-screen help make it enticing for graphics beginners. It offers bargain-basement drawing and graphing tools with a few pleasant and not-so-pleasant surprises. If you aspire to greater artistic heights on the PC, however, dig down deep and spring for a more sophisticated painting program. —Christine Whyte

Starplus

WordStar's labyrinth of commands is both a joy and a frustration. It's a pleasure when the familiar question, "Can *WordStar* do this?" is answered in the affirmative by your office computer guru. But *WordStar* has 134 commands, initiated with as many different key combinations, and it's almost impossible to remember them all. Not having the time or the patience to continually refer to *WordStar*'s manual or to study its terse help menus, most users eventually settle into a comfortable but limited functional rut, learning and remembering only those commands they need to get by. But with *Starplus* from Apeiron Software, you need not waste the versatility and power of this ubiquitous word processing tool.

Starplus is a memory-resident utility program designed to organize *WordStar*'s hidden powers and place them only a pinky away. The program redefines the PC's function keys with macros that provide single-key access to 60 *WordStar* procedures. With one keystroke, for example, you can center text, mark a sentence, reform a paragraph, or save a file. *Starplus* resides amiably with *SideKick* and *ProKey*. It works with all versions of *WordStar* but not with *WordStar* 2000.

Starplus groups *WordStar*'s commands into Help, Print, Block, Onscreen, Quick, Edit, and File templates. Each template is composed of ten commands, each assigned to a function key. (The exceptions are Edit, Print, and Block, which take up two templates.) *Starplus* displays the current list of template commands at *WordStar*'s 25th line. You can load different templates either by pressing <F1>, which displays a command menu of all available templates, or by pressing <Alt>-J for help, <Alt>-K for block, and so on.

Most *Starplus* macros execute only a single *WordStar* operation. For example, from the Edit template you can choose to delete text from the cursor to the end or beginning of a line, center text, scroll up or down, set margins, or reform paragraphs. However, *Starplus* occasionally uses ingenuity in combining commands; the Block templates, for instance, include macros that mark a paragraph, a sentence, a line, or a word with a single keystroke. Since *Starplus* works so intimately with *WordStar*, it shares some of its limitations. Marking a paragraph, for instance, relies on a search (<Ctrl>-Q F) for two carriage returns (^N^N). If your text is double-spaced, the macro will mark only to the end of the current line.

BMDPC STATISTICAL SOFTWARE

CONFIDENCE AND CONVENIENCE

BMDP® is Data Analysis with Confidence. Researchers and statisticians know quality research demands quality analysis. That's why they rely on BMDP Statistical Software for all their data analysis needs.

BMDP is a comprehensive library of dependable statistical programs. You can use BMDP to perform many types of analysis. Capabilities of BMDP range from simple data display and description to the most advanced statistical techniques. In fact, BMDP provides the widest range of statistical approaches required to effectively analyze your research data:

- Data Description
- Data in Groups
- Plots and Histograms
- Frequency Tables
- Missing Values
- Nonlinear Regression
- Analysis of Variance and Covariance
- Regression
- Multivariate Analysis
- Nonparametric Analysis
- Cluster Analysis
- Survival Analysis
- Time Series

Powerful statistical and computing procedures make BMDP especially

appealing to the experienced data analyst. However, you need not be a seasoned statistician or computer expert to perform data analysis with confidence. English-based instructions make BMDP easy to learn and easy to use.

As the acknowledged leader in statistical methodology, BMDP has become the standard by which others measure their performance. The BMDP programs are known for superior technology and state-of-the-art methodology. BMDP is committed to developing new statistical methods for data analysis, and continues to lead the way in providing superior statistical software.

BMDP is Data Analysis with Convenience. With our latest advance, you can even perform complex statistical analyses without a large computer. BMDPC offers you both the confidence of BMDP and the convenience of using your own PC.

The same programs that have been trusted for more than 20 years by researchers worldwide are now available for the IBM Personal Computer and compatibles.

Best of all, the BMDPC programs are available in low-cost subsets. So, you can pick and choose programs for your PC. Pick the types of analyses you use most, and choose from our broad selection of statistical programs.

Put the statistical software of choice on your IBM® PC®, so you can perform data analysis with confidence and convenience.

Hardware Requirements

Minimum requirements for running BMDP on the PC include the following:

- a 5 megabyte hard disk
- the capacity for double-sided, double density floppy diskettes
- an 8087 floating point processor
- a PC/DOS 2.0 or later operating system
- 640 kilobytes of memory.

Introducing Quadnet.TM

The family of four LAN systems that can grow with you.

The family tie.

Each member of the Quadnet family of local area network systems has its own unique characteristics. Yet all four share one family trait. The same network software.

That means you can start with the LAN system that suits your needs today. And upgrade tomorrow without having to learn a whole new set of commands. It's the only LAN system for IBM PCs, XT's and compatibles that you won't outgrow.

Making the right match.

If you're not sure which Quadnet LAN system is right for you, your Quadram dealer and our SelectNetTM software can help. This easy-to-use software will ask you a variety of questions about your planned applications, number of users, operating system, and more. Then SelectNet will recommend the ideal Quadnet match.

Quadnet comes with its own powerful multi-user operating system. Perfectly compatible with PC-DOS, Quadnet software lets you keep your current software and add on exciting multi-user packages. And while some systems limit each user to about 360K worth of data (just enough for one floppy disk), Quadnet lets you segment your hard disk any way you like.

When you're ready to order, all the accessories are pre-packaged so you're sure to get everything you need to get your Quadnet system up and running. The master package includes hardware, software and documentation. A workstation kit contains hardware for one workstation. And the cabling kit comes complete in three workstation increments.

Quadram Quality.

Insist on the Quadram name. It's your assurance that you're getting a quality product from an established and reliable company. Ask your dealer about Quadram. We don't make personal computers, we make them better.

Circle 219 on reader service card

Some other handy *Starplus* features include on-screen <CapsLock> and <NumLock> indicators and a two-key toggle that changes the 25th line to display the *WordStar* functions assigned to the templates. *Starplus* doesn't obviate traditional *WordStar* <Ctrl>-key combinations; you can utilize them and the function keys defined by *Starplus* to create a personal word processing style that's comfortable. You may find, for example, that pressing <Enter> to insert a hard carriage return is faster than using <F4> in the *Starplus* Edit template.

At first glance *Starplus* seems to add another layer of complexity to *WordStar*'s already complex command system. (What, more key-strokes to remember?) But once installed, the program actually makes *WordStar* more accessible by revealing commands that most people have either forgotten or never learned in the first place. —Wes Nihei

A MICROCOMPUTER USER'S GUIDE TO BUSINESS EXPANSION.

If your business uses microcomputers, computer expansion is a necessary step towards business expansion.

Interface Technologies designs and manufactures the tools of expansion for your microcomputers. High performance, economical products that increase the productivity of your computers, and your company.

An Expanding Line of Products for IBM and Compatibles

Included in our growing line of microcomputer accessories, are expansion boards for IBM PCs and PC work-alikes. The *AT/Timeless* is a multi-function memory expansion board for the IBM PC/AT. The *Monograph Visionary* permits high resolution graphics output on a monochrome display. The *Colorgraph* is a color graphics card for the IBM PC that features both RGB and Composite

Video Output. The *Chronograph Ramport* is a multi-function expansion board that can use either 64K or 256K chips. The *Datasync* provides a serial port for use with a modem or printer (with an optional real-time clock and battery back-up). Other products include the *Datagraph Modem*, a Hayes compatible 1200/300 baud internal modem, and the *ABC Switch Box*, which permits up to three computers to share one printer or other peripherals, and vice versa.

A Commitment to Service and Support

Interface Technologies products are backed by a 5-year warranty and the highest level of service and support. And you can count on the constant introduction of innovative new products to meet the expanding needs of business.

INTERFACE
TECHNOLOGIES
INC.

IBM PC is a registered trademark of International Business Machines Corporation.
Hayes is a registered trademark of Hayes Microcomputer Products, Inc.

Let's get straight to
the point. We think our
VTERM software is the most powerful
and versatile micro-to-mainframe link you
can buy for an IBM PC or compatible. The fact is,
**NO OTHER COMMUNICATIONS
PROGRAM DOES SO MUCH.**

VTERM is a single integrated package that combines
terminal emulation, file transfer, mainframe graphics,
and general communications capabilities. As a terminal
emulator, VTERM is unsurpassed by other software. It

TURNS YOUR PC INTO A VT100 OR TEKTRONIX 4010 TERMINAL.

The emulation is complete. Host software written for a
VT100, VT52, VT101, VT102 or Tektronix 4010 will run
without change using a PC and VTERM. You get through-
put to 9600 baud, printer and plotter support, disk capture
of graphics and text, easy-to-use setup screens, multiple
setup files, programmable softkey macros, on-line help,
automatic dialing, full keyboard emulation, and more.

FOUR ERROR-CORRECTING FILE TRANSFER PROTOCOLS

are supported by VTERM. They include our power-
ful VTRANS 7 and VTRANS 8 protocols. (VTERM
comes with complete VTRANS host software for
several host operating systems.) In addition, you
get ASCII text file exchange and XMODEM, as
well as the new micro-to-mainframe standard:

KERMIT. YES, KERMIT!

Kermit is a versatile error-correcting file
transfer protocol developed at Columbia
University. VTERM's Kermit supports
wildcard transfers, server commands,
data compression, command macros,
and other advanced features. Kermit
requires host software which is avail-
able at nominal cost from Columbia
for many host operating systems.

THE VTERM HOT KEY

lets you switch instantly be-
tween DOS and VTERM, so
you can run local programs
without losing your terminal
screen or link to your host.

132 COLUMN

display is emulated with
horizontal scrolling or
fully implemented with
an optional adaptor
board. VTERM can
redisplay data that
has scrolled ver-
tically off the
screen.

VTERM

is now available in
two versions. VTERM
4010 has all the features de-
scribed above. VTERM II has
all the features of VTERM
4010 except Tektronix 4010
emulation. VTERM runs on
the IBM PC, XT, AT,
Portable, and com-
patibles.

IT SCREAMS!

PCturbo 186™

"The PCturbo 186 is a sophisticated product, jam-packed with goodies... Lightning-like, indeed."

— Winn L. Rosch, PC Magazine

"PCturbo 186... speeds up your IBM PC something wonderful... no glitches, no problems, and it's fast, FAST, FAST!" — Jerry Pournelle, BYTE

**ADVANCED 8MHz
80186 MICROPROCESSOR**

**UP TO 640K 16-BIT
ONBOARD RAM**

**WORKS WITH 8088
ALREADY IN YOUR PC FOR
100% IBM COMPATIBILITY**

**EASY TO INSTALL AND
TRANSPARENT TO USE**

**DISK CACHING AND
RAM DISK BUILT-IN**

**CUSTOM VLSI TECHNOLOGY
WITH TURBOBUS EXPANSION**

EXTENDS THE LIFE OF YOUR COMPUTER ■ SPEEDS UP YOUR EXISTING PC ■ FINISHES JOBS FASTER

■ Now from Orchid Technology — PCturbo 186, the most practical solution to upgrading the performance of your existing IBM PC, XT or compatible. Based on the new generation 80186 processor, the PCturbo 186 runs your application programs, such as databases and spreadsheets 200% to 400% faster.

■ Plugged into your PC, the PCturbo works together with the computer power you already own today. Unlike less powerful imitations, the PCturbo works in tandem with the 8088 in your PC. It does not replace it. In this design, the 8088 handles all the peripheral I/O while the PCturbo runs your programs concurrently and more efficiently.

■ The PCturbo is a high speed system, with built-in software tools designed to increase all aspects of computer performance. Innovative software allowed Orchid to enhance the PCturbo with many powerful features, such as Mainframe style Disk Caching and high capacity RAM Disks, speeding up the reading and writing of files.

■ To help take advantage of those powerful software tools, the PCturbo allows you to add up to

640K of its own RAM on board. With PCturbo you can now have up to 1.28 Megabytes of RAM in one system — double the previous limit of the IBM PC! This frees the extra RAM in your PC to be used for increasing I/O performance.

■ With the PCturbo there are no new Operating System manuals to read, keyboards to learn, or special software versions to buy. When you plug the PCturbo board into your IBM PC or compatible PC, everything works just like it did the day before — only faster! The PCturbo was designed to be easy to install and transparent to the user. Installation does not void the warranty on your PC, as with some other offerings. Just plug it in, turn it on, and speed it up!

■ The PCturbo is a proven product, introduced in 1984. Since then, we've created a custom VLSI (Very Large Scale Integration) chip which improves the cost/performance ratio of the board even more. Our exclusive TurboBus Expansion capability allows you to add on new Turbo options such as the Serial Port Daughtercard. Continuing in our tradition, Orchid is first with the most in high performance PC enhancements.

PCturbo 186 is the most practical solution to making your operation more efficient and productive. Now isn't that what you bought a computer for in the first place?

ARE YOU PLANNING TO UPGRADE YOUR PC AND DON'T KNOW HOW?

**DON'T WORRY! CALL US ON OUR HOTLINE AND WE'LL SAVE YOU
THE HEADACHE AND HUNDREDS OF DOLLARS.**

For years we have been selling our products through distributors hoping that they will provide better technical support and services to our customers. Lately, we find that most of them are not really technical and sensitive enough to satisfy our customer needs. In order to provide quality products and services at factory prices, we have decided to sell to you direct by passing distributors. Each of our product comes standard with an easy do-it-yourself installation guide. If you still have problems, our highly trained technical staff is only a phone call away to answer any of your questions.

To further back up our commitment for high quality and better services, our products offer a one year warranty and 30-day no question asked money back guarantee policy.

10 MB Half-Height

Hard Disk Subsystem ~~\$599.00!~~

Save \$500 on our 10 MB Microscience hard disk drive which is normally listed at \$1,095. Microscience drives are the leader in the half-height hard disk industry and have been selected by many major computer manufacturers e.g. COMPAQ.

20 MB Half-Height

Hard Disk Subsystem ~~\$775.00!~~

Convert your PC into an AT. Save \$500 on our 20 MB Microscience hard disk drive which is normally listed at \$1,275. This drive is truly a breakthrough in technology. Its power requirement is actually lower than a 10 MB hard disk making it suitable to be installed into a PC.

10-45 MB 1/4" Streaming Tape ~~\$865.00!~~

No more worries in losing your valuable data. Save \$700 on this Wangtek streaming tape drive which is normally listed at \$1,595 and recently approved by IBM as their backup tape.

20 MB Streaming Tape ~~\$725.00!~~

Want to back up your valuable data and cannot afford the price? Consider this Memtec streaming tape drive which operates at the same speed as a quarter inch drive however at a much lower price. The limitation is capacity: 20 MB vs 45 MB. If you do not require high capacity back up, this is the ideal choice.

Please don't hesitate to call us for a free catalog and we will save you hundreds of dollars and headaches.

Why would anyone pay more!!!

300/1200 Modem ~~\$225.00!~~

Want to dial into a bulletin board or NY Stock Exchange? Is price the only thing holding you back so far? Our modems are normally sold at \$425 through normal distribution. We think that is too much, therefore, we will sell to you direct for \$225. Our modem is 100% Hayes & Bell compatible with features like auto dial, auto log on and supports COM3 and COM4. With this card we also include a free communication software package.

Memory Expansion Card . ~~\$199.00 (with 64K)!~~

Tired of running out of main memory? Why not expand your PC to the maximum memory of 64K and save \$50 to \$200. Can you imagine at a cost of \$199, we will ship you a memory expansion card capable of expanding 0-384K memory. We would even include a clock calendar with battery, parallel port, serial port, game adapter and 64K memory free. Furthermore, we will give you RAM Disk and Printer Spooler Utilities at absolutely no cost to you.

Half-Height Floppy Drive ~~\$119.00!~~

Add a half-height floppy to your PC, XT or AT or replace your full height monster with 2 of these half-height drives.

Color-Mono Graphics Display Card .. ~~\$280.00!~~

Are you frustrated to find out that your system can only run graphics either in color or mono? Frustrate no more. Try our graphics controller which offers 640 x 200 resolution in color and 720 x 350 in monochrome graphics. Install it in 5 minutes and save yourself hundreds of dollars.

SMART vs "STRONG"

UltraPAK-S™ (short for UltraPAK-SMART)

UltraPAK-S™ from Tseng Labs is the smart buy when shopping for a monochrome graphics card for the IBM PC and compatibles. Where the "strong on graphics" card runs out of functionality, the UltraPAK-S is just beginning to pick up steam.

Lotus 1-2-3™ spreadsheet in 132 x 44, VT/100 terminal emulation video support in 80/132 columns (with optional font kit for crystal clear readability for 132 column applications), color graphics emulation on mono display (with separate SoftPAK II compatibility shortcard available for virtually 100% color compatibility for software packages specifying a color adapter) and much more!

UltraRAM™ memory expansion piggy-back card (384 K) and UltraPAK Disk-master™ software with print spooling to use with our standard printer port and memory disk emulation. In one year, thousands of smart corporate end-users have standardized on the UltraPAK-S over the so-called "strong" card for these added features, in addition to our hi-res monochrome graphics (720 x 348) which are of course compatible with the "strong" card.

If you use Lotus 1-2-3™, VT/100 emulation software or any kind of monochrome graphics, give us a call and find out what our customers found out... That the smart decision pays every time.

Systems Supported: IBM PC, IBM PC/XT, IBM PC/AT, ITT XTRA™, Sperry™, Eagle PC™, TAVA™, Leading Edge™.

With Amdek 310A Monitor: Corona™, AT&T™, Compaq Portable™, Eagle PC Spirit Portable™, IBM PC Portable.

***FREE For 90 Days**—SoftPAK II short slot compatibility card for UltraPAK-S

The First True Advance In Information Processing
Since
MAINFRAMES

Its Only Competition

1

The Total Environment for Application Management from Unlimited Processing is by far the most complete and powerful product ever to run in a Personal Computer environment.

2

TEAM-UP has withstood the tests put to it by corporate America, from the very smallest one-man consulting operation, to the very largest of corporations. These evaluators have consistently **compared** its capabilities to **mainframe** products costing hundreds of thousands of dollars.

3

As a development tool, TEAM-UP is without peer; you should expect developer **productivity gains** of between 500 and 2000 percent over application development languages such as the current generation of micro computer DBMS's. The productivity gains are so dramatic that it is now feasible to use Personal Computers to prototype and get customer acceptance on proposed mainframe applications during the design phase. Many times, the PC prototype will meet all of the customer's needs and may be implemented directly, thus avoiding costly mainframe development projects.

4

TEAM-UP provides a consistent interface which successfully handles the complexities of a **LAN/Multi-user** environment for the developer. For example, it allows simultaneous updates to the same record while preventing one operator's change from destroying another's, thereby maintaining data integrity. That interface is so consistent that applications developed in a single-user environment automatically become multi-user when they are moved to a LAN environment and vice-versa.

5

Customer access to applications can be controlled through a unique sophisticated multi-faceted **security** system which extends even to the data field level. Therefore, personnel clerks may be prevented from seeing sensitive payroll information stored in personnel files.

6

TEAM-UP applications are **powerful** and so easy to use that even non-typists can easily enter, change, or extract meaningful management information! Data entry is equally easy. Data retrieval is unbelievably **fast**, 3/10 of a second to find any single record in a 70,000 record file. Relationships can be established which support record read, write, enter, update and deletes across up to 255 data base boundaries in a single transaction. Of course, all indexes and free file space are maintained dynamically.

With better-looking screens, you could be loved.

You write wonderful programs.

Their logic is elegant. Their organization is solid.
They work like a charm.

But how do they look?

Maybe appearance shouldn't count, but it does.
Because not only is a well-designed screen impressive to look at—it also makes the program easier to work with. And that makes you look good, too.

It takes you days, perhaps weeks of effort to make a program right. Isn't it worth a few minutes to make it beautiful?

A few minutes. That's all it takes for you and Screen Sculptor to create a glorious-looking screen. And once it's done, Screen Sculptor automatically writes the program—in IBM Basic, IBM Pascal, or Turbo Pascal—to display the screen and allow the user to enter data.

There's no limit to what you can do with Screen Sculptor. Design a screen you like and rearrange it whenever you like. Select colors from a mouth-watering menu. Choose special characters, draw lines and boxes, paint in areas, repeat a character in any direction!

Specify input fields, variable names, data types, acceptable data ranges and more. Then Screen Sculptor generates actual program source code based on your screen design.

You'll need an IBM PC, XT, PCjr, PC AT or 100% compatible, 128K, DOS, one 320K disk drive and any 80-column display.

Screen Sculptor does more than design screens. For \$125, it will enhance your creative reputation and thoroughly impress your users.

Because people don't expect a beautiful screen. But they sure do appreciate it when they see it.

SOFTWARE BOTTLING COMPANY

Presenting Datavue 25™

Get the full range of PC-compatibility.

Datavue 25, the powerful briefcase-type computer with built-in 360K floppy drive and RAM drive software, runs the same programs as your IBM PC*. Including Lotus 1-2-3*, WordStar*, Multiplan*, Supercalc* and all the rest. That means you can use your IBM PC at the office, then take your business with you anywhere you go.

Add up these features.

With a full-sized 80x25 line monochrome display, 4-shades of gray in graphics mode and 6-position tilt screen the Datavue 25 works your way. The low-profile, sculptured keyboard with 10 programmable

function keys and cordless infrared operation makes your job even easier.

Boost your portability.

At just 12 pounds, the Datavue 25 is a great little traveler. It comes in a durable, compact case with a fold-

away handle for convenient carrying. Take it in the car, on an airplane, in a taxi or anywhere else. The optional 2-pound battery pack provides ultimate portability.

And of course, the Datavue 25 is backed by a tradition of quality you've come to expect. When you're looking for PC-compatibility plus true portability, at a price you can afford, Datavue 25 is going your way. Available at local retail Quadram dealers or at the Intelligent Systems Companies.

2	123-GH12	12 Plug Pin	\$ 2.15	\$ 4.30	
1	567-AS78	12 Ft Cord	\$ 2.00	\$ 2.00	
0	-		\$ 0.00	\$ 0.00	

For \$125 you can let the world know it.

You're a good programmer. Maybe even the best. But do your users know it?

After all, they weren't around while you were working on your latest program. They can't know all the creative energy, all the problem-solving persistence that went into it.

All they know is what they see on the screen. Is it handsome? Is it elegant? Does it make the program easier to use?

Or is the screen dull, unimaginative and not as clear as it might be?

Now you can remove the last obstacle between you and programming perfection. You and Screen Sculptor can create a beautiful, logical screen in minutes. Then Screen Sculptor automatically writes the program—in IBM Basic, IBM Pascal, or Turbo Pascal—to display the screen and allow

the user to enter data.

Design a screen you like and rearrange it whenever you like. Select colors from a mouth-watering menu. Choose special characters, draw lines and boxes, paint in areas, repeat a character in any direction!

Specify input fields, variable names, data types, acceptable data ranges and more. If you like, design one screen to input data, another to output it.

Then Screen Sculptor generates actual program source code based on your screen design.

You'll need an IBM PC, XT, PCjr, PC AT or 100% compatible, 128K, DOS, one 320K disk drive and any 80-column display. We supply the rest.

Screen Sculptor. For \$125 you can make your users very, very happy.

While making yourself look very, very good.

The DOS Drivers

DOS 3.10 is barely out the door, but the crew from Bellevue is already hard at work on a sophisticated successor. PC World talks with Microsoft about networks, operating systems, and the feasibility of doing several things at once.

Edited by Ken Greenberg

||||| If Microsoft were sustained solely by its role as provider of the PC's operating system, its plate would be filled to overflowing. But the ubiquitous Bellevue, Washington-based firm has taken on the trappings of a software conglomerate, expanding its library of applications, languages, and system software at a rapid clip. Microsoft's public profile, for better or worse, is exhibiting a similar growth spurt. Within the first few months of this year the company released a new version of *Word*; prepared to unwrap *Excel*, an integrated spreadsheet for the Macintosh, and *Access*, its communications package for MS-DOS; beat the drum for *Windows*, its desktop integrator; announced that a new release of Xenix would support UNIX System V; and ushered MS Networks and DOS 3.10 into the often cruel world of local area networking.

The Microsoft triumvirate steers the course of DOS: Bill Gates, flanked by Jon Shirley (left) and Steve Ballmer

Where DOS is concerned, however, it's back to Microsoft's bread and butter. DOS's next incarnation has already achieved a certain mythic status. Sight unseen, DOS 4.00 is the business world's answer to UNIX: certainly multitasking, possibly multiuser, probably a good deal friendlier than its predecessors—and capable of making full use of a new generation of hardware.

Microsoft is just as earnestly attempting to translate its single-user operating system prowess into the local area networking (LAN) realm. The company developed networking protocols with IBM for IBM's PC Network. But shunning favoritism toward Big Blue, Microsoft was on hand for the debut of AT&T's UNIX PC, championing its own role as software supplier to the new multiuser kid on the block. (For a handy glossary of LAN lingo, see the sidebar "The New Communications Vernacular.")

Amid all this hubbub, *PC World* Editor Harry Miller, Associate Editor Ken Greenberg, and Technical Editor Karl Koessel recently traveled to Seattle to discuss the future of DOS, networking, and the nature of standards with Microsoft Chairman and CEO Bill Gates, President Jon Shirley, Systems Software Vice President Steve Ballmer, and Network Product Managers Bruce Phillips and Dave Melin. The following is an edited version of that conversation.

PCW: Bill, in the two years since our last interview, the industry has endured one upheaval after another. A great deal of what you predicted then has reached fruition. Where do you see things headed today, particularly with regard to local area networking? And what's likely to happen beyond that?

Gates: Networking is now falling into place. A lot of people are creating different transport systems using different wiring schemes. But when it comes to a standard that software developers can use to code network applications, I feel pretty secure there'll be fairly uniform support for the work we've done with IBM and others. Our short-term agenda is to get these networking products established and develop applications to take advantage of them.

Meanwhile, the hardware continues to evolve. Microsoft has focused a huge percentage of its efforts on Intel architectures. We even have our people work-

ing on as yet unreleased Intel architectures. We're going to get the DOS world to take full advantage of the 80286 CPU, and that's a real challenge. Obviously, people are expecting that the next major release of DOS will mesh with the 80286. We're using the PC AT as a development machine because it can run both Xenix and DOS. The way we're evolving Microsoft Networks, we'll be able to link DOS and Xenix machines together.

PCW: Now all we need are Xenix applications.

Gates: Right. We're working with the application developers to build that library. But we think DOS will continue to be dominant, even on the AT. Obviously, there are some trade-offs between networking and multiuser systems, and we're pushing both. We think there's room for both, at least in the next two or three years. That's particularly true because of the split in the Intel chip. If you want to use the 80286's protected mode, you're going to need Xenix. When you want to use the other mode, you're clearly going to be pushing DOS. On top of that, IBM has limited the number of simultaneous users the AT will support, but that's not really an embedded restriction, so the educational process with this new CPU is going to take a while.

PCW: You're suggesting that the next version of DOS will permit multitasking. Where the PC is concerned, aren't you still stuck with a chip that has some severe limitations? There is, after all, only so much you can do with the 8088...

Gates: What are the limitations of the 8088? True, it's not superfast, but multitasking could allow you to overlap memory segments and switch back and forth between tasks very easily. The 8088 is limited to 1 MB of RAM, of which 640K is hard-coded address space. 640K is an interesting limitation. Today, every application opts for all the memory it thinks it might need on the premise that if it doesn't grab it now, it'll never get it. And memory can't be swapped out, in some cases. I think it's inappropriate to have a multitasking operating system that doesn't have a very strong memory manager—one capable of moving things around and dynamically swapping things out.

If we do future versions of DOS right, we won't require every piece of DOS to be resident in RAM, as it has been in the past. We've had a fairly monolithic architecture, and it's served us well, but our vision now is a workstation on every desk. And we've decided that the vast majority of those workstations are

'The vast majority of those workstations are going to be based on MS-DOS and Intel's architecture. That's why it's up to DOS to be everything you're ever going to want in an operating system.' —Bill Gates

going to be based on MS-DOS and Intel's architecture. That's why it's up to DOS to be everything you're ever going to want in an operating system. We need a more flexible basic architecture. Just going in and sticking a little scheduler in DOS isn't enough.

Shirley: We see multitasking as the key to networking. The only practical way to run a network server and have it also be a workstation is with a multitasking operating system.

Ballmer: In addition, people want more memory at their disposal so they can run the basic core programs—an operating system, a desktop utility, a network operating system, a print spooler, an application program or two. Our future objective with MS-DOS is to get around the 640K address space limitation, put in protection, put in multitasking, and build a friendly interface.

We'll have to get around the 640K problem in one of two ways: either by managing memory better so we use the 640K more efficiently or by taking advantage of more memory in the system. Or we've got to be able to do both.

PCW: *Care to speculate about a timetable or a priority scheme for this assignment?*

Ballmer: We tend to work on projects one piece at a time, get them done, and ship them. DOS 2.00 had hard disk and large-file system support. We took another step with networking in 3.10.

Now we need to take another small step rather than resolving all of these problems in one fell swoop. Doing something about multitasking and managing memory is a practical problem that we can work on in a bite-size chunk. Perhaps after that we can attack protection, and after that, the problem of addressing more than 640K of memory.

It's important for DOS to take advantage of the 286 as soon as we can make that happen, but it's ridiculous to think that DOS would need to address 16MB of memory if it were single-tasking. My view of the world is that most DOS users want big Lotus spreadsheets but not 16MB Lotus spreadsheets. If you don't have multitasking, you probably don't need to address all the memory in the machine, and if you do multitasking, you'd better do memory management or address all the memory you've got.

PCW: *What about ensuring data integrity in a multitasking environment?*

Shirley: You can never guarantee data integrity in an unprotected memory environment, but you do everything you can. The greatest risk of corrupting data comes from applications that do strange things. Some applications, for example, control memory, which they really shouldn't do. For some time now, we've been giving our ISVs [independent software vendors] information about what our future DOS will and won't allow.

PCW: *Will new versions of DOS be sculpted for the 80286 rather than for the 8088/8086?*

Shirley: No. DOS will still be an operating system that runs on the 8086 and its equivalents. The problem with running on the protected side of the 286 is that it's a different processor in those circumstances. Ideally, you want an operating system to run on that side of the CPU and you want it to run all the existing software, but Intel didn't make the chip that

way. Can it be done? Nobody is absolutely sure at this point. But we believe there's a solution to the problem—to actually use the protected side with an MS-DOS operating system and maintain compatibility—that will be a fairly long-term solution and have both hardware and software implications.

Our relationship with Intel over the past couple of years has become extremely close. We can now offer key input into the company's design decisions so that they understand the effects hardware choices have on software.

PCW: There's some confusion, even among sophisticated users, about just where the concepts multi-user and multitasking part company. A machine that can do one would seem capable of the other. What distinctions is Microsoft making, and which approach has the momentum?

Shirley: We feel the single-user networked machine running under a multitasking operating system will be a much more popular environment, perhaps by a ratio of 10 to 1, than the multiuser environment.

That's where Microsoft Networks, the core software of the IBM PC Network system, comes in. The important point about MS Networks, as an extension of DOS, is that the same application will run on both MS Net and IBM's PC Network. All the high level protocols and commands are the same. DOS 3.10 contains all the hooks, if you will, for the network environment.

DOS 3.10 not only allows you to run old applications on the network, it enables you to run applications that were written for DOS 1.00, which didn't understand hierarchical file structures. We built commands into DOS 3.10 that allow you to tell the operating system to send an application program's request for a file to a given server, and you can embed in that information as long a set of directory instructions as you want.

We believe that networking will be extremely popular during the next couple of years, and that somewhere around 40 percent of all personal computers will end up on a network. I haven't talked to any large account customers who don't want to do that—they're just reluctant to put out the money until they know where things are going to settle down.

Melin: Technically, MS Net includes a dedicated file server, the redirector [which arbitrates user requests on the network], and, in DOS 3.10, an ability to use the file share included in DOS 3.00. IBM bought the three pieces but elected to do its own, nondedicated server.

'We believe that networking will be extremely popular during the next couple of years, and that somewhere around 40 percent of all personal computers will end up on a network.'
—Jon Shirley

PCW: Otherwise the IBM PC Network and MS Net are fundamentally the same system?

Melin: The three key interfaces in both network products run together. The most important interface is the DOS system call interface. That is identical in both products. There's also an interface to the so-called device driver BIOS level. The other major interface lies between the redirector and file servers.

PCW: Are other local area network companies now buying the Microsoft redirector?

Ballmer: Yes, although they may be writing their own file servers. We essentially see four businesses in the network area: boards or hardware, which includes device drivers; network operating systems; servers; and applications, such as electronic mail. We're not in all four by any stretch of the imagination, and there will be those for whom other file servers would be more appropriate than ours.

Before Microsoft Networks, there was no standard set of network operating system protocols. Anybody who wanted to enter the network business had to offer both the redirector and the server, combined. The redirector is worthless without a server, but now a network supplier can pick and choose to some extent. I encourage ISVs to write file servers. I'm now working with other LAN companies interested in getting file servers and print servers going on top of our core product.

PCW: You have a server, but you're not necessarily insistent on that product. Why not?

Phillips: We supplied a sample transport and a dedicated server with Microsoft Networks, not because we think those are our mainline products, but because we couldn't very well give our OEMs only one piece, which they would be unable to run on anything. We're trying to encourage them to build their own transports and servers—just use our operating system, because that's the business we're in. We view the server as an application on top of the operating system rather than as a part of it.

PCW: In your view, what is holding up development of a truly effective nondedicated server?

Melin: A multitasking version of DOS. It will support an effective nondedicated server. Until then, when you try to squeeze an extra task out of a system that isn't designed for it, you wind up with a kludge. That can also create havoc for you on future releases.

I think there are two advantages to a nondedicated server: It reduces the cost of small networks, and it provides a mechanism for direct peer-to-peer file sharing. But for serious information sharing, a dedicated server is a must. I just don't see network users patiently waiting while the guy with the nondedicated server plays *Flight Simulator*.

PCW: In that case, no custom-built server or transport will cause incompatibilities with MS Net, as long as it doesn't interfere with the network operating system?

Melin: That's right.

PCW: But if Sytek, IBM's supplier for the PC Network, doesn't formally support MS Net, how is it that MS Net supports the Sytek board?

Phillips: The product supports IBM's network board. I can't speak for Sytek's own boards at this point because they're not the same, but Microsoft Networks will run fine over the IBM board. We use them here in precisely that way.

PCW: There's some intelligence, the Net BIOS, on that board, but doesn't it get in the way?

Phillips: There's no problem whatsoever. Anything written for the rules that MS Networks provides will run on IBM's PC Network.

PCW: During the process of developing either MS Net or the PC Network, did you work with Sytek at all?

Phillips: No.

PCW: Novell, which aspires to be the Microsoft of the network operating system world, recently introduced a product that emulates the MS Net redirector. Who else do you foresee making a splash in the LAN software marketplace?

Melin: As you are aware, networking companies such as 3Com and Ungerman-Bass have already announced products based on Microsoft Networks.

As others pull their plans together, I think you'll see various networking products providing a range of services, all using at least the Microsoft redirector. The best part is, if these people are careful, their solutions will run the applications developed for the IBM PC Network without any modification.

Microsoft is in the business of selling operating systems software, in this case, a network operating system. I think the networking community now realizes we are not competing with the total network supplier.

I think this gives Novell an opportunity because both the PC Network and MS Networks will help expand the network business far beyond what it's been. Novell is one of the premier server-oriented companies in the marketplace. Combining our products with theirs gives them a great opportunity to build very powerful servers for the high-end market.

Phillips: One advantage that will help Microsoft Networks create a standard is its user interface—moving from network to network, you see the same thing. Today, in switching from Omninet to EtherSeries or whatever, you start from scratch. With our product, starting over is no longer an issue. For every network licensing the product, your files are good, the way you operate the commands are the same, everything you do is the same.

The New Communications Vernacular

Mark Hall

Like any burgeoning technology, local area networking comes with its own exacting jargon. Here's a brief glossary to help you navigate the networking shoals.

Server. A computer, connected to a local area network, that is designated for a specialized function such as handling print requests or managing files.

Dedicated server. A server that is committed exclusively to network tasks and is unavailable as a terminal for local processing. A *nondedicated* server performs its network function and is also available as a workstation.

File server. A program or device that controls a user's access to data on a file-by-file basis. If a user has been granted read and write access to a file, he or she can read from and

write to that file regardless of which network disk the file resides on.

Disk server. A device that controls a user's access to data on a volume-by-volume basis. A volume is a portion of a hard disk that acts as if it were an independent disk drive. If a user has been granted access to a volume, he or she can use any file in that volume.

Dynamic linking. The process of joining Xenix routines to a DOS application. This process occurs when the DOS application is loaded; the Xenix routines then translate DOS calls into Xenix calls.

Gateway. An intelligent network device that enables one network (e.g., 3Com EtherSeries) to communicate with a different network (e.g., IBM PC Network).

PCW: Do you think we're going to see vendors encountering the same sort of compatibility problems that some experienced with MS-DOS? Suppose they buy the net operating system from you, then embellish it for a given hardware configuration...?

Phillips: People can make changes. Some have licenses that give them access to source code. If people don't want to implement our interrupt calls, they'll encounter problems with IBM's net.

Melin: Microsoft Networks is an open system. We publish the DOS interface. Everyone knows what the interrupt calls are. You could skip using our re-director and do your own thing. But it's a funny business to be in because you're always chasing after Microsoft's and IBM's next release. Why reinvent the wheel?

What people are buying is not a board—they're buying functionality. When it comes to other network standards, of course, Microsoft Networks doesn't even attempt to standardize anything that a protocol like Ethernet standardizes. They're two different worlds.

PCW: Will there be a real problem generating application software for networks from the ISVs' point of view? I'm thinking about a certain lack of incentive in multiple-use situations, combined with a supposed absence of clear standards.

Multitasking. Describes the ability of an operating system to appear to execute numerous requests for the CPU simultaneously. Multitasking capabilities can be found in single-user as well as multiuser systems.

Multiuser. A type of system—using a single CPU or multiple CPUs in a single box—that can be shared by two or more workstations. An appropriate operating system must be installed to arbitrate requests from system users.

Network operating system. An OS capable of recognizing multiple users, servers, printers, and other devices. The OS must also be able to protect user files from unauthorized or unintentional use. A network OS enables workstations to access the resources of the network.

Node. A point on the network to which one or more resources—such as a disk server, printer, or workstation—is attached.

Redirector. A portion of Microsoft Networks that recognizes a user's DOS 3.10 command as a network request and executes the request at the appropriate resource.

Transparent. The way in which DOS commands and function calls invoke the network operating system without the user's awareness.

Transport. In DOS 3.10, the network board and the low-level communications protocols that it uses to prepare data for transmission over the network.

Workstation. At its most rudimentary level, a display terminal and an input device. In most cases, however, it is likely to be an intelligent terminal such as a PC.

Phillips: I'd say the real problem is the shortage of networks. If you really want to get somebody interested in product development, you must have a decent-size market. There are two ways to do that—either you build it and then people get behind it, or, if your name's IBM or Apple, people trust that you'll make one, even if it's not there initially. Until now, no big manufacturer has gotten behind LANs. None of the little guys, the 3Coms and the Corvuses, has been prosperous enough to lure a company like Lotus or Ashton-Tate into really getting serious about a mail package. None has been able to get dealers interested in stocking its stuff and having that broad distribution.

When it comes to network applications, we're encouraging all our ISVs to forget about the network hardware. That's what Microsoft Networks is all about. It makes itself transparent to applications whether they are working locally or across the network. Applications written to follow the rules will run on *all* networks supporting Microsoft Networks.

Melin: It's the operating system level that we want most of the applications to write to. We will provide the transparent distribution of those operating system functions through MS Networks.

PCW: *A number of single-user applications will run on local area networks, but ideally you're looking for true multiuser applications. Where are they apt to come from?*

'In unit volumes I expect DOS to outsell Xenix 10 to 1. These volumes make advances in the DOS world a little higher priority than they are in the Xenix world, but I always want to keep Xenix compatible with DOS.' —Steve Ballmer

Gates: I see several sources for those applications. The most obvious is DOS vendors moving up, which will primarily involve productivity software. And 300 or 400 companies are standing by, ready to catch this UNIX wave. A few dozen have done their applications with the right types of multiuser locking facilities built in. Most of the software houses doing vertical applications really want to support multiple users. A lot of people also involved with minicomputer architectures will now see that micros are sophisticated enough for them to modify their vertical applications.

PCW: Is Microsoft going to get into network applications?

Gates: Sure. You'll see a couple of pretty obvious applications designed strictly for the network as well as other applications that will be able to take advantage of the network over time. To date, most of what's been done has come from transport vendors doing the generic sort of network applications, and that doesn't make sense. You want somebody who really understands the IBM approach to gateways and who really knows how to use MS Net.

Shirley: We will also have language products designed to use the network's record-locking capability, which older applications can still access in the file-lock mode. The file lock is set from DOS, but if you want record locking, the application has to tell the system to lock a record, and that's normally done through a language. COBOL already incorporates this as a function.

Ballmer: Multiuser packages that run on systems like Xenix—mail, shared data bases, and so on—will soon be moving onto the network, which is essentially a multiuser system. I believe there will also be a new class of network applications that we haven't seen before—things that actually allow multiple users to participate collectively to get one job done, or that allow applications to be distributed across machines.

PCW: Does all this network activity have the potential, at least in the short run, of undercutting Xenix, your product, and UNIX in general?

Ballmer: Maybe, but on the other hand, multiuser systems will be participating in the network as well. We'll have networks that can have single-user or multiuser nodes on them, so four people get one processor, while someone else gets his or her own. You'll be able to choose the configuration you want. And multiuser nodes will, of course, be fairly good for servers as well. When we get to multitasking DOS, you'll be able to create tasks in other machines just as easily as you can create them in your own.

PCW: Does MS Net offer much hope for those of us who'd like to get different operating systems on a network talking to each other?

Phillips: We have standardized peer-to-peer protocol for operating systems. We now know the protocol in which one operating system will talk to another. It's when two operating systems talk to each other that we want to have a standard protocol so that communications can be replicated and become transparent. For example, we worked with Intel to extend the DOS-to-DOS protocols to cover DOS-to-Xenix communications.

PCW: *What can we look for in future releases of MS Net?*

Shirley: We'll want to do lots of things, particularly in the area of improving software performance. Most people concentrate on the performance of the wire, yet a variety of wires each yields exactly the same throughput on an identical system loaded with the identical software. That's because the bottleneck's the software, not the hardware. You have to add an awful lot of nodes to a high-speed network before you start to bring the thing down. Additionally, the operating system will have to accommodate changes as we go to multitasking. That will make a tremendous performance difference.

PCW: *Short of multitasking DOS, is there a way that MS Net and Xenix—a proven commodity in the multitasking world—can get together?*

Ballmer: We would like to allow Xenix to somehow run DOS applications and eventually, using facilities that we have built into Xenix and could put into MS-DOS, we can get applications that are binary compatible between Xenix and MS-DOS—assuming the developer is willing to obey certain rules. Perhaps nobody will choose to do that, but at least we should provide such a path. It depends upon a function we call dynamic linking, which allows you to bring in library service routines and link them with an application or with the operating system at run time. We have some DOS cross-development utilities that we bundle with Xenix today that let you write a program under Xenix, relink it under Xenix, and come out with a DOS binary. If DOS could relink that program itself at run time, we'd have this kind of compatibility, but we're not there yet.

In unit volumes I expect DOS to outsell Xenix 10 to 1. These volumes make advances in the DOS world a little higher priority than they are in the Xenix world, but I always want to keep Xenix com-

patible with DOS. When I do networking in Xenix, if I can't talk to a DOS file server, it's a joke, so in that sense, DOS will lead Xenix. Xenix is good, it serves an important part of the market, but it's not the high-unit volume part of the market.

PCW: *MS-DOS compatibility continues to thrive, despite the slowdown in market growth. Is there a certain kind of inertia in the marketplace that may be good for the consumer but might make things tricky when moving new technology into the pipeline?*

Gates: Sure, there's inertia. It's big stuff. More software is being written today for MS-DOS than has ever been written for any environment at any time, and it keeps growing every day. It makes the definition of compatibility very complicated. Being innovative in DOS while maintaining compatibility is incredibly difficult. We sit here and talk about ways that interfaces have been used beyond their intended specs—and whether or not we should preserve those interfaces. Our job is to combine innovation and compatibility. And it means DOS release cycles are hard to do in less than a year because there's so much compatibility testing that's got to occur.

PCW: *Some hardware companies don't share Microsoft's reverence for compatibility. Can the impetus for maintaining operating system compatibility keep pace with those pressures?*

Gates: I'm totally a believer that by following the Intel path and our path for DOS over the next three years, we will maintain compatibility and that the process is worth it every step of the way. And I'm convinced that totally incompatible approaches are not so dramatically better that they justify giving up that investment. At best, they're only marginally better—the code's a little smaller, but who cares? Is it fun to worry about those things? DOS is a unique product: more people test it than write it. But it's all worth it. It means you don't start over every time. ●

The PC World Advanced Users Quiz

Pit your experience, knowledge, and perseverance against PC World's editors in this go-for-broke quiz—and discover your PC IQ.

 Are you an advanced user of either the PC or a compatible machine? Being an advanced user doesn't necessarily mean you program for a living or are permanently stooped from soldering together an Altair in 1975. What it does mean is that you are thoroughly familiar with the PC and its major peripherals and application programs. If you bought a computer kit in the seventies and successfully (or unsuccessfully) put it together, you are probably an advanced user and then some. If

you regularly use *dBASE II*'s command language, *WordStar* patches, and 1-2-3 macros, you undoubtedly qualify. And if you drag a machine home every weekend and spend more time with it than with your spouse, you are well on your way. But how do you know for sure?

The quiz that follows can help you judge where you stand in the pantheon of PC knowledge. Compiled by the editors of *PC World*, this 60-question test touches on *PC mirabilia* ranging from RAM to telecommunications. If you answer 55 to 60 questions correctly, consider yourself advanced and start talking to humans again; if you score 50 to 55, you are almost advanced but should nevertheless renew your *PC World* subscription; if you score 45 to 50, you are getting close—renew that subscription and pick up a copy of *The Fully Powered PC* from PC World Books. If you tag 40 to 45 correct answers, you are an intermediate user and moving up; 20 to 40 cor-

rect answers indicates you are beyond the novice stage. A score below 20 means you show promise but should probably pick up some back issues of *PC World*.

If you don't rank in the upper echelon of PC users, don't despair. Making the perilous journey from beginning to advanced takes time, experience, and a knack for enduring confusing user manuals and obdurate hardware and software. If nothing else, we hope this test informs and entertains you, and more important, spurs you to explore the heights (and pitfalls) of using the PC. Remember that this is a self-test. You'll find the answers on page 229. Please don't mail us your completed quiz for grading. If you have comments about the "PC World Advanced Users Quiz," please write to *Letters*, care of *PC World*.

Quiz

Choose the single best answer.

1 The default disk drive is

- a. the one that usually breaks
- b. the one on the left
- c. the drive where a system disk resides
- d. the drive DOS assumes you meant

2 Which of the following cannot be run from *WordStar's* Opening menu?

- a. CHKDSK
- b. FORMAT
- c. internal DOS commands
- d. BASIC programs

3 The PC AT uses which microprocessor(s)?

- a. 8086-2
- b. 8286
- c. 80286
- d. 80287
- e. b, c
- f. c, d

4 Pressing <Ctrl> and <NumLock> usually

- a. breaks a program and returns control to DOS
- b. makes the computer pause
- c. provides hands-on anesthetizing

- d. downsteps the PC's power rating
- e. none of the above

5 64K is the same as

- a. 65,536 bytes
- b. 64,000 bytes
- c. 6400 bytes
- d. 2 kilos

6 A serial port is to a parallel port as

- a. 1 byte is to 1 bit
- b. 1 parity bit is to 1 stop bit
- c. 8 bits are to 1 byte
- d. 1 bit is to 1 byte

7 *WordStar's* cursor control diamond is

- a. old hat
- b. a girl's best friend
- c. E, S, D, X
- d. A, E, C, F

8 How can you quickly determine the dimensions of a 1-2-3 worksheet?

- a. Look at the disk directory.
- b. Use the /dimss macro.
- c. Use <Home>, <End>-<Home>.
- d. Use <End>, <Ctrl>-<CursorDown>-<CursorRight>-<CursorLeft>.

9 The difference between an interpreter and a compiler is

- a. an interpreter can accommodate several high-level languages, while a compiler can deal with only one
- b. an interpreter translates program instructions as the program runs; a compiler translates the entire program before it is run
- c. interpreters are confined to BASIC
- d. an interpreter can address only 64K memory segments; a compiler knows no limits

10 The bootstrap loader is

- a. a cowboy's shooehorn
- b. IBM's utility for loading the BASIC interpreter
- c. the BIOS ROM routine that loads DOS
- d. the PC's power-on diagnostic

11 How much random access memory can the PC's 8088 microprocessor address directly?

- a. 640K
- b. 64K
- c. 1Mb
- d. 3 gigabytes

(continues)

12 How do you copy files to another disk on a single drive system?

- a. COPY A:.* B:
- b. DISKCOPY A: B:
- c. COPY *.* A: B:
- d. COPY *.* B:

13 Spooling permits you to

- a. dump a screen display to disk
- b. print a file while working on another
- c. leave your modem unattended
- d. use WordStar's mail merge facility

14 How many pixels make up the PC's monochrome display?

- a. 252,000
- b. 128,000
- c. 64,000
- d. 320,000
- e. none of the above

15 What's the difference between baud and bits per second?

- a. Baud describes transmitted data; bits per second refers to received data.

b. Bits per second is a valid measurement only after the data leaves the computer; baud must be used for internal data transfer.

- c. Baud means bytes per second.
- d. Bits per second is the number of binary digits (0s and 1s) transmitted per second; baud is the number of signal events transmitted per second.

16 An interrupt can be issued by

- a. DOS
- b. an application program
- c. a user from the keyboard
- d. the microprocessor
- e. all of the above
- f. b, c, d

17 DEBUG is

- a. an assembler
- b. a way to "patch" programs
- c. an external DOS command
- d. all of the above
- e. a, b

18 A node is any PC

- a. connected to a mainframe
- b. on a local area network
- c. involved in a multiuser environment
- d. manufactured before 1982
- e. a, b, c
- f. a, c

19 What's the difference between multiuser and multitasking?

- a. A multiuser environment is hardware-based; multitasking is accomplished via software.
- b. Multitasking offers file- and record-level locking.
- c. Multiuser is sequential; multitasking is simultaneous.
- d. Multiuser partitions one or more processors for use by more than one person; multitasking lets a single processor keep many tasks active at the same time.
- e. About \$3000.

20 What are ASCII and EBCDIC?

- a. chip manufacturers
- b. signals that respectively mean "ready to send" and "ready to receive"
- c. code systems that represent data characters
- d. proposed graphics standards
- e. ancient Greek heroes

21 The DOS command DIR/P

- a. displays lengthy directory listings one screen at a time
- b. scrolls through a list of path names
- c. displays all print files
- d. changes the default drive to P:

22 The two hidden DOS files are

- a. IBMBIO.COM and IBMDOS.COM
- b. BIO.EXE and DOS.EXE
- c. DOS.COM and BIO.COM
- d. IBMDOS.EXE and IBMBIO.COM
- e. DB.COOPER and JD.SALINGER

23 Terminal emulation programs allow a PC to

- a. send data from a main-frame to a microcomputer
- b. upload files to a host system
- c. act like a specific type of terminal
- d. bypass encryption techniques by emulating the data patterns of the transmitting device

24 CHKDSK *.* indicates

- a. whether a disk has bad sectors
- b. whether files have not been closed
- c. whether files reside in the same volume
- d. whether files are contiguous
- e. a, b
- f. a, d

25 The difference between DELEting and ERASEing a file in DOS is that

- a. DEL removes all contiguous sectors
- b. ERASE updates FAT
- c. an ERASE is permanent
- d. none

26 Multiuser computers can be designed

- a. with a single CPU shared by multiple dumb terminals
- b. with multiple CPUs, one for each terminal, sharing a common bus
- c. with a single CPU shared by diskless workstations
- d. all of the above

27 On a PC, how many 64K-bit RAM chips make up 512K?

- a. 64
- b. 72
- c. 36
- d. 16

28 In a hierarchical data base, you can expect to find

- a. a many-to-one relationship
- b. data organized into parent-child relationships
- c. an abundance of key fields, set forth in tables
- d. a, b
- e. b, c

29 What is the PC's upper character set used for?

- a. character graphics
- b. freehand drawing
- c. alphanumeric strings
- d. Pascal programming
- e. breaking and entering

30 A DOS device driver is

- a. any application program that sends output to a printer or plotter
- b. the 8088 CPU
- c. a software program added to DOS that accommodates a specific peripheral device

d. a slave processor dedicated to input/output operations that aids the 8088 in speeding up printer operation

31 Which is the faster method for locating a name, address, or zip code in a *dBASE II* data base?

- a. index
- b. sort
- c. neither; index and sort are the same function

32 CMOS

- a. always hangs from the north side of a tree
- b. stands for Character Matrix Optimized Storage
- c. is an inexpensive, reductive thermocouple used in the PC's power supply
- d. none of the above

33 Which ASCII character produces a face in the IBM character set?

- a. 5
- b. 6
- c. 1
- d. 2

(continues)

34 In the Open Systems Interconnect (OSI) model, the user interface is part of the application layer, while the presentation layer

- a. is buried beneath the topology layer
- b. governs data interpretation
- c. permits error recovery
- d. establishes a session-level standard

35 The 1-2-3 command /frmacros~/wwv

- a. loads a worksheet called *macros* and creates a vertical window at the cursor position
- b. saves a file called *macros*, widens the window, and views a graph
- c. views a graph called *macros*
- d. finds the next occurrence of the word *macros*
- e. links two spreadsheets

36 The difference between a disk server and a file server lies in

- a. the disk server's ability to provide record locking
- b. the file server's ability to perform data encryption
- c. the file server's ability to regulate access to files
- d. the disk server's ability to overlap hard disk sectors

37 Which of the following is not a valid set of communications parameters?

- a. 600 baud, no parity, 8 data bits, 1 stop bit
- b. 9600 baud, even parity, 7 data bits, 1 stop bit
- c. 4800 baud, even parity, 8 data bits, 1 stop bit
- d. 19200 baud, space parity, 7 data bits, 1 stop bit

38 <Ctrl>-L issued in a WordStar document

- a. sometimes repeats the last <Ctrl>-Q F, a find command
- b. deactivates word wrap
- c. sets the help level
- d. splits the screen into windows

39 HOWBIG.TXT contains 2295 bytes, as shown by DOS's DIR command. What determines how much disk space DOS allocates to the file?

- a. whether the disk is formatted as a system disk
- b. the cluster size
- c. the location of the file in the file allocation table
- d. whether the file is located on a RAM disk

40 When two users in a multiuser environment access the same data at the same time, the data is at risk unless

- a. data security protocols are followed
- b. the network operating system provides record locking
- c. both the network operating system and the application program provide file protection
- d. the application program includes "hooks" for record locking and privacy
- e. the application program is also multitasking

41 Broadband differs from baseband in that

- a. broadband supports frequencies in two directions, baseband in only one
- b. broadband supports simultaneous multiple signals, baseband supports only one signal at a time
- c. broadband relies on thick coaxial cable, baseband on twisted pair wire
- d. broadband dictates a ring topology, baseband a star

42 A linker

- a. daisy-chains PCs together in a network
- b. lumps several 1-2-3 worksheets into a master worksheet for sorting purposes
- c. combines object code files into an executable program file
- d. bypasses switch settings on the PC's motherboard

43 CSMA/CD, an access technique used in many local area networks, stands for

- a. collision system media access with carrier detection
- b. carrier system media access with collision determination
- c. carrier sense multiple access with collision detection
- d. computer system method avoidance with collective diffidence

44 A bubble sort is

- a. the same as a key-field sort
- b. faster than a partition sort
- c. an algorithm for sorting elements of a file
- d. an algorithm particularly useful in sorting large files

45 Asynchronous communications programs used with modems for the PC control data flow via

- a. parity
- b. XON/XOFF
- c. XOR/XOFF
- d. CSMA/CD

46 The <F4> key in 1-2-3

- a. defines a relative cell address as an absolute address
- b. recalculates all values
- c. invokes a \X macro
- d. quickly locates circular references
- e. exits to DOS

47 ACK/NAK refers to

- a. a native instruction in 8088 assembly language
- b. acknowledgement of a transmitted message
- c. acceptable/not acceptable memory test
- d. a keyboard interrupt
- e. Ogden Nash doggerel

48 Modems employ three methods for modulating the sine waves (which represent data) sent over a telephone line. The three modulation techniques are

- a. asynchronous, bi-synchronous, and synchronous
- b. frequency, amplitude, and phase
- c. high-bit, low-bit, or no-bit
- d. none of the above

49 What does DIP stand for?

- a. dual in-line package
- b. duplex integrated program
- c. Diablo Inkjet Printer
- d. data interchange protocol
- e. none of the above

50 A program called TEST.EXE is stored in the \util subdirectory of your hard disk (designated C:). When the program runs and control returns to DOS, you are prompted to 'Insert COMMAND.COM disk in drive A'. Which of the following DOS commands executed before TEST runs would prevent your having to place a disk in drive A:?

- a. PATH C:\;C:\UTIL
- b. COPY A:COMMAND.COM C:\UTIL
- c. RENAME TEST.EXE TEST.COM
- d. ASSIGN A=C
- e. none of the above

51 How is bank switching distinguished from virtual memory?

- a. Bank switching swaps separate banks of RAM into and out of the same addresses; virtual memory swaps data between RAM and disk storage.
- b. Bank switching reallocates disk sectors; virtual memory deals with presized data frames.

(continues)

- c. Bank switching requires access to mainframe memory.
- d. Bank switching is a sophisticated financial management strategy that takes advantage of varying interest rates.
- e. Virtual memory does not count in Trivial Pursuit.

52 Which term does not belong?

- a. GET
- b. PUT
- c. DIM
- d. SUM
- e. FILES

53 To calculate parity you

- a. add the number of bits—the 0s and the 1s—in a 7-bit ASCII character as decimal numbers
- b. add the value of the 7-bit ASCII character as binary numbers
- c. add the number of bits in a 7-bit ASCII character and square the sum.
- d. don't—parity is too complex for the advanced user

54 MYSTERY.DOC is 28,050 bytes long according to the disk directory. But when you try to edit the file with *WordStar*, the file appears to contain only three lines of text. What might explain the discrepancy?

- a. More than 64 files are on the disk.
- b. A Control Z character is in the file.
- c. Graphics characters are in the file.
- d. You are using incompatible versions of DOS.

55 AX, the Accumulator, refers to

- a. an 8088 internal register used for word-size operations
- b. a BASIC function that accumulates and stores string values
- c. a tape backup file system
- d. Arnold Schwarzenegger's next film

56 A cross-assembler is

- a. a utility that notes where variables are used throughout a program
- b. a program that runs on one microprocessor and generates machine language code for another
- c. a program that links modules of assembly language code and generates appropriate microprocessor-specific subroutines
- d. a utility that translates assembly language programs into BASIC

57 What's the difference between nested and recursive subroutines?

- a. Nested subroutines are static; recursive subroutines are altered by others.
- b. *Nested* means one within another; recursive subroutines call themselves.
- c. Nested subroutines are restricted to FOR loops.
- d. Nested subroutines are illegal in BASIC.

58 A virtual field is

- a. a data base construct that helps the prototyping process
- b. a means of defining a field that isn't stored in a data base as such
- c. effectively the same as a key field
- d. a record used to set up a data base
- e. Candlestick Park

59 The nonmaskable interrupt is

- a. an interrupt you can't override
- b. an interrupt you can override
- c. the same as an error message
- d. an interrupt found only in BASICA

60 Cell A3 in a 1-2-3 worksheet contains the formula A1/A2. Which formula effectively tests whether cell A3 contains the value 3/7?

- a. @IF(@ABS(A3-3/7)<.0001,1,0)
- b. @IF(A3=3/7,1,0)
- c. @IF(@INT(A3)=@INT(3/7),1,0) ●

Drive your PC to distraction!

O'kay all you PC owners who've been waiting for a hard drive under \$500. Your time has come. We'll sell you Tandon's 10 Meg. internal hard drive, along with Western Digital's controller board for \$479! This complete package lets your PC act like an XT, even letting you boot off the hard drive! Ready to install, with a full one year warranty.

\$479 Tandon 10 Meg. Internal Drive Package (PC, XT)

Floppy drives for under \$100!

One of the best ways to save on a PC/XT installation is to buy floppy drives direct and install them yourself. Our CDC floppies are the original drives used in the IBM-PC. They are double-sided, double density (format 320K under DOS 1.1 and 360K under DOS 2.0, 2.1, 3.0). Every drive comes with a one year warranty, all necessary mounting hardware (including a special bracket if you buy two half-heights). We even include a printout of our in-house test results and complete installation instructions.

\$89 CDC half-height drive

\$99 CDC full-height drive (PC & XT)

Don't overtax yourself.

Isn't selling a tax program/planner after April 15 like selling umbrellas in the desert? Not if you got an extension till August 15. Or if you want to plan now to save money

next year. Software Digest called PC/TaxCut the #1 tax calculating/planning program. We usually sell it for \$123, but we saved so much using it on our taxes that we've cut \$74 off the price.

\$49 PC/TaxCut (Yearly updates available for \$75) (PC, XT, & AT)

Our copywriter swears by this.

That's right. Before our copywriter started using WordPerfect he couldn't block delete himself out of a brown paper bag of purple prose. Now he not only writes better copy in half the time, but he's stopped asking for raises because he's having such a good time. WordPerfect is a powerful, no-nonsense word processing package that stays out of your way while you're creating, and spares you many of the pains of editing. Now you too can work through lunch, and not even notice!

\$219 WordPerfect 4.0 (PC, XT & AT)

Buy this Quadboard!

How's that for hard sell? We're really putting it on the line with this one. The new expanded Quadboard that is. Everything the SixPakPlus has, plus a game port, I/O mounting bracket, 384K installed and tested, and Quadmaster software for \$249! Did we say 384K installed? Yes. Did we say \$249? Yes! Buy this board. But hurry before we change our mind.

\$249 Quadboard 384K with clock calendar, parallel, serial & game port, I/O bracket, and Quadmaster software (PC, XT)

110W

Have Mouse. Will Paint.

VisiCorp took Mouse Systems' 2-button optical mouse. Added PC Paint. Mixed in 3.00V pop-up menu software for popular programs like Lotus 1-2-3, WordStar, VisiCalc,

etc. (You can write your own pop-up menu software for other applications.) The results are almost too graphic to mention. The price too electric to ignore.

\$89 VisiMouse (PC, XT, & AT)

While supplies last!

Doesn't the phrase "while supplies last" make you want to hop the next mule train to Marlow? In this case, a simple phone call will do. We have a new shipment of **Financier II** that we're going to sell so cheap your toes will curl. This is the classic home accounting software that answers the question, "Where does all the money go?" You'll easily be able to keep detailed records, and do account reconciliation. There's even an automatic check-writing feature that updates the database instantly.

\$59 Financier II (PC, XT & AT)

Make a PC the apple of your eye.

Digital Research's GEM Software can turn your PC, XT, or AT into a realistic Mac-alike. GEM DESKTOP replaces the whole PC DOS command structure with a header menu,

icons, drop-down menus and a pointer. Add GEM DRAW, and use your mouse or cursor keys to make MACnificent art. And for a limited time you get GEM DESKTOP free when you buy GEM DRAW!

\$29 GEM DESKTOP only

\$89 GEM DRAW with free GEM DESKTOP (PC, XT, & AT)

6 MILL STREET, MARLOW, NH 03456 800/243-8088 or 603/446-3383

PC CONNECTION®

Circle 136 on reader service card

PC Pacifier.

Things that go crash in the night.

Loosing sleep over some PC problem? Do what our cool, calm, collected, and very furry friend is doing. Place an absolutely toll-free call to PC Connection in the sleepy little village of Marlow, NH (pop. 546). Because we're the largest direct merchant of PC products in the world. And when one of our customers has a question about one of our products, we find the answer.

So when there's something strange, when there's something weird, who you gonna call? Call us. Months before you're ready to buy, or years later. *Because our toll-free number isn't just for orders, it's for support.*

Farewell to alarms.

You'll sleep better knowing that our phone consultants can bring order to the chaos of manufacturer's installation instructions, or odd configurations. They can also help you select the best software for your applications, and let you know if there's an update coming soon.

We have technical wizards on staff whose entire job is to answer complex questions in simple English sentences. They've been using PC's, XT's, and AT's for so long, with so many different add-ons and programs, that they can resolve just about any glitch, gloom, or glaring error you encounter.

Sleep on it.

Kids have it easy. When they wake up screaming in the middle of the night, they just turn to a teddy bear for reassurance. But where can the PC insomniac turn? To his or her PC Connection pillow case, featuring our supremely reassuring mascot. They're free to anyone who places a \$500 order between now and June 30.

Just call 1-800/243-8088 or 1-603/446-3383, M-F 9:00 to 9:00; Saturday to 5:30. If you're planning to visit, call ahead to make sure what you want is in stock. The showroom closes at 8:00 M-F and at 5:00 on Saturday.

The PC Connection pillow case. Limit one set per customer. Take two and call us first thing in the morning. Offer not available to commercial accounts.

For the IBM-PC (XT & AT) exclusively.

PC Connection Hardware Special

What! No hardware specials either???

C'mon. PC Connection giveth, but we never taketh away. We now have a whole page of specials. Where are they? Just flip to the preceding page.

There you'll find three hardware specials — new low prices on Visi Mouse, 1/2 & full height drives by CDC, Tandon's 10 meg drive, and the Quadram Quadboard. So be sure to check out our new specials page, featuring our omnipresent mascot in a positively patriotic pose.

OUR POLICY

- We accept VISA and MASTERCARD.
- No surcharge added for charge cards.
- Your card is not charged until we ship.
- If we must ship a partial order, we never charge freight on the shipment(s) that complete the order.
- No sales tax.
- All shipments insured; no additional charge.
- Allow 1 week for personal and company checks to clear.
- UPS Next-Day-Air available.
- COD max. \$1000. Cash or certified check.
- 120 day guarantee on all products.
- To order, call us anytime Monday thru Friday 9:00 to 9:00, or Saturday 9:00 to 5:30. You can call our business offices at 603/446-3383 Monday thru Friday 9:00 to 5:30.

SHIPPING

Continental US: For monitors, printers, and drives, add 2% for UPS ground shipping. Call for UPS Blue or UPS Next-Day-Air. For all other items, add \$2 per order to cover UPS shipping. We will automatically use UPS 2nd-Day-Air at no extra charge if you are more than 2 days from us by UPS ground. **Hawaii:** For monitors, printers, and drives, actual UPS Blue charge will be added. For all other items, add \$3 per order. **Alaska and Outside Continental US:** Call 603/446-3383 for information.

Still Kicking.

Has IBM's recent announcement about the PCjr. left you feeling like you're upstream without a joystick? Never fear. Just because they've eliminated the little micro doesn't mean JR CONNECTION's going to roll over and play dead. We're committed to our junior customer.

We'll continue to offer low prices on lots of products, with great support.

So keep on calling junior specialists at JR CONNECTION. 1-800/IBM-jrPC or 603/446-7761. They can help you with all your junior add-on and software needs.

1-800/IBM-jr PC

Inside Modems

Modems that slip into your PC are crowding the market, but problems of incompatibility and unreliable high-speed transmissions plague some entrants.

Larry Jordan and Jan van der Eijk

||||| That first move into data communications takes you directly into the thick of the modem marketplace, where you'll be assaulted with choices about everything from speed to cost. However, your most crucial decision lurks in a simple guise: Should you buy an external modem or an internal modem? The characteristics of the former are well known (see "The Modem Market," *PCW*, Vol. 1, No. 8). Internal modems, however, bring with them an entourage of possibilities and pitfalls not associated with their desktop cousins.

In the early days of personal computing, only 300-bps modems were available. Back in those olden times, modems were relatively expensive external devices that only a few computer-savvy individuals dared to use. Today, data transmission rates for PC modems have skyrocketed, usable communications programs have arrived, prices have fallen, and board-level products abound. The seven 1200-bps modem

boards tested here represent only a sample of the devices that fit nicely into an IBM PC, XT, AT, or compatible.

Like desktop modems, modem boards translate a computer's digital data signals into analog frequencies that can be transmitted across normal telephone lines. Another modem at the receiving end converts the analog signals back to digital form for use by the receiving computer. Modem speeds vary, but 300 bps and 1200 bps predominate—although 2400-bps units are becoming more available.

The 1200-bps modems discussed here have some common characteristics. All PC modems, for example, require special communications software to provide easy access to other PCs and the huge number of computer bulletin boards, on-line data services, and company mainframes. Since Hayes modems dominate the market (more than 50 percent according to market analysts at Future Computing of Dallas, Texas), PC modems usually employ the Hayes command set and are often referred to as "Hayes compatible." These commands let users change certain modem functions such as waiting time for dial tones. As a result of this de facto standard, most communications software houses use the Hayes command set in their products.

For that same reason, the Hayes 1200B internal modem is used in this article as a standard against which the other products are measured. But be careful. Timing differences in a manufacturer's modem chip can corrupt compatibility. A program that runs beautifully on one modem may not work at all on an-

other. For example, with many software packages you can press a function key to disconnect the modem from an on-line service, but the timing sequence in the modem chip might not register the command properly. Thus, you may think you've logged off a system or closed a phone connection when the link actually remains open.

Table 1 illustrates the specific features of the internal modems discussed in this article.

Each of the seven modems requires an expansion slot and a standard RJ11 telephone wall jack for connection to a telephone system; each includes a communications program.

All modems reviewed comply with the Bell 103, 113, and 212A protocols to send asynchronous data. That is, the modems transmit characters in an irregular pattern, using start and stop bits to define the length of each burst of data.

We put these seven modems through a series of tests that included connecting them to an electronic mail program on a minicomputer, sending files to a remote PC, and linking them to on-line services such as MCI Mail and The Source. The modems were tested at both 300 bps and 1200 bps. Ease of installation and quality of documentation were also factors in our evaluation. But before making any selection, consider the words of a wise old race driver: "One man's Ferrari is another man's jalopy." The same maxim applies to modems.

■ AST Reach!

Noted for making multifunction boards, AST Research generates a significant amount of its revenues from PC communications products. Its Reach! half-board modem is a welcome solution to users of the XT and the Portable PC, who need all the full-length expansion slots they can get. This modem is compatible with most features of the Hayes Smartmodem 1200B, and it fits in the IBM Portable PC slots. The latest version of *Crosstalk XVI* is bundled with it.

One appealing feature of the Reach! is the accessibility of its DIP switches at the PC's backplane. Many communications programs differ in the switch settings they require; the Reach!'s switch design elim-

inates the loathsome task of opening and closing the PC's enclosure each time you change communications programs. While the Reach!'s documentation won't win a Pulitzer, it is adequate. Only 65 pages focus on the modem itself. Most of the manual is dedicated to explaining the use of *Crosstalk*. This emphasis seems unnecessary, since Microstuf, *Crosstalk*'s manufac-

The Era 2 responds to all of the Hayes Smartmodem commands. However, Microcom fully expects that you will use its own software.

turer, provides ample documentation, and users may choose other communications programs instead. During our tests, the Reach! modem did just fine with *PC-Talk III*.

The board appears well made with no loose wires or uneven soldering. The modem responded well to all Hayes commands and provided excellent line noise filtering. The Reach! modem does, however, have two shortcomings. Its speaker volume control must be adjusted with a screwdriver—a tedious task if the back of your system unit is not easily accessible. An outside volume-control knob would have added a crowning touch to an otherwise excellent modem. A less serious flaw is that the user manual comes on loose-leaf paper without a binder.

■ Era 2

Microcom is making a name for itself in the arena of communications protocols. Its MNP (Microcom Network Protocol) has attracted considerable interest among microcomputer manufacturers and long-haul data networks such as Telenet (see "The Microcom Agreement," *PCW*, Vol. 2, No. 5). But Microcom also has a bread-and-butter modem, the Era 2—a combination hardware/software package whose software works only with the accompanying hardware. The modem is one of the best Hayes Smartmodem 1200B clones tested. Because the software is written exclusively for the Era 2, it takes full advantage of the

modem, using menus and simple commands to set parameters. Another Era 2 advantage is the size of its line monitor speaker. Microcom uses a thin metallic speaker on the Era 2, which fits better in an XT than does the thicker, standard speaker Hayes uses in the 1200B.

With both *PC-Talk III* and *Telios* communications software, the Era 2 communicates easily with remote systems. During tests, the modem transmitted files and sent mail with no problems or need to re-transmit. The Era 2 responds to all Hayes Smartmodem commands. The only problem in using these commands is the lack of relevant documentation in Microcom's manual. Microcom fully expects that you will use its own software even though Hayes command recognition is available. The only communications package that refused to work with the Era 2 was the RBBS-PC bulletin board system, a popular public domain program used on many community and private computer bulletin board services (BBSs). The Era 2 would not answer incoming telephone calls when operating under the RBBS program.

The Era 2's typeset manual is easy to read and contains excellent modem installation advice. The program documentation will appear familiar to users of the *IBM Personal Communication Manager*—Microcom also wrote that software.

IDEAComm 1200

Like AST, IDEAssociates sells a wide variety of enhancement products for IBM PCs and compatibles. Communications, however, is the company's strength; IDEAssociates supplies local area networks and terminal emulation boards as well as modems. The IDEAComm internal modem will warble a tune to indicate when it is properly installed and ready to go. Our model ran through the standard tests and had no problem making connections at 300 bps. However, at 1200 bps, while sending a file to a remote PC and while attempting to send electronic mail to a remote host computer, the IDEAComm sent 8-bit graphics characters to the screen so fast that the tests had to be stopped. The screen filled with gibberish because (at least on the unit we tested) the IDEAComm modem does an inadequate job of filtering telephone noise at high speeds. At higher speeds, noise on telephone lines has traditionally created havoc with modem out-

put because the bandwidth on the copper wires is not designed to handle high-speed data without sophisticated filtering.

Included with this modem is the IDEAComm communications software. It supports the standard XMODEM file transfer protocol and has a dialing directory to store 70 characters in the logon sequence. In auto-answer mode, the IDEAComm modem allows remote users to upload and download files and leave up to 15 messages.

Info-Mate 212PC

Cermetek has made its name in the communications market quietly by providing modems for other manufacturers to resell. These OEM relationships have served the company well in its venture into the PC internal modem market. Cermetek's Info-Mate is well designed, expertly fabricated, and nicely packaged. Installation instructions are readable and easy to follow, with the exception of some indistinct photographs that proved of no help at all.

The screen filled with gibberish because the IDEAComm modem does an inadequate job of filtering telephone noise at high speeds.

The modem design employs very large scale integration (VLSI) chips. VLSI lets Cermetek pack the power of 1200 bps into a half-length modem board. The Info-Mate contains two modular telephone cable connections and an auxiliary RS-232C port. Modem jumpers are provided to switch between telephone communications and RS-232C digital communications. A second telephone connection port allows you to monitor the progress of a session or place a phone call manually. The modem comes configured as COM1; but is easily changed to COM2: using small cap-type jumpers.

The Info-Mate is one of the few modems on the market that does not use the Hayes command set. It comes with its own software, Modem-Mate. In our tests, the software did not respond properly when used to communicate with *PC-Talk III* on the other end of a transmission. The Info-Mate can be used with a modified version of *Crosstalk XVI*; that seems to be the software of choice for this modem, especially since Modem-Mate provides only a crude directory for telephone numbers, lacks the ability to use batch mode operations, and has no facility for script files such as those available in *Crosstalk* and other popular communications programs.

A couple of minor problems arose with the Cermetek modem. It has no line monitor speaker, and the dialing response result codes are cryptic. Without an aural monitor a user has to be cognizant of exactly what is happening on the screen. It takes some practice to make calls and to understand what the on-screen signals mean once a call is initiated. In addition, the modem's auxiliary RS-232C port does not support a ring-detect signal, not a problem if the port is used only for direct connection to a host computer. But operating an external modem from the port with bulletin board software, for example, requires the ring-detect signal.

Intellimodem XL

Bizcomp is the company that started the intelligent modem industry. Mike Eaton, Bizcomp's president, holds the patent for intelligent modems, and it is his technique that has been licensed by Hayes. The Intellimodem XL is a full-featured board that allows easy switching between voice and data communications. The voice-call capabilities are an asset to anyone who makes frequent telephone calls to a small group of people. Three telephone connection ports are provided on the back of the board. After connecting the modem to the PC, you can connect a telephone handset to the modem and make or receive voice calls independent of the computer when data calls are not in progress. If you don't have a dedicated line for your modem, this capability spares you from constantly having to plug in and unplug the phone. A special command mutes the modem so it won't transmit its high-pitched signal during voice calls.

The Intellimodem XL package includes *IntelliSoft Plus* communications software, which takes full advantage of the modem's voice call capabilities but does not measure up to *PC-Talk III* and *Crosstalk* in file-transfer and data communications features.

The tests uncovered problems with the Intellimodem. First, the board's default setting is for COM2:. Most modem manufacturers use COM1:, and the majority of communications software packages expect COM1:. Second, the Intellimodem XL

Without an aural monitor a user has to be cognizant of exactly what is happening on the screen.

locked up several times when used with a Hayes-compatible terminal emulation software package. The hang-up turned out to be a modem timing problem during initial connection with the remote host.

On the plus side, the manual is first-class, except for slight disorganization in the sections that cover linking to the major nationwide data networks. This deficiency could prove a problem for users not familiar with the complexities of data communications.

Qubie' PC212A/1200

Qubie's plug-in modem was one of the first internal 1200-bps units containing ROM-based emulation of the popular Hayes Smartmodem command set. Hayes compatibility combined with the modem's low list price (approximately two-thirds of the Hayes Smartmodem price) created an immediate demand for the Qubie'. Many initial buyers were disappointed, however, when they found that the Qubie' emulated the Hayes standard but not its high-quality construction and components.

Early Qubie' buyers suffered through a variety of problems ranging from improperly manufactured expansion-slot plugs to inadequate telephone-line noise filters. Users had to file down the modem's bus connector before it would slide into a PC slot. Some Qubie' buyers found that file transfers at 1200 bps using the XMODEM file transfer protocol were almost impossible due to inadequate noise filtering in the modem hardware.

Qubie' has corrected most of the problems that surfaced in early versions of its modem while keeping the list price low. The modem uses all the Hayes 1200B commands and interacts easily with *PC-Talk III*, which is included in the package. The Qubie' works nicely with a wide variety of remote data bases and PC-to-PC file transfer programs.

Despite these improvements, the Qubie' modem has a few lingering flaws. First, it sends 8-bit graphics characters (square root signs, brackets, and other symbols not in the transmitted text) to the screen when receiving data from a remote system. Second, the modem's default switches are set for auto-answer, an irritant to people who call while the modem is connected to the voice telephone line. Third, the modem's retaining bracket does not slide properly into an XT and must be twisted in order to fit. Finally, the Qubie' speaker's volume control is inaccessible from outside the PC system unit.

Smart-Cat Plus

Novation provides a full line of modem products for the IBM PC. The Smart-Cat Plus package contains an excellent installation and operations manual with ample illustrations for the hardware novice.

The modem comes with *Mite* communications software but operates equally well with several other programs. *Mite* supports both the XMODEM and CLINK file transfer protocols. In addition to a full Hayes Smartmodem command set, the Smart-Cat includes additional commands for such feats as dialing an alternate number when the first number is busy and determining whether pulse or touch-tone dialing is required.

Unlike the other modems reviewed, the Novation unit relies on the PC speaker for sound feedback during telephone dialing. The pair of jumper wires that connect the modem board to the PC speaker are too short, requiring that the modem be placed in an expansion slot close to the speaker in the PC or the XT. To connect the Smart-Cat Plus to an AT speaker,

Qubie' has corrected most of the problems that surfaced in early versions of its modem while keeping the list price low.

you must remove the disk controller to access the speaker connections on the motherboard. In the Compaq the speaker is so far from the expansion slots that the line monitor cannot be used at all.

Making the Connection

After taking these modems for a ride, we can recommend no single device as a dream modem. If price is the absolute criterion, the Qubie' has to be the answer. If sophisticated file-transfer capabilities are a must, the Era 2 is the standout. But if you're looking for a modem that best mimics the popular Hayes modem, go with the Bizcomp or AST products.

Other relevant issues lie beyond the scope of this review. Two of the modems—the AST and IDEAssociates products—are designed to work in tandem with the companies' other PC enhancements. IDEAssociates, for example, uses its modem with its terminal emulation board. In a corporate environment, that compatibility could be of greater value than low price or Hayes compatibility.

One more point needs considering before you buy an internal modem for your PC: Do you really want to fill an expansion slot with a modem? Desktop modems, although usually more expensive, are less hassle and won't interfere later if you want to add another enhancement to your PC's bus. Study your environment and consider your requirements carefully. ●

Corona at the Speed of Light

Look out world—the new laser printer from Corona prints as pretty as a daisy wheel, faster than a dot matrix, and as quiet as a quill pen. For a small package, this printer packs a real punch.

Bill Crider

...to be interpreted by ... from the dawn of civil-
 ization. This is *another* truth. This is a marvelous truth. Fully
 comprehended it may open to a printer a vista of profound
 sentiment, and invest his occupation with a sacred character.
 The most influential product of the printing art is books. There
 were countless books before the invention of printing, but let
 it be remembered that *typography is merely time-consuming*
 scribing, and that *writing is man's most free*
 By that invention *humanity's*
distinctive intelligence

It took years, but finally, after a long period of denial, I have faced facts: I am a technology junkie. Like all computer lovers in the early stages of addiction, I felt a surge of excitement at the sight of each new product. I was overwhelmed by bidirectional printing, giddy with joy over daisy wheels, and ecstatic at my first sight of a color printer. But inevitably, exposure to so many marvels left me jaded: These days I am bored by the merely innovative or the simply novel, and palled by products whose only boast is that they are cheaper and faster than the last model. Like any computer junkie, I require ever-larger doses of technological wizardry to satisfy my electronic addiction.

But incredible as it may seem, I have found something that satiates, at least temporarily, my craving for innovation—the Corona LP-300 Laser Printer.

Until last year, many people scoffed at predictions of laser printers for microcomputers. The cheapest laser printer on the market up to that time cost at least \$10,000, with prices of over \$50,000 much more common. Only large companies with heavy needs for high-speed, high-quality printing could justify such a tab. But the confluence of photocopying and electronics technologies brought new possibilities for laser printer design, and in 1984 the Canon Laser Printer Engine was born. The machine, which is similar to the Canon copier engine, was available in large quantities for the astonishingly low price of \$1000. Vendors who bought engines could add printed circuit boards, software, and a computer interface to create laser printers.

The first company to market a printer based on the Canon engine was Hewlett-Packard. Its LaserJet printer was released amid much hoopla last year. The Corona LP-300, first shipped in January 1985, is the second of the breed.

Why would anyone want a laser printer? The reasons are numerous, but they can be summed up in three *q*'s: quick, quiet, and quality.

Don't Make Light of Laser Printing

Compared with other types of printers, laser printers are *fast*. Daisy wheel printers generally produce 20 to 80 characters per second (cps). Dot matrix printers zip along at 80 to 240 cps. Ink jet and thermal printers occasionally achieve 200 cps. But the Canon engine can in theory print up to 8 pages a minute—or over 468 characters per second. (With 1-inch margins, each page has 54 lines with 65 characters per line; multiplying by 8 pages and dividing by 60 seconds yields 468 characters per second.) Timing tests clocked the Corona at speeds ranging from 5.5 to 7.5 pages per minute, or 322 to 439 characters per second. The differences in speed seem to be a function of the program in use. *WordStar* prints slower than *MultiMate*, for example.

The Corona's speed also varies according to the kind of document being output. Because the first page takes longer than subsequent pages, the speed advantage of the laser printer over other printers is

Table 1: Noise level comparison

	dBA
Quiet conversation	50
Corona LP-300 at 3 feet	55
Normal conversation	62
Fujitsu SP830 at 3 feet	70
Okidata 2410 at 3 feet	75
Vacuum cleaner at 3 feet	80
Auto horn at 3 feet	100

more marked for longer documents. Figure 1 compares the Corona printer to tractor-feed dot matrix printers, daisy wheel printers, and the HP LaserJet. As the results show, the Corona and the HP are comparable in speed for short documents, but the HP machine is significantly faster for long documents. Although these figures result from tests that involved no font changes within documents, separate tests show

that even a page with 60 typeface changes prints as quickly on the laser printer as the same page with no typeface changes.

■ Quiet Is Golden

For many offices, the quiet operation of the Corona could be the primary reason for buying it. If you have ever worked in an office with a printer banging away on your neighbor's desk, you will appreciate the Corona's hushed performance. Table 1 compares the Corona's sound level to that of other printers. When the Corona is just sitting there, its fan makes a whisper quieter than that of the fan in an IBM PC. When the printer is working, it is scarcely louder. To simulate the sound of the Corona laser printer in operation, flip the pages of this magazine. The loudest noise produced by the printer is the "swish" of the paper being picked up.

■ Denser Is Better

Another reason to buy a laser printer is print quality. Because the Canon engine can print 90,000 dots to a square inch (300 by 300), the Corona printer produces letter images comparable to those produced by a daisy wheel printer using a carbon ribbon.

For many companies, output of that quality is adequate for low-end typesetting needs. A laser printer's ability to produce a variety of proportionally spaced fonts in multiple sizes makes it a likely candidate for memos, reports, newsletters, and the myriad of other documents any company creates.

Figure 1: Speed comparison for the Corona LP-300 laser printer; the Hewlett-Packard LaserJet laser printer; a high-speed dot matrix printer (Okidata 2410, \$2475); a medium-speed dot matrix printer (Datasouth DS-180, \$1395); and a daisy wheel printer (Fujitsu SP830, \$2295). The long document is 600 lines; the short document is 25 lines.

Further Features

Beside the three *q*'s, the Corona has other attractive features. It is very easy to use. The toner comes in a cartridge that simply slides into place, and the paper loads in a cassette, as with a photocopier. Unfortunately, the tray holds only 100 sheets, but you do have the flexibility of choosing letter- or legal-size paper, making overhead transparencies, or using your letterhead. No more threading pin-feed paper under a desk or a printer stand. No more hassle with high-priced cut-sheet feeders.

Figure 2 compares the operating costs of the Corona and a daisy wheel printer. Not reflected in these figures is the time saved (and

the frustration avoided) due to the ease of operating the laser printer. Of course, if you use the printer for some of the low-end typesetting work that you would previously have sent out to a type shop, the savings are tremendous.

Another benefit is that a laser printer can sit on any small table or desk. It does not need a paper slot, and it can sit very close to the wall because the paper comes out in front. You can set the Corona on top of a small file cabinet and have drawer space below, instead of stacks of paper.

Meeting the Competition Head On

So what? you may be thinking. All these advantages are also true of the Hewlett-Packard LaserJet. What makes the Corona better? In comparing the market newcomer with the original, the Corona stands out in two ways: price and software.

At \$3495 for the LaserJet and \$3395 for the Corona, the initial cost of the two printers is close. Each printer comes with one toner cartridge—extras cost \$99 and are interchangeable (unfortunately, Canon Copier toner cartridges don't fit). The small difference in

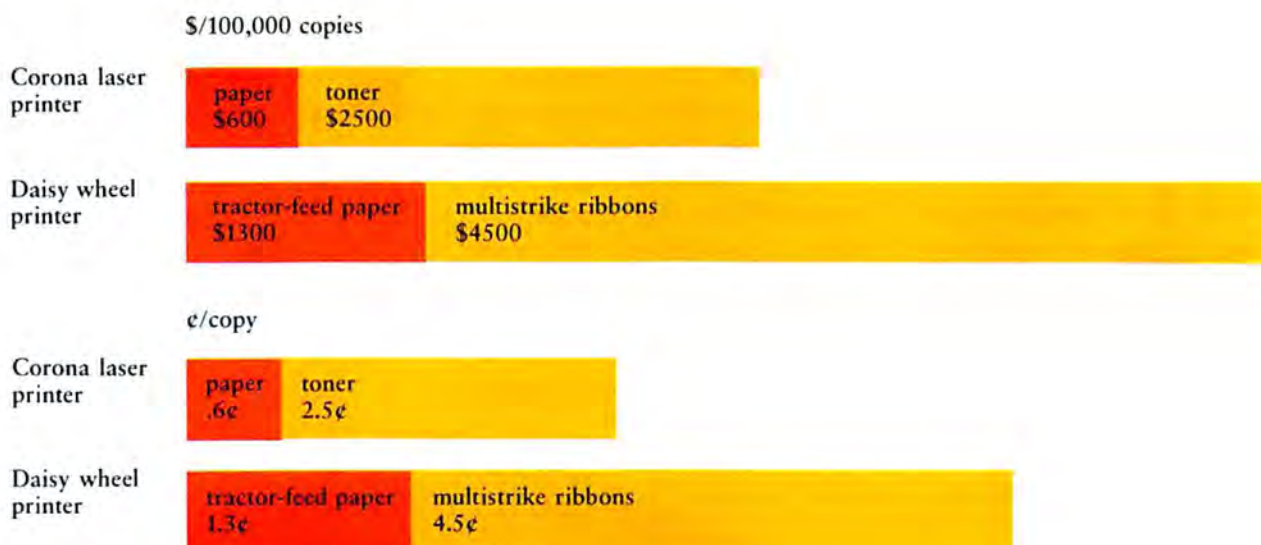

Figure 2: Cost of operations for the Corona laser printer and a daisy wheel printer. Maintenance costs and power usage are not included. The figures are based on 1500 characters per average page (30 lines, 50 characters per line); 6,000,000 characters per toner cartridge at \$100 each; and 500,000 characters per multistrike ribbon at \$15 each.

initial price is obviously intended to give Corona a slight edge without sacrificing profits.

But when you include the cost of fonts, the Corona has a significant price advantage over the HP. The LaserJet's fonts are stored in cartridges that plug easily into the front of the machine. Two fonts reside in the machine, and five or six are included on each cartridge.

Unlike the LaserJet, the Corona lets you decide which fonts you want mixed; you don't have to accept the mix provided on a cartridge.

Cartridges cost over \$200 each. The Corona, on the other hand, stores its fonts as software on disk. You could, for example, reserve a hard disk subdirectory for the fonts. Several companies are selling the fonts five to a disk, for about \$50 per disk. You can load whichever fonts you want into RAM, as long as all of them fit into 64K. This translates into four to six fonts on line at any time, and you can increase the number of on-line fonts by eliminating characters using a font editor. Unlike the LaserJet, the Corona lets you decide which fonts you want mixed; you don't have to accept the mix provided on a cartridge. Figure 3 shows some of the fonts available at the time this article was written.

Fonts are usually loaded from DOS, outside your application program. However, they can be

loaded from within an application if it has a command to run an external program (such as the RUN command in *dBASE III* or the R choice on the opening menu in *WordStar*). To load a font, you use the LPMODE.COM program provided with the printer.

Because they are software, the Corona fonts can be edited. *Poems Font Editor* by Poems Soft-

ware and *FontGen* by VS Software enable you to change the fonts included with the machine or to create your own fonts. Figure 4 shows some variations created with *FontGen* from a single Corona font. You can change the size of letters, create an italic or bold effect, or alter letter shapes by using *FontGen* to edit the bit map. You can even produce special symbols.

Another good use of a font editor is to fit more fonts into memory. For example, if you use a large font only for uppercase headlines, you could delete all its lowercase letters and graphics characters. This would reduce by more than half the RAM required to store the font, creating space for ten or more fonts in memory.

The 64K used for storing fonts is part of the computer's main RAM. The Corona interface board contains an additional 64K RAM, but this is used as a rotating buffer in which the printer holds a page image before putting it on paper. The interface board takes up one long slot in the PC and provides the port used by the Corona printer.

Graphics

In its graphics capabilities, the Corona printer completely outclasses its competition (see Figure 5 for an example of the Corona's graphics). The HP LaserJet has only rudimentary graphics

To create an image on the HP LaserJet, you must convert each line of the picture into binary data, where 0s represent spaces and 1s represent dots. A byte, or character, contains eight bits, so each character you send will cause eight dots to be printed. For example, the tilde character (~) is 01111110 in binary, so when you send a tilde to the printer it causes a space, six dots, and another space to be printed. A series of tildes creates a dashed line. You

Epson Emulation The Corona has two graphics modes: Epson emulation and a native command set. In the Epson emulation mode, almost all the graphics programs that work with the Epson MX, FX, and RX

printers also work with the Corona. The only common denominator I could find for those that did not work is their use of "handshaking"—they not only send information to the printer but also expect to receive information back from it. Those programs are not compatible because the Corona does not perform the same kind of handshaking as the Epson. You should test any programs that are especially important to you.

Figure 3: A representative sample of fonts available from VS Software for the Corona laser printer

All the BASIC programs tested appeared to work perfectly, with one minor qualification. The Corona does not commit anything to paper until it finds a formfeed in the data flow. In text mode the printer generates its own formfeeds when necessary, but not in graphics mode. Its print buffer simply sits there collecting data until a formfeed (ASCII character 12) arrives. If you send more data than the buffer can hold, the first data sent can be lost. When you finally send a formfeed to the printer, the only output will be the last information sent to the buffer. Maximum buffer size is 64K, but some graphics programs send more information than that at a time. Using a print spooler does not seem to help.

Speaking of spoolers, note that you must load memory-resident programs (such as spoolers, RAM disks, and "pop-up" aids) *before* you load the Corona fonts. Unless the fonts are the last memory-resident program loaded, they may corrupt other memory-resident programs.

One nice feature of Epson emulation is that DOS's GRAPHICS.COM utility works. With GRAPHICS.COM you can use <PrtSc> to produce a high-resolution printout of a graphics screen. Corona Data Systems is currently working on Diablo 630 emulation.

■ Native Graphics

The Corona's native graphics are not as easy to use as Epson emulation but provide added flexibility. You must load a graphics image into memory before you can print it. First load it onto the screen, then specify the video RAM as the memory location. Three native commands are used for printing graphics. *@showc* prints graphics immediately, wherever the command happens to be on the page. *@showb* lets you specify the placement of graphics on the page. *@showa*, the most complicated of these three commands, uses hexadecimal notation

and can print inverse images and locate images in memory other than the video buffer.

The syntax for the simplest command is

```
@showc MMap Screen
      SrcXb,SrcYb SrcXe,SrcYe
      Xmag,Ymag;
```

MMap is the memory map to use (for the IBM PC, an *MMap* of 3 refers to 320- by 200-pixel graphics, an *MMap* of 4 refers to 640-by-200 graphics). *Screen* refers to the screens used in BASICA (a *Screen* of 1 refers to medium resolution, a *Screen* of 2 refers to high resolution). *SrcXb* and *SrcYb* are the beginning x-y coordinates on the screen, and *SrcXe* and *SrcYe* the ending x-y coordinates. *Xmag* and *Ymag* are numbers from 1 to 4 that indicate the amount of magnification for each axis.

For example, *@showc 3 1 0,0 319,199 3,4;* means "Print the image found at the medium-resolution graphics buffer, starting with the first pixel and ending with the last one. Magnify the x axis three times and the y axis four times."

This is the Courier 9 font.

This is a bold version of Courier 9.

This line shows Courier 9 in slanted form.

This is the same font, reduced by 25%.

This is the same font, enlarged 50%.

Figure 4: Modifications of a Corona font created with FontGen

Figure 6 shows a *Framework* screen printed using the native graphics commands.

The last native graphics command is `@MMap`, which allows you to redefine the memory maps used, in case you do not want to store the image in one of the video buffers. If you do not define your own memory maps, `MMap` and `Screen` in the `@showc` command will both refer to the same parameter. If you define your own memory map with `@MMap`, `@MMap`

The Corona allows you to print text and graphics on the same page, with the text receiving priority over the graphics if they fall on the same part of the page.

will specify the location of the data, and `Screen` will specify the resolution of the data.

Using `@showa` and `@MMap` together is an exciting application of graphics. The Corona allows you to print text and graphics on the same page, with the text receiving priority over the graphics if they fall on the same part of the page. Using these two commands, you can create a form on a page as a graphics image and then print the data into the form as text. In such a case, you could get your data from a spreadsheet or a database—your monthly invoice information, for example. It could be printed on regular paper but look as if it were on a preprinted form.

Text Mode Programming

Several word processors—*WordStar*, *MultiMate*, and *Palantir*—have drivers that allow you to switch easily between fonts without using the Corona's command sequences.

If your word processor does not have a driver for the Corona, you can send commands to the printer in text mode. Each command is simply inserted into the text. When you print the file, the commands are executed and not

tion characters “@” and “;” to other characters of your choosing, set the number of copies per page, and print graphics.

Mighty Macros

Corona command sequences, though easy to remember, can become tediously long. To eliminate the typing of long command sequences, Corona has implemented the use of macros. A macro is a shorthand command that takes the place of a longer series of commands. You can define up to 99 macros, each of which can be up to 512 bytes long.

To define a macro, use the `@MACRO nn “@string;”` command, where `nn` is the macro number to be defined, and `string` is the command string to be executed. For example, you could define the command sequence given earlier as a macro like this:

```
@MACRO 01 “@FONT
COURR9;@LH 50;
@TBORDER 300;
@LBORDER 300;
@PWIDTH 1950;”;
```

Figure 5: A graphics image printed using the Corona native graphics commands

If you include all your macros in the AUTOEXEC.BAT file, you can set the font, the line height, and the borders by simply including the command <Esc> ^O1 in your text. Note that the "^" in this command is the caret (Shift-6), not the <Ctrl> key. Also note that to use macros, you must either have a word processor that supports use of the <Esc> key or use a keyboard macro processor, such as *ProKey* or *SmartKey*, that will enable you to assign strings of characters to individual keys.

Besides making font changes faster, macros enable untrained users to operate the laser printer. Only one person in an office needs to learn the laser commands—the rest of the office can use the macros.

The Battle of the Beams
Will the Corona LP-300 kayo the HP LaserJet in the battle of the laser beams? Possibly, but not probably. The Corona has significant features on its side, including superior graphics and font-handling capabilities, but as noted, the HP is faster, at least for long documents. In addition, Hewlett-Packard has megabucks for marketing and advertising, plus the advantage of having been on the market several months longer than the Corona. A head start is hard to beat. At this time far more software programs have been modified to support the HP LaserJet than the Corona. More-

over, Corona is throwing punches at a moving target. Technology doesn't stand still, and HP may soon improve its machine to make it more competitive. At this point, though, the Corona is still the best value for the money. ●

Better and True BASICs

Two fresh versions of the BASIC programming language breathe new life into the old workhorse, providing improved structure and capacity. One even does away with line numbers!

Donald P. George

 BASIC is the language that computer experts love to hate. Although it predates the microcomputer that spawned its popularity and international exposure, BASIC continues to be a viable and important language for tens of thousands of seasoned and novice computer users.

Notwithstanding its obvious popularity, the common microcomputer versions of BASIC (including IBM's PC BASIC, aka Microsoft's GW BASIC) have many drawbacks that have precluded their selection for ambitious pro-

gramming assignments. Recently, in answer to the language's deficiencies, several vendors have begun providing "new and improved" versions of BASIC.

Two such products are True BASIC, from True BASIC Inc., distributed by Addison-Wesley Publishing, and BetterBASIC, from Summit Software Technology. This review compares the products with each other and with the current "standard" in the world of PCs, IBM's Advanced BASIC (BASICA).

BASIC Limitations

These new products were designed to correct the aforementioned deficiencies in microcomputer implementations of BASIC and to add power and versatility to the language. As we shall see, each product approaches these tasks from a very different perspective.

One prominent shortcoming of BASICA is its required use of line numbers. Line numbers are awkward at best, and when used in conjunction with the GOTO verb, they often lead to a complex and convoluted logic referred to as

"spaghetti code." This coding style is nearly impossible to understand, debug, or modify, and it is one of the reasons for BASIC's poor reputation among computer scientists, professional programmers, and other demanding users.

Other favorite targets for improvement are BASICA's notoriously slow execution (when not compiled) and its lack of support for all available memory. BASICA supports a maximum program size of only 64K on a PC, a severe restriction for a machine that can support 640K of memory. BASICA also lacks several useful block control structures, provisions for local variables, the ability to create and invoke separate procedures easily, and an advanced program debugging capability.

True BASIC

True BASIC is brought to you by the same people who invented the BASIC language. In the early sixties, Professors John Kemeny and Thomas Kurtz invented BASIC as part of a larger project

to make computers available to the students at Dartmouth College. Their work with the language would probably have gone unnoticed by the world at large but for the arrival of the microcomputer. Due to its utility and simple design, BASIC was implemented on most of the early microcomputers and on virtually every personal computer since.

Since the first microcomputer versions of BASIC were written for extremely modest machines, only a small subset of the mainframe language could be used. But even after personal computers gained power, many limitations of these "small versions" of the language were retained. True BASIC Inc. is dedicated to promulgating the "true" version of the BASIC language intended by the original authors. True BASIC is not an extension of BASICA but a brand-new and extremely elegant implementation of BASIC.

■ The True BASIC Environment

When you invoke True BASIC, you are greeted with a split-screen display (see Screen 1). The bottom few lines of the screen form the history window, used to enter language commands and to display program output. The remainder of the screen forms the editing window, in which you display and edit your program. The sizes of these two areas are modifiable. The

ability to create and control windows on the screen is an intrinsic part of True BASIC.

To create True BASIC code you press a function key to take control of the editing window, then start keying in your program. At any point you can RUN your program, whereupon True BASIC performs a syntax check of the code, converts it into an intermediate form for faster execution (a process called semi- or incremental compilation), and executes the converted code. By examining every line of code during compilation, True BASIC detects syntax errors before execution and generates clear diagnostic messages to tell you of any problems. With this system, it is impossible for a syntax error to remain buried in the

code waiting to be discovered at some uncertain future time—a common occurrence with BASICA. True BASIC allows the compiled code to be saved to disk.

A full-screen editor built into the product is always available. Since True BASIC does not use line numbers, its editor is quite different from (and superior to) the editor included with BASICA. True BASIC's editor supports such common text processing commands as block move, copy, and delete as well as find, change, and change-verify commands. It even supports a limited undo function. True BASIC also includes a powerful built-in key macro capability. You can assign a string of charac-

ters to almost any <Alt>-key or <Ctrl>-key sequence; key definitions can be saved and retrieved from disk.

The True BASIC Language

True BASIC is an easy-to-use, straightforward, and powerful implementation of the BASIC language. Although it is a complete rewrite of what we commonly think of as BASIC, many of this language's statements are virtually identical to BASIC's, so you will quickly feel at home.

True BASIC supports string variables of up to 32,768 characters and numeric variables with a default of 14 digits of precision. On a computer equipped with an 8087 coprocessor, True BASIC automatically uses the coprocessor's power to do floating-point calculations with increased speed and precision. The product supports a complete set of matrix functions for array manipulation, including matrix READs, PRINTs, INPUTs, assignment statements, and arithmetic.

True BASIC's support for graphics on the PC is easier to understand, more complete, more flexible, and more portable than the graphics support available with BASICA. Points, lines, circles, and text are displayed based on the coordinates you specify—you do not reference the screen in terms of pixels. The product supports animation and full-color displays.

library file is a collection of ready-to-use, precompiled subroutines and functions.) All you have to do is name the library files and make them available to your executing program.

While some of these features may sound complex, True BASIC is easy to work with and operates like the BASIC you're used to. The program's marvelous documentation (a user tutorial and a tech-

It is impossible for a syntax error to remain buried in the code waiting to be discovered at some uncertain future time.

True BASIC is especially strong in its implementation of structured programming constructs, including DO-WHILE, DO-UNTIL, SELECT CASE, and IF THEN ENDIF (see Figure 1). It allows the definition of internal and external subroutines, functions with formal call parameters, and local or global variables. True BASIC also supports the simple creation and use of library files. (A

nical reference manual) minimizes any confusion you might experience in trying out True BASIC's many advanced features.

BetterBASIC

Summit Software Technology used BASICA as its model to build BetterBASIC. BetterBASIC is an elaborate extension of BASICA, with many restrictions removed and a vast number of language extensions added.

BetterBASIC is a highly modular system. When started, it reads a configuration file and brings into memory only those modules you have requested; you need not load program support for language features you are not using. For example, if you have a monochrome display, you can avoid the overhead of the system code that sup-

Figure 1: Block control structures. True BASIC provides a greater variety of constructs than BetterBASIC and implements them well.

Byte. Whole numbers between 0 and 255. Requires 1 byte of storage.

Integer. Whole numbers between -32,768 and 32,767. Requires 2 bytes of storage.

Real. Floating-point numbers between .1E-254 and 9.999..E + 253. Requires $[2 + (\text{precision}/2)]$ bytes of storage.

Named constants. A named data item whose value can be referenced but not changed in the program.

Pointer. A data item that can be "set" to point to another data item of the same type.

Record. A named collection of data items of any type (including other records).

Figure 2: BetterBASIC supports more data types than BASICA or True BASIC.

```

    CALL EDIT_DATE(MO,DA,YR)
    PRINT ERROR_MSG$
LOOP
END
```

Listing 1: True BASIC program structure

ports BetterBASIC's graphics functions. BetterBASIC enables you to add your own modules to the load list and actually create your own custom version of the BetterBASIC language.

■ The BetterBASIC Environment

Like True BASIC, BetterBASIC is an incremental compiler. Unlike True BASIC, BetterBASIC compiles each line as it is entered rather than when the RUN command is executed. If you make a syntax error, you will find out as soon as you press the <Enter> key; BetterBASIC will display an error message and indicate which part of the statement is at fault.

BetterBASIC comes with a BCD (binary coded decimal) math package to perform floating-point calculations. This technique eliminates rounding errors and permits absolute control over numeric precision; you declare the precision as part of the configuration file. Any precision between 4 and 24 digits is supported.

Summit Software also markets a separate math package that makes use of the 8087 coprocessor. To use this package, simply change the line in the configuration file that declares which math module is to be used when the program is invoked. This user control is another example of the flexibility afforded by BetterBASIC's modular approach.

BetterBASIC's operation is based on the somewhat foreign concept of a "workspace." A workspace is a self-contained area of memory composed of some BASIC code—normally one routine or procedure—and all the variables

referenced by that code. These variables are, by definition, local to the workspace. When BetterBASIC is first invoked, you are positioned in the main workspace. You can create and move to new workspaces by using commands unique to BetterBASIC.

The BetterBASIC Language

While producing clear advantages, Summit Software's decision to model BetterBASIC on BASICA has resulted in some trade-offs. The most serious is that BetterBASIC still requires line numbers. This restriction is somewhat mitigated by the availability of a range of structured constructs such as DO-END-DO, DO-REPEAT, and DO-IF-REPEAT (see Figure 1). Although each line of these constructs must have a line number, BetterBASIC will not allow a branch into the middle of one of these structures. Another helpful feature is that each workspace uses its own set of line numbers. Nonetheless, such numbers are a carryover from a more primitive past; requiring them was an unfortunate design decision that detracts from the ease of use and the utility of the product.

Another weakness is the built-in editor, essentially a clone of the editor built into BASICA. The editor does not support such useful features as block copy and move, global find, or global change. Since users tend to spend a great deal of time working with the editor, the lack of these extended features is disappointing.

On the positive side, BetterBASIC supports a rich set of data types (see Figure 2). Unlike BASICA or True BASIC, BetterBASIC requires that the data type of every variable be explicitly declared. The product supports a correspondingly large selection of declared data types including BYTE, INTEGER, REAL, STRING, BYTE ARRAY, REAL ARRAY, and STRING ARRAY.

Although you can change code with the built-in editor, you cannot change a data item declaration once you have made it. This serious deficiency can be circumvented only by an awkward and time-consuming procedure. For example, suppose you define an item as INTEGER when you mean it to be REAL. To correct this error, you must do the following:

1. Save the program in ASCII format using a version of the LIST command.

2. Exit BetterBASIC and load some other text editor that can handle regular ASCII files.

3. Edit the program file with the text editor and change the declaration statement from INTEGER to REAL.

4. Reload BetterBASIC, then LOAD the modified ASCII program code.

When learning the language, you are likely to make declaration errors with some frequency. Having to go through the error-correction procedure multiple times can be extremely annoying.

The BetterBASIC language itself supports the majority of the verbs included in BASICA, and their op-

  40 PRINT Error_msg$
  50 GOTO 10
  
```

Listing 2: BetterBASIC program structure

Converting to True BASIC or BetterBASIC From BASICA

Both BetterBASIC and True BASIC are more suited to writing code from scratch than to acting as drivers for code written in BASICA. However, to some extent, they both can serve the latter purpose. Of the two, BetterBASIC is much more compatible with BASICA code, a natural result of Summit Software Technology's decision to model BetterBASIC after BASICA. With both BetterBASIC and True BASIC, you will want to change your converted code to take advantage of the new features offered.

For True BASIC the areas of concern are:

- LET is required on all assignment statements.
- The END statement is required in all programs.
- Multiple statements on a line are not supported.
- Spaces between keywords are required.
- (!) is used as a comment character, not (*).
- Numeric variable type codes are not used (% , ! , #).

- Floating-point numbers are rounded (not truncated) to integers, when required.
- LEFT\$, MID\$, and RIGHT\$ are not directly supported (though you can write them as functions).
- Graphics code will probably have to be rewritten.
- File I/O is considerably different and will have to be rewritten.
- Communications ports are not supported. You will have to write such code in assembler and call it from the True BASIC program.

For BetterBASIC the areas of concern are:

- You must explicitly declare all variables with the appropriate declaration statement.
- File I/O is considerably different and will have to be rewritten.
- There are a few minor verb differences.

eration is essentially unchanged. However, because of the complex way the language extensions were implemented by Summit Software Technology, most new users will still face a substantial learning curve.

True BASIC Versus BetterBASIC

Though these products are worlds apart in their approach to the problems of BASIC, they are surprisingly close in the features they offer. As you can see in Listings 1 and 2, the coding structure of the two products is also similar. Both support all available memory, up to 640K. Each program offers a useful range of block control structures, though True BASIC offers the richer set.

Both products provide for the definition of local variables. In BetterBASIC, local variables are the default. In True BASIC, variables are local only if the procedure in which they are used is defined after the required main program END statement.

The True BASIC and BetterBASIC languages have been designed for ease in coding separate routines or procedures, and both allow procedures to be invoked simply. They support the passing of data to and from the procedure as parameters. BetterBASIC is more sophisticated in this respect, allowing a greater degree of control over the process. Unfortunately, neither product features an improved debugging capability, a serious omission.

As for the speed of the executing code, neither program is going to give assembly language, Turbo Pascal, or any good C compiler a run for its money. Table 1 shows the results of calculation speed

tests. The sieve of Eratosthenes (a program that finds and counts prime numbers from 2 to n) was used as a benchmark. Table 2 shows the results of a screen update speed comparison. The program used simply prints a full line of characters to the screen. In those simple benchmark tests, True BASIC was the hands-down winner. It performed as much as 3.62 times faster than BetterBASIC in the calculating test (1.99 times faster than BASICA) and as much as 1.92 times faster than BetterBASIC in the screen update test (2.48 times faster than BASICA). That BetterBASIC, though semicompiled, is actually slower than BASICA in doing calculations is not a surprise. BetterBASIC's BCD math package offers control over precision at the cost of speed.

The contrast between the two sets of documentation is striking. The BetterBASIC manual is huge (over 700 pages), sprawling, not well organized, and unremittingly technical—on the whole, it's poor. The True BASIC manuals, in contrast, are simply outstanding, rivaling any other language manual for any other software product.

Because of its modular nature, BetterBASIC is the more flexible of the two programs, allowing, for example, a choice of math modules. BetterBASIC is designed to accommodate new modules when they become available. This facility is similar, but superior, to the library support offered by True BASIC. True BASIC does, however, support matrix manipulation directly with several new MAT verbs and offers superior graphics support.

Table 1: Calculation speed comparison

Calculate primes	2-100	2-1000	2-10,000
BASICA	2.64 seconds	19.44 seconds	191.90 seconds
True BASIC	1.32 seconds	9.18 seconds	77.45 seconds
BetterBASIC	2.53 seconds	26.81 seconds	280.16 seconds

Table 2: Screen update speed comparison

Print to screen	10 lines	100 lines	1000 lines
BASICA	1.53 seconds	14.45 seconds	143.35 seconds
True BASIC	.77 seconds	8.68 seconds	90.41 seconds
BetterBASIC	1.48 seconds	13.62 seconds	135.33 seconds

In the END

Both these products improve the BASIC language, eliminating many shortcomings and adding power. BetterBASIC is slightly more powerful than True BASIC, but it is also more complicated. True BASIC is easy to use and manages to add power without increasing complexity, a difficult trick. BetterBASIC clearly excels in flexibility and extendability. It is more compatible with old BASICA programs than True BASIC is, though both products attempt to support the older verb constructs.

For clarity, speed, ease of use, and graphics, it's True BASIC. For flexibility and greater compatibility with BASICA, choose BetterBASIC. Both have much to offer to the majority of BASIC programmers. ●

COBOL Comeback

As the PC and its descendants take the business computing reins from mini and mainframe computers, COBOL is suddenly in vogue. PC World evaluates four top compilers.

Marilyn Z. Smith

■■■■ COBOL is often seen as a latter-day Latin, a dead language shackled to ancient mainframe computers that spew out junk mail and regularly gobble up Social Security checks. The reality, of course, is quite different. In data processing departments around the world, COBOL—the Common Business Oriented Language—has been the high-level language of choice for over 20 years, and for good reason.

As one of the first languages standardized by the American National Standards Institute (ANSI),

COBOL was aimed at simplifying business programming while simultaneously imposing structure on what had been a haphazard and mind-numbing process. Buzzwords such as *portable* and *English-like*, frequently tossed around in press releases and computer magazines, got their start with COBOL. COBOL programs

too: A single mainframe COBOL source code program can easily tip the scales at 160K.

But times and machines have changed. The millions of PCs finding their way into large and small corporations alike are not necessarily 8088-based, dual floppy drive machines. Hard disk storage is cheap and plentiful; powerful

In data processing departments around the world, COBOL has been the high-level language of choice for over 20 years, and for good reason.

use intelligible phrases such as ADD OVERTIME TO GROSS PAY, define common file formats (random, indexed, sequential), and reference routines by name instead of by line number—features that whelps such as BASIC are only beginning to incorporate.

COBOL takes on jobs ranging from accounting to order entry to report generation. Though hardly exotic applications, these are the bread and butter of business computing. Thus, it's no shock to discover that an estimated \$50 billion worth of COBOL programs are currently used worldwide—nearly 60 percent of all large system applications.

Enter the PC

So why is COBOL grappling for recognition on the PC? For most PC users, BASIC reigns supreme by dint of its simplicity and cost. For professional programmers, languages such as C and FORTH offer greater flexibility or superior speed. Girth is a factor,

processing, in the form of 8086 and 80286 machines such as the Compaq Deskpro and Deskpro 286, the Kaypro 286i, the ITT Xtra XP, and the PC AT, makes COBOL not only viable but appealing—appealing enough, apparently, to have spurred such personal computing stalwarts as Microsoft and Digital Research into releasing COBOL compilers for the PC.

Corporate America and Uncle Sam, pressured to find PC solutions and to keep budgets in line, are discovering that COBOL's portability makes moving existing applications from larger machines to the PC a cost-effective alternative to developing programs from scratch. Retraining is minimized as well, because PC and mainframe COBOL programs adhere to the same standard. If nothing else, programmers writing for the PC will appreciate COBOL's interactive debugging and PC-specific development tools.

COBOL à la PC

COBOL comes in several flavors: high, high-intermediate, low-intermediate, and low, with high embracing the entire language, and the rest, in descending order, smaller subsets. Nearly a dozen COBOL compilers of varying levels and capabilities are available for the PC. The representative sample reviewed here includes a mix of low- and high-level COBOL compilers produced by IBM, Digital Research, mbp, and Micro Focus. Untangling the relationships between these and other system language companies takes a bit of doing. IBM COBOL was developed by Microsoft but is marketed by IBM. Micro Focus developed both Level II COBOL (marketed by Digital Research) and enhanced Professional COBOL, which differ radically in performance. mbp COBOL from Mathematischer Beratungs-und Programmierungsdienst of West Germany is unrelated to any of the others.

COBOL Basics

In the best of all programming worlds, a well-implemented COBOL compiler does a complete job throughout the programming process: Catching and correcting errors is easy, compiles are comparatively fast, and the resulting program executes efficiently. While finding the perfect compiler is unlikely, certain design facets should be considered. How a COBOL compiler transforms source code into executable machine language can affect program development, compile time, the quality of the resulting machine language code, and execution. Both mbp and Professional COBOL compile programs into directly executable machine code.

Table 1: COBOL comparisons on an XT

	Level II COBOL	mbp COBOL	IBM COBOL	Professional COBOL
Version	2.1	7.04	1.0	USV 1/1-85
Level	high-intermediate	low-intermediate	low-intermediate	high
Memory required	192K	192K	64K	256K
Size of compiler code	190K	1.5MB	180K	700K
Compile speed (lines per minute)	200-300	100-150	200-300	150-200
Checker speed				450-800
Execution speed	fair	good	poor	good
Produces executable machine language	no	yes	no	yes
Error messages	poor	good	poor	poor
Interactive debugging	yes ¹	yes	no	yes
Sort utility	yes	yes	no	yes
Ease of use	fair	fair	fair	good
Documentation	fair	fair	poor	good
Price	\$700	\$750	\$700	\$3000

¹This option costs an additional \$800.

While the generated code is usually fast, it's hardly compact, because it includes library routines for I/O and other data processing tasks. The compiler itself is also likely to take up a fair amount of disk space.

IBM COBOL and Level II take a different tack, compiling source code into an intermediate language, which must be run through each package's respective interpreter. Like a BASIC interpreter, COBOL interpreters execute one line of code at a time. In this environment compiling is relatively

speedy, but this gain is at the expense of execution speed; a program may run 50 to 400 percent slower than a fully compiled peer. Realizing this, Digital Research recently released version 3.0, which compiles into native 8088/8086 code.

Keep in mind that none of these compilers can generate object code exceeding 64K. Programs above that limit must be rewritten using overlay files. Since the PC and, of course, the AT offer more than sufficient memory, this limitation is not easily justified. Keep a sharp lookout for new versions of these and other compilers that overcome the restriction.

Consider other features as well: What level of COBOL does the compiler support? (Is it high enough to make mainframe COBOL conversions relatively simple?) Are error messages easy to decipher, or is 'END OF SENTENCE SHOULD PRECEDE O1' the compiler's idea of clarity? Can you interactively debug a program as it runs? Is it easy to change a compiler's program listing options and memory and storage settings? Is the compiler geared to the PC,

Figure 1: Compile times on the XT

taking advantage of its function keys, full-screen input/output, and other unique hardware features (see Table 1)?

Setting Up the Test

One lesson is clear from using all the compilers reviewed: Unless you're an accomplished disk juggler, it's advisable to run these compilers on a hard disk system. Compile and execution tests for this review were conducted on an XT with 384K.

To test compiler speed and the efficiency of generated code, programmers traditionally use the sieve of Eratosthenes, a prime number calculation algorithm. Although the sieve provides perfor-

mance data, it hardly qualifies as a typical COBOL application.

In an attempt to replicate real world conditions, I wrote programs aimed at testing each compiler's speed in computation, file updating, input/output, and branching. The computational program prodded each compiler to add, subtract, multiply, and divide numbers in various ways allowed by the language. Another program reflected the major function of order-entry systems—the constant updating of a master file with transaction files. Because this process is at the core of many

Figure 2: Histogram of execution time for computational- and I/O-intensive programs

business and accounting applications, any COBOL compiler worth its bits should perform it with ease. The file updating program was also geared to test the compiler's ability to move data to and from a hard disk. The results are not absolutes, of course; some compilers show wide variation in performance depending on the type and size of the program used.

From Compile to Execution

When comparing compile times, remember that IBM COBOL and Level II COBOL produce an intermediate language, which generally results in relatively speedy compile times and rather slow execution. With mbp COBOL the reverse is

true, and Professional COBOL's speed depends on which option you choose, the checker or the compiler. The checker produces an intermediate language that can be either run, albeit slowly, or further compiled into tight, rapid code. The checker is used mostly for efficiently developing and debugging programs.

In general, the tests confirmed that program size affects compiler performance, while program type (computation- versus I/O-intensive) has a direct effect on the execution speed of the resulting object code (see Figures 1 and 2). Though Professional COBOL's compile times are roughly average, the generated code easily beats all contenders. On an AT, all compile and execution times would be at least twice as fast.

If storage is at a premium, remember that COBOL programs are particularly disk hungry. Directly executable COBOL code usually consumes a fair amount of disk space; interpreted code is more streamlined. For example, the same 370-line I/O-oriented program run through each compiler produces object code files ranging in size from 4.6K to 28.5K (see Table 2).

Level II COBOL, Version 2.1

Level II COBOL is a high-intermediate compiler that is complete enough to run mainframe programs easily with minor modification. Most of the changes required are in the Environment Division, which defines file characteristics. The compiler allows you to dy-

namically assign file names at execution so that programs can use more than one data file at a time.

While Level II COBOL offers some interesting un-COBOL-like features—such as the use of lower-case source code and PEEK and POKE—the compiler is no great friend of the programmer. Error messages dumped to the screen en masse are not particularly lucid and, worse still, are not linked to lines where the errors occurred. Given COBOL's fussiness about syntax—misplaced hyphens have caused more than one computer science student to change majors—this flaw assumes significant proportions when it's time to debug a program.

Fortunately, two optional (read extra cost) packages for Level II ease the programmer's task. The Animator provides interactive debugging; a forms utility lets you create custom data entry and output screens. The process is straightforward: Simply fill a blank screen with the titles you desire, identify numeric and alphanumeric fields with 9s and Xs as you would in PICTURE statements, mark fields for display attributes (blinking, underline, inverse video), and save the screen. The forms utility automatically generates the appropriate DATA and PROCEDURE division statements, which can then be incorporated into a program. Like all the compilers reviewed save IBM COBOL, Level II comes with a sort utility—an attractive feature when you consider that a healthy percentage of all COBOL operations involve sorting.

Level II comes with a concise COBOL syntax pocket reference, plus *Operations*, *Getting Started*, and *Reference* guides. Though

Table 2: A 370-line COBOL program compiled

Compiler	Object code size
Level II, version 2.1	4.6K
mhp COBOL, version 7.04	28.5K
IBM COBOL, version 1.0	18.4K
Professional COBOL, USV 1/1-85	
Checker	4.4K
Compiler	7.7K
.COM file	54K ¹

¹The Professional COBOL compiler can "build" a file that will run outside the Professional COBOL environment on any 8088 MS-DOS machine. The extra bulk is due primarily to MS-DOS-specific library routines.

clearly written, the manuals lack sufficient examples of COBOL in action, are not typeset, and are poorly indexed. Unlike other compiler manuals, which are organized by division, Level II's documentation follows mainframe conventions, listing statements by function. This may or may not be a help, depending on your experience with COBOL.

Of special note for Level II COBOL fans is the recent release of version 3.0. Developed jointly by Micro Focus and Digital Research, version 3.0 differs radically from its immediate predecessor. For starters, the new version is a high-level compiler that converts COBOL code into directly ex-

executable machine code. Preliminary testing indicates that version 3.0 compiles as slowly as mbp COBOL but produces faster-executing machine code. A forms utility is now included, but Digital Research has mysteriously dropped the interactive debugging feature—a serious miscalculation.

■ mbp, Version 7.04

Though mbp is a low-intermediate COBOL compiler, for some reason it soaks up more disk space than all the other compilers combined. But it includes enhancements that make programming less of a chore. A forms utility lets you format data entry and output screens. Screen design is not particularly easy, however, and mbp perversely fails to allow the creation of numeric fields with dollar signs. Considering COBOL's dominance in the business world, this omission is glaring indeed, but the manufacturer claims it will be corrected in a forthcoming version.

mbp's interactive debugging feature is a mix of good and bad. The debugger interactively traces a program's execution and displays identified variables. However, it doesn't display the program on screen, forcing you to keep a printout of the source code handy while debugging. Thankfully, the compiler's error messages are understandable and identified by line number; but instead of being displayed, they are stored in a listing file after every compile. As a result, time and disk space are wasted as you continually create the file and then view it with a text editor or a word processor.

mbp does offer some attractive run-time features. Subscripts are automatically checked. If the pro-

gram references code outside of an array, execution stops before useless output is generated. Like Level II COBOL, mbp also allows you to assign a number of data files to a program at execution time.

My major complaint with mbp COBOL is its snail-like compiles. A typical 500-line program takes nearly 5 minutes—twice as long as IBM COBOL and Level II COBOL and five times longer than Professional COBOL. Worse, you cannot compile programs approaching 2000 lines. My attempt to do so resulted in an I/O error. If you want to grow old at your terminal, mbp is your package.

Like its mainframe antecedents, mbp's manual is written in the stilted prose professional programmers are accustomed to. And like most of the compiler manuals reviewed, it lacks clear and useful examples.

■ IBM COBOL, Version 1.0

COBOL as a language seems to inspire grandiosity, but IBM (with substantial help from its friends in Bellevue, Washington) has put forward a relatively agile low-intermediate compiler. It's not the fastest of the lot, but its compile speed is acceptable, particularly with I/O-intensive programs. As Figure 2 illustrates, however, the IBM package falls down in a crucial area: computation speed.

Not surprisingly, the IBM compiler was designed with the PC firmly in mind. The compiler accepts lowercase input, provides for full-screen input and output, and allows programs to access the PC's function keys. Error messages are displayed as a program

compiles and are matched to the appropriate line numbers. But the messages themselves are sometimes maddeningly vague. In one instance, the compiler blithely noted 'STATEMENT TOO LONG OR INCOMPLETE'. I finally had to create a separate program module containing the misguided statement and experiment with it until the error made itself clear.

The compiler's static debugging approach—you must decide before compiling which data names to display or procedures to trace—will probably send the most phlegmatic programmer into cat fits. There's no real way to modify values or the flow of execution as a program runs.

In the area of documentation, the vague plague dominates. The IBM COBOL manuals are particularly sketchy on important compiler specifics. For example, you are not told how the SELECT statement defines a file name or how to install the compiler on a hard disk. By running several programs I accidentally discovered some important, undocumented limitations—notably, those imposed on the number of variables and operations that a COMPUTE statement can contain and the level of nested PERFORMs. These restrictions may be beneficial, since the programmer is prevented from writing unduly complicated—and error-prone—programs.

■ Professional COBOL, USV 1/1-85

Professional COBOL is the only high-level compiler reviewed and, fittingly, is the most capable at converting mainframe COBOL programs for use on the PC. Micro Focus's compiler includes a

number of features that usually cost extra, which justifies the package's \$3000 price tag. In this case the cost is worth it.

Professional COBOL comes not only with competent documentation but with a full assortment of program development tools, including full-screen editing, a sort utility, a forms generator, interactive debugging, and a checker compiler that examines program syntax before debugging occurs. The package is also rather independently minded, allowing you to turn a source code listing into a .COM file that will run outside of the Professional COBOL environment.

As a complete package, Professional COBOL is, to use the hackneyed phrase, user-friendly. The PC's function keys are tied to compiler functions and identified at the bottom of the screen. In-context, on-line help is also available, though this is probably unnecessary for most COBOL programmers. Once you load the compiler, you can edit, create I/O screens, check program syntax, debug interactively, or compile. As the checker runs, source code scrolls by on the screen. If a program error comes to light, an error message is displayed. You can choose to continue the check or fix the problem on the spot—an approach similar to Turbo Pascal's.

In all respects, Professional COBOL is a worthy product, assuming your bank account can withstand the strain. The checker is fast, the compiler produces speedy 8088/8086 machine code, and the interactive debugger is

useful and powerful. With the latter, as the program scrolls by, you can direct the compiler to single-step through each instruction. When execution ceases, you can examine variable values and change them by either entering the data name or pointing at the variable with the cursor. You can also change the order in which statements are executed.

Creating I/O screens with Professional COBOL is similar to using the forms facility with Level II COBOL. You type in the screen you want, set fields for alphanumeric and numeric data, and select video attributes for each field. Unlike mbp, Professional COBOL permits all kinds of PICTURE editing.

The Winners' Circle

I found it hard to dislike Professional COBOL; it is clearly the best of the compilers evaluated. It manages to pack the entire ANSI COBOL language into 700K and yet match or outperform its competitors. It also takes into account the wear and tear most COBOL programmers experience. No compiler is perfect, but this one comes close.

All these compilers are undergoing revision, adding new features and cleaning up annoying or potentially disastrous flaws. Other COBOL compilers for the PC are also appearing on the scene, from small and large companies alike. The PC COBOL wars, it appears, are just starting to heat up. ●

MASS 11

In today's corporate paper chase,
does your word processing package
move the message?

Paper. Your organization revolves around the generation of hundreds upon thousands of varied documents: memos, reports, announcements, minutes, policy manuals, scientific notes, footnoted briefs, text integrated with graphics, and rough drafts.

With so many word processing needs to fill, you're looking for a package comprehensive enough to tackle any task. You need software sophisticated enough to communicate between shared logic and stand-alone systems. And, because you want to make a decision that will be right for your organization now and later, you need a product that will progress with you toward a fully automated office.

All you really need is MASS-11.

MASS-11 delivers more in one package than others promise in ten. Available for the entire family of Digital VAX computers, the IBM PC and the Digital Rainbow PC, MASS-11 offers: communications, on-line spelling checker, list processing, table of contents generation, equation editing, automatic footnoting, redlining, page and paragraph numbering, user defined keys, four function calculator, column editing, glossaries, split screen editing, user-definable defaults, support of proportional printing, plus much, much more.

MASS-11 gives you more than features: responsive customer and technical support, comprehensive system level documentation, thorough training programs, and user friendly documentation.

For more information on how you can move messages with MASS-11, contact Microsystems Engineering Corporation at 312-882-0111. We'll be happy to tell you more.

Get the Picture with PHOTOBASE

PHOTOBASE is a software package that works with data base management systems such as: *dBase II*®, *R:Base 4000*® and the *IBM Filing Assistant*®.

PC-EYE is a high speed, high resolution video digitizer board that lets you capture anything you can see.

Now you can open up a whole new dimension in data base applications by merging real-life pictures with popular data base management systems. Pictures of people, products, diagrams, maps, company logos — whatever you want to photograph — can be integrated with your data base. Consider these typical applications:

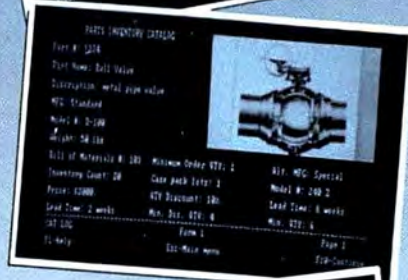

Security — verify those employees who have authorized clearance to limited access areas. A data base containing employee pictures and personnel records can be searched and displayed for visual verification.

Signature Verification — increase the efficiency of credit checks by adding pictures of customer signatures to your financial data base records.

Real Estate — add pictures of houses to on-line real estate listings for faster property identification and improved sales presentations.

Electronic Cataloging — pictures of products can be combined with a data base system containing product specifications, pricing, availability and much more.

Customers, distributors and sales personnel can quickly search data and view the resulting product/picture information on one screen. Files can be updated easily, quickly.

It's Easy

With a simple keystroke, pop-out of your data base system and into the PHOTOBASE menu. Capture images of text, photos, artwork and 3-dimensional objects with an ordinary video camera and our high resolution PC-EYE™ video digitizer. Pop back into your data base system and add the picture name to your data base like you would any other piece of information. The full functionality of the data base system is preserved, but the resulting display is text and picture information on one screen.

Pictures are displayed in the upper right quadrant of the screen at a resolution of 320 x 200 with 16 colors or levels of gray. Text information from data base records fills the rest of the screen. Pictures can also be exploded to full screen.

Call or write and we will send you information on PHOTOBASE, PC-EYE, compatible cameras and other imaging equipment in the Chorus Family of products.

\$1,895

BENEFITS OF INVESTING IN SUNFLOWER.

- A complete removable, hard disk system — controller boards, interface cables and power supply are included. One free removable media also included.
- Compatible with IBM PC and other major microcomputers. PC-DOS and MS-DOS compatible.
- On-line, rapid access. Automatic boot from disk.
- Limitless capacity. All models upgradable.
- Fast, accurate, easy to install and use.
- Available units include 10Mb removable; 10 Mb fixed/5Mb removable; 20/10, 30/10, 10/10 both removable and 30/30 both fixed.
- One year warranty.
- Modular design makes servicing easy. Overnight shipment of replacement modules guaranteed.
- All systems completely formatted and tested before shipment.
- Ongoing system support via "Sunflower Hard Disk Hotline."

JUNIOR ACHIEVEMENT

Quadram introduces enhancements that turn your PCjr™ into a powerful business computer.

Increase system power with added memory. Add memory to your system with the optional Quadjr.™ Memory Expansion Board. For memory expansion in 64K increments from 128K to 384K.

Quadjr. Expansion Chassis™ doubles PCjr power. Beginning with a 360K 5¼" floppy drive. Lets PCjr run most PC business software—including Lotus 1-2-3, Symphony, WordStar and many more.*

Snap on more system features. The side unit adds a parallel port for all your printer needs. An automatic clock/calendar to date your files. A PCjr/PC mode toggle switch. Even a PCjr bus extender for future growth.

A powerful personal computer... Quadjr. Expansion Chassis blends into your system, virtually giving PCjr the power of a regular IBM PC. At over \$1,000 less than what a similarly equipped PC costs.

More PCjr expansion with QuadMEMjr.™ For home or office expansion, snap on QuadMEMjr. for 128K, 256K or 512K additional RAM.

For a free demonstration visit the Quadram dealer nearest you. Or, for information, write us at 4355 International Blvd., Norcross, Georgia 30093, (404) 923-6666.

The PCjr Survival Kit

Hugh Delahanty

On March 19, 1985, IBM dealt the lethal blow to its deteriorating reputation for infallibility in marketing. Industry insiders may have anticipated IBM's announcement to end production of PCjr, but numerous dealers and Jr owners reacted with shock and bewilderment. Dealers began to slash prices, while concerned Jr owners deluged bulletin boards with pleas for help. A CompuServe message reflects one owner's reaction: "Will those of you who purchased a Jr, TI-99, Edsel, or mood ring please advise—what do we buy next?"

Racore Corporation, a manufacturer of add-ons for Jr, was inundated with hundreds of phone inquiries from angry Jr owners. Many of them had purchased a Jr at Christmastime, when the price had dropped to around \$800, and were barely acquainted with their new computers when they heard the news.

In its official statement IBM explained that it wasn't "pulling the plug" on Jr but was merely stopping production because inventory was sufficient to meet demand. Displaying surprising sensitivity to Jr owners' feelings of abandonment—or viewed cynically, to its public image—IBM in April placed 3/4-page newspaper ads quoting Mark Twain's wry rejoinder: "The reports of my death are greatly exaggerated." The ad continued, "If you own a PCjr you can be sure it is still a well-cared-for member of the IBM PC family."

In the same ad IBM promised to provide parts, service, and support for at least five years, presumably through IBM Product Centers and, on a voluntary basis, through authorized dealers. In a separate interview, an IBM representative said that production of Jr ROM cartridges would continue for an indeterminate period.

If you own a Jr you're probably skeptical about official rhetoric and want to know what's in store for your computer. The important issues are how Jr's demise will affect the quality of service and technical support from both IBM and authorized dealers, how long the supply of IBM and third-party software and peripherals will last, and—plainly speaking—whether in two or three years Jr will become as obsolete as the Timex Sinclair or the Texas Instruments TI-99. For the time being you can rest assured that the Jr remains a useful home computer, but be aware of problems that lie ahead.

The Software Solution

As a Jr owner you may be concerned that software for your computer will become unavailable. After production on the TI-99 ended last year, new software for it stopped appearing within two or three months. Unlike the TI-99, however, the Jr shares the PC's operating system and can run an estimated 70 to 80 percent of PC programs. Those that Jr can't run either require too much memory or, like the PC version of *1-2-3*, try to address video memory directly rather than accessing the display via DOS function calls.

Although IBM intends to continue producing its current line of ROM cartridges, including Cartridge BASIC, it does not plan to develop or market new ones. Third-party suppliers say they too are unlikely to release new cartridges, and some industry analysts speculate that the current supply may not last long. Dealers interviewed wouldn't predict how long their inventories might last, but you should consider buying soon any popular cartridge programs such as *1-2-3* or Andrew Tobias's *Managing Your Money*.

Purchasing Peripherals

If you plan to use Jr primarily for recreation or education, you needn't worry about the availability of peripherals that expand memory or disk storage capacity. But if you bought Jr to "grow with you" as your need for computing power increases, take heed: If your Jr doesn't grow up fast, it may well become mired in a state of arrested development.

IBM claims it will continue to manufacture existing Jr peripherals, such as the PCjr 128K Memory Expansion Attachment, in limited numbers, but again won't say for how long. Development of new peripherals is unlikely. In any case, IBM's current prices are higher than those of comparable units from other manufacturers. To boost a 128K Jr to 512K with IBM add-ons, you must pay \$325 each for three PCjr 128K Memory Expansion Attachments and \$125 for an additional power supply—a total of \$1100. (Keep in mind that all prices quoted in this article were current as of press time.)

By contrast, for only \$840 you can combine Tecmar's \$395 jrCaptain—which has 128K, a parallel printer port, a clock/calendar, and a power supply—with Tecmar's \$445 jrCadet 256K memory expansion board. Some authorized dealers sell this combination for \$550 to \$650.

Racore Corporation has a \$675 Drive Two Enhancement Package with a memory expansion slot, a power supply, a parallel port, a clock/calendar, and a second disk drive. (Note that the combination of IBM add-ons mentioned previously does not include these last three items.) The total cost of the Drive Two package purchased with Racore's \$403, 384K Memory Expansion Package is \$1078. One dealer offers the same combination for \$830, so you can find bargains if you shop around.

The big question is, how long will these units be available? Tecmar president Marty Alpert says the company plans to continue producing all its Jr peripherals as long as Jr is selling. For other manufacturers, including Legacy Technologies, continued production depends on authorized dealers' willingness to stock their products.

In the weeks following IBM's announcement, many dealers unloaded their stocks of peripherals at cut-rate prices and did not reorder. "Our strategy," says Racore president Rod Crisp, "is to convince dealers that strong demand for PCjr products will continue. Customer interest is high, but most would-be buyers can't find the products in the stores." An alternative for some manufacturers has been to sell their inventories to mail-order houses.

Service With a Smile?

Obtaining basic repairs for Jr shouldn't be a major problem—at least for the present. According to industry analyst Brian Jeffrey of International Technology Group, IBM's track record for servicing discontinued products is good for the first year or two, but after that finding service becomes more time-consuming and difficult.

The majority of Jrs were purchased after August 1984. These units carry a 12-month parts-and-service warranty that IBM and its dealers will honor. But you may need to act soon to add a year to your warranty with IBM's extended service agreement. By purchasing this agreement before the warranty expires, you'll pay substantially less than if you buy a separate agreement after the warranty runs out (see "Totally Unwarranted," PCW, Vol. 2, No. 9).

If purchased while the warranty is in effect, the extended service agreement includes on-site service by IBM technicians. The cost is \$78 a year for a 128K Jr with a color monitor and one disk drive. An additional \$8 covers on-site repairs on a PC Compact Printer for the Jr for the duration of the warranty period.

If you can't find adequate support from IBM or a dealer, it may be wise to join a local user group to glean tips from other owners.

simple questions from new users. Based on recent experience, you may have to wait for half an hour before someone answers your queries. According to IBM, the primary line of support should be the authorized dealers, but again, few of them employ technicians who are knowledgeable about the Jr.

If you can't find adequate support from IBM or a dealer, it may be wise to join a local user group to glean tips from other owners. At the time of Jr's demise, relatively few such groups existed; most of those were special-interest committees attached to larger IBM PC user groups. In the last few months, however, Jr owners in several cities have started full-fledged Jr user groups as a source of support and, to an extent, solace. As one owner put it, "We're talking about a big investment when you've bought a Jr. The only place to turn now for help is a user group." To find one in your area, contact the local IBM PC user group.

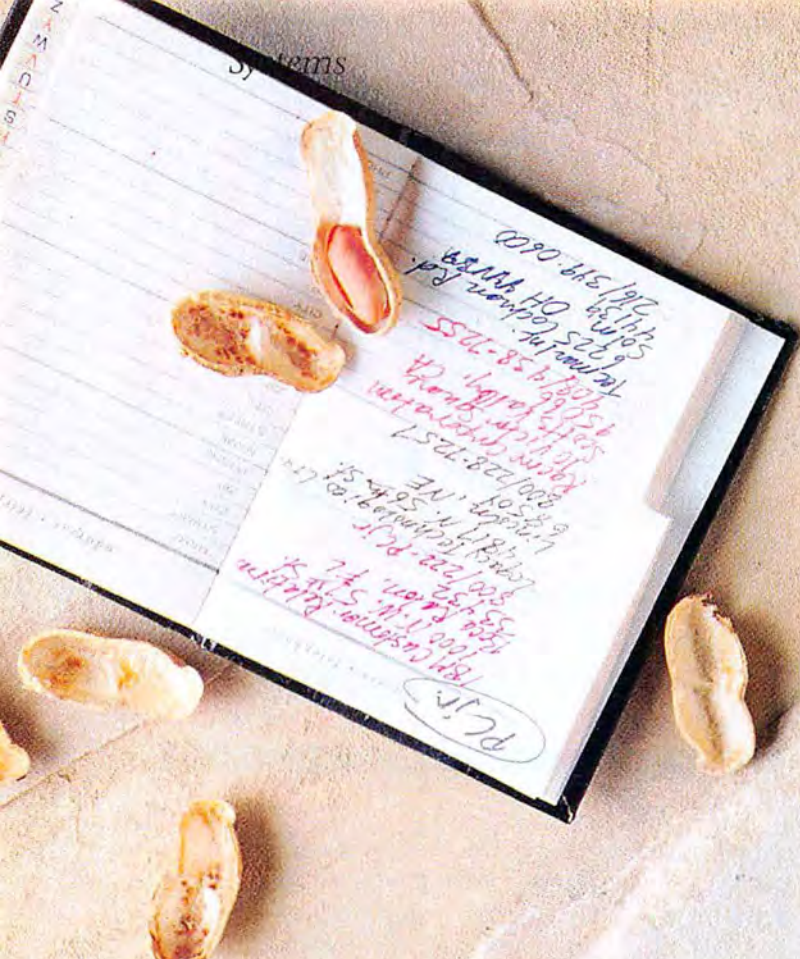

Obtaining repairs on Jr is relatively straightforward, but finding information to solve occasional problems may be more difficult. IBM maintains a hot line at 800/222-PCJR, which is intended not as a technical support service but rather as a forum for handling

Wrapping Up

Reports have circulated suggesting that IBM may unload its remaining inventory of Jrs, perhaps by dumping them on a major broker or large department store chain like K-Mart. A few weeks after Jr's demise, some authorized dealers reduced their inventories by selling a 128K Jr with a color monitor for as little as \$795. Some analysts expect dealers' prices to drop to \$500 or less, so this could be your chance for a great bargain.

Despite the uncertainty surrounding the Jr, one fact is clear. If IBM plans to reenter the low-end market, it will have to polish its tarnished image among first-time computer buyers. As one frustrated Jr owner said, "I'm going to think twice before I buy from IBM again."

Milestones in PCjr History

November 1983:

IBM introduces the Jr, code-named the Peanut during development. The Jr comes in two versions: a 64K entry-level model, at \$699, that runs only ROM cartridge programs; and a \$1295 enhanced model with 128K and one disk drive. Reviewers criticize Jr's Chiclet-style keyboard, its limited memory, and its weak power supply, which makes expansion difficult.

January 1984:

After an unexplained production delay that causes Jr to miss the crucial Christmas selling season, IBM begins shipping the machine to dealers.

April 1984:

IBM unveils a color monitor for Jr and launches a \$40 million advertising campaign but quickly reduces ad expenditures when Jr sales remain sluggish.

June 1984:

To stimulate sales, IBM drops the price of the entry model to \$599 and reduces the enhanced model to \$999.

July 1984:

IBM announces several improvements for Jr, including a more traditional keyboard, a speech synthesizer attachment, a power supply unit, and 128K Memory Expansion Attachments, which boost RAM to 512K. Reviews are generally favorable.

August 1984:

IBM inaugurates a massive pre-Christmas promotional campaign, estimated by one analyst at \$120 million. The campaign includes an advertising program, several direct-mail promotions, special rebates for dealers, and a 12-month warranty for Jr.

October 1984:

During the final quarter authorized dealers drop prices to about \$800 for a 128K Jr with a color monitor, and sales soar. Dataquest estimates quarterly sales of 200,000—80 percent of the year's total. Dataquest also estimates per-unit production and marketing costs at \$887.

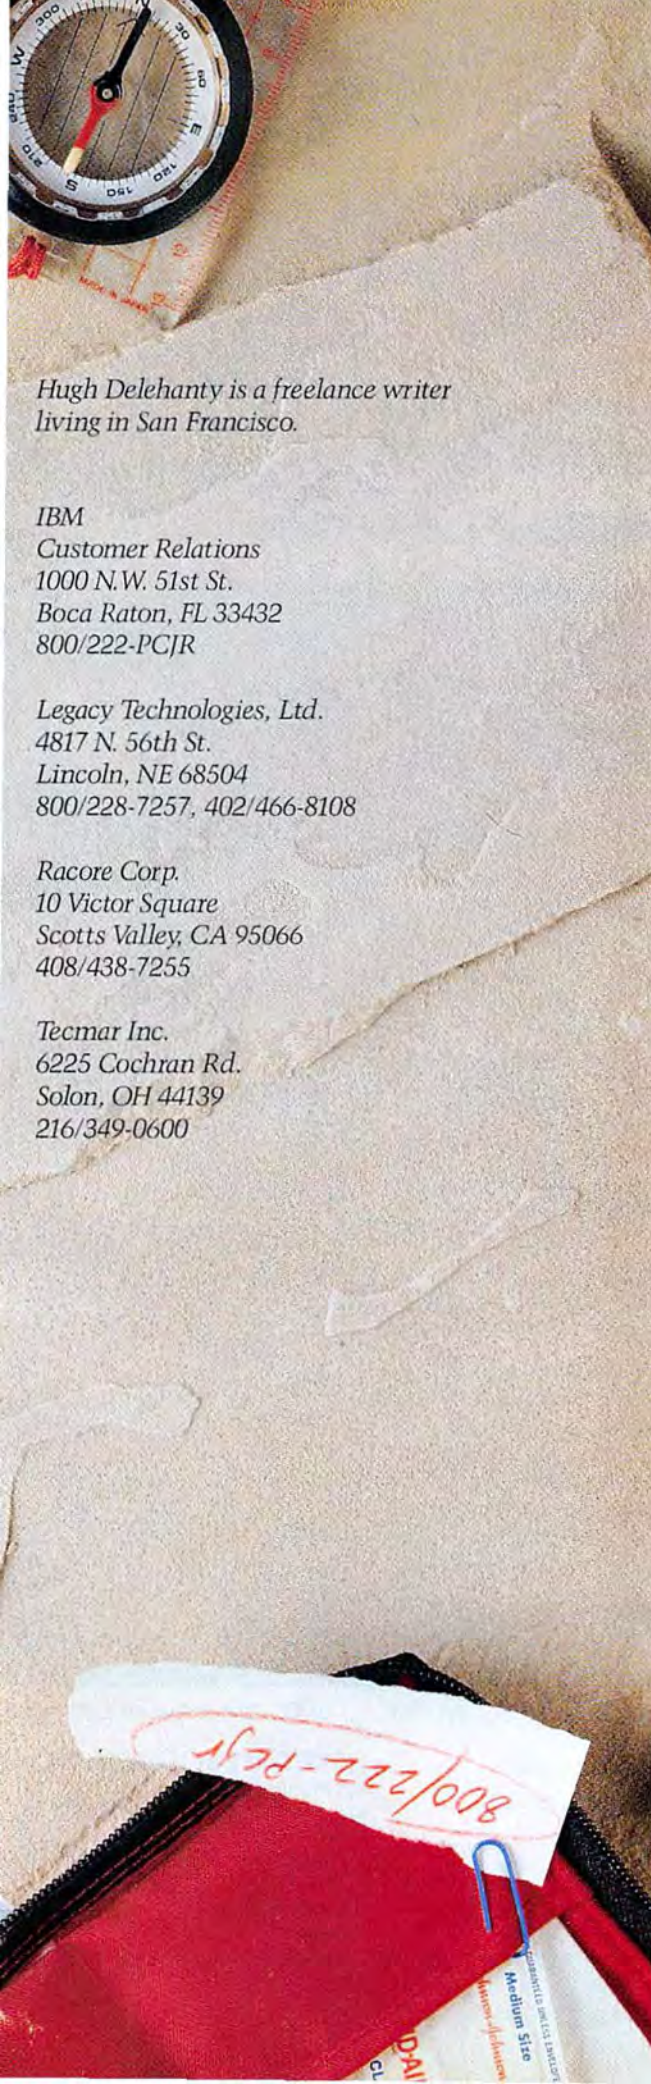

January 31, 1985:

IBM Jr promotions end, and the price of a 128K Jr with a color monitor floats back up to the \$1400 range. Sales slump accordingly.

March 19, 1985:

IBM announces plans to cease production of the Jr in April.

PCjr LIVES!

Feel like an Edsel owner? Well, cheer up. The real value of a computer is in the software it can run. And, as the world's largest manufacturer of PCjr® enhancements, Racore has the hardware you need to run almost every IBM® PC and PC XT program there is.

For example, our Drive Two™ package snaps on top of your PCjr and makes it, essentially, a dual drive IBM PC. You also get our unique PC mode switch. It allows your jr to run PC graphics, like those in Lotus 1-2-3™ and Symphony™. You can't do that with any other system. For even more versatility, snap on our 10MB fixed disk enhancement. It gives your jr performance approaching that of a PC XT.

Both the 10MB and the Drive Two systems include a parallel printer port, a battery operated clock calendar and a built-in power booster. You can also add a direct memory access (DMA) controller board for maximum IBM PC compatibility. In addition, we manufacture a low cost memory expansion board that fits neatly inside our disk drive enhancement packages.

To unleash the full potential of your jr, call or write today. Racore Corporation, 10 Victor Square, Scotts Valley, California 95066.

P.S. Have you priced an Edsel lately?

Interested in a Users Group?

Our commitment to support goes well beyond hardware. If you are in a PCjr users group, tell us the details and we'll tell others. If you aren't, we'll try to match you up with one.

You know that choosing the right software is serious business. So does WATCOM.

So before you make any decisions about your software needs, talk to WATCOM—the people major software users around the world have trusted for years.

WATCOM has the products you need to get the job done right. Proven performers like WATFOR*, WATFIV*, WATBOL*, and SCRIPT. Plus new leaders in software for PC workstations and micro-to-mainframe communications. Networks, language interpreters and compilers. Text preparation and data management. All WATCOM products are human engineered to provide the optimum in people efficiency and productivity. And they're designed to run compatibly on IBM mainframes and PC's, Digital main-

frames and micros, and Commodore micros.

Whatever you need is backed up by WATCOM's innovative maintenance and support services. You'll be kept up to date with the latest in product enhancements and information. And our publications and seminars will help you get the most out of your software investment. WATCOM. Quality products. Professional service. And a reputation built on more than 150,000 licensed mainframe and micro software programs throughout the world. So talk to us before you decide. After all, choosing the right software is serious business. For you. And for WATCOM.

Make the right choice: WATCOM GML

Faster document preparation with fewer errors makes WATCOM GML the right choice.

GML is the Generalized Markup Language defined by IBM for contracts, proposals, research papers and letters.

WATCOM GML is faster than conventional GML processors because WATCOM processes GML tags directly. And errors are less trouble because WATCOM GML diagnoses errors in GML terms, rather than the underlying text forming language.

WATCOM GML runs on IBM mainframes, PC's, and Digital VAX's*. And IBM DCF* or Waterloo SCRIPT can be used to give you the quality copy you need.

Make the right choice. Call or write WATCOM today and we'll tell you all about WATCOM GML or any of WATCOM'S other people-efficient products.

It Doesn't Print Any Dirty Words!

Printouts should be crisp, clean and completely legible.

And that's what the 24-pin system guarantees. Letter-quality...without smudges, without blotches, without gaps, without any dirty words.

The Brother M-2024 has what it takes: incredible dual mode speed...draft at 160 cps and letter-quality at 96 cps (elite). Other features include push type bidirectional tractor feed which saves on paper costs because of the one-inch cut from the print head, standard Centronic parallel interface and impeccable engineering that promises to outlast the competition.

Plus, Brother is compatible with virtually every type of small business computer, word processor, personal computer or home computer system. All the latest state of the art developments that will set the quality, value and productivity standards for years to come.

For more information, write to Brother for the name of your nearest dealer.

Avocado Computer To Merge With Parallax Technologies

HOUSTON — The (financially troubled) Avocado Computer Corporation of Balaire, California, has agreed to merge with Parallax Technologies of Houston, Texas, an international manufacturer of computer mainframe support equipment. The deal is expected to help Avocado solve a number of recent debt

problems that have threatened to drive the company into bankruptcy. Under the agreement, Avocado will become a division of Parallax Technologies, and will concentrate on bolstering that company's present share in the small business segment of the office computer market.

Industrial productivity up. White collar productivity down.

WASHINGTON, D.C. — U.S. industry appears to be regaining its edge, but productivity in the white collar sector is still lagging. According to the Bureau of Economic Analysis, productivity in the manufacturing sector rose 1.1% in the third quarter, while productivity in the non-manufacturing sector fell 0.1%.

White collar productivity, however, fell 0.1% in the third quarter, marking the second straight year of decline. The decline was attributed to a number of factors, including a slowdown in the growth of the service sector and a decline in the productivity of the non-manufacturing sector.

can be credited with a productivity gain, as well as a productivity loss. The productivity of the manufacturing sector is still higher than that of the non-manufacturing sector, but the gap is narrowing. The productivity of the service sector is still lower than that of the manufacturing sector, but the gap is widening.

Metro project delayed 6 months.

Management errors cited in multi-million dollar postponement.

DETROIT — At a press conference held late yesterday, James Arthur Leggett, senior vice president for the Wagner-Davis Construction Company, announced that the company's multi-million dollar Metro Center has been delayed for at least six months.

Leggett said the delay was caused by a number of management errors, including a failure to properly plan the project and a failure to properly allocate resources. He said the company was "not in control" of the project and that the delay was "a disaster."

Leggett said the company was "not in control" of the project and that the delay was "a disaster." He said the company was "not in control" of the project and that the delay was "a disaster."

Business Shorts

A syndicate that won control of 27 percent of Southwest Airlines' stock has been forced to sell its stake. The syndicate, which was led by a group of investors, had been struggling to raise the money needed to buy the stock. The syndicate was forced to sell its stake at a loss.

Dow up 6.7; Earlier Gain Trimmed

NEW YORK — The Dow Jones Industrial Average after closing yesterday, closed 6.7 higher than the day before. The gain was trimmed by a decline in the price of oil.

Credit Markets Short-Term Rates Edge Up Bonds Stage Rally

By LANE ALLISON
Short-term interest rates edged back up yesterday, while bond prices staged an early recovery. Treasury bill yields included a slight increase, while long-term yields were flat.

Advanced Screening

Spurred by projections of a soaring market for portables, developers of flat screens race to introduce a display that is truly portable and—more important—readable.

Janet Goldenberg and Karl Koessel

||||| As the personal computer shrinks ever smaller, its monitor is like the taunting smile on the Cheshire cat—the most stubbornly corporeal part of a vanishing frame. Either slim and compact but impossible to read or so big or power hungry that true portability is impractical, this component has kept the portables market from achieving its promise.

But potential buyers of portables are knocking at the door: Dataquest, the San Jose-based market research firm, predicts that by 1989 mobile machines will make up 30 percent of all personal computers shipped. Behind their respective doors, manufacturers are struggling to make their displays bigger, flatter, and more legible. More than a dozen lap-size computers now boast flat-panel displays, and according to a study by Arthur D. Little, a research firm based in Cambridge, Massachusetts, demand for these screens is expected to triple in the next two years, fueling a market worth \$4.2 billion by 1992.

A microphotograph of one pixel of a Panelvision active matrix LCD shows its thin film transistor, storage capacitor, transparent output pad, and row and column buses.

Currently, some ten major flat-panel technologies, at various levels of promise and development, have their sights on the information display market—a field that includes screens not only for portable computers but also for desktops, instrument panels, and TVs. Of these technologies, only four—liquid crystal display (LCD), plasma, electroluminescent (EL), and flat cathode-ray tube (CRT)—have evolved far enough to be viable. And even these have far to go before they match the standard CRT's all-around quality.

Developers of flat-screen technologies struggle with what seem to be mutually exclusive goals. The longed-for display should be portable, readable, and PC-compatible.

Developers of flat-screen technologies struggle with what seem to be mutually exclusive goals. The longed-for display should be portable—both lightweight and sufficiently frugal with power to be run from a battery. It must be readable—legible in less than perfect light. It must be PC compatible—offering 80-column by 25-line text and at least 640-by 200-pixel graphics, preferably on a 12-inch diagonal screen. And it must be inexpensive—as cheap as or cheaper than a CRT. But available screens that are lightweight and consume relatively little power require special lighting conditions for legibility and are hard to implement in very large monitors.

Table 1 shows how each technology currently stands in the race toward the major goals. None so far is successful on all counts, but each has its strong points and is improving rapidly.

While market analysts can't yet say which flat screen—if any—might dislodge the CRT from its niche

as the display of choice, they agree that the next few years will present a “marketing window” through which emerging technologies can pass if they offer a special advantage of high resolution, legibility, portability, or price.

■ LCDs: Lower-Class Displays?

Cheap, lightweight, and miserly with power, LCDs most closely approach the ideal for battery-powered, portable display applications. But major problems must be solved before these screens can become sufficiently vivid for the computing public. For one, the conventional “twisted nematic” LCD screens now in widest distribution can't be viewed at angles greater than 30 degrees from straight-on. What's more, their contrast is worse than that of cheap newsprint.

All LCDs are based on liquids whose molecules share an ability to line up like iron filings when charged with a certain level of voltage (referred to as the *threshold voltage*). Viewed through polarizers that encase the liquid, the energized crystals appear dark.

In small displays such as those in watches and calculators, each of the elements that form numbers can be connected directly to a power source so that controlling them is straightforward. But for the larger displays that personal computers require, this method is too cumbersome. Instead, a technique called *multiplexing* is used to deliver current to discrete points on the screen—the equivalent of pixels on a CRT.

In a multiplexed LCD, small lines of current are switched on and off along the screen's vertical and horizontal axes, like warp and weft threads. At the spot where two “threads” meet, their combined current excites the liquid crystals into lining up, and this spot appears dark, like an intersection in a plaid. To display a full screen of such intersections simultaneously is no simple matter, however, because if more than one pair of “threads” is excited at the same time, some junctions may darken unexpectedly. Multiplexed LCDs solve this problem through a complex electrical dance in which x-y pairs are stimulated one at a time and kept active by periodic refreshments of current. This method, however, is lumberingly slow, and because the impulses travel not along wires but through an excitable soup of liquid crystals, some current always bleeds into surrounding areas. This muddies contrast and blurs a high-resolution display.

Table 1: Flat display wish list

	LCD				Plasma		EL	CRT
	Twisted nematic	Cholesteric field	Supertwisted birefringence	Active matrix	AC plasma	DC plasma	ACTFEL	Flat CRT
Lightweight enough to be carried easily	●	●	●	●	○	●	●	○
Low enough power consumption to be battery operable	●	●	●	●	○	●	○	○
High enough contrast to be read under various lighting conditions and at various viewing angles	○	●	●	●	●	●	●	●
Good graphics resolution	○	●	○	●	●	●	●	○
Practical in sizes suitable for computer screens	●	●	●	○	●	●	●	●

Reasonable cost	●	●	●	●	○	○	○	●

● = has reached acceptable standards

● = getting close

○ = major hurdle

But change is afoot. Several new LCD technologies on the verge of production promise dramatic improvements within the next year or so, such as viewing angles of up to 70 degrees and contrast ratios of 10 to 1—nearly three times the contrast of a conventional LCD. Most of the improvements depend on new varieties of liquid crystal molecules, which align themselves more densely in response to electrical current, thus appearing darker.

One of the most promising of these developments is the *cholesteric field effect*, developed by Crystalvision of Sunnyvale, California. Now at the prototype stage, this method arranges the molecules

in spiraling layers, like receipts on a spindle near a restaurant's cash register. Another promising technique is *supertwisted birefringence*, invented by Brown Boveri Research Laboratories of Switzerland. The molecules used with this technique twist 270 degrees instead of the 90 degrees common with twisted nematic displays. Both technologies offer three times the contrast of traditional LCDs. The cholesteric field effect offers resolution that equals or exceeds that of a CRT.

Also auspicious, although several years away, is the *guest-host* display, in which a dye injected into the liquid crystal medium becomes visible only when the crystal layers are at proper angles to one another. This technique eliminates the need for polarizers, the costliest element of the LCD assembly.

■ Toward Active Matrix LCDs

While most researchers have hunted for more effective liquid crystal compounds, some scientists in the United States and Japan have sought to restructure the way on/off signals are delivered to each pixel. One such approach, called *active matrix*, may be the ultimate answer to the LCD's woes (see Figure 1). The active matrix LCD, developed in the 1970s by Westinghouse and pioneered by Panelvision of Pittsburgh, Pennsylvania, consists of a grid of thousands of small transistor-capacitor pairs deposited on thin film, like components of an enormously magnified silicon chip. But instead of storing bits of data, each transistor functions as a pixel, darkening when current is applied and "remembering" its on or off status until a screenful of information has unfurled. Since each pixel is isolated electrically, the display is faster and crisper, potentially capable of CRT-level resolution. And because performance does not diminish as size increases, the screens could theoretically be made quite large.

Though 8- by 5-inch prototypes of active matrix displays have intrigued computer manufacturers, screens of even this size are proving difficult to mass-produce because of problems in etching large sheets of transistors. Consequently, this technology isn't expected at the forefront for another three to five years.

However, active matrix displays have already cut through the color barrier. Last year Japan's Epson introduced a 2-inch active matrix color TV of impressive brightness and resolution. Called the Elf, it is unquestionably the forerunner of larger LCD color displays.

Some analysts think that no matter how much LCDs improve, they will never measure up to their brighter, more glamorous light-emitting cousins. "LCDs will never achieve the 'viewability' standards they need for universal acceptance," says Christopher King, executive vice president of Planar Systems, a developer of electroluminescent technology. "Though LCDs will always enjoy the advantage of using less power, they have no sex appeal, as glowing screens do. You still feel like you're looking at an Etch-a-Sketch." But because they are cheaper to make, King sees LCDs dominating the home computer market while professionally oriented computers move toward plasma and EL.

■ Plasma

The oldest and most highly evolved of the flat-screen technologies, AC plasma panels use a grid of conductors to excite a neon-based gas mixture. Pixels are created at points where the conductors intersect. One advantage to plasma is that images remain intact without constant refreshment of current, reducing the number of electronic components needed to drive them.

A more visible asset is that the screens can be made very large—at least a meter across, with stunning resolution. When introduced at COMDEX in 1982, IBM's model 581 plasma monitor for mainframes dazzled crowds with its 11- by 17-inch, 750,000-pixel screen displaying 64 lines of 160 characters. The 3295 Plasma Monitor, a recently announced PC version of this product, offers similar size and clarity. But at a cost of \$3695 and a weight of 50 pounds, it's an unlikely mate for portable computers. Though IBM has been a major figure in plasma research, industry watchers predict it won't put all its money in the plasma bank when the lap-size market takes off.

However, thanks to new Japanese breakthroughs in DC plasma, a related technology, plasma screens are now leaner and trimmer than ever and promise to be a major force in the portables market. In March, Sweden's giant Ericsson Information Systems launched the 14-pound, \$2995 Ergo-Screen

Portable, whose central attraction is a lightweight plasma monitor. The monitor's 640- by 400-pixel, 2000-character display is only slightly smaller than that of a 12-inch CRT. However, the screen's 100-watt power requirement makes battery operation unfeasible.

‘Though LCDs will always enjoy the advantage of using less power, they have no sex appeal. You still feel like you’re looking at an Etch-a-Sketch.’

In developing the new machine, Ericsson designers questioned the mystique of battery-powered portability. “We did a lot of research on using a screen that’s truly portable,” says Jonas Akerman, product manager of the new Ericsson portable. “We found that businesspeople don’t so much work on airplanes or trains as they carry their computers from the office to a hotel, a home, or another office. We decided we’d rather give them a screen they could really see.”

GRiD Systems’ new GRiDCase 3 (see Figure 2), based on a DC plasma display from another, unnamed manufacturer, has somehow captured the best of both worlds. It operates on a rechargeable internal battery for up to 2 hours, although it will run more practically on AC current. The entire system weighs 12 pounds and displays the same information as the Ericsson on a screen of about half the area—and it does so with greater clarity. If you don’t care to pay \$4350 for this deluxe model, two otherwise identical units with LCD screen options are offered for \$2975 and \$3150.

Figure 1: Panelvision's MiniGraphic active matrix display shows one of the most promising LCD technologies. Active matrix LCDs have high contrast and resolution but are hard to manufacture in computer display sizes.

Figure 2: GRiD system's GRiDCase 3 flaunts a “sexy” plasma display. New technologies are bringing plasma displays within reach of their most elusive goals: lighter weight and lower power consumption.

Electroluminescence: Plasma's Bright Challenger

Though somewhat less prominent lately, EL displays may well overtake plasma by the end of the decade. Planar Systems' Christopher King contends that EL displays will ultimately be more portable than plasma because they weigh less, are more rugged, and will eventually produce better resolution using less power.

The predominant EL display is called *AC thin film*, or ACTFEL. In this type of display a layer of phosphor (material that glows when energy is applied) is deposited between clear glass panels. Points on the surface are addressed by a matrix of conductors much like those of a plasma screen. The image is a high-resolution, luminous amber. At present the high voltage these units require restricts them to AC power, but more efficient driver electronics may allow them to appear in battery-powered portables before long. To date, the Grid Compass and the Hewlett-Packard Integral PC, a UNIX machine, are among the few computers to use these relatively expensive displays (Planar supplies them for some \$800 each). But according to King, costs will drop substantially within several years. Because EL screens can't be made as large as plasma screens, however, they will probably not grab as large a share of the desktop market.

Flat CRTs: On the Horizon?

Apart from their bulk and possible radiation hazard, CRTs remain the best and most cost-effective computer displays. Last year Sony announced progress in reducing at least the bulk. Instead of beaming electrons outward from a central point behind the screen, as standard CRTs do, Sony's 4-inch flat CRT sprays them across the screen from a low angle, like a sunset over the ocean. The unit is just an eighth as deep as a conventional CRT and uses only one-third

the power. Though heftier than some flat screens and lacking the average CRT's resolution, flat CRTs may eventually appear in more portables.

Long Shots and Hybrids

Further down the evolutionary pike, three Japanese manufacturers—Futaba, NEC, and Ise—are pursuing another type of display, based on *vacuum fluorescent* (VF) technology. As in CRTs, electrons stimulate dots of phosphor encased in a vacuum. When voltage reaches certain thresholds, the dots glow in one or more colors. Because of resolution problems, VF displays have so far been confined to cars and small consumer items, but advances in addressing methods are producing TV-quality resolution, with commercial application predicted by 1987.

Two lesser-known technologies show promise if current obstacles can be overcome: the *electrochromic* display, developed by Sharp, Seiko, Exxon Office Systems, and others; and the *electrophoretic* display. The electrochromic display uses a layer of salts or metal oxides that change hue as different voltages are applied. As yet, these materials can't be satisfactorily addressed as a matrix, so computer-size screens are impractical. Electrophoretic displays use a thin film of negatively charged dyes that move toward or away from oppositely charged, transparent plates of the screen. The dye particles are visible only when adhering to the front face, and they remain visible even after the power is shut off. Unstable materials and the unlikelihood of achieving full color have inhibited this research.

Perhaps the ultimate victor in the marketplace will be a hybrid of two or more technologies. Morrow Designs recently added an EL-like backlight to improve the contrast of its LCD Pivot portable, an enhancement somewhat sabotaged by the LCD's poor resolution. Active matrix technology, currently applied to LCD materials, could eventually drive a plasma display, bringing improvements in brightness and clarity. PlasmaGraphics, a New Jersey firm, recently introduced a 7.2- by 3.7-inch, 130,000-pixel

panel that combines the best features of AC and DC plasma and is brighter than either. Other researchers see a future in marrying VF or plasma displays to CRTs to obtain bigger, flatter, brighter screens with better resolution. One CRT-plasma crossbreed has been made that measures 50 inches diagonally—the very model of hybrid vigor.

Instead of beaming electrons outward from a central point behind the screen, as standard CRTs do, Sony's 4-inch flat CRT sprays them across the screen from a low angle, like a sunset over the ocean.

Several other developments, still at the early research stage, hint at an imminent shake-up not just in computer displays but in the entire information/communications industry. At this year's conference of the Society for Information Display, Matsushita engineers described a very large, high-contrast, continuous LCD made by joining small panels together. With improvement, this creation might be used for huge TV screens and animated billboards. And 3-D panels for computer modeling or videoconferencing could be created by stacking LCDs in layers.

For the more immediate future, market analyst Kenneth Lim of Dataquest sees the steady trickle of new technologies broadening into a river of new products. "I don't think they'll all appear at the same time, and they'll come out at different price and performance levels that may not compete directly with one another," he suggests.

Should you delay buying a portable in the hope of dramatic improvements soon? If you have no pressing need for a portable computer, you might want to wait until the products themselves convince you it's time to buy. You won't see 12-inch color LCDs or battery-powered EL screens very soon, but they're in the works. Lim gives this advice: "Anyone buying a portable computer now should not ask, Is this machine going to have an obsolete display? but, Does it do useful work, and will it pay itself off before the next generation comes out?" ●

Fraternizing With Framework

Using Framework doesn't necessarily mean forgoing your tried and true stand-alone programs. With Framework's DOS window and a FRED program, you can have integration your way.

William Urschel

|||| Familiarity sometimes breeds devotion. Witness the success of *WordStar*. It isn't the Gucci of word processors, but like an old shoe, it's comfortable, it gets you there, and it does things many programs can't. The same can be said for *PC-Talk III*, *dBASE II*, and a host of other software veterans. With the arrival of integrated upstarts such as *Framework*, *Symphony*, and *Electric Desk*, the user's life took a turn for the better. Common applications—word processing, spreadsheets, data management, graphics, and communications—all work in the same environment, sharing commands and data. Disk swapping and data conversions are reduced or eliminated. And once you master one application or module, you can move on to others with relative ease.

But even the most accomplished integrated programs stumble in one area or another. *Symphony* devotees admit its word processor is second-rate; *Framework*'s data base is fast but is limited to a meager 700 records. Unfortunately, with most integrated programs what you buy is what you're stuck with.

Not so with *Framework*. Not only can *Framework* use data files produced by external programs, it can actually run those programs without straying far from its convenient desktop. This partnership gives you the best of both worlds, combining the special talents of your stand-alone program with the coherence and speed of *Framework*. You can achieve this level of integration in two ways. One method uses *Framework*'s DOS window, a Disk menu option that lets you slip into DOS, run external programs, and then return to *Framework*. The other approach brings an outsider more intimately into the *Framework* environment with the aid of a FRED program. Under FRED's aegis, for example, *WordStar* can appear in *Framework*'s Disk menu and be run from the desktop. Best of all, you need not quit *Framework* (and later reload it) to use an external program. While this isn't the highest form of integration, it bridges a gap few other integrated programs can.

DOS in a Window

The simplest way to run an external program with *Framework* is through a special frame called a DOS window. The only requirement is that COM-MAND.COM be present on *Framework*'s second program disk, in drive A:. To open a DOS window, select an existing text frame, or create a new text frame with the Empty/Word Frame command from the Create menu. (*Framework* asks for confirmation before proceeding, however, because it empties the frame's contents.) Open the Disk menu and choose DOS Access; the drive spins for a second, and the A> prompt appears.

For all intents and purposes you are now in DOS. You can use COPY, DIR, FORMAT, CHKDSK, and other DOS commands or slip a program disk into drive A: and run it. (When using a memory-resident program, such as *SideKick*, you must load that program first and then load *Framework*.) Typing EXIT at the DOS prompt returns control to the *Framework* desktop.

Although using a DOS window is simple, you must bear a few rules in mind. Once you enter a DOS window, you cannot enlarge or zoom a frame with *Framework* commands. If you want to dedicate the entire screen to DOS or an application, you must create a frame and press <F9> (Zoom) to enlarge it before selecting the DOS Access option. Memory is also a limiting factor: *Framework*, all the frames currently on the desktop, and the external application being run must fit into available memory. A realistic

Memory is a limiting factor: Framework, all the frames currently on the desktop, and the external application being run must fit into available memory.

minimum is 384K. If you come up short, one quick remedy is to close unnecessary frames on the desktop and store them to disk.

Like *TopView*, *Microsoft Windows*, and similarly dedicated software integrators, *Framework* is most hospitable to programs that use DOS for screen display. Programs that ignore DOS and write directly to the screen, such as *1-2-3* or *WordStar*, cannot reside with other frames on the desktop and will monopolize the entire screen. Such programs yield control to *Framework* only when the DOS window is closed.

Once you have closed the DOS window, the result of your work can be imported to *Framework* in two ways. If the external program produces ASCII files—minus control characters and other program-specific impedimenta—merely load the desired file like any other *Framework* file. *WordStar*, *1-2-3*, *dBASE II*, or DIF formatted files can be converted with one of *Framework*'s utility programs. Be aware that no single *Framework* frame can exceed 32K; *Framework* automatically stores imported data in a number of 8K child frames, which are contained in a parent frame.

A more convenient, albeit limited, method is to funnel data contained in the video buffer to *Framework*. The default buffer setting is either 2K or 4K, depending on the version of *Framework*. You can increase the buffer size up to 32K simply by changing the value at the DOS ACCESS line in *Framework*'s CONFIG.FW file. The next time *Framework* is run, the buffer will reflect the new setting. Because data sent to the screen is always in ASCII form, grabbing data in this manner eliminates file conversion problems. This data transfer method won't work with unrepentant programs such as *1-2-3* and *WordStar* that eschew DOS's display routines and put nothing in the buffer.

The Frame Game

Though the DOS window provides ersatz integration, a relatively short FRED program written using the @RUN function can turn stand-alone programs into members of an extended family. While such integration is hardly seamless, the external program can occupy the desktop, appear in menus, and conveniently run within *Framework*.

The obvious example of this approach is *Mite*, *Framework*'s communications module. *Framework* was not designed with communications in mind, but Lotus Development's release of *Symphony* spurred Ashton-Tate to match its competitor. Instead of reprogramming *Framework*, Ashton-Tate bought the rights to *Mite*, an existing stand-alone telecommunications program, and stitched it onto *Framework* with a FRED program.

Attaching a program with FRED has distinct advantages. For example, if you are not using *Mite*, you can remove it from the desktop and emancipate some memory. More important, if you want to use another telecommunications program—*PC-Talk III* because you know and love it, *Crosstalk* for its superior scripting abilities—you can simply replace *Mite*.

Though you needn't be a programming expert to use this technique, it helps to understand how FRED links *Mite* to *Framework*. Installing *Mite* involves running the INSTCOM.BAT file on *Framework*'s first program disk. The file directs *Framework*'s configuration file, CONFIG.FW, to insert the

```
;UTIL.FW. FRED comments are always preceded by a semicolon.

@if(@memavail < 20000,
  @list(
    @prompt("Insufficient memory for external programs ")),
  @return(0))),

@echo(#off),

@set(UTIL.System_drive, "A:"),

@local(original_selection),
original_selection := @setselection("UTIL"),

@performkeys("{scroll-lock}"),
@if(@setselection = "UTIL",
  @list(
    @echo(#on),
    @prompt(" Run the external programs though the DISK menu ")),
  @return(0))),

@UTIL.Alternatives Menu,

; exit
@iserr(@setselection(original_selection)),
@echo(#on)
```

Listing 1: The FRED program UTIL.FW incorporates external programs into Framework. This portion of code is contained in the UTIL frame.

label 'Telecommunications' in place of 'Utilities' at the Disk menu, and to load the FRED program UTIL.FW. When you select 'Telecommunications' the UTIL.FW menu is displayed. Choosing 'Mite Main Menu' directs UTIL.FW to load and run *Mite*. When the *Mite* session ends, control returns to UTIL.FW; from this point you can return to the *Framework* desktop.

The FRED program in this article (see Listings 1, 2, and 3) grafts *WordStar* and *PC-Talk* onto *Framework* in much the same way UTIL.FW links *Mite*. Since UTIL.FW is the only FRED program name the *Framework* Disk menu recognizes, remember to name this FRED program UTIL.FW and give the *Mite* version of UTIL.FW the name UTIL.BAK.

FRED Frame by Frame

Integrating *WordStar* and *PC-Talk III* with *Framework* uses six frames (see Figure 1). The parent, or containing, frame labeled UTIL holds two child frames, Alternatives Menu and System Drive. The Alternatives Menu frame in turn contains the

frames called PC-Talk III, WordStar, and Return to Framework, which house appropriate swatches of FRED code. The System Drive frame, which is referenced by UTIL.FW, contains the letter (and path, if necessary) of the drive where external programs are stored.

Like any *Framework* formula, the UTIL.FW code is entered at the frame border (see Listing 1). From a blank *Framework* desktop, issue <Ctrl> -C <Enter> to create an empty frame; type UTIL and press <Enter>. This operation labels the frame. To label other frames—WordStar, PC-Talk III and so on—follow the same procedure. To enter the FRED code contained in the border of UTIL, press <F2> (formula edit) and then <F9> (zoom). This sends the cursor to the edit line at the bottom of the frame and expands the line to fill the screen. After you've typed in the code, press <Esc> to end the session and return the UTIL frame to the screen. Save the frame on *Framework*'s system disk number two. (For further information on frames and *Framework*, see "Framework: Simplicity and Synergy" and "Frame by Frame," PCW, Vol. 2, No. 12.)

To create the Alternatives Menu frame and the System Drive frame within UTIL, press <GrayPlus> and repeat the sequence for creating a new frame. Type in the formula @menu(Alternatives Menu) in the Al-

Listing 2: This FRED program in the border of the PC-Talk III frame calls PC-Talk III from the Framework desktop.

```
; PC-Talk III
@local(output, echo, command, error_code),
command := System_drive & "PC-Talk.EXE ",
;run PC-TALK III
@isabend(#false),
error_code := @run(output, command),
@if(error_code = 2,
  @list(
    echo := @echo(#on),
    @beep,
    @eraseprompt,
    @prompt("Program file " & command & " not found.
      (Hit any key to continue)"),
    @nextkey,
    @echo(echo),
    @return(0),
  @if(@and(error_code <> 0, error_code <> 2),
    @list(
      echo := @echo(#on),
      @beep,
      @eraseprompt,
      @prompt("Operating System Error Code " &
        @integer(error_code) & " using "
        & command & " (hit any key to continue)"),
      @nextkey,
      @echo(echo),
    @return(0))
```

```

; WordStar
@local(output, echo, command, error_code),
command := System_drive & "WS.COM ",
;run WordStar
@isabend(#false),
.
.
.
    @nextkey,
    @echo(echo)),
@return(0)

```

Listing 3: This program in the border of the WordStar frame is identical to Listing 2, except for program references to WordStar.

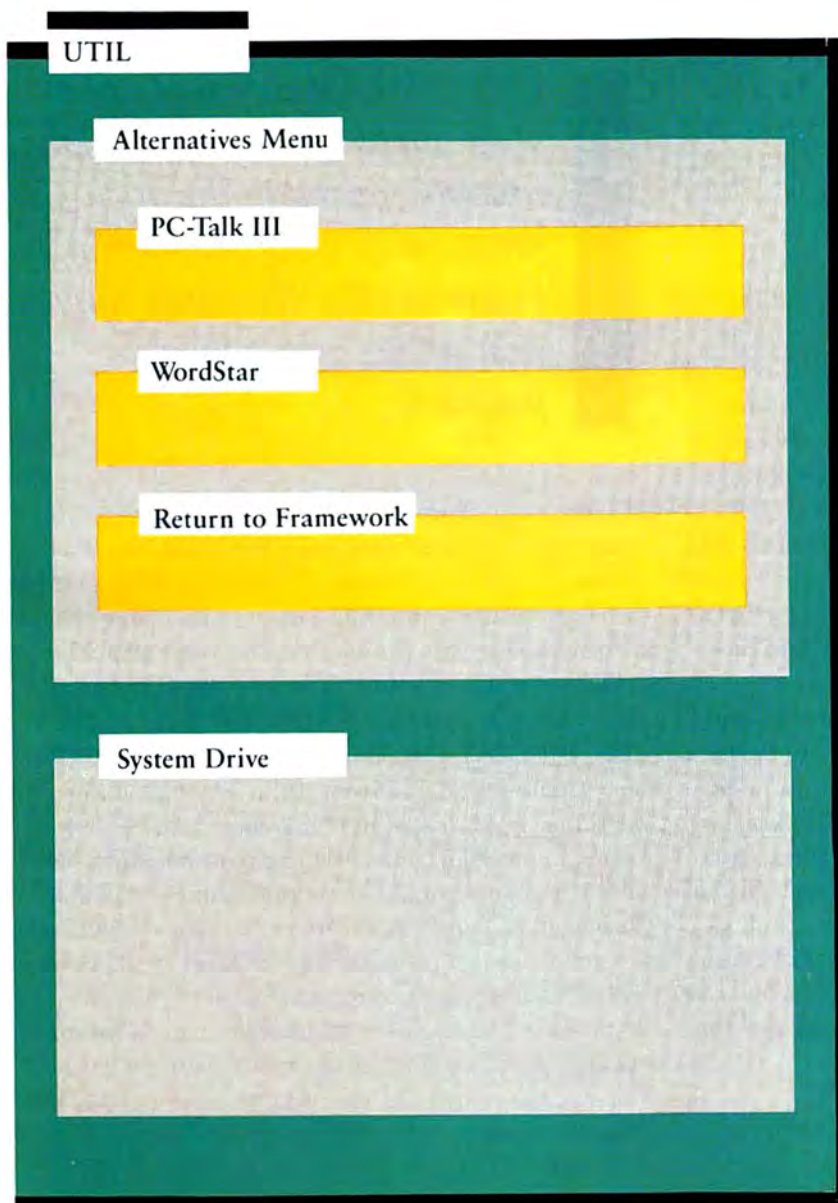

Figure 1: In Framework, frames contain other frames. UTIL is the master frame that contains all others as well as portions of the FRED program. Alternatives Menu and System Drive frames are siblings; the former holds three frames, which contain FRED programs and text; the latter holds the disk drive reference.

ternatives Menu frame border; inside the System Drive frame, simply type **A:**. The process for creating the PC-Talk III, WordStar, and Return to Framework frames within the Alternatives Menu frame is the same. Since the code for the PC-Talk III and WordStar frames is nearly the same (see Listings 2 and 3), you can save time by typing in the code for one frame and copying it to the other, changing only the name of the program referenced and the one-line prompt. For the Return to Framework frame, simply enter the formula `@quitmenu`.

The only text that actually resides inside these three frames is program prompts. Type each of the following prompts into its related frame: **Place the PC-Talk III program disk in drive A:**, **Place the WordStar program disk in drive A:**, and **Resume working on the Framework desktop**. Again, remember that formulas and FRED programs are entered in the frame border; data occupies the frame.

Code by Any Other Name

The FRED code that ties *WordStar* and *PC-Talk III* to *Framework* is relatively uncomplicated. The first four lines of code in Listing 1 determine whether your PC has sufficient memory to store the *Framework* desktop while running an external program. Subsequent code turns off screen echo, sets the default drive to A:, tracks the original frame (UTIL), and shields the program from *Framework*'s RECALC command. This last action provides consistency, since it forces all external programs to run from the Disk Menu. Not surprisingly, `@UTIL.Alternatives menu` displays the Alternatives menu.

In Listings 2 and 3, the first two lines of code identify the external program being run and the local variables (output, echo, command, and error code) defined for that frame. The remainder of the code is primarily an error-trapping routine that checks for absent files and an unreadable program disk. The latter condition may be caused by a disk that is unformatted, damaged, or formatted by another operating system. When an error occurs, the PC beeps, an error message pops up, and control returns to the desktop.

Using WordStar and PC-Talk III

When you select 'Telecommunications' or 'Utilities' from the Disk menu, the Alternatives menu appears. Depending on your program choice, you are asked to insert a *PC-Talk III* or *WordStar* disk into drive A:. This disk swapping is eliminated if you place the external programs and COMMAND.COM on the same disk and set the overlay option in CONFIG.FW to *true*, or if you store all the programs on a hard disk.

Since *PC-Talk III* generates clean ASCII files, *Framework* can use its output directly. *PC-Talk III*'s parameter files, .DEF, .KEY, and .DIR, are manipulated within *PC-Talk III* and are not dealt with by

Using WordStar from Framework takes a bit of effort. Documents created in the document mode must pass through Framework's WordStar conversion utility before they are palatable.

UTIL. Using *WordStar* from *Framework* takes a bit more effort. Documents created in the document mode (D) contain *WordStar*'s notorious 8th bit, hard carriage returns, and other hidden formatting characters and must pass through *Framework*'s *WordStar* conversion utility before they are palatable. This utility is actually two files, WS2FW.FW and WS2FW.COM. On a dual floppy system, the .COM file should reside on drive A:, the .FW file on the desktop. Files created in nondocument mode (N) pose no problems. However, control characters and dot commands should be stripped out beforehand, using either *WordStar*'s search and replace function or a public domain program such as WS-DOS.BAS (see WS-DOS.BAS in *Listings* at the back of this issue). Note that *Framework* sets the right margin for imported *WordStar* documents at 165; you can easily change the setting with the Margin command at the Words menu.

Passing data from *Framework* to an external program requires the services of the 'Write DOS Text' option from the Disk menu. This program transforms *Framework*'s native file format into ASCII.

Fine Tuning

As noted, to access *WordStar* or *PC-Talk III* you must select either 'Telecommunications' (if you previously installed *Mite*) or 'Utilities'. To create a more appropriate listing on the Disk menu, open CONFIG.FW (stored on system disk number 2), and scroll to the fourth line from the bottom of the listing. At UTIL_NAME, replace 'Telecommunications' with a label such as 'External Programs', close the frame, and save CONFIG.FW. Since *Framework* allows a program option to be selected by typing its first letter, make sure this label doesn't conflict with others in the menu.

At some point, you will undoubtedly want to tie other programs to *Framework*. The tinkering involved is modest; copy the contents of either the *PC-Talk III* or *WordStar* frame into an empty frame, and insert the program file name in the second line of code. Thus, to add *WordPerfect* to *Framework*, you would type *command := System_drive & "WP.EXE"*. Naturally, you should change menus and comment lines to reflect the new program.

You can further streamline this ad hoc form of integration by automating certain functions with FRED. You could, for example, rig *Framework*'s conversion programs to automatically transform *WordStar* files after a *WordStar* session. While you'll never achieve seamless integration with FRED, you can conveniently use *Framework* with all the programs in your library—and keep your costly software investments working. ●

Transfer of Power

Keys to Simplicity
Menu-Making Tips
Status Conscious
Forever Making Menus

If you've tricked up your favorite application program with batch files and keyboard macros, Keyworks menus will take your handiwork another step. With this new keyboard enhancer you can convert customizations into a turnkey system and pass that power on.

Harry Miller

||||| If you've been computing for a while, you've probably received kudos for some particularly elegant shortcut, followed by a respectful, How'd you do that? There's an excellent chance that you "did that" with a keyboard macro, sometimes in combination with a batch file. And although such tools make complex routines look easy, the glamour disappears when you explain that to protect the contents of a work file on a RAM disk, for example, you press <Alt>-<F9>, invoking a macro that jumps to the beginning of the file, marks the block beginning, jumps to the end of the file, marks the block end, saves the marked block as a file called Temp on the floppy drive, and returns the cursor to where you were editing last. So while the macro reduces 30 or more keystrokes to 2, explaining or documenting its operation is often just too much trouble. Until now, only you have been able to tap the power of your software; features that others would find useful lay hidden behind your idiosyncratic tinkering.

Keys to Simplicity

To date, only one keyboard macro program enables you to share the sophisticated simplicity that you've worked so hard to develop: *Keyworks*, from Alpha Software. The program lets you create descriptions up to 20 characters long of the macros at your disposal, then helps you build pop-up lists or moving-bar menus of those descriptions. As in all keyboard enhancers, macros can call other macros, and menus can call other menus. *Keyworks* also enables you to create pop-up text windows that can be used as context-sensitive help screens (see Screen 1) or to instruct others in program fundamentals (see Screen 2). Listing 1 contains the macros that created Screens 1 and 2.

Keyworks extends the maximum number of macros beyond the usual mix of keys and key combinations. You can create additional macros numbered 1 to 255, which carry their numbers as individual IDs. It is possible to invoke them by pressing <Alt> and typing the appropriate number on the numeric keypad; in actual use, however, these macros will most likely be displayed in a menu or called by another macro. The use of numbered macros leaves the simpler key combinations free for macros you define "on the fly" within an application program. You can record macros by using a

Learn mode, in which *Keyworks* remembers keystrokes as you enter them, or you can create macros in the program's pop-up macro editor.

The ability to create menus whose entries describe and invoke these macros (along with help screens that explain the macros) enables you to fashion complex systems of macros and batch files that any user can control with a simple moving-bar menu.

Reading a Macro

Keyworks macros are stored as straight ASCII files and can thus be edited with any text editor. Each macro takes the form `{{macro id}<description>... keystrokes ...`

The double opening curly brackets signify the beginning of a *Keyworks* macro, the angle brackets delimit the description, and the keystrokes to be played back follow the angle bracket that closes the description.

Special keys or keystroke combinations are delimited by opening and closing curly brackets, as in {AltF1}, {CapF1}, or {CtrlPgDn}. *Keyworks* command words, such as {Menu}, {Text}, {Clear}, and {Bell}, are also set off by curly brackets.

Text contained between two delimiting {Text} commands will be displayed in a text window. Macro IDs contained between two {Menu} commands will be displayed in a pop-up menu along with their corresponding descrip-

tions. An {Idoff} command between {Menu} commands causes the menu to display only the descriptions.

Menu-Making Tips

Keyworks enables you to play programmer without requiring you to mine the computer's resources at the bits and bytes level. Although the application program does the real work, your macro system is likely to get most of the credit. Simple as macro creation may be, it's still good practice to follow some conservative and efficient programming techniques.

In developing a turnkey system, take a top-down approach. Define the largest, most general function of the system first, then develop the collection of tasks that will perform that function. Finally, fill in the blanks by determining how each task will be accomplished.

Start creating your system by thinking of it in three phases: input, manipulation, and output. That is, determine how the data should be entered, what the system should do with the data, and what form the reports should take.

Menu-Making Tips

Top-down Approach
Menus First
Display IDs
IDs in Order
Menus Return
Unique Initials
Options in Order

Create the menus before you create the macros that execute the menu options. You can use *stub* text in a text window macro to convey something like, This part of the system's not ready yet. I reserve {255} for that purpose (see Screen 3 and Listing 2) and begin each system by assigning {255} to every menu choice, but any number will do. This approach enables you to create and test each macro in turn until all menu options work.

Delay installation of the {Idoff} commands until the system is almost complete. Displaying macro IDs on the menus makes editing and debugging the macro file that much easier.

As you create and edit the system, keep the macro IDs in order. I prefer the following sequence: function keys, <Alt>-function keys, shifted ({Cap}) function keys, <Ctrl>-function keys, <Alt>-key, <Ctrl>-key, and finally numbered macros, but feel free to use any order you like. A logical order simplifies accessing macros when using the List Macros function, which displays a menu of all macro key assignments according to their order in the macro file. A consistent sequence also allows you to use the List Macros window as a cross-reference to the macro file. For example, you may need to know

whether you've already created a macro for <Alt>-A, or whether the macro you want is <Alt>-M or <Alt>-N. Order is a boon to macro file editing as well.

In each submenu, create a means of returning to the main menu or the next highest menu. That way, any user will easily be able to maneuver through the menu tree you've created. You can simply include the macro ID of the higher-level menu as a selection on

the submenu. In our example later on, the Edit menu includes macro ID {10} as a way of returning to the main menu.

You can also choose a macro from a moving-bar menu by typing the first letter of your selection. Write your menu descriptions accordingly, ensuring that items on any given menu have

```
{{100}}<Call me for help >{Text}{1,1,4,60}{Clear}Yes, you
really are hopelessly lost.\Call Harry at x 275 and he'll
help you straighten it out.{Text}{FixPause}{1}{Restore}

{{101}}<Damned if you do... >{Text}{1,1,3,60}{Clear}Press an
y key to format hard disk\{Text}{FixPause}{1}{Restore}
```

Listing 1: Macros to create text windows for customized help screens or instructions

```
{{255}}<Stub >{Text}{1,1,3,60}Harry sez: Sor
ry, this feature's not here yet{Text}
```

Listing 2: A text macro can be used to display dummy text during system development.

Yes, you really are hopelessly lost.
Call Harry at x 275 and he'll help you straighten it out.

Screen 1: A text window macro can be used for context-sensitive help.

Press any key to format hard disk

Screen 2: Text windows can also provide customized instruction windows.

Harry sez: Sorry, this feature's not here yet

Screen 3: Stub, or dummy, text can be defined as the result of any macro that is still under development.

unique first letters. If choices begin with the same letter, *Keywords* will invoke the macro for the choice listed first.

At the same time, make every effort to order choices logically. One suggestion is to list the more frequently used options higher on the menu. Alternatively, you might want to place commonly used macros at the bottom of a very long menu, taking advantage of the revolving nature of *Keywords* menus (when you move the bar to the bottom of a menu, it jumps to the top).

Creating macros or parts of macros using the Learn mode (by selecting 'Record a Macro' from the *Keywords* menu) may prove to be a real time-saver. The program's built-in editor makes it

easy to construct new macros from existing ones. You might use a standing macro ID, such as {254}, to test part of a macro; once you've got that segment working smoothly, use the editor to copy it where you want it.

Status Conscious

PC World's article-status tracking procedure illustrates some simple techniques you can use to create a turnkey system. Manuscripts are monitored via a 1-2-3 spreadsheet according to author, editor, section, and so on. Each article's progress is tracked throughout the editing process. In the planning stage, features tend to be shifted according to pending issues; those changes must be reflected on the spreadsheet. Each article is allocated a certain amount of space, and illustrations

are noted on the spreadsheet and coordinated with the art department.

This tracking application involves functions that can be separated into five menus, unified by a main menu (see Figure 1). The Main Status menu, summoned with {AltF10}, can call the Edit, Cosmetics, Reports, or Disk Access menus, or it can bypass them all and jump directly to data entry. The Main Status menu macro (see Listing 3) includes the macro IDs of the submenus. The specification {2,5} immediately after the first {Menu} command tells *Keywords* to display the Main Status menu starting at row 2, column 5 of the screen. The {Title} command dis-

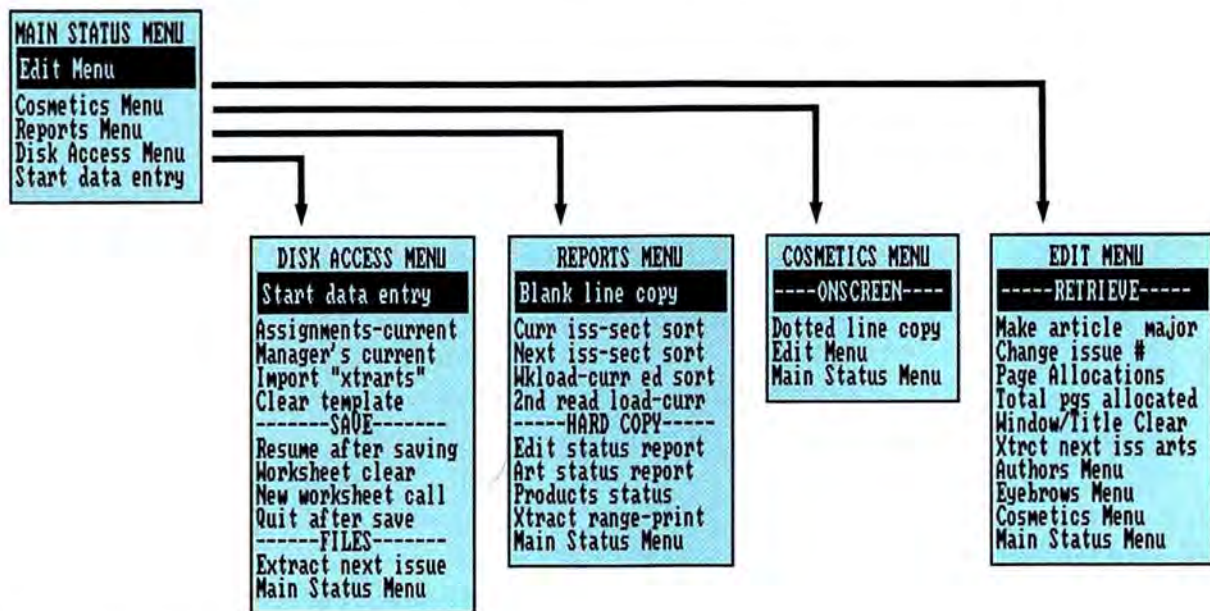

Figure 1: The status-tracking system menu tree. Notice that each subsidiary menu (Edit, Cosmetics, Reports, and Disk Access) has a selection that returns the user to the main menu.

plays the text that comes between it and the backslash as a menu title. Menus can also have footers.

The five <Alt>-key macros in Listing 3 enable you to access sub-menus directly by pressing <Alt> and the first letter of the menu selection. You could eliminate these five macros by using a text editor to search and replace every occurrence of numbered macro IDs with <Alt>-initial letter once the system is complete. However, cross-referencing by numbers in the system development phase is much easier.

Menu macros can provide consistent data entry, a practice of particular importance with data that is subject to searches or sorts. Screen 4 lists the first names of some regular *PC World* authors according to the format used on the magazine's status sheets. When one of these names is selected, the macro responds by typing out the full name (see Listing 4).

Screen 4: Consistent data entry is assured when the desired text is selected from a menu.

```

{(AltR)<Reports Menu        >{(9)}
```

Listing 3: Macros to create the menus in Figure 1. When a macro ID is listed between {Menu} commands, the corresponding description appears as a choice on the menu.

```
{(AltA)<Authors Menu          >{(Menu){(IdOff){(Title)AUTHORS ME
NU\{(200,201,202,203,204,205,206,207,208,220,2,10){(Menu)}

{(200)<Harry                >{Miller, Harry{Enter}

{(201)<Ken                   >{Greenberg, Ken{Enter}

{(202)<Robert                >{Luhn, Robert{Enter}

{(203)<Karl                   >{Koessel, Karl{Enter}

{(204)<Darcy                  >{DiNucci, Darcy{Enter}

{(205)<Cindy                  >{Hamburger, Cindy{Enter}

{(206)<Mark                   >{Hall, Mark{Enter}

{(207)<Wes                    >{Nihei, Wes{Enter}

{(208)<Christine              >{Whyte, Christine{Enter}

{(220)<More authors          >{(Menu){(IdOff){(Title)MORE AUTHOR
S MENU\{(214,218,219,2,10){(AltA){(Menu)}
```

Listing 4: Macros for the Authors menu. The text following the description will be typed out in response to a menu selection.

Branching

You can embed a small menu within a text window and simulate a branching effect based on the user's choice (see Screen 5). In our example, the text window prompts the user to verify the cursor's position; if the cursor is not in position, the menu provides an option to cancel the current macro. In Listing 5, note the relative screen positions of the text macro ({20}) and the menu macro that it calls ({21}).

The Proceed option starts the execution of macro {22}. In this case, the macro marks as a lead story the magazine article whose title is at the cursor position. The macro edits the title cell (by adding five asterisks to the title), then moves to the right to edit the formula that converts disk file size (in kilobytes) to an approximate page length. (After invoking <F2>, 1-2-3's edit key, the macro backspaces three times and inserts the digits 600 in place of the previous number.)

You can rely on this same branching technique to provide more detailed instructions for complex menus or to map a multitude of paths anywhere in the system.

```
{20}<Make article major>{Text}{1,4,7,60}Be sure that the
  cursor is in the Title field\Then press the [Enter] key\\I
  f the cursor is not in the Title field,\select "Cancel"\\{Text}
{21}
{22}<Proceed
  {Right}<Right><Right><Right><Right><F2><BkSp> <BkSp><BkSp>600<Enter>
{23}<Cancel
```

Listing 5: Macro to create Screen 5. Macro {20} creates the text window and calls macro {21} to create the menu within it. Macros {22} and {23} are the actions that result from the menu selections.

Be sure that the cursor is in the Title field
Then press the [Enter] key
If the cursor is not in the Title field,
select "Cancel"

Proceed
Cancel

Screen 5: A small menu positioned within a text window provides a simple user interface for a branching decision point.

```
{100}<Blank line copy
{101}<
{102}<Proceed
{103}<Dotted line copy
{104}<
{105}<Proceed
{110}<Text prompt
  e cursor is in column A\Then press the [Enter] key\\If the
  cursor is not in column A,\select "Cancel"\\{Text}
{23}<Cancel
```

Listing 6: Macro {110} is called by both {100} and {103} to avoid duplication.

Be sure that the cursor is in column A
Then press the [Enter] key
If the cursor is not in column A,
select "Cancel"

Proceed
Cancel

Screen 6: Macros {100} and {103} both call macro {110}, which displays this text window. Then different macros are called to display the small menu within the text window. Although the menus look the same, the results of a Proceed choice will differ.

Nesting

Because one macro can call another macro (or for that matter, any number of macros), a macro can serve as a subroutine for any other macro in the file. You can even develop a standard library of macro subroutines and store them in a separate disk file. The library can then be copied into (*appended to*, in *Keywords* jargon) any macro file.

Listing 6 illustrates the simplest way to nest macros and avoid re-typing text for a text window. Macro {110} generates the same menu text whether you copy a blank formatted line or a dotted line; similarly, selecting Cancel ({23}) as a response to either text prompt invokes the same result. In addition, the Cancel macro is identical to the branching example used earlier in this article.

Macros {100} and {103}, which copy a blank line and a dotted line, respectively, both call macro {110} to display the text screen first (see Screen 6). The difference lies in the results of a Proceed selection ({102} copies a blank formatted line, while {105} copies a dotted line).

Reports on the Run

Maintaining macros that are independent of a given worksheet—unlike the 1-2-3 practice of creating worksheet-dependent macros—enables you to save and load several worksheets with a single macro. In Listing 7, macro {143} saves the worksheet in its

```
{143}<Products status      >{169}{F5}sect<Enter>/wdc<Enter>
{Rght}<Rght>/wdc<Rght><Rght><Rght><Rght><Rght><Rght><Rght><Rght>
{Rght}<Rght><Rght><Rght><Rght><Rght><Rght><Rght><Rght><Rght>

keywords status.kw{1}

Listing 8e: STATUS.KW

```
{1}<Start 1-2-3 Status>a:123<Enter><Enter>/fdc:\STATUS<Enter>/fr
```

Listing 8a-e: Macros {100} and {101} in file DOS.KW call batch files that load new macro files and immediately execute macro {1} in either file. Macro {1} loads 1-2-3 and executes the appropriate program commands to select files or to change directions and then select files.

current form, then deletes several columns to create a greatly condensed print range. The macro's next set of 1-2-3 commands specifies the left and right margins and the printer setup string and prints the range. The macro then erases the altered worksheet and retrieves the last file saved; the macro's movement of the cursor to the left from the File Retrieve file list highlights the last file saved.

DOS-Level Start-Up

Once you've got your system working smoothly, you can jazz it up (or make it foolproof) by calling the application program from a DOS-level *Keyworks* menu (see Screen 7). Such menus are particularly useful in moving through subdirectories on a hard disk and enable you to jump right into an application, bypassing opening logo screens.

Notice that in the macro file DOS.KW (see Listings 8a, 8b, 8c, 8d, and 8e) the *PC-Talk* macro includes an extra {Enter} to bypass the opening logo screen and an

Screen 7: A simplified DOS-level menu. Any selection will bypass any opening logo screens.

{AltD} to call up the dialing directory. Thus, when you select *PC-Talk*, the macro situates you directly at that spot in the program where you'll begin working. The 1-2-3 macros employ similar commands. One menu choice simply loads 1-2-3; the other loads 1-2-3 and switches default directories.

Forever Making Menus

As you can see, creating menu-driven systems is relatively easy; the pop-up, moving-bar menu is generally unobtrusive; and the program's potential for helping you help other PC users is great. While this article focuses on transferring your expertise to others, don't minimize the program's potential for making your own computing environment more pleasant. Don't like the command

structure of an otherwise useful program? No problem—make a menu. Have a system of codes to remember? Same advice. Any further questions? Just follow the instructions in Screen 2. ●

The Fully Powered PC

The batch processing language within DOS can no longer be shrugged off as too primitive to be of much use. Here's a guide to its most impressive capabilities.

*Burton L. Alpersen,
Andrew Fluegelman,
and Lawrence J. Magid*

When DOS 2.00 was introduced, many people thought its advantages over earlier DOS versions applied only to users with hard disks. They were wrong. DOS 2.00 also offers a quantum leap in batch processing capability. The newest versions of DOS provide extra flexibility in the use of replaceable parameters and the abilities to branch, loop, and call subroutines within batch files. Suddenly, batch files can turn programming somersaults.

Batch Files With a Difference

The purpose of batch files is to automate commonly used procedures. But often you may want to modify the way a procedure works at the time you call its batch file. For this contingency, DOS provides *replaceable parameters*. When you create a batch file that will have variable information, simply use a replaceable parameter variable at each point where such information will be needed. Replaceable parameter variables consist of a single percent sign and an integer (%0 through %9). When you execute the batch file, any words you type on the command line following the batch file name will be substituted for those variables.

DOS assigns the value of each replaceable parameter in sequence, according to the position of the words on the command line. The name of the batch file, the first word on the command line, is

used as the value for parameter %0. The next word on the command line is the value for replaceable parameter %1; the next is the value for replaceable parameter %2, and so on.

Consider the word processing batch file GO.BAT in Listing 1. It includes the replaceable parameter

The SHIFT command can come to the rescue in DOS 2.00 by setting up a queue program without the limitations imposed by the PRINT command.

%1 in two lines: the line that calls a directory and the line that calls *WordStar*. If you were to invoke this file by typing *GO DOCUMENT.DOC*, the parameter *DOCUMENT.DOC* would be substituted for each %1, and the batch file would behave accordingly. Thus, the line 'DIR B:%1/W' would be interpreted by DOS as *DIR B:DOCUMENT.DOC/W*, which asks DOS to search for the file *DOCUMENT.DOC*. The line 'A:WS %1' would be interpreted by DOS as *A:WS DOCUMENT.DOC*. By *WordStar* convention, the command *WS filename* loads *WordStar* and then opens the specified file. *WordStar* would therefore bypass its opening menu and go immediately into document mode with the file *DOCUMENT.DOC* in place for editing.

Shifting Assignments

Before DOS 2.00, you were restricted to ten replaceable parameters per batch file. With the introduction of the SHIFT command, DOS 2.00 removed the ten-parameter restriction. Now the only limitation on the number of parameters is that they all fit on a

on the command line (the command itself and *w1* through *w9*) are assigned to those variables. The SHIFT command does not increase the number of variables; but each time you use it, the variable assignments are "bumped over" one position. With the first SHIFT command, the variables %0 through %9 are reassigned the values *w1* through *w10*, respectively. The value originally assigned to %0 is bumped off. Use the SHIFT command again, and the variables %0 through %9 acquire the values *w2* through *w11*.

However, the true value of the SHIFT command goes beyond getting more replaceable parameter values from the command line. The following application shows how useful SHIFT can be.

SHIFT Into Print Queuing

DOS 2.00 provides a PRINT command to set up a print queue (a series of files to be sent to the printer), but the command has at least two serious problems. First, the queue created by PRINT is limited to 10 files. Second, the

logical command line. (A logical command line includes everything you type from the DOS prompt through the carriage return and may be as long as 127 characters.)

Imagine a command line with 14 elements:
A>command w1 w2 w3 w4
w5 w6 w7 w8 w9 w10 w11
w12 w13

You still have only ten replaceable parameter variables available, %0 through %9. The first ten words

```
ECHO OFF
CLS

ECHO Insert your data disk in drive B:
PAUSE
DIR B:%1/W
ECHO Make sure your file is on this disk.
PAUSE
CLS
CHKDSK B:
ECHO Is there enough work space? Change the disk if necessary.
PAUSE
B:
A:WS %1
A:
```

Listing 1: GO.BAT

PRINT command does not recognize path names. Consequently, all the files to be printed must be in the same directory, and you have to print from that directory. (DOS 3.00's PRINT command does not have those limitations. The optional /Q: command enables you to specify the number of files—up to 32—that the queue will hold. The PRINT command in DOS 3.00 also recognizes path names.)

QUE.BAT, the batch file in Listing 2, shows how the SHIFT command can come to the rescue in DOS 2.00 by setting up a queue program (in this case called QUE.BAT) without the limitations imposed by the PRINT command. QUE.BAT is invoked with the following syntax:

```
QUE filename1 filename2
    filename3 ...
```

This batch file allows you to queue up to 62 files, depending on the length of the file names. The printout of each file begins on a new page with a header consisting of the file name and a line of hyphens.

The first two lines of QUE.BAT turn off the echo and clear the screen. The fourth line, 'A:BASICA A:FORMFEED', makes use of a simple BASIC program called FORMFEED.BAS to start the file on a new page. FORMFEED.BAS consists of the line

```
10 LPRINT CHR$(12);:SYSTEM
'ECHO PRINTING FILE %1'
```

displays the name of the file currently being printed. The next three lines send output to the printer: the first sends the current file name; the second sends a line of hyphens, which is part of the header; and the third TYPEs the file's contents. All output is re-directed to the printer with '>PRN'. By using the TYPE command instead of PRINT, QUE.BAT allows you to use path names freely in file names specified as replaceable parameter values for QUE.BAT.

The ':PRINT' and 'IF NOT ZIP==ZIP%1 GOTO PRINT' lines in QUE.BAT will be discussed later. These lines determine whether more files must be printed. If not, the batch file terminates.

It is the SHIFT command, however, that really makes this batch file work. The first time through the batch file, the value of %1 is

filename1; all references to %1 use that value. But before the procedure in the batch file repeats, the SHIFT command is invoked, causing all references to %1 to use the value *filename2*. The third time through the batch file, %1 takes on the value *filename3*, and so on. Thus, the SHIFT command allows the batch file to pick up each file name on the command line with the use of a single DOS variable.

Branching

Another important programming feature that DOS 2.00 adds to batch processing is branching. Normally the execution of a batch file flows from the first to the last statement in the file. With branching, however, you can redirect the flow.

Branches can be conditional or unconditional. An unconditional branch uses the syntax GOTO *la-*

```
ECHO OFF
CLS
:PRINT
A:BASICA A:FORMFEED
ECHO PRINTING FILE %1
ECHO %1 >PRN
ECHO ----->PRN
TYPE %1 >PRN
SHIFT
IF NOT ZIP==ZIP%1 GOTO PRINT
A:BASICA A:FORMFEED
```

Listing 2: QUE.BAT

bel. GOTO transfers control to the line containing the next executable command following *label*. The label can be any string of up to eight characters, prefixed by a colon. The label line can include other words; however, the label must be the first word on the line.

The conditional branch allows the batch file to choose between actions, depending on whether a certain condition is met. The command uses the syntax

IF [NOT] *condition command*

The *condition* parameter names any of three conditions for testing. It can test whether or not two string values are the same (IF [NOT] *string1* = *string2 command*). It can test for the existence of a file (IF [NOT] EXIST *filespec command*). Finally, *condition* can test for an exit code, a new capability of DOS 2.00 (IF [NOT] ERRORLEVEL *number command*). When a program terminates, it can set a numerical value, called an exit code, that indicates the manner in which the program terminated. By checking this value with ERRORLEVEL, you can test whether the previous program terminated successfully or with an error. Although this test is potentially useful, the only programs in DOS 2.00 that produce exit codes are BACKUP and RESTORE. Unless your application involves these

two commands or sets its own exit codes, ERRORLEVEL is of limited value.

The EXIST *filename* test is crippled by the exclusion of DOS 2.00 path names from the *filename* pa-

signed value. Therefore, the GOTO command is not executed, and control passes to the next line. A final formfeed is sent to the printer, and the batch file terminates.

You can intermix DOS command line variables and the item variable of the FOR command in batch files.

rameter. The specified file must be in the default directory or it will not be found. This limitation has been eliminated in DOS 3.00. However, even the weak IF commands of DOS 2.00 add substantially to your control over batch operations.

The QUE.BAT batch file in Listing 2 would not work if it weren't possible to branch within the batch file. The critical line is the conditional branch instruction 'IF NOT ZIP = ZIP%1 GOTO PRINT'. Each time the batch file reaches this point, it tests whether the string 'ZIP' is the same as the string 'ZIP%1'. If the value of %1 is *filename1*, the line finds that 'ZIP' does not equal 'ZIP*filename1*'. Consequently, control is transferred to the next executable line after the label ':PRINT', and the file is printed. The SHIFT command bumps the assignment of %1 to the next value, *filename2*. The test is then performed again, with the same outcome.

Finally, no file names remain on the command line. At this point the test finds that 'ZIP = ZIP%1', because %1 has no as-

'ZIP' is used as part of the string test because batch file conditional commands cannot compare a string to a null value. Some character or characters must be included, and the arbitrary choice ZIP is as good as any other. Also note that the replaceable variable is placed on the right side of the double equal signs. This prevents the errant behavior that occurs when the right string matches the beginning of the left string but is shorter.

Looping

The DOS 2.00 batch language also allows you to generate batch file loops. This means that, within certain limits, you can have the batch file recycle the same command with different arguments. To do this, use the syntax FOR %%*variable* IN (*set*) DO *command*

The DOS manual tells you, "The %%*variable* is sequentially set to

each member of *set*, and then the *command* is evaluated and executed." You may find it more helpful to think of the command as follows: FOR each item IN (this collection of items) DO the action specified in the command using the items appropriately. For example, if you had to back up three files in a financial program, and you wanted to copy those files from drive A: to drive B: with a batch file, you could use the command

```
FOR %%Z IN (TRNS.DOC  
CHKS.DAT DEPS.LST) DO  
COPY A:%%Z B:
```

%%Z is a variable whose value is set sequentially to each name in the collection of items. The batch file would operate once as though instructed to COPY A:TRNS.DOC B:. It would then operate as though instructed to COPY A:CHKS.DAT B:. Finally, it would act as though instructed to COPY A:DEPS.LST B:. Since no items would remain in the set at this point, the loop would terminate.

Listing 3 shows how the FOR command can keep track of files within the complex directory structure that is possible in DOS 2.00. For example, if you invoke this batch file, DIRALL.BAT, with the command *DIRALL *.BAT*, the batch file checks each of the 14 subdirectories listed in the FOR commands, as well as the root directories of drives A: and C:, and reports to the printer the existence of each batch file. These reports will be arranged within each of

the 16 subdirectories and the 2 root directories. You would have to type 18 DIR commands, 1 for each directory, to duplicate the behavior of the single command DIRALL.

DIRALL.BAT shows that you can intermix DOS command line variables (replaceable parameters) and the item variable of the FOR command in batch files. The FOR command's item variables are identified with a double percent sign and an alphanumeric character (%%0 through %%9 and %%A through %%Z). The FOR command can also be used from the command line, in which case you must change the double percent signs preceding the letter variable to a single percent sign. For example, at the command line you would type *FOR %Z IN (A:\B:\) DO DIR %Z* to display the root directories of drives A: and B:.

Batch File Subroutines

One of the most powerful techniques employed in programming is the subroutine, a program statement or set of statements that accomplishes a specific task. Batch files have always been able to call other batch files into execution. Normally, however, the second batch file does not return control to the first. Although the capability is not well documented in the DOS manual, in versions of DOS later than 2.00, a batch file itself can be a subroutine and can be invoked at any time by calling it with an instruction in another batch file. Once it has accomplished its task, the subroutine batch file automatically returns control to the next instruction in the calling batch file.

The technique is simple. You call for the batch file subroutine with the syntax

```
ECHO OFF  
CD\  
A:BASICA A:FORMFEED  
FOR %%A IN (COM COMPILER CSU EDISK FLOPPY) DO DIR %%A\%1 >PRN  
FOR %%A IN (FOOD GRAPH IPM MONEY MSTOOLS) DO DIR %%A\%1 >PRN  
FOR %%A IN (MSWORD POWERBOO SSDB STAT TEST) DO DIR %%A\%1 >PRN  
FOR %%A IN (WP A: C:) DO DIR %%A\%1 >PRN  
A:BASICA A:FORMFEED  
CLS  
ECHO -  
ECHO DONE
```

Listing 3: DIRALL.BAT

COMMAND/C *filespec* [%# ...
%#]

COMMAND/C is the subroutine call (equivalent to GOSUB in several computer languages). *Filespec* lists the drive, the path, and the name of the batch file you want to use as a subroutine; %# ... %# are the values for any replaceable parameters in the subroutine. The only special attribute of the subroutine batch file is that it must contain the word EXIT as its last command. This command is the equivalent of RETURN in many computer languages and is responsible for returning control to the parent batch file.

You could, for example, set up an AUTOEXEC.BAT file to perform three tasks: setting up the clock, setting up the monitor, and setting up the printer. If each of these tasks were a subroutine, your AUTOEXEC.BAT file would consist of only three major instructions. You would set up the file as follows:

```
ECHO OFF
CLS
COMMAND/C SETCLOCK
ECHO OFF
CLS
COMMAND/C SETMON
ECHO OFF
CLS
COMMAND/C SETPRINT
```

The three files serving as batch subroutines would be

SETCLOCK.BAT:

```
ECHO OFF
CLS
SETCLOCK
EXIT
```

SETMODE.BAT:

```
ECHO OFF
CLS
MODE 40,R
EXIT
```

and SETPRINT.BAT:

```
ECHO OFF
CLS
MODE COM1:96,N,8,1,P
MODE LPT1: = COM1
EXIT
```

As in other languages, you can "nest" batch file subroutines; that is, one subroutine can call another, which can call another, and so on. But be careful; each level of nesting will cost you 3K of RAM. Also remember that DOS always turns on the echo at the beginning of any batch file. To keep the echo off, begin each batch file with the command ECHO OFF. Unfortunately, this command, like the first command of all batch files, is displayed. But it disappears almost immediately if you follow it with a CLS command.

The AUTOEXEC.BAT file shown earlier is too simple to be of much use, but it illustrates the techniques to use for more complex subroutine operations. By using batch file subroutines you can easily maintain and modify batch files of great complexity.

This technique also reduces debugging problems dramatically by locating instructions in well-defined modules, and it enables you to write the instructions for a commonly used procedure only once and then call the routine from any batch file.

With the refinements of version 2.00, DOS's easy-to-use batch processing has become a powerful programming language. Its looping, branching, and variable capabilities don't rival those of C, but you may find they give you the power to control many tasks without leaving DOS; a 2-minute batch file might just do the job. ●

The PC World Advanced Users Quiz

Answers

1. d.

2. c. Selecting *R* from *WordStar*'s opening menu permits you to run external DOS commands such as *FORMAT*, most *BASIC* programs, and most *.COM* and *.EXE* files. But internal commands such as *DIR* cannot be accessed.

3. f. The 8086-2 doesn't exist—you might have confused it with the faster 8088-2 microprocessor used in many PC compatibles. 8286 is a deliberate misprint designed to catch lazy eyes. The 80286 is the AT's CPU, while the 80287 is an optional coprocessor used for high-speed math calculations.

4. b.

5. a. 1K is not 1000 bytes, but rather, 1024 bytes. Thus 64K is actually 64 x 1024 bytes, or 65,536 bytes.

6. d. Serial ports transmit data 1 bit at a time; parallel ports, 1 byte at a time.

7. c. The diamond harks back to the days when *WordStar* was used on personal computers that lacked separate cursor control keys.

8. c.

9. b.

10. c. When the PC is switched on, the 8088 microprocessor executes the power-on diagnostics routine in the BIOS ROM, then the bootstrap loader, which tells the computer to load the disk operating system, or DOS.

11. b. The 8088 can directly address only one 64K segment of RAM at a time. The 8088 lacks a 20-bit address register; it must compute addresses using two 16-bit registers. Note also that while the 8088 can address 1MB, not all of it can be written to. ROM chips on the motherboard holding the BIOS and BASIC, as well as those on boards controlling peripherals, have addresses in this "memory map."

12. a. DOS will prompt you to remove the original disk from drive A: and replace it with the destination disk. This is almost a trick question, since *COPY *.* B:* would work—assuming your

single drive was designated A:. But 'tain't always so. If you chose *d*, give yourself half a point.

13. b.

14. a. 252,000, based on the 720- by 350-pixel resolution of the PC's monochrome screen.

15. d.

16. e.

17. d. *DEBUG* is considered to be a modest assembler as well as a means of patching programs.

18. e.

19. d.

20. c. EBCDIC's roots trace back to early IBM mainframes, so it uses 8 bits to represent a character; the 7-bit ASCII scheme was originally developed for data communications and later adopted by mini and microcomputer vendors.

21. a.

22. a. *IBMBIO.COM* and *IBMDOS.COM* are two players in the DOS quartet, the other two being the boot record and *COMMAND.COM*. *IBMDOS.COM* handles file management routines and a variety of other functions

for application programs. IBMBIO.COM provides an interface to ROM BIOS device routines. Neither appears in a directory, and they cannot be altered or accidentally deleted.

23. c. Terminal emulation is often confused with host/micro-computer file transfer systems. True terminal emulation allows a PC to view and sometimes manipulate host data but does not allow it to save host data to disk.

24. f. With *.* appended to CHKDSK, you not only discover bad disk sectors but whether a file is noncontiguous—whether its components are stored in discrete areas of a disk. Such files take longer to read. You can speed disk access by first copying frequently used files onto a new disk. These files are stored contiguously and thus are read off the disk more quickly.

25. d. DEL and ERASE are different names for the same function.

26. d.

27. b. Each 64K bank of eight chips uses an additional chip dedicated to parity checking. PC-compatible computers that don't check for parity need only 64 chips.

28. d. Hierarchical data bases organize data according to many-to-one and parent-child relationships—a distinctly different method from the tabular and key-field approach common in relational data bases. The hierarchical structure tends to conserve RAM.

29. a. The PC's upper character set—codes 129 to 255 inclusive—contains a range of foreign language and mathematical symbols, double lines, bars, and other critters you don't find in the ASCII set.

30. c.

31. a. When you index a data base on a key field, such as name, address, or zip, only the data within the key field is indexed, creating a new file with the extension .NDX. Indexing allows you to locate records on a floppy disk within 2 seconds, typically, with the Find command. The Sort command creates an ordered copy of the entire data base and thus is slower.

32. d. CMOS stands for Complementary Metal Oxide Semiconductor. This semiconductor fabrication process makes everything from memory chips and microprocessors smaller, cooler, and more efficient. CMOS chips are found in digital watches, the PCjr's keyboard, and a number of lap-size computers.

33. c, d. This is a trick question—there are actually two faces in the IBM character set. Both *c* and *d* are correct. If you picked both, give yourself two points.

34. b. The OSI model defines seven layers of communications protocols; each successive layer is insulated from the details of those

below. Accordingly, networks can be built from individually implemented layers. The presentation layer governs data interpretation, format, and code transformation, and it lies below the application layer.

35. a. The equivalent command sequence would be */File Retrieve Macros <Enter> /Worksheet Window Vertical*.

36. c. A file server regulates access to files; a disk server regulates access to portions of a shared hard disk but offers little in the way of protection and no record protection.

37. c. Since ASCII code uses 7 bits, parity employs the 8th bit (which can be odd or even) for error-checking routines. If you specify no parity, the bit can be used to increase the number of transmitted characters. Otherwise, you can use only 7 data bits.

38. a. Issued within a document, <Ctrl>-L repeats either <Ctrl>-Q F, the find command, or <Ctrl>-Q A, the search and replace command, whichever was used last. From the main menu, the command simply changes the logged disk drive.

39. b. A cluster is the smallest allocatable disk space. On a double-sided floppy disk, a cluster is two sectors, or 1024 bytes. Thus if you save a file only 8 bytes long, it will consume 1K of disk space. Hard disks often use 4K clusters.

40. c. A network operating system may include various data protection "hooks." Unless the application program takes advantage of these hooks, data remains vulnerable.

41. b. Broadband supports a wider bandwidth than baseband (or voice grade) channels and can handle multiple and higher-speed data transmission.

42. c.

43. c. CSMA/CD is only one LAN access mechanism. It is a random contention method in which each device competes for access to network resources. In contrast, the token passing method is deterministic; an electronic "token" is passed to devices in the network in a predetermined order.

44. c. A bubble sort is a common algorithm used to order files that consist of relatively few elements. It relies on a series of comparisons and swaps in which the successive elements of lower value rise like bubbles to the top.

45. b. XON/XOFF is a technique that informs a transmitting device whether the receiving device is ready to accept data. It is similar to the process of stopping and starting a scrolling screen with <Ctrl>-S (XOFF) and <Ctrl>-Q (XON).

46. a. <F4>, invoked while you're pointing to a cell or range address during formula entry, de-

fines a cell address as mixed (that is, absolute row and relative column or vice versa) or absolute.

47. b.

48. b.

49. a. DIP is the centipede-like configuration common to all the chips in a standard PC. By contrast, the PC AT's 80286 CPU is a square, leadless package that sports contacts (instead of pins) on not two but all four sides.

50. d. Some programs, including .EXE programs produced by the BASIC compiler, look to drive A: to reload COMMAND.COM when they exit to DOS. Issuing the command `ASSIGN A=C` forces the computer to look for DOS on drive C:.

51. a.

52. d. The others are BASIC commands. SUM is used by a number of other programs, such as 1-2-3.

53. a. For example, the letter Z in 7-bit ASCII is represented as 1011010; the sum of these numbers is 4. If even parity is used, the telecommunications program makes the 8th bit a 0; if parity is odd, a 1 is added to make the value odd. The program at the other end always strips away this 8th bit.

54. b. The Control Z character (ASCII 26) is used by DOS to indicate the end of a file. Most text editors recognize this end-of-file marker and will treat the first Control Z they encounter in a file as the end of a file. If a Control Z were embedded in the middle of a

file, you would not be able to edit past it, even though the file held more characters.

55. a.

56. b. For example, you can run a cross-assembler for the 68000 microprocessor on the PC AT and generate 68000 assembly language code.

57. b.

58. b. A virtual field's value is based on other fields. For example, the sum of ten accounts payable fields could be a virtual field.

59. b. The NMI has highest priority, is reserved for parity errors, and cannot generally be disabled. However, you can disable the NMI by writing 0 to the port A0.

60. a. The formula in *b* appears correct, but it won't yield proper results. 1-2-3 stores the values of formulas and calculations in a binary form that is only an approximation of their true decimal value. For this reason, testing for exact equality fails under some circumstances, such as when cell A1 contains 3 and cell A2 contains 7. The formula in *a* tests whether the difference between the formula value and the calculated value is smaller than .0001, a trivial amount. ●

A PARADYNE COMPANY

There Are Times When Having The Right Name Really Counts For Something.

Today's computer world is a jungle. With so much to choose from, you have to be wary. Computers in all sizes, priced for any budget. And enough accessories and software to make your head spin.

Then there are the books that are supposed to help you through all this. About 3,000 of them at last count. If you have time, you could check them all. But there is a better way. Look at the name. That's what smart buyers do. They go with a name that's been around. One with a reputation for excellence. One they can trust. A name like **PC WORLD BOOKS**, written by the editors of PC WORLD, a standout in the computer field.

All three books are reader friendly, each taking you step by step through every area of PC operation.

Book 1, GETTING STARTED WITH THE IBM® PC AND XT, is a total guide covering keyboard, disks, and operating systems (DOS 1.10 and 2.00). It shows you how to set up electronic files, work with BASIC, determine software needs, maintain your machine, plus a lot more.

Book 2, HOW TO BUY AN IBM PC OR COMPATIBLE COMPUTER, will help you through the computer jungle by making sense out of the many choices you have when buying a PC, saving you days trying to decide which PC configuration is for you. It will also help you choose disk drives, displays, printers, and software of every kind.

Book 3, ESSENTIAL APPLICATIONS FOR THE IBM PC AND XT, is an introduction to the full range of business applications for the PC: disks, spread sheets, word processing, data base management, integrated programs, and other productivity software.

IBM is a Registered Trademark of International Business Machines Corp.

All three **PC WORLD BOOKS** are on sale now at book and computer stores. The price is low for a safe journey through a jungle.

Bring your PC up to AT speed with Univation.

Introducing the Univation Turboboard system accelerator.

Now you can get the speed and performance of an AT without all the expense. The Univation Turboboard will triple the speed of your PC or PC/XT, allowing you to do more, in less time, to more fully utilize your existing investment.

The Univation Turboboard is totally compatible with most software application packages and enables you to expand the internal memory up to 640K. Our Turboboard will improve your data processing speed over 300% and has the power to handle systems such as Xenix and Unix.

The Univation Turboboard is easy to install. It comes with friendly software and complete, easy-to-follow instructions for installation and operation.

Fully tested, proven reliable and available now, a Univation Turboboard will give your existing PC/XT speed and performance like an AT for only \$1,250*.

Turboboard Features:

- Fully integrated 8086 CPU
- 16-Bit Databus
- 9.54 MHz clock speed
- 300% Performance Improvement
- On board memory expansion to 640K
- Normal speed on/off switch
- Faster execution of ROM-based routine

Storage, Back-up & Security Removable and Fixed Disk Sub-Systems.

Make your PC perform just like an IBM-XT and improve its storage versatility with a hard disk sub-system from Univation. We feature innovative 5.5Mb & 10Mb, removable media hard disk systems and 10Mb, 20Mb & 30Mb fixed disk systems. We can configure them in any combination to meet your memory expansion needs.

Stack two half height 5.5Mb removable media drives in the right hand disk storage slot and you get XT memory with the added benefit of media backup protection, security and transportability. Combine a 5.5Mb removable drive with a 10Mb, 20Mb or 30 Mb fixed disk for extensive on-board storage capability with the ability to back-up, remove, transport and protect sensitive or critical data.

Univation's sub-systems are easy to install and come complete with controller, cables and our unique power supply booster/cooler. Univation disk drives can also be used externally.

Univation disk drives are extensively tested and guaranteed to give you years of problem-free service.

For more information on Univation products see your computer dealer today, or call 408/745-0180.

Univation is dedicated to making you and your PC as fast, efficient and productive as possible.

BY THE YEAR 2000, THE WORLD MAY CATCH UP WITH THE WAY COMPU SERVE'S ELECTRONIC MALL™ LETS YOU SHOP TODAY.

Presenting the computer shopping service that delivers discount prices, name-brand merchandise, and in-depth product information.

To make your computer even more useful, join CompuServe and shop in our Electronic Mall. Easy enough for beginners, it's open 24 hours a day, 7 days a week. And it offers a wide range of goods and services from nationally known stores and businesses including Bloomingdale's, Waldenbooks, American Express and Commodore.

CompuServe's Electronic Mall™ lets you shop at your convenience in all these departments:

The Auto Shop, Book Bazaar, Financial Mart, Leisure Center, Merchandise

Mart, Newsstand, On-line Connection, Personal Computer Store, Record Emporium, Specialty Boutique and Travel Agency.

Take the CompuServe Electronic Mall 15-Minute Comparison Test.

What you can do in 15 minutes shopping the Electronic Mall way.

- Access descriptions of the latest in computer printers, for instance.
 - Pick one and enter the order command.
 - Check complete descriptions of places to stay on your next vacation.
 - Pick several and request travel brochures.
 - Access a department store catalog and pick out a wine rack, tools, toys...anything!
 - Place your order.
- What you can do in 15 minutes shopping the old way.*
- Round up the family and get in the car.

The Electronic Mall—A Valuable Addition to the Vast World of CompuServe.

CompuServe Information Services bring you information, entertainment, personal communications and more.

You can access CompuServe with almost any computer and modem, terminal or communicating word processor.

To buy a CompuServe Subscription Kit, see your nearest computer dealer. To receive our informative brochure, or to order direct, call or write:

We've Put a Local Area Network on a Disk

Corporate Information Sharing. It's been described as the key to increasing a company's productivity. It's also why large networks of PC's are becoming more and more common in the workplace...in spite of the fact that they're costly, difficult to install, and incompatible with much existing software.

Finally, there's a solution to this corporate dilemma. Its name is LANLink™.

A Software-Driven LAN That Uses Standard, RS-232 Ports. A major breakthrough in local area networks, LANLink™ uses your computers' existing serial ports and runs under PC-DOS.

Because all of the intelligence the network requires is on the server and satellite diskettes, expensive network interface boards aren't required.

A Powerful Network That's Cost-Conscious. If you've been pricing board-driven LAN's, you already know that they can cost over \$1,000 per workstation.

LANLink™ is different.

Boasting a data transfer rate in excess of 100,000 BPS, LANLink™ is compatible with a wide range of programs. And because special boards aren't required, installation costs are one-third that of a traditional network.

A Network Designed the Way Business Works. With LANLink™ you're able to customize your network along departmental lines using a data-sharing hierarchy and password-protected access.

Get Started With LANLink™ TODAY. Call The Software Link TODAY for complete details and the authorized dealer nearest you. The LANLink™ Starter Kit, priced at \$495, comes complete with network software for both a server and a satellite computer. For a limited time, 50 feet of RS-232 cable will be included free of charge.

LANLink™ is immediately available and comes with a money-back guarantee. VISA, MC, AMEX accepted.

Star-Dot-Star

A global exchange of personal computer discoveries

Tips and techniques to help you get the most from your PC, including using subdirectories and setting dates in 1-2-3, converting data from dBASE III to Symphony, and patching programs to better suit your needs

Edited by Steven Cook

1-2-3 Subdirectory Menu

The 1-2-3 worksheet in DIR-MENU.WKS provides an alternative to the method given for setting the LOTUS default directory in "Automatic 1-2-3 Subdirectories" [**.**, PCW, January 1985]. DIRMENU dispenses with the task of creating and saving separate copies of the 123.CNF file for each subdirectory. It also eliminates the file copying that takes place every time LOTUS is loaded under the previously given method. Instead, only one small worksheet needs to be kept in the 1-2-3 subdirectory.

Follow these steps to create the worksheet:

1. Start 1-2-3 and set the */Worksheet Global Default Directory* to the drive and directory from which 1-2-3 boots, then Update and Quit from this menu.

2. Type a list of the subdirectories you will want to access in column A, one per cell. Use */Worksheet Column-Width Set* to adjust for long directory names.

3. Type the macro command labels as shown in cells B1, B2, and B4. The empty B3 cell will automatically be filled in when the menu is used.

4. Now use */Range Name Create* to name the macro \0 (the autoexecute macro) and assign it the cell range B1..B4. Use */Range Name Create* again to name \R, another keyboard macro that references the same cell range.

5. Finally, use */File Save* to store this as the automatic-loading worksheet by giving it the name **AUTO123**.

Now whenever 1-2-3 is started, this worksheet will appear on screen and act like a pull-down menu. You simply point with the cursor to the desired directory and press <Enter>. If you select an invalid directory (one that no longer

exists, for example), an error message to that effect will appear. You can then press <Esc> and use <Alt>-R (Restart) to pick another directory from the menu.

To add, delete, or edit directories in the menu, simply start 1-2-3, press <Ctrl>-<Break>, and make the necessary changes. You can use the Data Sort commands to keep the list in column A neatly sorted. When done making changes, issue the */File Save Replace* command before pressing <Alt>-R to test the new menu.

*Arman D. Tookmanian, Jr.
Dover, New Jersey*

Make a Date

In a 1-2-3 worksheet the usual method for creating a column of dates that are an equal number of days apart is to use a formula and the Copy command. An easier way is to issue the */Data Fill* command. When it prompts for a Start value, type **@DATE(yy,mm,dd)**, where *yy*, *mm*, and *dd* represent the year, month, and day you wish to begin the list with. In response to the Step prompt, type the number of days you want for the interval between the dates, then enter **100000** as the Stop value. When the list of values is complete, use the */Range Format Date* command to select a date format.

Since I often want to display dates in a month-day format, which 1-2-3 does not offer, I put **@MONTH()** and **@DAY()** formulas in adjacent columns and separate them with a column of hyphens to create the desired format. For example, if column A contains a list of dates created

Aptos, California*

NumLock Key in 1-2-3

A question in *The Help Screen*
["1-2-3 and the PC's Number
Pad," PCW, March 1985] prompts
me to offer this solution to the

problem of using the PC's numeric
keypad with 1-2-3. Many of the
worksheets I've developed have re-
quired the abilities to move the
cursor to random cells and to en-
ter values at those locations. To
accomplish both, I put the keypad
numbers into a macro that uses a
"sticky" menu as shown in
KEYMAC.

With <NumLock> on, this
macro causes the number keys to
move the cursor in the usual man-
ner until the <Enter> key is
pressed. After that, the number
keys enter numbers until the
<Enter> key is pressed again;

Lotus, dBase, WordStar and MultiMate Users

Smarten Up

FOR ONLY \$495

To help introduce the newest, fastest, and most powerful Smart Software System (version 2.0), we're repeating an outstanding offer.

For a limited time, you can upgrade to the complete Smart Software System and save \$400 off suggested retail price. Or upgrade to individual Smart modules at comparable savings.

And, whichever way you choose to Smarten up, you'll get the bonus of Smart Communications, Smart Programming Language, and Smart Time Management with every purchase.

IF YOU OWN:	UPGRADE TO:	SUGGESTED RETAIL:	FOR ONLY!
Lotus 1-2-3, Symphony, dBase II, dBase III, MultiMate, WordStar	The Smart Software System	\$895*	\$495
dBase II dBase III	The Smart Data Manager	\$495*	\$195
Lotus 1-2-3	The Smart Spreadsheet with Graphics	\$395*	\$195
MultiMate WordStar	The Smart Word Processor	\$295*	\$195

*Suggested retail prices effective with version 2.0.

JOIN THE RANKS OF SMART USERS.

No matter how you decide to get Smart, you can count on full-featured, fully-integrated performance.

The Smart Spreadsheet is the largest and fastest you'll find. It reads and writes Lotus files. And its Graphics will draw unmatched attention to your data.

The fully-relational Smart Data Manager handles up to 1,000,000 records. Yet for its size and capabilities, it's uncommonly easy to master.

And for memo writing to the most complex documents, nothing beats the versatility of The Smart Word Processor.

UPGRADE OFFER EXPIRES JULY 31, 1985.

If you decide to play it Smart, you must act fast. Just stop by the nearest Smart dealer for an Upgrade Order Form. Mail it, along with your check (or charge card authorization) and qualifying proof of purchase.

GET SMART TODAY.

For the name of your nearest Smart dealer, call us toll free at 800-GET-SMART. (In Kansas call 913-383-1089.)

Got a minute?

The folks who make very modern personal computers would have you accept a very old fashioned idea. Namely that you should buy everything else from them, too. Including their printers.

But IBM owners everywhere are finding that while the IBM PC may be the right tool for their business, the ideal tool for putting their business on paper is the all new Microline 192 from Okidata. And it isn't taking them long to find out.

First there's speed. The Microline 192 is twice as fast as the IBM Graphics Printer. But IBM PC owners are finding some other very remarkable features about the Microline 192 that the Graphics Printer doesn't have.

FEATURE	OKIDATA	IBM
SPEED	160 CPS	80 CPS
CORRESPONDENCE QUALITY	YES	NO
FREE FONT SOFTWARE	YES	NO
BIDIRECTIONAL GRAPHICS	YES	NO
MENU SELECT MODE	YES	NO
CUT SHEET FEEDER	OPTIONAL	NO
WIDE CARRIAGE MODEL	YES (ML-193 \$699)	NO
WARRANTY	1 FULL YEAR	90 DAYS
WEIGHT	9 LBS	13 LBS
SUGGESTED LIST PRICE	\$499	\$449

Oh, one other comparison worth repeating. In the minute and ten seconds it took the Microline 192 to print what you've just read, the IBM Graphics Printer wouldn't have told half the story.

OKIDATA, an OKI AMERICA company

That's about all it takes to discover why Okidata's new printer beats the IBM® Graphics Printer.

The folks who make very modern personal computers would have you accept a very old fashioned idea. Namely that you should buy everything else from them, too. Including their printers.

But IBM owners everywhere are finding that while the IBM PC may be the right tool for their business, the ideal tool for putting their business on paper is the all new Microline 192 from Okidata. And it isn't taking them long to find out.

First there's speed. The Microline 192 is twice as fast as the IBM Graphics Printer. But IBM PC owners are finding some other very remarkable features about the Microline 192 that the Graphics Printer doesn't have.

CALL TODAY (408) 980-8880

Gives you the Source Code.

Three Harbor Drive

Sausalito, CA 94965

then the keys switch back to controlling the cursor. The only way to escape the macro is to press <Ctrl>-<Break>. However, if you are willing to give up one of the cursor movements, you can substitute another command to return you to a previous menu.

To create the macro, type in the cell values as shown. Note that the numeric digits must be entered as labels. Move the cursor to cell A1 and create a range named CURSOR. (You can make just cell A1 the range, but if the range covers the entire macro you can easily copy the macro to other worksheets using the File Combine Copy Named Range command.) Go to cell B8 and create a range named DIRECTION.

If you access this macro by way of another menu, then you're all set. To access the macro with an <Alt>-letter combination, go to cell A4 and create a range named \M (or another letter of your choice).

*Phillip Martin
Salisbury, North Carolina*

Linked 1-2-3 Worksheets

It's not uncommon to have a series of 1-2-3 worksheets that must be subjected to an identical group of procedures. This typically involves loading a template, "combining-in" a file, performing various operations, and printing the result. In the past we used a brute-force approach: An operator sat in front of the computer, loaded each file, and started a macro to perform the desired steps. That process was repeated for each file until the entire set had been processed.

Feel right at home with the stock market.

Now you can use your personal computer and modem to help make investment decisions with confidence. Right in your own home.

Dow Jones News/Retrieval® is the surprisingly affordable, online financial news resource with exclusive electronic access to *The Wall Street Journal*. The combination of News/Retrieval and Dow Jones™ Software makes personal investment decisions easier by giving you a clear, organized picture of the facts.

Use News/Retrieval to check on your stocks or read up on companies and industries that interest you. Get tomorrow's business news today—90 seconds after it appears on the Dow Jones News Service® (the broadtape). See what impact government or world news is having on the marketplace.

Measure stock performance—past and present—with Dow Jones Quotes. And to round out the picture, review economic and earnings forecasts or SEC, Merrill Lynch and Standard & Poor's reports. It's all here in one place.

Then use Dow Jones Software to display trends, organize your portfolio and give you the entire picture in clear graphics.

After you've checked your investments, the whole family can use News/Retrieval to get hot sports news, shop at home, look up articles in the encyclopedia and much, much more.

For more information on how Dow Jones News/Retrieval can help *you* feel at home with the stock market, call **800-345-8500 Ext. 144***.

Dow Jones News/Retrieval & Software
Keeping you a step ahead.

*Alaska, Hawaii and foreign, call 1-215-789-7008 Ext. 144.

Circle 176 on reader service card

***I'm Adam Osborne.
I want you to know that
you no longer have to
pay ridiculous prices
for top quality software.***

Yes, you can get full-featured word processing for under seventy dollars. So don't be fooled. The next time a sales person tells you an advanced word processor costs \$400, he's either ignorant or putting his commission before your pocketbook.

Most software companies believe in "perceived value pricing". If a software package saves you thousands of dollars, they argue, why shouldn't you pay hundreds for it—even though the program costs just a few dollars to produce. Based on that logic, a telephone should cost \$500! After all, it saves you thousands in travel costs.

High software prices are currently maintained by a shaky coalition of software companies and some computer stores. **You've had no choice but to pay exorbitant prices whenever you bought software for your personal computer.**

I founded Paperback Software International to give you an alternative—Quality Software at Affordable Prices!

Ask for the Paperback Software alternative at your local bookshop, computer store, or software store. Or use the order form below.

NUMBER WORKS

The spreadsheet for budgeting, financial planning, expense reports, homework. Do "what if?" calculations, spot trends. 40 built-in math and finance functions. Spreadsheets can be as large as disk, not limited by memory like other programs. IBM PC w/128K, PCjr w/256K.

EXECUTIVE WRITER

Advanced word processing with word wrap, global search and replace, horizontal scrolling, centering and right justification, on-screen bold and underlining, headers, footers, footnotes, indices and tables of contents, macros, graphics. IBM PC w/128K, PCjr w/256K.

EXECUTIVE FILER

An electronic file cabinet. Keep anything you write organized and available at a keystroke. Combine with *Executive Writer* to switch between documents and filecards at a keystroke. Look up references. Do document assembly. Use *MailPrint* to generate form letters. IBM PC w/128K, PCjr w/256K.

DRAW-IT

Turns your computer into a full color electronic drawing board. Make pictures and illustrations, pie, bar, and line graphs, or just have fun! Easy-access help screens, simple commands, ready-to-use pictures and patterns. IBM PC w/128K, PCjr w/256K, color graphics card.

PAPERBACK WRITER

The affordable high-value word processor for everyday use. Easy-to-read instruction book makes you productive in minutes. Block operations, horizontal scrolling, word wrap, on-screen bold and underlining, search and replace. IBM PC w/128K, PCjr w/256K.

MY ABC's

Six educational games that are simple to learn and fun to play for preschoolers. They teach your child to recognize letters, count, and develop concentration skills. IBM PC/PCjr w/128K, color graphics card.

One look tells you that THE DESK ORGANIZER® is a clear winner over competing desk management products. And there's more to our superiority than immediately meets the eye.

THE DESK ORGANIZER is the only powerful desk management program that features dynamic storage/retrieval capabilities. THE DESK ORGANIZER stands ready to help you organize yourself, your work, you name it.

At the core of THE DESK ORGANIZER is a free-form filing system that files anything you want, just by typing it. Notes. Letters. Reports. Phone numbers. Names and addresses. And you can retrieve or update at any time.

Surrounding this system is a powerful set of tools that provides one convenient environment for storing and utilizing all your work. Feature by feature, from alarm clock to telephone dialer, from visual calendar to visual calculator, all THE DESK ORGANIZER's

amazing tools work together—even alongside other software. So they're always available to organize your busy day. Imitators of THE DESK ORGANIZER offer fewer functions that can't team up.

Put the most powerful desk management program on your side. Boot THE DESK ORGANIZER up each morning and be more productive all day long. More organized—down to every last detail.

We encourage you to read between the lines—and make the intelligent choice. THE DESK ORGANIZER. The superior electronic secretary for only \$99. See your software dealer or call

Today, all our files contain a small macro named \0 at cell B1 (any cell will do). The macro consists of {GoTo}B2~/FCCEzero~, and cell B2 is blank. An empty worksheet named Zero is kept in each subdirectory.

The effect of the macro is to combine the worksheet Zero below the autoexecuting macro every time the worksheet is loaded. Usually Zero is empty and the macro stops. To perform a series of operations on a group of worksheets, we just put the appropriate macro into cell A1 of Zero to initiate the sequence for each worksheet.

This allows a worksheet to pass macro keystrokes to another file, a feature not otherwise available in 1-2-3. In addition, the File Extract command can put keystrokes into Zero that cause it to retrieve the next worksheet in sequence.

Jan Card
Hamilton, Bermuda

dBASE III to Symphony

Many people making the transition from *dBASE II* and 1-2-3 to *dBASE III* and *Symphony* have probably run into the same problem I did: Converting data from *dBASE III* to *Symphony* is not nearly as easy as converting from *dBASE II* to 1-2-3.

My solution is as follows: First, run *dBASE III* and USE or SELECT a data file, then use the command **COPY FILE filename.DBF TO filename.EXE DELIMITED** to create a file *Symphony* can read. Quit *dBASE III* and start *Symphony*. From the Services menu (<F9>) select File Import Structured, and then enter the name of the file created in the prior step.

One last note: All the fields in the *dBASE III* file will be imported. I save time by using *dBASE III* to eliminate the fields I will not need before importing the

(continues)

What every IBM PC user should ask before buying the "Sider" 10 MB hard disk:

When a company offers a superior quality 10 megabyte Winchester hard disk for only \$795, it's bound to raise a few eyebrows...and a lot of questions. The fact is, you're probably already wondering "Can I really get a 10 megabyte hard disk that's *reliable* for only \$795?" The answer is: ABSOLUTELY...when you choose the Sider from First Class Peripherals.

What's so great about the Sider?

For starters, the Sider lets you boot your *IBM PC** or *PC/XT* directly off the hard disk—unlike some other Winchester subsystems. Rebooting is also trouble-free. And the disk is partitionable, giving you a convenient way to organize your data, as well as access the information you store.

What's more, a small "footprint" lets you incorporate the compact Sider into your existing computer set-up with ease.

In addition, with the Sider, you not only pay far less for the subsystem, you also save money on installation. Because, unlike other 10 MB systems that require the purchase of expensive "extras," the Sider is *plug and play*. Everything you need is provided, including cables, host adaptor, installation software and manual.

What makes it so reliable?

To start, the Sider is manufactured, and sold exclusively, by First Class Peripherals, an innovative computer company which is backed by Xebec. The computer industry's leading manufacturer of disk controllers, Xebec has over a decade of experience serving customers like IBM, Toshiba, Texas Instruments and Hewlett Packard. It's this kind of expertise that helps assure the Sider's performance.

Special design features further enhance reliability. The Sider's controller is the field-proven, industry standard Xebec SI410A. And Xebec's 3200 drive tester, the toughest in the industry, ensures error-free media to keep the Sider operating reliably,

* Must contain hard disk ROM.

"Only \$795?"

longer. A self-contained power supply also adds to dependability by eliminating the risk of heat build-up that could cut PC component life. One more assurance of the \$795 Sider's quality: it's UL Approved and FCC Class B rated.

But why is it only \$795?

You pay less for the Sider than for other 10 MB hard disks simply because you're paying for the superior quality components inside the unit, not for a lot of retail overhead costs. Since First Class Peripherals sells direct, you avoid dealer and dis-

tribution expenses, and pay only for the product.

What about a guarantee?

Like many experienced PC users, you may be reluctant to buy a hard disk priced at only \$795 without first seeing for yourself how it performs. That's why First Class Peripherals offers you a reassuring, money-back guarantee that eliminates any risk on your part. Simply order the Sider and use it for 15 days. Then, if you're not entirely satisfied, return it and receive a full refund—no questions asked.

The Sider also comes with a full one-year limited warranty. Plus, there's a convenient, toll-free hotline you can call anytime you have a technical or service question, or need help.

Don't delay.

Order the Sider now.

To receive the Sider 10 megabyte Winchester hard disk subsystem for only \$795, simply order using the coupon below. For faster service, order by phone and charge to your VISA, MasterCard or American Express. (You can also call us if you have any questions or technical concerns about the Sider. We'll see you get the help you need.) Call toll-free:

1 800 538-1307

MICROWAY'S 8087 RUNS 1-2-3™!

MicroWay is the world's leading retailer of 8087s and high performance PC upgrades. We stock a complete selection of 8087s that run at 5 and 8mhz. All of our coprocessors are shipped with a diagnostic disk and the best warranty in the business - 180 days! We also offer daughterboards for socketless computers such as the NEC PC and PCjr, and a board which increases the clock speed of the 80287 in the PC AT. Our new NUMBER SMASHER™ includes 512K ram. It will run the IBM PC at clock speeds up to 9.5mhz and achieves a throughput of .1 megaflops

with 87BASIC/INLINE, Intel Fortran, or Microsoft Fortran. Software reviewers consistently cite MicroWay software as the best in the industry! Our customers frequently write to thank us for recommending the correct software and hardware to meet their specific needs. They also thank us for our same day shipping! In addition to our own products which support the 8087 and 80287, we stock the largest supply of specialized software available anywhere. For information call us at

617-746-7341

MicroWay® 8087 Support

For the IBM PC, PC XT, PC AT and Compatibles.

87FFT™ Written in assembly language, performs Forward and Inverse FFTs on real and complex arrays which occupy up to 512K bytes of RAM. Also does convolutions, auto correlations, hamming, complex vector multiplication, and complex to radial conversions. Callable from MS Fortran, 87MACRO or 87BASIC/INLINE. \$150

87FFT-2™ performs two-dimensional FFTs. Ideal for image processing. Requires 87FFT. \$75

MATRIXPAK™ manages a MEGABYTE! Written in assembly language, our runtime package accurately manipulates large matrices at very fast speeds. Includes matrix inversion and the solution of simultaneous linear equations. Callable from MS Fortran 3.2, 87MACRO, and 87BASIC/INLINE each \$150

GRAPHICS PACKAGES

Grafmatic for MS Fortran or Pascal \$125
Plotmatic for Grafmatic. \$125
MultiHalo (one language) \$189

DFixer™

A disk utility which thoroughly checks PC or AT hard disks for bad sectors and updates the MS DOS file allocation table accordingly. \$149

87DEBUG™ - a professional debugger with 8087 support, a sophisticated screen-oriented macro command processor, and trace features which include the ability to skip tracing through branches to calls and software and hardware interrupts. Breakpoints can be set in code or on guarded addresses in RAM. \$150

HARDSCOPE™ includes a version of 87DEBUG which interfaces a Breaker Box which makes it possible to reset your PC and break program execution independent of DOS. \$249

AST Advantage™ \$439

JRAM-2™ (ØK) \$199

JRAM™ AT (ØK) \$229

MAYNSTREAM™ 60 meg \$1695

87BASIC/INLINE™ converts the output of the IBM Basic Compiler into optimized 8087 inline code which executes up to seven times faster than 87BASIC. Supports separately compiled inline subroutines which are located in their own segments and can contain up to 64K bytes of code. This allows programs greater than 128K! Requires the IBM Basic Compiler and Macro Assembler. Includes 87BASIC \$200

87BASIC™ includes patches to the IBM Basic Compiler and both runtime libraries for USER TRANSPARENT 8087 support. Provides super fast performance for all numeric operations including trigonometrics, transcendental, addition, subtraction, multiplication, and division. \$150

87MACRO™ - our complete 8087 software development package. It contains a "Pre-processor," source code for a set of 8087 macros, and an object library of numeric functions including transcendental, trigonometrics, hyperbolics, encoding, decoding and conversions. For the IBM Macro Assembler, Version 1.0 or 2.0 \$150

OBJ-ASM™ - a multipass object module translator and disassembler. Produces assembly language listings which include public symbols, external symbols, and labels commented with cross references. Ideal for understanding and patching object modules and libraries for which source is not available. \$200

RTOS - REAL TIME OPERATING SYSTEM

RTOS is a multi-user, multi-tasking real time operating system. It includes a configured version of Intel's iRMX-86, LINK-86, LOC-86, LIB-86, OH-86, and MicroWay's 87DEBUG. Runs on the IBM-PC, XT, PC-AT and COMPAQ. \$400

"Volkswriter[®] Deluxe..." the critics' choice!

“Thirty word processing programs were reviewed ... no other program received a higher overall evaluation than Volkswriter Deluxe.”

Software Digest Ratings Newsletter, January 1984

“If WordStar™ set a standard ... Volkswriter Deluxe sets a new standard for transparency, simplicity, and speed. You can learn Volkswriter in under an hour ... because it does so many things exactly the way you think they should be done.”

“VOLKSWRITER DELUXE is the best buy in the IBM-PC™ writing tool arena.”

Charles Spezzano, Whole Earth Software Review, January 15, 1984

“Volkswriter Deluxe ... a simple way to word processing power ... for writers who like to think.”

Washington DC Capital PC User's Group Vol. 3, #4

“Lifetree ... provides exceptionally helpful and competent assistance to registered owners, and the company's update policies are excellent.”

“In sum, this is a unique word-processing program.”

John Lombardi, Reviewer, InfoWorld, April 16, 1984

Albany, Oregon*

dBASE III Lines Up

The *dBASE III* routines *CENTER.PR*G and *RIGHT.PR*G will center or right-justify a line of text sent to the printer or the screen.

The first line of each routine establishes the parameters to be passed when the program is called. The next line sets the width of the output device, and the two lines after that preserve the cursor position when the routine is called. The last line restores the cursor to its previous location.

To use these routines type **DO CENTER WITH row, string** or **DO RIGHT WITH row, string**, where *row* is set to the desired line and *string* is the text to center or right-justify.

*Dan Domzalski
Buffalo Grove, Illinois*

dBASE III Timer

dBASE III has several functions and field types not available in *dBASE II*. We have done some investigation into the new *TIME()* function and the new *DATE()* fields.

The *TIME()* function can be used to set up a timer, as shown in *TIMER.PR*G. This small program can be run from within *dBASE III*. Type **START = TIME()** <Enter> to begin timing; type **END = TIME()** <Enter> to indicate the end of

NEW

A powerful multfile database with a programming language for only \$99

Versaform's new XL database isn't just promises—it's here now! And it offers—YES, FOR ONLY \$99—all the features you'd expect in a database costing 4 times as much.

Accounting applications are XL's strength. Invoicing, purchasing, receivables, and shipping almost create themselves as you design the forms—and XL transfers data between them. There's an Invoicing, A/R and Inventory application—source code included—in the package that shows how it's done. The power's there. And unlike packaged accounting programs, you can do them YOUR way.

	VersaForm XL	dBASE III*	R-BASE 4000*

*dBASE III is a registered trademark of Ashton-Tate. R-BASE 4000 is a trademark of Microrim, Inc.

- XL's structured language can access multiple files. 48 built-in functions give control of file access, printing, and user dialogues. You'll develop transaction-based applications with an ease you've never experienced before. And all at this unheard-of low price.
- VersaForm XL's unique form-oriented data structures let you easily set up forms and ledgers—even those with columns! Application development is FAST, FAST, FAST. And since forms are the way that businesses already store their data, the transition is smooth. That's why VersaForm XL is so easy to operate even for high-turnover clerical people—it starts from where they are now.
- Automatic data entry checking and on-screen calculation make transactions error-free. Stored print formats make output formatting a snap—you can quickly match existing paper forms. VersaForm XL's report generator is clear and intuitive. Designers can pre-install reports,

users can set up their own.

- Query-by-forms (at no extra cost) lets users go right to the data they need. No query language to learn—forms are the natural language of business.

Ironclad Money-Back Guarantee

Try VersaForm XL for 30 days. If you're not fully satisfied, return it. We'll gladly refund your money.

Order now, and have the pleasure of using the right tool at the right price. You can't lose!

VersaForm XL runs on IBM PC, XT, AT and compatibles. Requires 192K, two 360KB drives, DOS 2.0 or later. Hard disk recommended.

Standard VersaForm (single file, no language) available for 64K, 2-drive Apple II or 128K IBM PC. \$69.

YOU FORCED US TO MOVE!

...and We Love You For It!

Because of the tremendous response you've given to our F.O.B. OVERNIGHT DELIVERY and 10% OFF policies, our growth has been phenomenal! Even we did not project how rapidly we would expand. Quite honestly there were times when it seemed like the whole country was trying to place an order...at the same time!

We realize that some of you have had problems getting through our phones simply could not handle the volume) and, yes, some have even gotten their shipments late (our shipping department has been on a 12 hour schedule)...to those of you, WE APOLOGIZE for the inconvenience and would like to say THANK YOU for your patience.

A one million dollar investment has allowed us to solve these problems...we've just moved into our new World Headquarters, beefed up our sales department, added a spanking new phone system and built a fully automated warehouse.

Oh, sorry, we almost forgot "Harold" (who's extremely fast, very sensitive) our new 100 terminal computer system. He's designed to speed up order processing to get your shipments out the door...fast. Sorry Harold.

**EVERYTHING YOU ALWAYS
WANTED TO KNOW ABOUT
BEATING A PRICE BUT WERE
AFRAID TO ASK...**

**or How I Learned To Save Money
Without Really Trying.**

We know there are still a few of you who have shied away from ordering from us (you know who you are) perhaps thinking our \$10.00 off and FREE overnight policies were a "gimmick" or a "come-on" to pressure you into something.

We'd like to tell you how simple it really is. Just pick up the phone and dial 1-800-645-3491, then tell your sales agent you'd like to beat a price (don't be embarrassed; he's not), the name and date of the publication and who you want us to beat. No gimmick, no come-on, it's that easy.

ACCOUNTING SYSTEMS

**CONFUSED
OVER
ACCOUNTING
SYSTEMS?**

We don't blame you, that's why we invite you to give us a call. We've evaluated over 50 of them and just because you can save a lot of money buying mail order shouldn't mean you have to sacrifice service...We want to take the time to assist you before you buy. We realize that an accounting system can add up to a sizeable investment and helping you end up with the right package for your money is what doing business is all about.

the interval to be measured. The command DO TIMER will execute the program, which will clear the screen and display the date and the elapsed time in a 'Saturday: March 16, 1985' format.

By issuing the DO TIMER command at various points, START can be stated once and END stated several times to time several different aspects of a program.

LaGrange, Illinois

Editor's note: This might come in handy for keeping track of business versus personal use of your computer, for tax purposes.

SideKick Trick

I have version 1.1 of SideKick and wished to place the Help file, SK.HLP, on my drive C: RAM disk. Unfortunately, SideKick insisted on looking for SK.HLP on drive A:. After some trial and error I found the following solution.

Evidently, SideKick looks for its help file on whichever disk drive was the default drive when the

(continues)

CopyWrite

BACKS UP IBM PC SOFTWARE

Hundreds of the most popular copy-protected programs are copied readily. CopyWrite needs no complicated parameters. It needs an IBM Personal Computer, or an XT or an AT, 128k bytes of memory, and one diskette drive. CopyWrite will run faster with more memory or another drive.

CopyWrite is revised monthly to keep up with the latest in copy-protection. You may get a new edition at any time for a \$15 trade in fee.

CopyWrite makes back up copies to protect you against accidental loss of your software. It is not for producing copies for sale or trade, or for any other use that deprives the author of payment for his work.

To order CopyWrite, send a check for \$50 U.S., or call us with your credit card. We will ship the software within a day.

Quaid Software Limited

45 Charles Street East
Third Floor
Toronto, Ontario M4Y 1S2

TURBO 20 AND TURBO 30

We've Got it at **ALPHA OMEGA** COMPUTER PRODUCTS

- TURBO 20® and TURBO 30® are designed for the IBM PC®, PC/XT®, PC/AT® and compatibles. Both available internally or externally.
- Incredibly low power consumption requiring only 16 watts of continuous power.
- More Bytes for the Buck giving you 22 megabytes on the TURBO 20® and 33 megabytes on the TURBO 30®.
- With an interleave factor that is 300% faster than the standard PC/XT®, your programs will, in real time, run faster than you've ever thought possible.
- Ease and speed of installation and use. Documentation was written for the non-technical end user. Install and format in less than 45 minutes.
- 13 month defective warranty (exchange only).
- Speed, convenience, affordability, and reliability all in one package from ALPHA OMEGA COMPUTER PRODUCTS.

Contact your local dealer, and ask for the
TURBO 20® and 30®, or call:

(818) **345-4422**

18612 Ventura Blvd., Tarzana, CA 91356

All products are pre-tested before delivery, and are guaranteed for 13 months. Within this period, defective returns must accompany an RMA number. All other returns subject to a 10% restocking fee. Please include \$6 for shipping and handling. There will be an additional \$4 surcharge on COD orders. Calif. residents include 6.5% sales tax.

TURBOPAT: Patches to eliminate the 'Include error messages?' prompt

Turbo Tip

The patches in TURBOPAT eliminate the need to enter Y or N to the question 'Include error messages?' at the beginning of Turbo Pascal, version 2.0. To apply the patches, make a copy of TURBO.COM and place it in drive B:, then put DOS in drive A: and type in the lines as shown, replacing the CALL 01B4 instruction at address 2CEE with RETURN or JUMP, as appropriate.

Market Manager PLUS™

The investment software that helps you stay ahead of the odds.

In today's dynamic market, staying ahead of the odds means staying on top of your investments—making sure you have the right information at the right time to manage your portfolio effectively.

Market Manager PLUS offers portfolio management for the active investor. By linking you with Dow Jones News/Retrieval®, it provides comprehensive automatic updating and reports.

Here's what it gives you:

- Automatic portfolio valuation updates.
- Automatic dividend distribution.
- Automatic stock-split routines.
- Automatic bond and treasury bill maturity alerts.
- Automatic option expiration and stock long-term alerts.
- Interest and dividend tax reports.
- Holdings reports by portfolio and security symbol.
- Plus much more.

Market Manager PLUS gives you easy access to the portfolio information you need to make informed investment decisions.

Demonstration disk. Just \$5*.

We've prepared a demo disk to show you how easy it is to manage investment portfolios. Learn how you can stay ahead of the odds, call:

1-800-345-8500, extension 48.

(Alaska, Hawaii and foreign call, 1-215-789-7008 ext 48.)

Have your credit card information ready, including expiration date. VISA, MasterCard, and American Express accepted.

Act now — Offer expires July 31, 1985.

*Please add \$2.50 for shipping and handling.

Market Manager PLUS works with IBM® PC, IBM XT and Apple® Macintosh™.

The Temptation to Peek

When learning to type, the temptation to peek at the keys is overwhelming. You can't learn to touch type if the computer beeps and displays every error you make, forcing you to play "keyboard peekaboo."

Typing Made Easy is different. You focus on what you are typing, not on your errors. It's the only computer-based typing course that teaches touch typing—typing without looking at the keys.

It runs on the IBM PC, PC AT, PCjr, all the compatibles, all the Apples and the Macintosh.

FREE 15-DAY TRIAL

Compare our course with any other. If it is not the best you've seen return it. Call 800-343-4848 (617-237-5656 in Mass.) for details about Typing Made Easy and our other tutorials.

CMDFIX.BAS: Patch to make DOS look for COMMAND.COM on a different drive

Although I have tested these patches on my system, I can't guarantee that they do not cause any side effects, so don't modify your only copy of TURBO.COM.

*Kenneth Leo
San Francisco, California*

Command Redirection

If your PC has an add-on hard disk drive or a RAM disk, you may have wished for a way to make DOS reload COMMAND.COM from a disk other than the one used to boot the computer. One popular technique is to load a secondary copy of COMMAND.COM, but that wastes more than 17K of memory.

A better way is simply to tell DOS which drive to use. The program CMDFIX.BAS creates CMDFIX.COM, a program that does just that. As shown here, the program causes DOS to reload COMMAND.COM from drive C:, but you can change the letter in line 40 to refer to any drive you wish.

To create CMDFIX.COM, load BASIC, then type in CMDFIX.BAS. Make sure the drive letter in line 40 is the one you want, then type **RUN** and press **<Enter>**. To use CMDFIX.COM, simply execute it whenever you start the computer, and DOS will always look to the selected drive to find COMMAND.COM. (Remember to put a copy of COMMAND.COM in that drive.)

This version of CMDFIX works with PC-DOS, version 2.10. It may also work with other versions of MS-DOS, but I cannot guarantee it. The following steps—for readers

(continues)

IF ANY 3M, MAXELL, OR DYSAN FLOPPY DISK FAILS, WE'LL REPLACE IT WITH A NEW VERBATIM® DISK. FREE.

Most floppy disks come with a guarantee; if they ever fail, the manufacturer will send you a brand new one. But let's face it; if a particular brand of floppy disk ever loses your data, you might not want another one of theirs.

That's why Verbatim is offering a very special guarantee: If you buy a 3M, Maxell, or Dysan floppy disk — and it fails — we will replace it with a brand new Verbatim disk. Free. Why are we making this offer? Because we think it's time you use a floppy disk you can always count on. Verbatim.

© 1985 Verbatim Corporation

VERBATIM. YOU CAN COUNT ON US.

Mail your failed 8", 5¼", or 3½" disk in its original envelope, along with your name and address, and the brand and model of your computer system, to: Verbatim Offer, P.O. Box 7306, Clinton, IA 52736. Limit one refund per name and address. Offer limited to the first 100,000 3M, Maxell, or Dysan failed disks received. Offer expires October 1, 1985. Void where prohibited by law. Offer rights are not assignable or transferable.

Circle 287 on reader service card

who are inclined to experiment at their own risk—describe how to modify the program for use with different versions of DOS.

First, start DEBUG, then enter the command **D0:86 L2 <Enter>**. DEBUG will display several values, including two that are 2 characters long and separated by a space. Those two values point to the DOS kernel. Write them down in reverse order; that is, write the second value first. For example, if the values are 63 and 25, write 2563.

Next, type the command **Sxxyy :0 FEFO"A:\COMMAND.COM"** <Enter>, where xxyy represents the 4-digit value you recorded in

the previous step. Be sure to type the command exactly as shown, including using capital letters within the quotation marks.

DEBUG will respond with a list of memory addresses. The first line of the list is the address of the location to modify. Write down the last 4 digits of that address exactly as they appear. For example, if the first line reads 2563:0939, write 0939.

Substitute that number for the 4-digit value in line 50 of CMDFIX.BAS, then run the program to create your customized version of CMDFIX.COM.

Since this technique modifies DOS each time you start the computer, you can run a "pure" version of DOS anytime by just restarting the computer and not running CMDFIX.COM.

*Eric Mintz
New York, New York*

Editor's note: This patch is not necessary for DOS 3.00. SET COMSPEC=C:\COMMAND.COM works for this version of DOS.

Printer Resets Removed

You may have noticed that when compiled BASIC programs run, they reset the printer to its power-on defaults. This is a real nuisance

Last year the experts tested the top-of-the-line Toshiba 3-in-One™ printer. Here's what they said.

“When Toshiba America called to see if there were problems testing their printers, I responded, ‘You bet—I can’t get the P1351 off Bill Machrone’s desk long enough to get its picture taken!’ It’s that good.”

(Bill Machrone is the editor of PC Magazine.)

PC Magazine
November 27, 1984

“It is setting new standards for quality and performance in the dot matrix arena.”

Circle 285 on reader service card

Computers & Electronics Magazine
November 1984

when you want special printer settings to remain in effect while the compiled BASIC program executes.

The steps presented here describe how to eliminate those pesky printer reset commands from compiled BASIC programs. Remember to make a backup copy of each program before you try to modify it. Never modify your only copy of a program; you might not be able to restore it if you make a mistake.

First, copy the program onto a blank disk and rename it so that the extension is something other than .EXE. The command **COPY**

filename.EXE B:* .TMP <Enter> will perform both actions at once.

Next, put a copy of the DEBUG program from the DOS Supplemental Programs disk into drive A:, and use it to load the renamed program with the command **DEBUG B:filename.TMP <Enter>**. DEBUG will display a hyphen prompt when it starts.

Then use DEBUG to search for the offending instructions, MOV AH,01 and INT 17. To do this, type the command **S 100 FFFF B4 01 CD 17 <Enter>**. DEBUG will display the location of the stored printer reset command.

To eliminate the printer reset command, type the command **E xxxx:yyyy B4 02 <Enter>**, replac-

ing xxxx:yyyy with the contents of the line displayed during the prior step. For example, if DEBUG had displayed 4356:3A27, you would type **E 4356:3A27 B4 02 <Enter>**.

Finally, save the modified program by typing **W** and then pressing **<Enter>**. Exit DEBUG by typing **Q** and pressing **<Enter>**, then rename the file so its extension is once again .EXE by issuing the command **REN B:filename.TMP *.EXE**.

That's it. The program will never again reset the printer, so special printer features will remain

(continues)

“ Imagine what they will say about its successor.”

The New Toshiba P351 3-in-One printer. They could say that inside the sleek new Toshiba P351 you'll find the ultimate 3-in-One printer. Because it offers a combination of:

Letter-quality printing. Perfectly translated graphics. And speed. (100 cps letter. And draft speed improved to 288 cps.)

They could say you'll appreciate the 24-pin dot matrix head that gives the P351 its exemplary letter and graphic quality.

They could say the new P351 gives you an almost unlimited number of ways to express yourself. With both downloadable software fonts and new plug-in font cartridges.

And they could say the new P351 is not only the best looking printer in the \$1,000 to \$2,000 range. But also the most reliable.

Of course, we're not putting words in their mouths. Just the ultimate 3-in-One printer in their hands. And yours.

PC NETWORK!**

On our corporate roster are some of the nation's largest financial industrial and professional concerns *including some of the most important names in the computer industry:*

AT&T
Barclays Bank
Bell & Howell
Citibank
Columbia University
Data General
Exxon
Farm Bureau Insurance
Frontier Airlines
General Mills
General Electric
General Motors
Gillette
Hewlett Packard
Hughes Aircraft
IBM
ITT
Kodak
Multimate
United Nations
Yale University
Veteran's Administration

plus thousands of satisfied consulting firms, small businesses, user groups, municipalities, government agencies and value-conscious individuals ACROSS THE NATION! Their buyers know that purchasing or renting from PC NETWORK saves them time, money and trouble. They also count on us for product evaluation, professional consultation and the broadest spectrum of products and brands around.

PRICING MADNESS

Once again, as Federal Express picks up our ad at the very last millisecond before this issue's advertising deadline, *here we sit with dozens of price reductions and new product announcements which have arrived too late for us to let you know.*

Why, our ad manager asks, do we always go through a last minute price update frenzy, just seconds before our ad is due at the publisher, when we know that despite our heroic effort, *many of these products will cost even less by the time you read this ad.*

How, she asks, can we get a crystal ball to forecast what fantastic promotions and specials our suppliers are going to offer from now to the date *this ad gets to the newsstand over two months from today?*

Well, we decided that she has a good point. While we'll still keep getting our grey hairs and ulcers from last minute revisions, we will start publishing this notice and ask our readers to make a simple check. Look at any four back issues of this magazine (*yes we're in every one*) and track the prices on the most popular products. **You will see that many drop with every issue.** Most of these price changes were instituted well before the issue was printed and **our members always pay the lower price.** This should prove that this notice is much more than hype.

Given the current madness in the PC industry with its spur of the moment pricing and instant product introductions, ***you will find it always pays to call for our latest prices.*** You will be glad you did.

Listed below are just a few of the over 20,000 products available at our EVERYDAY LOW PRICES! All software below is priced in IBM-PC format.

TM—Registered trademark of IBM and COMPAQ

PC NETWORK

... WITH THESE 15 UNIQUE BENEFITS

1 COST + 8% PRICING—The NETWORK purchases millions of dollars in merchandise each month. You benefit in receiving the lowest price available and all at just 8% above published dealer wholesale price.

2 OUR 600 PAGE WHOLESALE CATALOG—Members receive our 600 page wholesale catalog containing over 20,000 hardware and software products for the IBM PC, APPLE and over 50 other popular computer systems. THE NETWORK'S CATALOG IS THE LARGEST SINGLE COMPILATION OF PERSONAL COMPUTER PRODUCTS AVAILABLE TODAY. NOW UPDATED QUARTERLY!

3 IN-STOCK INSURED FAST HOME DELIVERY—The NETWORK maintains a giant multi-million dollar inventory of most popular products, allowing us to ship many orders from stock. Non-stock items are typically maintained in local warehouses just days away from The NETWORK and YOU. We pay all insurance expenses on your shipment. EMERGENCY OVERNIGHT SERVICE IS AVAILABLE ON REQUEST.

4 10 DAY RETURN POLICY—If you are not satisfied, for any reason with any hardware component purchased from The NETWORK within 10 days of receipt, we will refund your entire purchase (less shipping) with no questions asked.

5 MEMBERSHIP SATISFACTION GUARANTEE—If for any reason you are not satisfied with your membership within 30 days, we will refund your dues IN FULL.

6 EXPERIENCED CONSULTANTS—The NETWORK hires consultants, not order takers, to aid you in product selection. Our consulting staff possesses in excess of 150 man years of personal computer product experience. We back our consultants with our money back guarantee: IF ANY PRODUCT RECOMMENDED BY OUR CONSULTING STAFF FAILS TO PERFORM AS PROMISED—WE WILL TAKE IT BACK AT OUR EXPENSE FOR A 100% REFUND.

7 FREE TECHNICAL SUPPORT—The NETWORK supports every product it sells. Our qualified TECH-SUPPORT staff will help you assemble your system, interpret vendor documentation and get your software and hardware to work. WE WILL GIVE YOU ALL THE HELP YOU NEED, WHEN YOU NEED IT—FREE!

8 OPTIONAL BUSINESS RENTAL LIBRARY—All members can join our BUSINESS RENTAL LIBRARY featuring over 1000 available titles for just \$25 PER YEAR above the base membership fee. This entitles you to rent business software AT JUST 20% of the DISCOUNT PRICE FOR A 14 DAY PERIOD. If you decide to keep the software, the entire rental fee is deducted from the purchase price. VIP MEMBERS GET A FULL 30 DAYS for just \$30 above the V.I.P. base fee. This also includes the game library privileges for a \$5 combination savings.

9 OPTIONAL GAME SOFTWARE RENTAL LIBRARY—The Game Rental library is available to members for just \$10 PER YEAR and permits evaluation (or just enjoyment) of any game or educational software product as above.

10 SPECIAL SAVINGS BULLETINS—THE PRINTOUT—Issued Quarterly at no charge to Network members only! The Printout contains all the New Product listings and price changes you need to keep your Catalog up to date. Also, we buy excess dealer inventories, and store bankruptcy closeouts, which we turn around and make available to our members at fantastic savings via THE PRINTOUT.

11 DISCOUNT BOOK LIBRARY—Working with numerous publishers and distributors, The NETWORK has assembled a library of over 1000 computer related books and manuals at savings of up to 75% from the normal store price.

12 MEMBERSHIP REFERRAL BONUS—Our most valuable source of new members is you! To date almost 40% of our members have been referred by word of mouth from other satisfied members. For those of you who refer new members, The NETWORK will credit a cash bonus to your account applicable to any future purchase.

13 CORPORATE ACCOUNT PROGRAM—Almost 50% of The NETWORK's members are corporate buyers and users (see opposite page left). The NETWORK can establish open account status and assign designated account managers to expedite orders, and coordinate multiple location shipments.

14 QUANTITY DISCOUNTS—For large corporations, clubs, and repeat or quantity buyers The NETWORK can extend additional single order discounts, when available to us from our manufacturers and distributors.

15 PRICE PROTECTION—The PC Industry is crazy!! Prices change not yearly or monthly or even weekly but often day by day! These changes are sometimes up but are mostly down!! THE NETWORK GUARANTEES THAT IN THE EVENT OF A PRODUCT PRICE REDUCTION, BETWEEN THE TIME YOU PLACE YOUR ORDER AND THE TIME THE PRODUCT SHIPS YOU WILL ONLY PAY THE LOWER AMOUNT!!

Circle 460 on reader service card

If you're tired of waiting, you're using the wrong file manager.

Be fast. Btrieve.™

If batch jobs and reports turn waiting time to nighttime, then wake up! You're using the wrong file manager.

Btrieve™ file management hates waiting as much as you do. It's written in assembly language especially for the IBM®PC. And based on b-tree file indexing, with automatic balancing for access speed that won't degrade as your database grows. With Btrieve, your applications always run fast. So you'll be out the door faster.

The standard for networking. When your application requires multi-user file sharing, Btrieve/N (network version) sets the standard for the industry's most popular LANs: IBM's PC Network, Netware™, Davong MultiLink™, Omninet™, PC Net™, Ether Series™, Nestar™, and NetOne™. Btrieve/N offers *safe* network file management that coordinates simultaneous updates and prevents lost data.

Automatic file recovery. Btrieve provides automatic file recovery after a

system crash, so accidents and power failures don't turn into database disasters. Your Btrieve data always comes back intact.

Fully-relational data management. Using SoftCraft's entire family of products gives you a complete, fully-relational database management system. Rtrieve™ adds report writing capabilities for generating the reports you need. Xtrieve™ speeds users through database queries with interactive, on-screen menus—no command language or special syntax.

For professional programmers. Btrieve is the fast, reliable answer for all your application development. In any development language—BASIC, Pascal, COBOL, C, FORTRAN, and APL. With multikey access to records. Unlimited records per file. Duplicate, modifiable, and segmented keys. With Btrieve, you can develop better applications faster. And know they'll run—*fast*.

Suggested retail prices: Btrieve, \$245; Btrieve/N, \$595; Xtrieve, \$195; Xtrieve/N, \$395; Rtrieve, \$85; Rtrieve/N, \$175. Requires PC-DOS or MS™-DOS 1.X, 2.X, or 3.X.

Btrieve, Xtrieve, and Rtrieve; IBM; Netware; Davong MultiLink; Omninet; PC Net; EtherSeries; Nestar; NetOne; and MS are trademarks of SoftCraft Inc.; International Business Machines; Novell Data Systems; Davong Systems Inc.; Corvus Systems; Orchid Technology; 3Com Corp.; Nestar Systems Inc.; Ungermann-Bass; and Microsoft Inc.

in effect until you decide to turn them off.

Michael Cook

Vilas, North Carolina

Editor's note: You can use the same technique to take care of almost any program that resets the printer, including BASIC and BASICA, versions 1.0 and 1.1. (BASIC 2.00 and later versions do not reset the printer.) This patch replaces the printer reset command with a request for printer status.

Format Fix Fixed

An error in the FORMATFIX2 patch for DOS 2.10 [*.*, PCW, March 1985] causes the program to return the message 'Invalid drive specification' regardless of the drive specified. The correct patch for the DOS 2.10 version of FORMAT.COM is E191 EB D8 90 90 90.

Thinking of... 8087, High-Speed Math Support?

THINK C-86

OPTIMIZING C86 FROM COMPUTER INNOVATIONS

The 8087/80287 Math Co-processor chips provide a major leap in the computing capability of the IBM family of personal computers. The fast, accurate, math computational ability provided by these chips not only speeds typical applications but opens a range of applications once reserved exclusively for mini and mainframe systems. The key question is HOW CAN THE C PROGRAMMER TAKE ADVANTAGE OF THE 8087/80287's capabilities? The answer is C86 by Computer Innovations.

EXECUTION SPEED, ACCURACY, IN-LINE CODE

C86 has offered the highest level of 8087/80287 support since the chips became available. Specialized libraries make program development a snap. A math function library provides full trig, log and a wide variety of other functions. But most important, C86 produces IN-LINE code. This means that math functions can be performed by the co-processor in immediate succession WITHOUT separate subroutine calls. This eliminates library call "overhead" and results in the highest execution speed attainable.

LIBRARY SOURCE PROVIDES CONFIDENCE - CONTROL

Library Source Code is INCLUDED. - It always has been with C86. This means you have total control over your development environment, and total control means better and faster code.

TECH SUPPORT - GET INTO 8087/80287 PAINLESSLY

Computer Innovations' experienced tech support team is available to get you through the rough spots and provide the assistance/advice/expertise required to get you into 8087/80287 quickly and efficiently. Plus you can take advantage of Computer Innovations' user newsletter, technical notes, and On-Line bulletin board. No other Compiler offers more.

CALL FOR FREE BULLETIN

To receive Computer Innovations' free bulletin entitled "How C86 Takes Advantage of Intel 8087/80287 Math Co-processors," or for more information about C86 Call:

PRODESIGN II

Anybody Can Do It!

5 BEDROOM DESIGN

LIVING AREA -
FIRST FLOOR: 2,278 SQ.FT.
SECOND FLOOR: 804 SQ.FT.

SECOND
FLOOR

FIRST FLOOR

ProDesign II has disproved a common misconception about computer software—you don't have to spend a lot of money to get quality software. ProDesign II has the features of many Computer Aided Design (CAD) systems costing thousands of dollars! At \$299, it is priced 70% to 80% below the popular CAD packages available for microcomputers. AND PRODESIGN II IS BETTER!

Besides saving money on the software, you save on the hardware, too. With ProDesign II's exclusive "Virtual Screen" you won't have to buy expensive monitors and adapters to produce quality work. ProDesign II has all the features of conventional CAD packages, and it runs on your system!

With a standard IBM PC, 512K memory, and a color graphics adapter and monitor, you can produce drawings that were virtually impossible to do on your system before.

The best feature of ProDesign II, however, is not its low price. It's not its outstanding performance. It's not its extensive hardware compatibility. The best feature of ProDesign II is its unprecedented ease of use! With easy-to-use single keystroke commands, clear documentation, and on-screen help, ProDesign II is truly the CAD system that anybody can use!

Publish the Most Important Book You'll Ever Own.

Names. Addresses. Phone numbers. All those little notes... If you stop and think about it, they're probably your most valuable business tools. But if you're like most people, those little pieces of paper never seem to be quite where you need them. That's why we created "The Little Black Book".™

A practical little software package that takes all those names and numbers and puts them together. Then, prints them out quick. In little black book size.

400 Entries. 30 Categories.

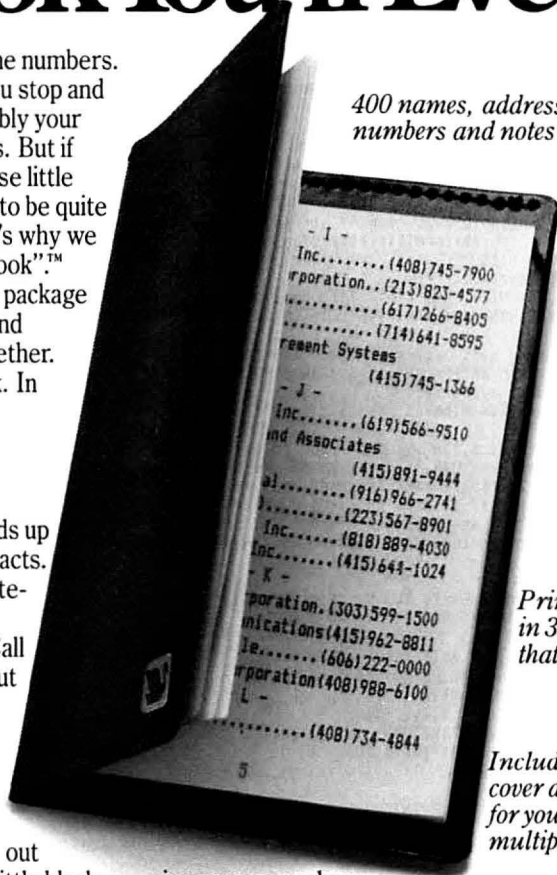

The Little Black Book holds up to 400 of your personal contacts. Create 30 different index categories (like sales offices, friends, customers, etc.). Call them whatever you want. Put 30 different entries in each index. Even all entries in multiple indexes. When you're finished, just tell us to print. A couple of quick keystrokes and bingo, out of your printer comes your little black book. On standard printer paper. Just cut along the dotted lines, staple to the heavy backing we provide and slip it into the cover. If you change a few numbers, or add a few addresses, print it again. The whole process only takes minutes.

The Little Black Book sorts and prints alphabetically. With or without addresses, notes or index categories, just names and phone numbers... you name it. So what you really get is personal white and yellow pages for your PC. And your pocket.

Pops in. Pops out. Even dials.

If all The Little Black Book did was print, it'd be a great value. But there's more. You're preparing a spreadsheet and you need to look up a phone number. Hit two keys and up pops your 30 most frequently used entries. Tap the two-digit index code, and there's the number. If you have a Hayes compatible modem, it's dialed automatically. Includ-

400 names, addresses,
numbers and notes

Use your Little Black Book to keep track of sales prospects; to print different books for the office, the home and the road. You can even buy one program and print books for everyone in your company. There are thousands of reasons to buy The Little Black Book, but maybe one more might help. Try this. If for any reason you don't like the program, simply return it within 30 days. We'll return your money. No questions asked.

Call today: 1-800-621-4292
1-800-331-9113 (in California)

The Little Black Book™

Prints entries
in 30 categories
that you create

Includes a handsome
cover and materials
for your PC to make
multiple books

ing access numbers for lower cost services like SPRINT. No Modem? Buy the Cygnet Accessory Dialer Board, or dial by hand. Either way, you've saved a little time. And probably a lot of money.

Bells. Whistles. And a Guarantee.

The Little Black Book also includes an Area Code Directory that pops in on demand (know the area, find the city and vice versa). And a "Screen Dialer" that actually finds a telephone number in other programs and dials automatically. All this pops in and out of virtually every PC-DOS program available.

Let Your
PC Make 'em.
And Make 'em.

mbp COBOL for your IBM/PC

Now, more convenient... 4 (exclusive) ways.

Now, the mbp COBOL Compiler offers unrivaled convenience to go with its unmatched performance.

Here are the convenience features you've wished for:

1) an enhanced Screen Management System with program-controlled video attributes and color; 2) support for PATH & sub-directories; 3) DOS command execution from within a COBOL program; 4) 'permanent' DEFAULT modification.

The new mbp Compiler has them all! And they're exclusives: you get them *only* with mbp.

GIBSON MIX Benchmark Results Calculated S-Profile (Representative COBOL statement mix)

Execution time ratio

mbp* COBOL	Level II* COBOL	R-M* COBOL	Microsoft* COBOL
1.00	4.08	5.98	6.18

*128K system with hard disk required. IBM PC & AT are IBM TMs. Netware is a Novell, Inc. TM. Level II is a Micro Focus TM. R-M is a Ryan-McFarland TM. Microsoft is a Microsoft TM.

Plus, it's 4 times faster.

Because the mbp COBOL Compiler generates native machine language object code, it executes programs *at least* 4 times faster (see chart). Now, we've made that performance even more convenient to use.

The complete COBOL.

An Interactive Symbolic Debug Package included standard; Multi-keyed ISAM structure; SORT & CHAIN; GSA certification to ANSI '74 Level II; IBM/PC-AT and TI Professional compatibility; with mbp, you get it all. Optional: Novell NetWare interface.

mbp COBOL: the choice of professionals.

It's no surprise more and more companies like Bechtel, Bank of America, Chase, Citicorp, Connecticut Mutual, Hughes Aircraft, McDonnell-Douglass, and Price-Waterhouse choose mbp COBOL.

Make it your choice, too.
Just send the coupon, or call, for complete information.
Today.

mbp COBOL. \$1000

What the world really needs is a 99 cent Double Sided, Double Density Diskette with a LIFETIME WARRANTY!

And DISK WORLD! has it.

**Introducing Super Star Diskettes:
the high quality diskette with
the lowest price
and the best LIFETIME WARRANTY!**

In the course of selling more than a million diskettes every month, we've learned something: higher prices don't necessarily mean higher quality.

In fact, we've found that a good diskette manufacturer simply manufactures a good diskette...no matter what they charge for it. (By way of example, consider that none of the brands that we carry has a return rate of greater than 1/1,000th of 1 percent!)

In other words, when people buy a more expensive diskette, they aren't necessarily buying higher quality.

The extra money might be going toward flashier advertising, snazzier packaging or simply higher profits.

But the extra money in a higher price isn't buying better quality.

All of the good manufacturers put out a good diskette. Period.

How to cut diskette prices ...without cutting quality.

Now this discovery posed a dilemma: how to cut the price of diskettes without lowering the quality.

There are about 85 companies claiming to be "diskette" manufacturers.

Trouble is, most of them aren't manufacturers.

Rather they are fabricators or marketers, taking other company's components, possibly doing one or more steps of the processing themselves and pasting their labels on the finished product.

The new Eastman Kodak diskettes, for example, are one of these. So are IBM 5 1/4" diskettes. Same for DYSAN, Polaroid and many, many other familiar diskette brand names. Each of these diskettes is manufactured in whole or in part by another company!

So, we decided to act just like the big guys. That's how we would cut diskette prices...without lowering the quality.

We would go out and find smaller companies to manufacture a diskette to our specifications...specifications which are higher than most...and simply create our own "name brand" diskette.

Name brand diskettes that offered high quality at low prices.

Super Star diskettes are sold in multiples of 50 only. Diskettes are shipped with white Tyvek sleeves, reinforced hubs, user ID labels and write-protect tabs.

Boy, did we get lucky. Our Super Star Diskettes are the same ones you've been using for years...without knowing it.

In our search for the low priced, high quality diskette of our dreams, we found something even more interesting.

We found that there are several manufacturers who don't give a hoot about the consumer market for their diskettes. They don't spend millions of dollars in advertising trying to get you, the computer user, to use their diskettes.

Instead, they concentrate their efforts on turning out the highest quality diskettes they can...because they sell them to the software publishers, computer manufacturers and other folks who (in turn) put their name on them...and sell them for much higher prices to you!

After all, when a software publisher or computer manufacturer or diskette marketer puts their name on a diskette, they want it to work time after time, everytime. (Especially software publishers who have the nasty habit of copy-protecting their originals!)

**Super Star Diskettes. You already know
how good they are. Now you can buy
them...cheap.**

Well, that's the story.

Super Star diskettes don't roll off the boat from Pago-Pago or emerge from a basement plant just east of Nowhere.

Super Star diskettes have been around for years...and you've used them for years as copy-protected software originals, unprotected originals. Sometimes, depending on which computer you own, the system master may have been on a Super Star diskette. And maybe more than once, you've bought a box or two or more of Super Star diskettes without knowing it. They just had some "big" company's name on them.

Super Star Diskettes are good. So good that a lot of major software publishers, computer manufacturers and other diskette marketers buy them in the tens or hundreds of thousands.

We buy them in the millions.

And then we sell them to you.

Cheap.

When every little bit counts, it's Super Star Diskettes.

You've used them a hundred times...under different names.

Now, you can buy the real McCoy, the same diskette that major software publishers, computer manufacturers and diskette marketers buy...and call their own.

We simply charge less.

DISKETTE STORAGE CASES

PERFECTDATA DIAL 'N FILE

Terrific! Holds 10 5 1/4" diskettes. Just flip the lever and they all slide up for easy access and identification. Grey with smoked plastic front.

\$2.75 Ea. + .35 Shpg.

DISK CADDIES

The original flip-up holder for 10 5 1/4" diskettes. Beige or Grey only.

\$1.65 ea. + .20 Shpg.

DISKETTE 70 STORAGE

Dust-free storage for 70 5 1/4" diskettes. Six dividers included. An excellent value.

\$11.95 ea. + \$3.00 Shpg.

HOW TO ORDER:

ORDERS ONLY:

1-800-621-6827

(In Illinois: 1-312-944-2788)

INQUIRIES:

1-312-944-2788

FOR FASTEST SERVICE, USE NO-COST MCI MAIL: Our address is DISK WORLD. It's a FREE MCI MAIL letter. No charge to you. (Situation permitting, we'll ship these orders in 24 hours or less.)

SHIPPING: 5 1/4" & 3 1/2" DISKETTES—Add \$3.00 per each 100 or fewer diskettes. **OTHER ITEMS:** Add shipping charges as shown in addition to other shipping charges. **PAYMENT:** VISA, MASTERCARD and Prepaid orders accepted. **COD ORDERS:** Add additional \$3.00 special handling charge. **APD, FPO, AK, HI & PR ORDERS:** Include shipping charges as shown and additional 5% of total order amount to cover PAL and insurance. We ship only to United States addresses, except for those listed above. **TAXES:** Illinois residents, add 8% sales tax.

MINIMUM ORDER: \$35.00 or 20 diskettes.

Super Special!

Order 50 Super Star Diskettes and we'll be happy to sell you an Amara Media-Mate 50 for only \$8.75, shipping included...a lot less than the suggested retail price of \$15.95.

**Regular DISK WORLD! price: \$10.95 ea.
+ \$2.00 Shpg.**

The Super Star LIFETIME WARRANTY!

Super Star Diskettes are unconditionally warranted against defects in original material and workmanship so long as owned by the original purchaser. Returns are simple: just send the defective diskettes with proof of purchase, postage-paid by you with a short explanation of the problem, and we'll send you the replacements. (Incidentally, coffee stained diskettes and diskettes with staples driven through them don't qualify as "defective".)

Find the right word

THE WORD FINDER

(Synonym Finder)

Multimate, Word Perfect
Microsoft Word, Pfs-Write
WS 2000, IBM Writing Ass't.

Improve your writing by finding the *perfect* word. Put your cursor on a word and call up a list of words with similar meaning, from right inside your word processor! Pick one, and voila, your new word replaces your old word. It's so fast and easy you'll use it all the time. Works with WordStar (3.0, 3.3, 2000), Multimate, Word Perfect, MS Word, IBM Writing Ass't., and Pfs-Write. Specify word proc., computer, and operating system (MS/PC DOS or CP/M 80). New data-

base has 1/3 more words than Random House and uses 1/3 less disk space. Easy to install and operate. Highly rated by dozens of reviewers and users groups. Special introductory offer, only \$79.95! (Regularly \$124.95). Add \$2.50 shipping and NYS residents add sales tax. Okay! My check is enclosed for \$_____ (or charge my VISA/MC acct. # _____ expires _____/_____/_____).

Circle 613 on reader service card

PC World Directory

PC World Directory is a comprehensive listing, by category, of products and services for the IBM PC, look-alikes, and compatibles. It provides rapid access to the burgeoning PC marketplace for both readers and advertisers.

FORMAT: The standard format includes a product ID, a 300-character descriptive ad, and company name, address, and telephone number.

Advertisers may choose among categories already in use, or they may create their own. Display advertisers can cross-reference their current ad to the PC World Directory for increased exposure at low cost.

RATES: Listings are accepted for three-time consecutive insertions at a rate of \$891 (\$297 per issue). We offer a six-time insertion, 15 percent discount contract for a total of \$1500 (\$250 per issue). Listings must be prepaid (except for established display advertisers) upon submission of ad copy. Checks, money orders, VISA, and MasterCard are acceptable.

DEADLINE: For copy deadlines, contact a PC World Directory sales representative at 415/861-3861 or 800/872-7808 (CA), 800/872-7800 (nat'l). Please send copy and prepayment to PC World Directory, 555 De Haro St., San Francisco, CA 94107.

Accessories

Computer Covers

Computer Cozies?

Beautiful, hand-made, quilted dustcovers. A classy alternative to vinyl. Vinyl can damage machines by retaining heat. These covers are anti-static & machine washable. Parish Data System™

Comprehensive church program, menu-driven, extremely easy to operate. Family, Member, Financial info & all reports integrated into one package. Ability to get selective listings, mailing labels; contribution, tuition statements; personalized letters. User able to create own reports & letters. \$950. Parish Data Systems, Inc., 3140 N. 51st Ave., Phoenix, AZ 85031, 602/247-3341

Collectors

"THE COLLECTOR"™

Organize your collectibles (stamps, coins, dolls, antiques, trains, you name it) all on one disk. Single disk holds 2000+ items. Has unlimited capacity. Sorts alph/numeric with cost/cur val at touch of key. For PC/PCjr/XT or similar (128K-DOS 2.00, 2.10). Write/Call for free brochure, or \$65 + \$3 s/h. Visa/MC. The Third Rail, P.O. Box 143, O'Fallon, IL 62269, 618/632-7424

Communications

HardWire@ Moves Files

Menu-driven program moves files between IBM PC or PC compatibles & lap computers from NEC, Epson, Radio Shack, others. CP/M version also available. With both, move files between MS-DOS & CP/M computers. Also trans-

lates among *WordStar*, *Perfect Writer*, *TEXT*. \$39.95 each; two for \$59.95. MC/Visa. *Pomerleau Computing Systems of Hyde Park*, 5634 S. Maryland Ave., Chicago, IL 60637, 312/667-2075

Compilers

Professional Pascal

Serious software developers:

- Full ANSI Standard with extensions
- Cross compiler generates optimized MS-DOS code for 8088, 80186, 80286
- 8087 native code or emulation
- Separate compilation & communication with other languages
- Five memory models
- Produces ROMable code \$895. *Microtec Research, Inc.*, 3930 Freedom Cir., Santa Clara, CA 95054, 408/733-2919

Construction

Construction System

Offers fully integrated Job Cost, GL, AP, PY & AR accounting for the XT & AT. Getting Started book, audio-cassette, HELP, online slideshow, & sample company tutorials for the first-time user. Complete manuals to help set up your books on each application. Options: network & Lotus interface. *Software Shop Systems*, P.O. Box 728, Farmingdale, NJ 07727, 800/554-9865

Culinary Arts

Diskette Cookbook Series

ATTENTION GOURMET COOKS! VANILLA is redefining the meaning of software publishing. Twenty-five outstanding cookbooks, each contained on a separate disk. Search, scale & print recipes from the thousands available in the Series' cookbooks. Powerful, yet simple; no user manual needed. Software \$40; cookbooks \$12 & up. Send for free catalog. *Vanilla Software*, 3345 Lakeshore Ave., Dept. W, Oakland, CA 94610, 415/835-1953

MICRO-GOURMET™

A complete culinary guide for the IBM PC. Create a personal recipe library, shopping list, create portion to portion comparisons. *Micro-Gourmet* has over 90 continental recipes, culinary terms, calorie guide, herbs & spices, & more. Home & restaurant use. Req. 128K, DOS, Disk Drive. Check or money order. \$40. *DeAmicis Software Development*, 4193 Galbar St., Oceanside, CA 92056, 619/758-4766

Data Base

Call Costing Data Base

Customized data base for call costing. Intra & inter-lata, interstate, & international based on Federal & State tariffs & V&H coordinate system. Utilities included to create special rate tables. First year updates free. Complete data base \$595. OEM discounts. Demo sample \$49. *JCL Associates*, P.O. Box 335, Contoocook, NH 03229, 603/746-4865

100 Economic Time Series

Historical & Current Monthly & Quarterly Data sent to you monthly on diskette for a year. Includes RETRIEVE spreadsheet software—displays, graphs, forecasts & creates data files for other software. Call or write today. A year's subscription is only \$99. *Key Data*, 4415 Cowell Rd. #2000, Concord, CA 94518, 415/671-2771

Data Entry

Radar-II

RADAR-II is a powerful key-to-disk program that will do everything a 3741 or 5280 will do & more. Features: auto-duping, two-pass verification, accumulators for batch total checks, cross foot checks, check digit tests, data typing of fields, field tagging, operator stats., etc. Throughput permits 40,000 characters per hr. \$995. *Southern Computer Systems, Inc.*, 2304 12th Ave. N, Birmingham, AL 35234, 205/933-1659, Telex: 755714

RODE/PC Data Entry

RODE/PC is unmatched for power & ease of use. Menu-driven; pop-up help; heads-down speed; extensive input validation; automatic reformatting; conditional processing; operator stats; user exits; 029 keyboard & barcode options, much more. \$40 demo. \$595 first license, \$395 each additional. Volume discounts. *DPX Inc.*, 20823 Stevens Creek Blvd., P.O. Box 656, Cupertino, CA 95015, 408/973-9292, TELEX 701111

Data Entry System

Heads-down data entry for the PC will allow fast & accurate preparation of data files for your mainframe. Features: Auto dup, verification, auto format change, table lookups, range checks, batch totals, dup key, record insert, & much more. Ask us about our free 30 day trial period. Only \$395. *Computer Keyes*, 6519 193 SW, Lynnwood, WA 98036, 206/776-6443

Data Management

PC-FILE III™

New for 1985, version 3.00 is faster than ever. Enhancements: 32767 record capacity, field size up to 1665 bytes, instant "snapshot" mailing labels, much more. Exchange data with 1-2-3, Word, WordStar, etc. Over 100,000 copies of PC-File in use. Printed manual. \$49 chh/MC/Visa. Toll free 24 hour order line: 800/JBUTTON. *ButtonWare*, P.O. Box 5786, Bellevue, WA 98006, 206/746-4296

LETUS A-B-C™

Data base containing ABSTRACTS of articles, Letters to Editors, Questions & Answers from ALL of the MAGAZINES about the IBM PC. Designed to be used with PC-File III, one easily searches on any subject, title, author, string, or "keyword". \$75/6 disks/1982—2nd Qtr 1984. Updated quarterly \$30/2 disks. Printed manual included. Check or company P.O. *Letus A-B-C*, Dept. W, 3790 El Camino Real #2006, Palo Alto, CA 94306, 415/493-4306

GOLDDATABASE

GOLDDATABASE is an easy to use DBMS for the IBM PC/XT. Data bases & reports are painted on the screen. Selection is by English-like commands. Procedures & a W/P interface are included. A BASIC Programmers Interface is available. With it, programs are written in BASIC that access GOLDDATABASE. *Goldata Computer Services, Inc.*, 2 Bryn Maur Ave., Bryn Maur, PA 19010, 215/525-1036

askSam

A simple—yet powerful—end user text oriented dbms. Retrieve on any combo of words, parts of words and/or field values. Sort output to printer, screen, or disk. Update with full screen text editor or batch operations. For IBM PC, PCjr, AT, XT, & compatibles with PC-DOS 2.00 or later, 128K min. \$149.95. *Seaside Software*, 538 Parade, Corpus Christi, TX 78412, 512/991-2019

TRAK I DBMS

New for 1985, for IBM PC/XT/AT, 128K, compatibles. Easy to use, on-line help everywhere. Hardly any documentation. Prints all types & sizes of labels. High speed 10 level search & sort, 100,000 record capacity, 100 fields/record, 1676 char./field. Up to 5 report formats per file, stat. fcns., import/export capability. Many other signif. features. \$129. *AIQR, Computer Software Div.*, 1494 Hamilton Ave., #104, San Jose, CA 95125, call collect: 800/621-0854 Ext. 290

Data Security

N-CODE™ Data Security

Fast, ultra-secure data encryption system. N-CODE protects your files from unauthorized access or change. Encrypt/decrypt a single file or entire directory. Select or change coding key when you want. Unique password & coding system supplied. Demo disk \$10. Uses DOS 2.X/3.X, 192K. \$79.95 postpd. Visa/MC/chk. K + L Software, White Flint Mall, P.O. Box 2303, Kensington, MD 20895-2303, 301/564-8669

Protected by the CIA!!!

Controlled Information Access—a complete security system with multiple levels. Hide/encrypt files; protect entire diskettes with passwords; personal security codes, copy protection. Use any or all 5 methods on every system/data disk. 64K (DOS 1.X) 128K (DOS 2.X). \$49. Visa/MC. Micro-Research Software, 9758 Longview Dr., Ellicott City, MD 21043, 301/465-8115

Development Tools

For BASIC Programmers

F*1*F (Fill-In-Formats) saves time! Easily create input screens, menus w/all options. A generated compact BASIC source code subroutine, compatible, handles entire input session w/user. One GOSUB gets you edited, formatted data. Price \$49.95. Visa. PCjr, PC, 128K, 80 col. monitor. Manual, demos. Siskiyou Software, 830 Garden Way, Ashland, OR 97520, 503/482-1908

Edit

KEDIT

KEDIT is an XEDIT-like full screen editor for the PC. Split-screen editing of multiple files, targets, ARBCHAR, SCHARGE, GETFILE, SORT, wordwrap, prefix commands, block operations, key redefinition. Requires 80 column display, 192K. \$125 + \$3 shipping. Demo version \$10. MC/Visa. Mansfield Software Group, Box 532, Storrs, CT 06268, 203/429-8402

POEDIT

Full-screen editor, the EDLIN alternative. Includes: 4-way cursor, char. insert/delete/replace, 4-way scroll, split/join lines, add/copy/move/delete lines, search/replace strings, get/put to disk, help screens. Edit multiple files at same time. Needs 80 column display, 128K, DOS. \$45 + \$2 shipping. ADAM Systems Corp., 5919 Munson Court, Dept. 101, Falls Church, VA 22041, 703/379-0669

Super Screen Editor

(SSE) is a full-featured screen editor including split-screens, 4 way scrolling, definable keyboard, macros copy/move/delete blocks of data (by line or column), file backup, line numbering, search/replace/undo, print utility, help screens: \$99 + shipping. Binary Corporation, 4091 126 Dr. N, Royal Palm Beach, FL 33411, 305/798-3100

Educational

PC/Pilot

Language for education & training. Now offered also by IBM as IBM Pilot. Support for color, graphics, fonts, windows, files, video control. We offer upgrades, advanced feature library (\$300), tutorial (\$125), authoring prompter. Single use license (\$200) & unlimited campus/site license (\$2000). 20% ed. discount. Washington Computer Services, 3028 Silvern Lane, Bellingham, WA 98226, 206/734-8248

Hebrew/English/Greek

Type any language combination on your PC, Compatible, or jr. Highest quality letters—80 column. Works right to left and/or left to right (with or without vowels). Insert/delete, word-wrap, etc. Requires: 128K, DOS, graphics, Okidata, IBM, Epson, C. Itoh printer. Price, \$149.95 (\$15 for Demo). To order/for info call: Gamma Productions, 817 10th St., Santa Monica, CA 90403, 213/451-9507.

Teacher Turned Author!

Create great instructional courseware in minutes. No programming! Mix text, color graphics & questions on any page. Built-in drawing system or optional graphics tablet. Student recordkeeping, instant editing, & page playback. No royalties—produce unlimited courseware. PC & XT, \$699. Demo disk, \$15. Raster Technology, Inc., P.O. Box 3477, Longwood, FL 32779, 305/862-2859

TYPIST™—Teach, test

Unique touch typing tutor. Rapid advances in skill & speed. Experienced & beginner typists. Test & practice are analyzed with standard typing evaluation. Multilevel game. User prepared drills. Many options. Home, school, business. \$49.95 + \$3 ship. PC, XT, AT, PCjr. PC-DOS, 128K. Choice Software, P.O. Box 726, Centerville, UT 84014, 801/292-7424

Engineering

Structural Design

NEW—Fast, efficient, versatile structural analysis & design programs in spreadsheet format—BEAMS, COLUMNS & FRAMES of any material. Friendly input & output with data storage & COLOR graphics. Specify PC, XT or AT & send \$25 for demonstration diskette to: C-Squared B-Squared Software Design, Inc., 763 27th Ave., San Francisco, CA 94121, 800/621-0851, ext. 330, 415/751-1337

Mech./Elec. Design

Programs for HVAC Loads, Building Energy Analysis, Faser Energy Acctng., Duct Sizing, Lighting, Short Circuit, Voltage Drop, Pipe Sizing, Critical Path Analysis, Life Cycle Costing, & more avail. for CP/M, CP/M-86, & MS-DOS computers. All disk formats supported. Demo disks avail. on each program for \$33. Send/call for literature. Elite Software, P.O. Drawer 1194, Bryan, TX 77806, Bus.: 409/846-2340, By Modem: 409/775-0760

smARTWORK®

Printed-circuit artwork editor for double-sided boards up to 10" by 16"; runs on an IBM PC. Color display allows complete interactive control over the placement & routing process. 2X artwork can be made on a dot-matrix printer or pen-and-ink plotter. \$895. Write or call for a brochure. WINTERK Corp., 1801 South St., Lafayette, IN 47904-2993, 317/742-8428

Eng./Sci. Graphics

Engineering/scientific graphics. OMNILOT [S] (screen graphics) & OMNILOT [P] (plotter driver) provide integrated eng./sci. 2D & 3D graphics w/NO PROGRAMMING! Menu-driven, flexible, professional. Choice of formats: tabular/line, contour, 3-D wire frame & more! \$195 each. Both \$295. Microcompatibles, 301 Prelude Dr., Silver Spring, MD 20901, 301/593-0683

Simulation

GPSS/PC is a full-power version of GPSS, the most popular mainframe simulation language. Using GPSS/PC it is possible to predict the effects of managerial or engineering decisions on complex real-world systems. More than just a language, it is a simulation environment specifically designed for interactive use on today's high-speed microprocessors. Minuteman Software, P.O. Box 171/W, Stow, MA 01775-0171, 800/343-0664, ext. 4800 (U.S.), 800/322-1238, ext. 4800 (MA)

Thermal & Flow Analysis

For the power & process engineer, 8 complete, rigorous, interactive programs to analyze Exchangers, Combustion, Pressure Drop, Cogeneration, Condensers, Pipe Networks, Cooling Towers, Steam Heaters. Set of 8, \$189. IBM PC-DOS. Industrial Power Plant Heat Balance Program, \$349. Thermal Analysis Systems, 725 Parkview Circle, Elk Grove, IL 60007, 312/439-5429

Financial

IRA Money Maker

How to Get the Dollars Growing in Your IRA. Opportunity for More Retirement Income easily explained. You learn about interest rates, mutual funds & Your IRA. What was once known only to a few can now be Yours. IRA Money Maker, ONLY \$39.95. IBM PC, 64K. Specify Color or B/W, 320K DSD, Printer. Knowledge Reach Associates, Inc., P.O. Box 3407, New York, NY 10185, 212/942-4692

Business Library

A collection of fifteen valuable programs. Library includes Mortgages, Loans, Depreciation, Rule of 78, True Interest, Accelerated Cost Recovery, alternate ACRS, Present Values, Annuities, Rate of Return, & Auditing. Flexible & easy to use. Excellent documentation. \$495 all fifteen programs. Write or call for brochure & license. *Advanced Management Systems*, 2432 W. Peoria #1280, Phoenix, AZ 85029, 602/944-5594

Bookkeeping Made Easy

Fast, single-entry checkbook accounting system in "C". Allows multiple checkbooks, charge cards, & departments. Option to print checks, bank reconciliation, flexible sorting & reporting. Exports to Lotus format or dBASE format. MICRO-ONE-WRITE demo \$10, complete program \$95. Lotus tax template \$75. *Permar & Associates*, 1125 Sunnyhills Rd. Dept. W, Oakland, CA 94610, 800/443-0100, ext. 644

Forecasting

1,2,3 FORECAST!

Menu-driven template programmed in Lotus 1-2-3 macros. Forecasts time series data in existing 1-2-3 files. Fast & easy with little Lotus or forecasting experience. Linear & non-linear trends, regression, smoothing, decomposition, seasonal indices, diagnostics, more. 50 page manual includes tutorial & documentation. \$75 chk/MO ppd. USA, more info: 1,2,3 FORECAST!, P.O. Box 12582, Salem, OR 97309, 503/585-8314

Games

Star Fleet 1

"The world's most elaborate star battles game," (J. Pour-nelle-Byte-Sept. '84). Features color animation of battles, music, promotions. Capture ships, lay mines, launch probes, rescue bases, repair damage, eliminate intruders, more! 98 pg. manual. PC/PCjr/AT. Req. 128K, 1 drive, 80 cols. \$49.95 + \$2 s/h. Also TI PC. CYGNUS, P.O. Box 57825, Webster, TX 77598, 800/622-4070 (Nat.), 800/942-7317 (IL)

Scatter

A challenging black box logic game. Using your reasoning powers, locate the hidden atoms by firing the laser into the box & deciphering the clues that come out. The sharper your deductive skills, the higher your score. A new puzzle each time—you choose the level of difficulty. \$22. Visa/MC/chk. *SoftStart*, P.O. Box 803, Framingham, MA 01701, 617/620-8315

Wizzardz & War Lordz

At last—A new challenge! Lead your party of 6 adventurers thru the depths of a 15-level dungeon in 3-D graphics! Can they defeat in mortal combat the dreaded VYLGAR, & his henchmen? W & W gives new meaning to the word adventure. IF YOU DARE... \$49.95 + \$2 p/h. IN 5% tax, 128K, DOS. Dealers inquire. *Ram-Tek Co.*, 6752(B) Covington Creek Trail, Fort Wayne, IN 46804, 219/432-2455

Gas Stations

Station Master

Complete integrated bookkeeping system for gas stations. Quick, easy data entry automatically creates daily accounting. Reports shift check out, TBA, profit & margins. Has full inventory control, accounts receivable, payroll, P/L statement, & many other features. Great vertical marketing opportunity for dealers. *Small Business Computer Systems, Inc.*, 313 Llewellyn Rd., Ambler, PA 19002, 215/542-9639

Genealogy

Family Reunion III

For IBM PC, XT, PCjr or compatibles. Keeps track of living relatives as well as genealogical data. Produces pedigree charts, group sheets, descendant charts, address labels, birthday lists, text data, & much more! Price \$159.95. Requires 128K & PC DOS 1.10, 2.x or 3.x. Supports monochrome or color. Any printer. Visa/MC/AmEx/COD. Add \$5 S&H. *Personal Software Co.*, 1580 East Dawn Dr., Salt Lake City, UT 84121, 801/943-6908

ROOTS II™

Powerful organizer for family historical info. Lightning fast searches & sorts. Print camera-ready paginated books with pedigree, descendant & ahnentafel charts, family group sheets, text & index. Display maps w/graph adapter. Any PC or compatible. Satisfaction guaranteed. \$195 (+ tax in CA). *COMMSOFT*, 2452 Embarcadero Way, Ste. B, Palo Alto, CA 94303, 415/493-2184

Graphics

Grafmatic/Plotmatic

Grafmatic (screen graphics): 70 MS FORTRAN/Pascal (3.10, 3.20) IBM 2.00; ss, Prof. FORT callable graphics routines. 100 page user manual. General utility, 2D interactive, total 2D plot support, 3D plots & solid models. \$135. HP, HI plotter? Try *Plotmatic* for complete plotter capabilities. Use with *Grafmatic*. \$135. Both, \$240. *Microcompatibles*, 301 Prelude Dr., Silver Spring, MD 20901, 301/593-0683

HALO

The most powerful library of subroutines under MS-DOS. Extensive functions include point, line, arc, circle, ellipse, hatch styles, pattern fills, clipping, dithering, world coordinates, image compression, multiple viewports, rubberband mode, etc. Compatible with multiple devices & languages. *Media Cybernetics, Inc.*, 7050 Carroll Ave., Takoma Park, MD 20912, 301/270-0240

Dr. HALO

An easy to use icon driven paint program. Draw, cut & paste, paint, rotate, store & create images & symbols & use 8 flexible fonts. Internal grab & show programs let you edit images from other packages & prepare presentations. Runs on many graphics cards, input & output devices. \$99.95. *Media Cybernetics, Inc.*, 7050 Carroll Ave., Takoma Park, MD 20912, 301/270-0240

PLOTGRAPHY™

Now PLOT your graphic drawings on paper or transparencies. Great for overhead presentations. Make them any size anywhere on the page, either direction. Will PLOT drawings from most graphic editors. Requires IBM PC, XT or PCjr. 128K, color board, floppy or hard disk, PC-DOS. Call to see if we support your plotter. Only \$49.95. *Cactus Software Inc.*, P.O. Box 880, Peoria, AZ 85345, 602/242-7953

Graphic Printer Support

Use the PrtSc key to produce B&W or color scaled reproductions of your display on your Epson, IBM, Okidata, IDS, Datasouth, TI, HP, Toshiba, NEC, C. Itoh, etc. Supports IBM, Tecmar, or Hercules graphics cards. \$49.95. *Visa/MC. Jewell Technologies, Inc.*, 4451 53rd Ave. SW, Seattle, WA 98116, 206/937-1081

Flowcharter

EasyFlow is a computer aided flow chart generation tool. Charts up to 5 by 11 shapes in size, automatic line routing, automatic text centering within shapes, 100 pg. manual plus many more features than we can mention here. Runs with all printers on any MS-DOS or PC-DOS machine. \$49.95 U.S. *HavenTree Software Ltd.*, RR 1, Box 105, Seeley's Bay, Ontario KOH 2N0 Canada, 613/542-7270, ext. 45

Art Organizer:

Most powerful CAD/GRAPHIC EDITOR of its kind. Line, circle, ellipse, arc, copy, paint, undo, symbol library, hardcopy & 40 more extensive functions. Guaranteed to save 10 times more file space than most graphic tools. Pictures can be read back by BASIC programs. \$89.95. Requires: 128K, color card, 1 drive, PC/XT/AT. *Rosa Software*, 14245 SW Walker #22, Beaverton, OR 97006, 503/643-7964

Executive Picture Show

Easily the most powerful & distinctive free-form drawing & presentation graphics package, with its ability to create menu-driven presentations using literally hundreds of animated drawings, graphs, etc. Ideal for slides, displays, hard copies. IBM PC & compatibles. TRY IT OUT FOR ONLY \$15! Retail \$245. *PCSoftware*, 9120 Gramercy Dr. #416, San Diego, CA 92123, 619/571-0981

MetaWINDOW™

Advanced graphics toolkit provides Xerox Star/Apple Macintosh style graphics on your IBM PC. Supports most popular graphics cards. Create pop-up menus, windows & icons; use proportionally spaced fonts; rubberband & drag lines, text or bitmap images; supports mouse/cursor tracking. Tightly optimized for use w/Turbo Pascal, IBM Pascal, C, Fortran & BASIC. *Metagraphics Software Corp.*, 444 Castro St. #400, Mountain View, CA 94041, 415/964-1334, Telex: 4998586 METAGRAF

Fast, Free-form Graphics

MONOGRAPX™ FOR PCs WITH OR WITHOUT GRAPHICS BOARDS! Quickly draw forms, org/bar/flow/Gantt charts, block diagrams & much more. Freely mix text & graphics on 8.5 x 11" page. PULL-DOWN MENUS. UNDO. FULL-SCREEN EDITOR. Drivers to print what you see on 50 printers. RAVE REVIEWS. \$49.95. 14-day money-back guarantee! MC/Visa. *Analytics International Inc.*, 17 Oakland Ave., Arlington, MA 02174, 617/641-0400

Home Use**Shop Cheap—Eat Smart**

- **COUPONOMIZER**—Save more money with your discount coupons & rebates. 64K.
- **DIET ANALYZER**—Lose those extra pounds! Tracks calories + 23 nutrients. Ideal for menu planning. 128K. Immediate shipment, 2 week money back trial. \$49.95 ea. + \$2.50 s/h. AmEx/MC/Visa. Call for free brochure. *Natural Software Ltd.*, 7 Lake St. #7E, White Plains, NY 10603, 800/626-2511, 914/761-9329

Inventory Control**Mr. QuarterMaster**

Features: receipts & issues updating; inventory, reorder & usage reports; screen display of stock item(s); price quotes, & invoices; reorder points adjusted automatically & file maintenance to add, change & delete stock items. List Price: \$120. Manual alone: \$20. Free brochure. *RJL Systems*, 106 New Haven Ave., Milford, CT 06460, 203/878-0376

Inventory Manager II

Ideal stand-alone program perfect for retailers, wholesalers or any business involved with merchandise sales. Up to 9999 items. Generates numerous reports including ave. cost & ave. sale, gross profit, margins, stock on hand, on order, sug. & actual P.O.s & more. Sort utility. Floppy (vers.) \$199. XT \$299. *Satori Software*, 5507 Woodlawn N., Seattle, WA 98103, 206/633-1469

dFeller Inventory

A business inventory program written in dBASE II source code, so you can modify the program to fit your particular needs. The menu-driven program lets you locate items by inventory name or number. It keeps track of reorder points, vendors, average cost, & other information. List price, \$150. Requires dBASE II or dBASE III. *Feller Associates*, 550 CR PPA, Route 3, Ishpeming, MI 49849, 906/486-6024

Investment**Rental Property**

Considering an investment in real estate? Lets you build financial projections. Shows before & after tax Cash Flows, Profits, Internal Rate of Returns, & such. Assumptions can be changed for each year. SIMPLE menu-driven, & yet sophisticated. Template—you must have a spreadsheet. Specify *Multiplan* or *Lotus*. \$29.95. *TimeSaver Software*, 4470 Chamblee-Dunwoody Rd. #315, Marketing Dept., Atlanta, GA 30338

Labels**cheapware™**

Type up to 5 lines of text in any of 3 type faces & 4 fonts on 1 x 2 3/4" labels. Program can insert a serial number or text from a sequential file on labels. Dot matrix printer & HiRes color monitor req'd. Program diskette, instruction booklet & box of 3,000 labels only \$45 postpaid. For more info call the cheapware sales/support. *Robert L. Nicolai*, 4038 N. Ninth St., St. Louis, MO 63147, 800/642-6524, 314/621-7618(MO)

Languages**BetterBASIC**

- Structured language with BASIC syntax
- Extensible—create own keywords
- Modular-procedures can be grouped together into library modules
- Utilizes full PC memory capacity (640K)
- Full screen editor w/multi-window display capability
- Full support for graphics, comm. screen format. \$199. *Summit Software Technology, Inc.*, P.O. Box 99, Babson Park, Wellesley, MA 02157, 617/235-0729

muLISP-83

An integrated environment for AI software development. Includes a high-performance, pseudo-code LISP compiler; a resident, screen-oriented editor & debugging system; interactive LISP programming lessons; & a detailed reference manual. \$250. Also available, the *muMATH Symbolic Math System*, \$300. *Soft Warehouse, Inc.*, P.O. Box 11174, Honolulu, HI 96828

Legal**Legal Billing**

Complete time billing package for firms with up to 18 lawyers. Features exclusive "video time-slip" for "magic quick" entry. Prints detailed client statements, lawyer time & client aging reports plus more. Large record capacity. Trust accounts & automatic interest. Very friendly. \$450. *Satori Software*, 5507 Woodlawn N., Seattle, WA 98103, 206/633-1469

Lotus**1-2-3 Statistics**

Complete Statistical Package designed to process data from 1-2-3; Menu-driven; T-Tests, Correlations, Cross-tabulation, Powerful Multiple Regression routine, ANOVA/ANCOVA (with Repeated Measures), Nonparametric Statistics, Bar graphs, Scatterplots; Super fast (8087 Support); for 256K PC; \$99. *StatSoft*, 2831 East 10th St. #3, Tulsa, OK 74104, 918/583-4149

Mail List Programs**Pony Express XL**

For commercial & large lists. Fast machine code multisort. Prints labels 1-5 across, single line or user-defined format. Also CHESHIRE FORMAT. Multi file merge. Records can be selected by user-defined codes, zips or zip ranges. Auto repeat for ease of record entry, corrections & deletions. Phone list option. \$238. *Computech*, 975 Forest Ave., Lakewood, NJ 08701, 201/364-3005

Bulk Mailer

This is the most sophisticated mail list program available, & the only one to offer these features: Duplication elimination, up to 32,000 name capacity, coding capability, multi-label formats, zip & alpha sorts, easy to use plus much more. Floppy version (5400 names) \$99. XT version (32,000 names) \$350. *Satori Software*, 5507 Woodlawn N., Seattle, WA 98103, 206/633-1469

Label Master

Organizes client lists. Prints mailing labels. Ideal for law firms, medical offices, retail stores, any small to medium-size business. 65,000 record capacity. PC World Directory is a comprehensive listing, by category, of products and services for the IBM PC, look-alikes, and compatibles. It provides rapid access to the burgeoning PC marketplace for both readers and advertisers.

FORMAT: The standard format includes a product ID, a 300-character descriptive ad, and company name, address, and telephone number.

Advertisers may choose among categories already in use, or they may create their own. Display advertisers can cross-reference their current ad to the PC World Directory for increased exposure at low cost.

RATES: Listings are accepted for three-time consecutive insertions at a rate of \$891 (\$297 per issue). We offer a six-time insertion, 15 percent discount contract for a total of \$1500 (\$250 per issue). Listings must be prepaid (except for established display advertisers) upon submission of ad copy. Checks, money orders, VISA, and MasterCard are acceptable.

DEADLINE: For copy deadlines, contact a PC World Directory sales representative at 415/861-3861 or 800/872-7808 (CA), 800/872-7800 (nat'l). Please send copy and prepayment to PC World Directory, 555 De Haro St., San Francisco, CA 94107.

DISK WORLD!

is pleased to announce the
**lowest-prices ever on brand
name diskettes!**

You've seen ads for lower priced diskettes.

But did you ever notice that they usually don't carry or list a brand name. There's a reason for that: there is no brand name to be listed, since these low-cost "generic" diskettes are politely called garbage within the diskette industry.

One or two individuals buy reject product from lower-quality manufacturers and put it out in the market place without a label...and without any meaningful guaranty that you're getting good product.

But not at DISK WORLD!

We deal only with **branded** merchandise...with diskettes made by people who are proud to have their name known.

3M: Almost every diskette you buy has a little 3M in it. 3M manufactures more blank

diskette media than anyone else...and probably produces more computer media in all forms than any other manufacturer. This is factory-fresh 3M product, boxed in 10's, reinforced hubs, user ID labels, write-protect tabs and a **100% LIFETIME WARRANTY.**

5.25" SSDD w/ FREE Flip 'n File 15.....	\$ 1.42 ea.
5.25" DSDD w/ FREE Flip 'n File 15.....	\$ 1.74 ea.

**Get more data on products
you're interested in—
simply return this card today.
There's no cost.
And no obligation.**

It's easy to get more information on products advertised in PC World. Here's how:

- Print or type your name and address in the spaces provided, and answer the questions that apply to you or your company. (These questions help us to better meet your needs and the needs of our advertisers.)
- Circle the number(s) on the card that correspond(s) to the reader service number(s) for the product(s) in which you're interested. For your convenience, the reader service number appears in the ad and in the Advertisers Index.
- Detach the card from the magazine, fold, seal with tape (please do not staple), apply first-class postage, and mail. Literature on the products you're interested in will be mailed to you directly from the manufacturer, free of charge.

Free Product Information Service

Please print or type all information.

Name _____

Company _____

Address _____

City, State, Zip (Zip code needed to ensure delivery) _____

Phone: Area code/Number _____

PLEASE NOTE: This card is for your convenience in obtaining information on products advertised in PC World. Please send editorial comments or inquiries to: The Editor, PC World, 555 De Haro St., San Francisco, CA 94107. Thank you.

☐ Please bill me \$23.75 for a 1-year (12-issue) subscription to PC World (U.S. and Canada only).

1. Your primary job function:

- ☐ (A) Corporate or general management
☐ (B) Department manager
☐ (C) MIS manager
☐ (D) Professional
☐ (E) Other _____

2. Number of employees in your company:

- ☐ (1) 25 or less ☐ (4) 500-999
☐ (2) 26-99 ☐ (5) 1000 or more
☐ (3) 100-499

3. Information requested for:

- ☐ (A) Business applications
☐ (B) Home applications

4. Reason for inquiring:

- ☐ (1) Plan to buy—next 3 months
☐ (2) Plan to buy—4-6 months
☐ (3) Plan to buy—7-12 months
☐ (4) Plan to buy—beyond 12 months
☐ (5) Reference only

5. For how many IBM PCs and compatibles do you buy products? (Include both company and personal units, please.)

- ☐ (A) 1 ☐ (C) 5-9
☐ (B) 2-4 ☐ (D) 10 or more

6. How much do you expect to spend in the next 12 months for peripherals and other add-ons?

- ☐ Less than \$250 ☐ \$500-\$999
☐ \$250-\$499 ☐ \$1000 or more

7. How much do you plan to spend in the next 12 months for software?

- ☐ Less than \$250 ☐ \$500-\$999
☐ \$250-\$499 ☐ \$1000 or more

8. How much do you plan to spend in the next 12 months for personal computers?

- ☐ (1) Less than \$2500 ☐ (3) \$5000-\$9999
☐ (2) \$2500-\$4999 ☐ (4) \$10,000 or more

Valid through 10/1/85

Curl up with a Thriller Tonight!

You don't ordinarily think of a software directory as a thrilling piece of literature, but if you have an IBM PC or compatible, the PC Software Interest Group's directory, *PC-SIG Library*, may leave you exhilarated.

In PC-SIG's library:

- Topically arranged, annotated lists of PC software from PC-SIG's 300+ diskette library.
- Software packages for public domain spreadsheets, word processors, and database managers at very low prices.
- Subroutines and programs that run under DOS, BASIC, Pascal and C that will satisfy every kind of user.
- Games that rival arcade quality in action, challenge, and fun.
- Source for direct-marketed, user-supported, fully documented software products that ask a donation from satisfied users.

Try a Sneak Preview! Why wait for the book? You can try out some of the software now from the list below. Just check the items you want and use this as an order form.

**"Is now
soon
enough
for
you?"**

**Diamond Software has the most
complete inventory going,
and can deliver whatever
you want, whenever you want.**

In supplying corporations with quality software, we provide something our competition doesn't.

Everything.

The most complete selection of major business applications software packages and peripheral hardware from top manufacturers.

An experienced team of salespeople and technicians whose training and focus is business-oriented.

A pricing structure that's not only competitive, but one that incorporates quantity incentives and cumulative volume discounts to qualified accounts.

And much more. Please call us and see.

Diamond Software

*Whatever you want,
whenever you want it.*

7916 Capwell Drive, Oakland, CA 94621

HOW TO BUY SOFTWARE WHEN ALL THE ADS LOOK THE SAME.

We know it's hard to choose a software house. All the ads say the same thing—"Lowest prices," "fastest delivery," "best support," "biggest inventory."

Trouble is, although the claims are the same, the companies are very different. Which is why we want you to know some important facts about us:

1. 800-SOFTWARE is one of the oldest and most reputable firms in the industry. Our customers include Coca-Cola, GE, Hewlett-Packard, Xerox, AT&T, and thousands of other satisfied buyers.

2. Our National Accounts Program offers volume discounts and valuable services to large software users. We offer *incredibly* low prices on large bids!

3. We have a giant, \$1,000,000 inventory. Which means we can offer next-day delivery if needed.

4. With every product you get friendly, expert technical support. Have a question? You'll be glad you bought from 800-SOFTWARE!

5. We'll match our competitors' prices on most products. We *never* cut service.

6. We never charge extra for credit card purchases, nor do we process for payment until the product is shipped. (Our competitors don't make this claim!)

7. You'll automatically receive our Technical Support Newsletter—a great way to stay up-to-date.

8. We are members of the Better Business Bureau and the Direct Marketing Association.

9. We want your business. *And* your repeat business. Which is why we work so hard to keep you happy. Give us a call and let us *prove* it!

- ☐ International orders welcome: TELEX #751743 800 SOFTWARE UD.
- ☐ All returnable products subject to a minor restocking charge.

THE "WHERE ON EARTH DO YOU LOOK FOR IT" FINDER

Where on earth do you look for that product? The answer is DIRECT NET. If it exists, chances are you'll find it under one of our listings.

We offer, through your modem, software and hardware product information. We offer manufacturer information, PC World subscription and program listings... even electronic mail and bulletin boards. And we're thorough. For instance, you want to find that product but you only have a description. Our product information menu can find that product by name, category, manufacturer, description, or our exclusive multiple parameters method.

After you've found it, we can tell you all you want to know about it, give you a demonstration... and even order it for you. That's because we're DIRECT NET, the "where on earth do you look for it" finder. And after you've found us, you'll be sitting on top of the world.

- Direct-Net is available at an introductory annual membership fee of \$50. There is no initial contact fee—connect time charges are \$10/hr.
- A demonstration disk and instruction manual is available for \$10 (applied towards annual membership fee).
- Special membership information for computer retailers and consultants is available upon request.

Nationwide: 800-223-0822

(In California: 800-824-5526)

MasterCard Visa orders through 800#.

- ☐ \$50.00: Membership Fee, DN-COMM Software Package, Instruction manual
- ☐ \$10.00 Demonstration Disk, Instruction Manual (applies toward membership plus 6% sales tax for California Residents only)

Westlake Village, CA 91362

Announcing the only devoted entirely to

*Sponsored by MACWORLD,
the Macintosh Magazine,
August 21-23, 1985, Bayside
Exposition Center, Boston*

The second standard in business computing has arrived, and it's called the Macintosh Office. The power, flexibility, and ease of use of the Macintosh offer you the alternative you've been waiting for. And the introduction of the Macintosh Office provides all levels of business with a choice.

The Macworld Exposition is your chance to see it all in one place—software, hardware, and peripherals developed for the Macintosh. See for yourself the products available now that will help you work faster, easier, and smarter.

All of the elements of the Macintosh Office will be on display. The 512K Macintosh, the LaserWriter, and AppleTalk™, as well as Jazz™ from Lotus, are just a few of the products you'll get to see.

The Macworld Exposition has a targeted schedule designed to fit your busy schedule. As a dealer, a distributor, a retailer, a business user, or an educator, the three-day conference and exposition is designed for you.

Day one is for dealers, distributors, retailers, and other third-party vendors to talk to Apple and the 100+ exhibiting companies about their products.

Days two and three are specifically geared for people interested in the Macintosh as a tool for business and anyone else interested in the Mac.

Who should attend?

Industry: Dealers, distributors, retailers, wholesalers, manufacturers, systems houses, consultants, technical programmers, all other ISOs

Business: CEOs, presidents, vice presidents, managers, comptrollers, owners/partners

Professionals: Doctors, nurses, bankers, lawyers, engineers, stockbrokers, real estate and insurance agents, CPAs, consultants

Education: Administrators, faculty, students

Here's a look at some of the conference sessions designed for you:

**MACWORLD
EXPOSITION**
BOSTON

If the space program had advanced as fast as the computer industry, this might be the view from your office.

And space stations, Martian colonies, and interstellar probes might already be commonplace. Does that sound outlandish? Then bear these facts in mind:

In 1946 ENIAC was the scientific marvel of the day. This computer weighed 30 tons, stood two stories high, covered 15,000 square feet, and cost \$486,840.22 in 1946 dollars. Today a \$2,000 kneetop portable can add and subtract more than 20 times faster. And, by 1990, the average digital watch will have as much computing power as ENIAC.

The collective brainpower of the computers sold in the next two years will equal that of all the computers sold from the beginning to now. Four years from now it will have doubled again.

It's hard to remember that this is science fact, not fiction. How do people keep pace with change like this? That's where we come in. We're CW Communications Inc.—the world's largest publisher of computer-related newspapers and magazines.

Every month, over 9,000,000 people read one or more of our publications

Nobody reaches more computer-involved people around the world than we do. And nobody covers as many markets. In the United States we publish three computer/business journals. Micro Marketworld, for businesses selling small computers and software. On Communications, the monthly publication covering the evolving communications scene. And Computerworld, the newsweekly for the computer community, is the largest specialized business publication of any kind in this country.

We also offer seven personal computer publications. InfoWorld, the personal computer weekly, is general interest magazine for all personal computer users.

The other six are monthly magazines that concentrate on specific microcomputer systems. PC World, the comprehensive guide to IBM personal computers and compatibles. inCider, the Apple II journal. Macworld, the Macintosh magazine. 80 Micro, the magazine for TRS-80 users. HOT CoCo, the magazine for TRS-80 Color Computer and MC-10 users. And RUN, the Commodore 64 & VIC-20 magazine.

And we have similar publications in every major computer market in the world. Our network of more than 55 periodicals serves 25 countries. Argentina, Australia, Brazil, Canada, Chile, Denmark, Finland, France, Greece, India, Italy, Japan, Korea, Mexico, The Netherlands, Norway, People's Republic of China, Saudi Arabia, Southeast Asia, South Africa, Spain, Sweden, United Kingdom, United States, and West Germany.

The sooner we hear from you, the sooner you'll hear from our readers

Simply put, we'll make it easy for you to reach your target audience—and for them to reach you. Call today for more information. You'll find the number below.

WE'RE BUILDING A NETWORK FOR SALES,

NO ONE BACKS IT UP LIKE WE DO.

From first-time user to seasoned pro. From national telemarketing to local retail stores. Whoever you are, and whatever your microcomputer needs, for sales, service and support, you can count on Micro Mart.

CUSTOMIZED SYSTEMS, CUSTOMIZED SUPPORT.

Micro Mart customizes personal and business computers because we have the expertise to do it right. Our specialties include advanced memory systems like hard disk drives and multifunction boards. And much more.

Now you can depend on Micro Mart for customized service and support. Our service center is the largest in the Southeast, and it backs up every telemarketing sale we make, nationwide. Our retail sales are supported by the best in-store Techs in the business. So our service is on-line, on site or on-the-spot. And we do it on time. Try us and see.

MICRO MART NATIONAL. ALWAYS UP-TO-DATE.

Micro Mart is the place to find the latest products. Our state-of-the-art mainframe-to-inventory connection puts every buyer on-line with our ten million dollar inventory. Instantly.

Our telemarketing salespeople are highly trained consultants, constantly up-to-date, so you don't have to be. And we offer equally innovative financing, like the Micro Mart Blue Chip Credit Card. Call us today for systems, sales and support, and discover why Micro Mart is way out in front.

Pure power.

QIC-60 streaming tape backup is more than just fast and simple to operate. It's also the leader in powerful processing.

For example, our unique five-head tape deck offers immediate read-after-write verification. No rewinding necessary. And no re-recording of the entire backup after an error.

Another powerful advantage is automatic adjustment of the head mechanisms to seek the best track alignment every time a tape is inserted. Plus our exclusive power sensor is designed to alert and freeze the write head if PC power is reduced, which eliminates the chance of disk damage. We're so confident in the technical excellence of QIC-60 that we offer an aggressive one-year limited warranty on the entire line, compared to the 90-day warranty provided by other manufacturers.

Best of all are a pair of backup bonuses that turn QIC-60 into a sophisticated data management tool. When you select mirror-image restore, QIC-60 sees bad disk sectors and automatically reroutes data to safe locations for improved data reliability.

Tecmar offers AT owners a special enhancement with an internally-mounted QIC-60 tape drive that costs even less than external systems. And when you add our internal AT Hard Disk to the package, you have a fully upgraded system ready to use today.

Pure speed. Pure power. Pure innovation from Tecmar.

For a free demonstration of the new standard in tape backup, see your Tecmar dealer or call us at 216/349-1009 for the location of the dealer nearest you.

Ven-Tel's Half Card™ modem is in all the best computers

Here's why...

Ven-Tel gives you lots of reasons to buy our Half Card™ modem for your IBM PC or compatible. The Half Card™ is a complete system that lets you communicate with other PCs, mainframes, and databases effortlessly. It includes Crosstalk-XVI® software. It's reliable. It's got all of the features you want. And it's a good value.

Do You Own One of These Computers?

Chances are you do. And if you're thinking of buying a modem, consider the Half Card™. Because of its small size, the Half Card™ fits in more computers, including all of the models we've listed here. The Half Card™ is small, so it fits in short slots or long. That means you can save your long slots for other expansion uses.

Effortless Communication

Each Half Card™ comes with Crosstalk-XVI® communications software, by Microstuf. It's the easiest to use, whether you're a beginner or an old hand, and the most powerful. A full on-line help menu makes using Crosstalk® for the first time a snap. It can turn your PC into a terminal on a mainframe computer with its powerful terminal emulation feature. It will even operate your PC when you're not there. You can call into an information service such as The Source or Dow Jones News Retrieval, or transfer files and electronic mail, all at the touch of a button. The Half Card™ connects your computer to the world. Effortlessly.

More Modem for Your Money

When you buy the Half Card™, you don't need anything else. The Half Card™ is a complete communications package that includes a full-featured modem and the best known software on the market. Complete easy-to-understand instructions with full technical support on installation and use. And a very competitive price. The Half Card™, with Crosstalk-XVI® software, retails for only \$549.

Reliability

Ven-Tel has been making modems for 10 years. Our experience shows. Ven-Tel's Half Card™ only has about 70 parts, compared to almost 300 on other modems. We reduced the parts by building the first LSI modem chip using advanced switched capacitor technology. What that means to you is greater reliability and lower power consumption, so you can load up your PC with expansion boards and not worry about heat or power problems. And we back the Half Card™ with a two-year warranty on parts and labor.

You Can Buy the Half Card™ Anywhere

You can get the Half Card™ at Computer Land, Businessland, the Genra Group, Entré Computer Centers, Macy's Computer Stores and other fine dealers nationwide. Also from Ven-Tel: the 1200 Plus™, an external modem and the PC Modem 1200™, an IBM internal with V.22 international capability.

Features

- 1200/300 baud auto-dial, auto-answer.
- Uses the industry standard "AT" command set.
- Runs with virtually all communications software, including Smartcom II and PC Talk III and integrated packages such as Symphony and Framework.
- Includes Crosstalk-XVI® software.
- On-board speaker and extra phone jack for easy switching from voice to data mode.
- Selective tone or pulse dialing; full or half duplex.
- Automatic answer on any ring.
- True ring or busy signal detection.

Effortless Communication
