# Share Your IBM PC...

## ...Add up to 31 Low-cost Work Stations!

The scene at the left is typical of many companies today. Employees standing around idly awaiting their turn on those expensive PC's. Computer **congestion** multiplying by the minute. Computer **confusion** in sharing disks and files.

Eliminate that congestion and confusion. Free-up those unnecessary employee "waiting lines." Share a common data base without loss of speed or efficiency ... and valuable work time.

The choice is yours!

**1 Install a Network. (LAN)** Several software driven systems are available. But beware of the headaches - slow speed due to cable limitations and heavy costs. It may pay to heed the opinion of Tom Hogan, Editor-in-Chief, Business Software, "our experience has not been entirely positive." Call for reprints (Editors Page, June, 1985) and read for yourself the many pitfalls this publication has experienced.

OR

**2 Install an Advanced Digital PC-Slave** work station. Low cost. Faster speed (8 MHz) and no headaches!

The choice is obvious. Advanced Digital's

PC-Slave concept allows you to add up to 31 low-cost "dumb" work stations to your IBM, PC, AT, XT, and the compatibles. Just plug Advanced Digital's PC Slave board into your PC expansion slot, a connecting cable, a low-cost dumb terminal and you're in business.

Orderly work stations are readily apparent without employee congestion and confusion. Speed and performance are uninterrupted since only disk access is shared. Best of all, 2 to 3 work stations may be added for the price of an additional PC.

The next time you're standing around idly may be the best time to put the advanced technology from Advanced Digital to work for you. Start sharing your IBM PC today!

Advanced Digital Corporation also manufactures a complete line of S-100 single board computers and multi-user systems.

# 3 simple ways to let your computer take over your desk top.

**#1 BUY A HARD DISK**

**#2 BUY A BACK-UP**

**#3 BUY A SURGE PROTECTOR**

## 1 simple way to put it in its place.

It happens all too often. A peripheral here. An enhancement there. The idea was to solve the problem of storing and protecting your data, but pretty soon you've created a new problem. Storing and protecting all the new equipment that stores and protects your data.

So, what to do?

The answer comes from Kamerman Labs: the Masterflight mass storage system.

Instead of the piecemeal approach to upgrading your computer system, Masterflight gives you a single, convenient, compact unit. It sits just 2½" high between your IBM PC and your monitor. And inside is everything you need: a high-performance hard disk system with up to 60 megabytes of storage operating at up to ten times the speed of a floppy, and a 10 to 60 megabyte streaming tape drive that can back up ten megabytes in just 2½ minutes.

You can also add a power and security option to your Masterflight. Handy front panel switches direct power to your computer, monitor, printer, and two other devices. No more calisthenics just to turn on your system. A power lock prevents unwanted access to your data. And special circuitry filters out electrical intruders like spikes, surges, and line noise.

So take back possession of your desktop. Get the Masterflight from Kamerman Labs. And while you're at it, ask about our full-height chassis, removable hard disks, and acceleration boards for the IBM PC, XT, AT, and compatibles. For more information, call toll-free 1-800-522-2237. Ask for Dept. 919. In Oregon and Alaska call 503-626-6877. Ask for Dept. 919. Dealer and OEM inquiries welcome.

*The Comprehensive Guide to IBM Personal Computers and Compatibles*  
September 1985

## 110 From Here to Mainframe (and Back)

To TTY or not to TTY—that's the question for an increasing number of business PC users. This *PC World* primer helps you negotiate the terrain between micros and mainframes—and reveals the terminal inside your PC.

## 126 Copying Software: Who's Right?

Bootlegged software may be reshaping the way programs are priced, distributed, and used. *PC World's* reader survey reveals that unauthorized duplication is widespread but not epidemic and that users have some very surprising attitudes about piracy.

## 160 Reflex: Analysis With Finesse

Analytica's *Reflex* melds data manipulation, quantitative analysis, and graphics capabilities into a slick, accessible package that gives new meaning to the term *data management*.

## ● Getting Started

- 106  **Theory PC, William Ouchi**  
The author of *Theory Z* advances a modest proposal for ending the standoff between computers and telecommunications.
- 110 **From Here to Mainframe (and Back), Janet Goldenberg and Raymond Panko**

## ● Community

- 122  **The PC as Innovator, Edmund G. Brown, Jr.**  
PCs are changing the way we work—but are they changing the way we compete? A political trailblazer foresees the mental retooling of America with the PC.
- 126 **Copying Software: Who's Right?, Darcy DiNucci**
- 142 **Cautious Capital, Jane Ferguson**  
Venture capitalists, the beleaguered benefactors who sponsored the PC boom and then participated in the recent shakeout, are picking new winners with care.

## ● Review

- 156  **The Personal Connection, James Fallows**  
A distinguished journalist contends that the PC's power to unite represents its greatest promise, at work and at home.
- 160 **Reflex: Analysis With Finesse, Stephen A. Blumenthal and Gail Rosen**
- 169 **Ready to Run Accounting, Ralph Soucie**  
An inexpensive template offers general ledger capabilities within the comfortable environs of 1-2-3.
- 171 **Enable: Compact and Capable, Merrily Shinyeda**  
The Software Group's five-function exercise brings near-seamless integration to power users and novices alike.
- 179 **And the Word Is Good, Burton L. Alperson**  
Version 2.0 of *Microsoft Word* aptly defines word processing.

## ● State of the Art

- 188  **Asimov Ponders PCs, Isaac Asimov**  
The noted visionary author takes a down-to-earth look at machine versus human cogitation.
- 192 **Experts on Call, Janet Goldenberg**  
Your PC may be smarter than you think. Discover how expert systems can turn your PC into a desktop consultant.

## ● Hands On

- 202  **A Model for Peaceful Coexistence, Richard L. Nolan**  
An analyst from the world of corporate computing discerns a bright light at the end of the micro-mainframe tunnel.
- 206 **Dress Up Your Documents, Ted Nace**  
Tap the style of the LaserJet printer with *Microsoft Word* or *WordStar*.
- 214 **A New Way to Frame Projects, Arthur English and Richard Katz**  
Use *Framework* to create a project scheduling program.

## Departments

- 11 **David Bunnell**
- 25 **Ken Greenberg**
- 43 **John C. Dvorak**
- 57 **Letters**
- 76 **PC World View, Ken Greenberg**  
Bet you didn't know the PC's 40 years old ...
- 87 **The Help Screen, Karl Koessel**  
Give *WordStar* 43 lines with the Enhanced Graphics Adapter
- 230 **From the Software Shelf, Edited by Robert Luhn**  
Negotiating, PC-style
- 259 **Password: Communicate, Robert Luhn**  
On-line gateway services and query software face off.
- 285 **\*,\*, Edited by Steven Cook**

## PC World Directory

- 314 **A classified guide to products and services**

## Index

- 325 **Advertisers**

# Introducing the

## The best of both worlds.

For owners of IBM Personal Computers, combining personal productivity and business applications is now less of a leap than ever before.

There's a new IBM product that marries the IBM System/36 and the IBM Personal Computer to give you the best of both worlds.

### Meet the newest member of the System/36 Family.

It's called the IBM System/36 PC.

Very small but it opens up new worlds for your personal computer. Very affordable with a price starting at \$5,995, yet capable of running System/36 programs that will help you run your business.

Even if you've never owned a computer before, this can be your first business system, instantly offering the capability of running your business right now and expanding it in the future.

### Multiuser system.

System/36 PC can be a standalone computer for small companies or a departmental system or even part of a distributed network for larger companies, providing multiuser access to data.

The System/36 PC is made up of a 5364 Processor attached to an IBM PC, PC XT or PC AT. And you can connect up to three more of these personal computers. Or you can connect terminals such as System/36 printers or displays.

### Flexibility.

Whether your business has two employees or more than 2,000, the System/36 PC can combine the personal productivity of your PC with the business applications of the System/36 Family.

The System/36 can handle all facets of your business—distribution, sales analysis and general ledger functions. Accounts payable, inventory control and payroll.

# IBM System/36 PC.

And you can get traditional PC functions such as spreadsheets and word processing.

Software for the System/36 has been developed over the years and has proven invaluable in all kinds of businesses of all sizes. And with the thousands of programs written for both IBM PC and System/36, the sky's the limit for business and planning applications.

The System/36 PC even provides you with data security features so that the right data gets into the right hands.

## Small yet powerful.

All of this processing power can sit right on a desk or under it—either horizontally or vertically. It measures a mere 21¼" x 16¾" x 6½"—about the size of a small suitcase.

Yet as small as it is, this little box has multiple processors, with main memory that can be dedicated to running your business functions. In plain English, this means you can get better response time. The System/36 PC comes with a 1.2 MB diskette drive and either 40 or 80 MB disk storage, depending on your information storage needs.

## Easy to use.

The System/36 PC is easy to learn and to use. If you need assistance, it has over 2,800 "help" screens that take you step-by-step through any rough spots. You can merge data you've generated on your PC with information that's on your System/36 PC. And you can share information that is stored in the System/36 PC with other attached IBM Personal Computers or System/36 terminals.

Compatibility is high so that you can keep on using many of the PC peripherals and programs you may already own.

## Easy growth.

What happens when your small office becomes bigger?

That's what the System/36 Family is all about. No matter what size your business, there's a member of the System/36 Family that can help you do whatever you do, better.

As your needs become greater, there's the mid-sized 5362 processor that offers greater performance and can handle up to 22 personal computers or System/36 terminals.

Then there's the original System/36—the 5360 processor—the largest member of the System/36 Family, which can handle up to 36 personal

computers or System/36 terminals.

Any one of these processors can function as the central processor in your office. Each can communicate with PCs or larger systems, giving communication and connectivity new meaning by allowing departments to share data.

So if your dreams are big but your office is small, the new System/36 PC is the perfect step for you to take. You not only get the best of both worlds, you also get IBM product reliability. And authorized IBM on-site service is available anywhere in the U.S.A.

For a free brochure on the IBM System/36 PC or for information on product availability from participating IBM Product Centers, Authorized PC Dealers or Value Added Dealers, call 1 800 IBM-2468, ext. 553, LL. Or call your IBM marketing representative.

# Direct PC to System 34/36/38 Connections Using Standard Twinax Cable

## It's Easy With AST-5251/11™: Fast Hookup, File Transfer and Extra Capabilities

**Standard Twinax Cable Support Makes Installation A Snap.** AST-5251/11 and twinax connection means easy, cost effective direct cable attachment of your PC to your IBM® System 34/36/38—no expensive communications adapter necessary. Just plug our AST-5251/11 emulation board into your PC/AT/XT, portable or compatible and connect the twinax cable. With this complete hardware/software solution that's all it takes to use your PC just like a standard IBM 5251/11 display terminal.

**File Transfer Is Only The Beginning.** Use your PC as always, and emulate a Model 11 terminal—with extra capabilities—to access your powerful host minicomputer. Then transfer files bi-directionally between your host and PC, in a ready-to-use format.

**Use Your Favorite PC Software.** AST's file transfer support not only eliminates the burden and the errors of re-keying, it adds the ability to manipulate

transferred data using your favorite PC software packages, like Lotus 1-2-3™ and WordStar®. And our Hot-Key support lets you conduct concurrent DOS and host sessions, while our applications program interface (API) makes integrating PC and host applications simple.

**Even Greater Efficiency.** For configuration flexibility, AST-5251/11 provides host-addressable 5256 printer support in a background mode, and can effectively utilize low-cost PC-compatible printers.

This complete package—from the leader in PC enhancement products—is available from your neighborhood computer store. So is our AST-5151/12™ for remote connections. See your dealer today, or call our Customer Information Center (714) 863-1333 Ext. 5249 for more information. AST Research, Inc., 2121 Alton Avenue, Irvine, CA 92714 (714) 863-1333 TWX: 753699ASTR UR.

#### KEY FEATURES

- Plugs into PC/XT/AT and compatibles; connects to System 34/36/38 via twinax cable and supports cable thru.
- Emulates 5251-11, 5291, or 5292-1 display terminal.
- Provides host-addressable 5256 printer support (background mode) on PC-attached printer.
- Selectable DMA and I/O interrupt channels.
- Application program interface and bidirectional file transfer included.
- Complete package includes hardware, software, twinax cable assembly, and comprehensive user manuals.
- Supports fixed or hard disk.
- Hot-Key assist for concurrent host and PC sessions.

# Shining Some Light on Software Piracy

PC World proves software publishers can unlock their treasure chests without sacrificing the ship.

Software piracy has been a constant, nagging problem for personal computing.

Like many ailments, piracy has inspired a series of old wives' tales: almost everybody's theories on the causes and cures differ. *PC World* surveyed a sample of its readers in order to cut through the fallacies and find the facts about who actually owns or uses "unauthorized" programs.

Our results are staggering. They clearly indicate that illegal copying and distribution of all categories of popular software is a widespread practice at home and at the office.

Despite this alarming revelation, the results strongly support the contention that unauthorized copies help sell authorized copies. Why? Because people who use pirated software often decide to buy legitimate copies or recommend that their friends or their companies purchase the software.

Thus, John Dvorak's theory that unauthorized copies sell software is no longer just hearsay. Our survey proves it. We now have a basis for truly understanding the problem.

Historically, there have been notorious levels of rancor between zealous publishers guarding their software protectively—and in the process making it awkward to use—and radical users contending that copying software is a right guaranteed in both the Constitution and the Ten Commandments.

These two segments may never see eye to eye. But the rest of us don't have to watch them turn the personal computer business into a Belfast street battle.

The fiercest combatants are motivated mainly by unmitigated, shortsighted selfishness. According to the vast majority of *PC World* readers surveyed, software publishers and users share a mutual interest and are generally in agreement: Authors and publishers need to be paid for their work.

A SLEEK NEW STRATEGY FOR

**T**allgrass ends the hunt for the perfect mass storage system.

Until now, all Personal Computer tape backup systems have seemed unnecessarily cumbersome and complex. Then along came PC/T,<sup>®</sup> from Tallgrass.

PC/T stores and retrieves data on tape in a way that makes all streaming tape systems obsolete. Because it makes tape work like disk. With DOS simplicity. Rapid access to the file you need. And uncompromised data integrity.

The key: PC/T *formats* tape, creating directories, just like with floppies or hard disks. So defective blocks are locked out. And all 60 megabytes of tape are on line, to be accessed, updated or deleted at the stroke of a key. And if recorded data is accidentally damaged, PC/T's error correction capabilities can completely reconstruct it.

PC/T is available in a wide range of Tallgrass systems, offering tape only or tape plus 25 to 80 megabytes of hard disk storage. Just call 1-800-228-DISK for your Tallgrass dealer. And end the hunt for the perfect mass storage system.

*For a framable print of the Acinonyx jubatus Cheetah, send a check for \$3 to: The Tallgrass Collection, Dept. C, 11100 W. 82nd St., Overland Park, KS 66214. Proceeds, plus an additional donation from Tallgrass, will be forwarded to the World Wildlife Fund.*

**NEW!!**

### C86 VERSION 2.3 with Source Level Debugging Support

The C language has rapidly become the development language of choice for applications ranging from Operating Systems to Accounting Packages. WHY? Its structured approach and extreme portability make it perfectly suited to today's fast-paced environment.

Of all of the C Compilers available for PC/MSDOS, more programmers choose COMPUTER INNOVATIONS' C86. WHY? Because it's part of a COMPREHENSIVE family of C products with an unparalleled reputation for performance, reliability, and stability.

#### C86 2.3 C COMPILER

C for PC/MSDOS began with C86 and today it remains perhaps the most solid, stable C Compiler available. Even competitor's ads show C86 as a consistent top level performer in benchmark testing.

Version 2.3 offers a host of new features including source level debugging support and a 40% boost in compilation speed. Call for complete specifications.

**COST: \$395 UPDATE TO 2.3: \$35 w/o/d diskettes NOT COPY PROTECTED  
CALL ABOUT VOLUME DISCOUNTS**

#### LEARN C INTERACTIVELY WITH INTRODUCING C

Intimidated by rumors about the difficulty of learning C? Need to train your staff quickly? INTRODUCING C can help. INTRODUCING C combines a thorough, self-paced manual with a unique C interpreter to provide a fast, efficient method of learning C. Designed for both professional and casual programmers, it provides a comprehensive understanding of important C concepts such as standard K&R syntax and operators, full structures and unions, arrays, pointers, and data types. Requires IBM PC, XT, or AT with one disk drive and 192K bytes of memory.

**COST: \$125 - NOT COPY PROTECTED**

#### CI PROBE SOURCE DEBUGGER

Take advantage of C86 2.3 source level debugging support with CI PROBE. Cut down program development time and save money! CI PROBE is highly economical yet has the features of debuggers costing far more.

**COST: \$225 - NOT COPY PROTECTED**

#### C-TERP C86 COMPATIBLE INTERPRETER

The C-TERP INTERPRETER is a full K&R implementation that allows you to write code and execute it immediately without the compile and link steps. Once you have your program running with C-TERP you can compile the code (without alterations) with C86 for fast, efficient executable files. C-TERP requires 256K, 512K is recommended.

**COST: C86 version - List Price: \$300, Special Computer Innovations Price \$250.  
Combined C86 & Lattice version - List Price: \$400, Special Computer Innovations Price \$350.**

#### Start With Us, Stay With Us

Computer Innovations offers a complete range of products that let you enter the C environment and create applications with the most advanced set of development tools available. Unparalleled tech support assures that you're always at the height of productivity.

To order call: **800-921-0169**

**COMPUTER  
INNOVATIONS, INC.**

980 Shrewsbury Ave., Tinton Falls, NJ 07724 • (201) 542-5920

C-TERP is a trademark of Gimple Software. Prices and specifications subject to change without notice.

Surprisingly, users would even agree to a minimal form of copy protection on purchased software. So the notion that people want to rip off software developers just isn't true.

An international software congress of users, authors, publishers, and other key PC people should be formed to help resolve the piracy problem and to ensure that all sides of the issue are examined.

Such a congress could draft major documents analyzing the issue and could establish standards for protecting users as well as software publishers. Users in turn would encourage publishers to adhere to the copy-protection standards by exerting their purchasing muscle. And following a "Users Code of Ethics," these honest enthusiasts would support publishers' efforts to find and stop the minority of users who *really* steal software.

Were such a congress truly successful, it could transform the environment in which programs are authored, published, and used. Ideally, software would no longer be crippled by cumbersome protection schemes. Adequate methods of program testing would be developed. And buyers would be permitted trial runs before making final purchasing decisions.

# Introducing the Most Powerful Business Software Ever!

FOR YOUR TRS-80 • IBM • APPLE • KAYPRO • COMMODORE 64 • MSDOS OR CP/M COMPUTER\*

## The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

### VERSARECEIVABLES™ \$99.95

VERSARECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSARECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II™ and VERSAINVENTORY™.

### VERSAPAYABLES™ \$99.95

VERSAPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

### VERSAPAYROLL™ \$99.95

VERSAPAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER II™ system.

### VERSAINVENTORY™ \$99.95

VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

### VERSALEDGER II™ \$149.95

VERSALEDGER II™ is a complete accounting system that grows as your business grows. VERSALEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system without any additional software.

- VERSALEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II™ manual will help you become quickly familiar with VERSALEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

### SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module. All CP/M-based Computers must be equipped with Microsoft BASIC (MBASIC or BASIC-80)

# Lots of dollars.

# Lots of sense.

## \$69.95

They've been doing it for years. Selling you accounting software module by module, till before you know it you've paid up to five thousand dollars for a complete system. That's a lot of dollars... which doesn't make good business sense.

Now, there's a better alternative. Dac Easy Accounting. For only \$69.95, Dac Easy is a fully integrated accounting package offering instant access to General Ledger, Accounts Receivable, Accounts Payable, Inventory, Purchase Order, Billing and Forecasting. And Dac Easy has the flexibility to manage either product or service oriented businesses.

It's not just the price that makes Dac Easy better. Only Dac Easy saves three years of history in all files, making automatic forecasting easier and more accurate. Plus, you can generate any of 300 different reports for instant access to the exact information you need.

Dac Easy is menu-driven for ease-of-use, and comes with easy-to-understand documentation inside a handsome slip-case binder. It's also non-copy-protected. Listen to what experts are saying:

*"Dac Easy Accounting is remarkable, amazing, revolutionary, sensational..."*  
Computer Buyer's Guide  
& Handbook, September 1985

Find out for yourself why Dac Easy is the fastest selling accounting package in history. Compare Dac Easy's range of features against systems costing thousands more. You'll see how Dac Easy can save you lots of dollars. Which makes a lot of sense.

#### PARTIAL LIST OF FEATURES

##### General Information

- Menu driven
- Password protection
- File capacity limited only by disk space
- Support contract available

##### General Ledger

- Unlimited multi-level accounts
- Three-year account history for CRT inquiry
- Pencil and pen feature to correct mistakes
- Unique budgeting routine
- CRT transaction inquiry
- Activity report, trial balance, financial statements, unlimited departments and journals

##### Accounts Receivable

- Open invoice or balance forward
- Customized aging report
- Unlimited number of customers
- Flexible mailing labels and directories
- Supports partial payments & finance charges
- Three-year customer history for number of invoices, sales, costs, and profits
- Customized statements
- Cash flow analysis/sales analysis
- Automatic sales forecasting

##### Accounts Payable

- Check printing with multiple invoices and cash available routines
- Aging reports with seven customized columns
- Unlimited number of vendors
- Flexible mailing labels and directories
- Three year vendor history
- Unlimited allocations per invoice

##### Inventory

- Supports average, last purchase, and standard costing methods
- Powerful physical inventory routines
- Accepts any unit of measure
- Three-year product history in units, dollars, cost, and profits
- Automatic forecast of product sales
- Automatic pricing assignments
- Alert and activity reports with 11 sorts
- CRT shows on-hand-on-order/committed/sales/cost/profit/turns/GROI

##### Purchase Order

- Inventory and non-inventory items
- Allows up to 99 lines per P.O.
- Per line discount in %
- P.O. accepts generic discounts/freight/taxes/insurance
- P.O. accepts back orders and returns
- Purchase journal

##### Billing

- Service or Inventory invoicing on plain or preprinted forms with remarks
- Prints sales journal
- Allows return credit memo

##### Forecasting

- Unique program that automatically forecasts using your three-year history:
- Revenue and expense accounts
- Vendor purchases
- Customer sales, cost, and profit
- Inventory item usage
- Forecast by same as last year, or % base from last year, or trend, or least square trend line analysis method

# The power behind the glory.

Primavera Project Planner gives successful project managers the little things they want most out of life...control, control, control. What they like, you'll like...

Our capability for managing projects up to 10,000 activities. Resource leveling and cost management. The ability to compare current schedules to targets and to perform "what-if" analysis. Plus, standard and custom reports to give you the who, what, when, where and why in virtually any format you need.

You can even produce high quality bar charts and network logic diagrams using our optional graphics package, Primavision.

Interested? Contact us for more information or the name of a nearby Primavera dealer. Or buy our full-featured demo (handles 60 activities) for just \$75—and put the power at your fingertips.

**Primavera Project Planner...the most project management you can get from a micro.**

In such an altered, open environment, software sales would increase significantly—encouraging the publication of both more software and cheaper software. Everyone would profit.

I encourage everyone who is concerned about software piracy to read Darcy DiNucci's article, "Copying Software: Who's Right?," in this issue. Review and study the results of the survey. If you think the concept of a software congress has merit, please send me your suggestions on how to forge ahead with this idea. With enough support from users, authors, and publishers, there may be light at the end of the piracy tunnel...

# A \$39 training program can get your \$3900 computer out of the closet

The computer is a wonderful invention. But the truth is that computers are not as easy to use as you've been told. In fact, a recent independent survey found out that 60% of computers in corporate America today see little or no use. ATI thinks its skill-based training programs are the answer. For as little as \$39.95, anyone can learn how to operate a computer in less than two hours—without attending a class or reading a technical manual.

Over 500,000 users have happily achieved computer literacy with ATI. In fact, ATI was voted the Educational Product of 1984 in a highly publicized survey. So, whether it's training for 1-2-3 dBASE III or getting started with your PC, look to ATI.

You can find ATI training programs at your nearby computer store or use the coupon below if your favorite program is out of stock.

Please rush me the following training programs:

## International Connections

With the industry's most popular data communications program, the world is at your command.

An import/export office in New Jersey can instantly check the London market for current dollar exchange rates ... send Hong Kong an updated production schedule ... print-out the week's sales results from the Dallas branch.

There's virtually no limit to how far you can reach with your microcomputer, ordinary telephone lines, and CROSSTALK.

Even if your own business and personal needs are closer to home, you'll appreciate CROSSTALK's compatibility with a wide user base ... smart terminal characteristics ... total modem control ... and the ability to capture data at a high speed for later off-line editing. CROSSTALK has extras you may not find in other programs. Data capture to memory buffer (and on-line display). Protocol error-checking file transfer. Modem/telephone hangup, and display of elapsed time of call. Command file power and flexibility. Remote takeover and operation. And much more.

There is a CROSSTALK version for almost every CP/M, CP/M-86, or IBM DOS based microcomputer system. See your dealer, or write for a brochure.

# SOLVE PROGRAMMING PROBLEMS THE WAY YOU THINK. PURE AND SYMBOL.

## APL★PLUS® PC IS THE ANSWER.

The shortest distance between two points is a straight line. But unfortunately, that's not the case in programming.

Most languages require you to go through an enormous number of steps before an idea becomes reality.

That's why the APL★PLUS PC System is such a dramatic and exciting software tool for serious PC programmers and application developers.

Instead of requiring you to learn—and write—long-winded and complicated programs, APL is based on your instinctive ability to deal in symbols. And once you

begin using APL's quick notations, you'll find it the ideal programming environment for all your application needs.

The incredible shortcuts you get with APL will let you spend less time on drudgery, and more time creating. Intricate calculations and modeling on PC's are a snap.

And only with APL★PLUS PC do you get:

- full-screen editing
- a built-in terminal emulator
- communications
- graphics primitives
- and report formatting.

Plus concise notation for programs like sorting, matrix inversions, string searching,

and more. And the complete package price is just \$595 with major credit cards accepted.

Act now, and we'll send you a free Convincer Kit. Contact your local dealer, or call **800-592-0050** (in Maryland, call **301-984-5123**) to order your system, or for more information about our other APL★PLUS products—from our UNIX™ version to the new streamlined Pocket APL™.

Or write STSC, Inc., 2115 East Jefferson St., Rockville, MD 20852.

You'll see how symbol PLUS★WARE products are to use, the very first time you use them.

## Problem-solving at the speed of thought.™

**STSC**  
A Contel Company

APL★PLUS PC System requires 192K. A soft character set can be used for computers with IBM compatible graphics board. A character generator ROM or software is included for the IBM PC or selected compatibles.

PLUS★WARE and Pocket APL are trademarks of STSC, Inc. APL★PLUS is a registered service mark and trademark of STSC, Inc. UNIX is a trademark of AT&T Bell Laboratories.

# A MICROCOMPUTER USER'S GUIDE TO BUSINESS EXPANSION.

If your business uses microcomputers, computer expansion is a necessary step towards business expansion.

Interface Technologies designs and manufactures the tools of expansion for your microcomputers. High performance, economical products that increase the productivity of your computers, and your company.

## An Expanding Line of Products for IBM and Compatibles

Included in our growing line of microcomputer accessories, are expansion boards for IBM PCs and PC work-alikes. The *AT/Timeless* is a multi-function memory expansion board for the IBM PC/AT. The *Monograph Visionary* permits high resolution graphics output on a monochrome display. The *Colorgraph* is a color graphics card for the IBM PC that features both RGB and Composite

Video Output. The *Chronograph Rampart* is a multi-function expansion board that can use either 64K or 256K chips. The *Datasync* provides a serial port for use with a modem or printer (with an optional real-time clock and battery back-up). Other products include the *Datagraph Modem*, a Hayes compatible 1200/300 baud internal modem, and the *ABC Switch Box*, which permits up to three computers to share one printer or other peripherals, and vice versa.

## A Commitment to Service and Support

Interface Technologies products are backed by a 5-year warranty and the highest level of service and support. And you can count on the constant introduction of innovative new products to meet the expanding needs of business.

Call 416-255-5555 for information.

# Powerful business tools don't have to be complicated.

The manual filing system helped people do incredibly powerful things—like effectively organize their businesses. Yet it wasn't a complicated tool.

PFS:FILE and PFS:REPORT are software programs that are so powerful they can help you run your business even more effectively. Yet they're so uncomplicated, you can learn how to use them easily.

Both programs are designed for people without computer expertise. All instructions are written in plain English so you can be productive right away.

FILE lets you create the filing system that will best fit your particular needs. Unlike other database software, you can design forms any way you want without having to follow a lot of complicated rules.

You can find and print information like mailing labels, client

records, inventory lists or purchase orders. Instantly!

REPORT is the perfect companion to FILE. It lets you quickly create summaries of your FILE data with totals, averages, counts and other calculations. So you can get a quick look at the bottom line.

FILE and REPORT are fully integrated with the PFS Family of Software. So you can easily use information from FILE and REPORT in other PFS programs and get more done in less time. For example, you can produce personalized form letters complete with addressed envelopes with PFS:WRITE.

PFS—it's the powerful software that's simple to learn. It's the power of simplicity.

See your computer dealer for a demonstration and discover how powerful the power of simplicity really is.

**PFS SOFTWARE**  
The Power of Simplicity™

PFS:FILE and PFS:REPORT run on Apple IIc and IIe, Macintosh, IBM, Compaq, Commodore 64, Tandy, Panasonic, Data General, ACT, NEC, TI, Hewlett Packard, Wang and other personal computers.

Ken Greenberg

# The New Status Quo

The small businessman is smart; he realizes there's no free lunch. On the other hand, he knows where to go to get a good inexpensive sandwich. —George Morrow

Once upon a time, when data processing was confined to clinical cubicles ministered by white-coated swamis, computing had little direct connection with boardrooms and business meetings.

Certainly computing has had a home in the Fortune 500 since the days of vacuum tubes, but the art was antiseptic and untouchable, the domain of an elite cadre of skilled linguists fluent in COBOL. That language was, in a way, a tip-off, a harbinger of who among business, science, and education professionals would win the right to direct computing energies.

Personal computers have affirmed that trend toward business applications and extended it. In the past half dozen years, the PC has made the phrase "computing for business" a marvelous redundancy. That new status quo is what this special issue of *PC World* is all about.

Until the PC caught on, a manager in search of increased productivity wasn't likely to depend on an adding machine or any other piece of office equipment. The personal computer revolution

has transformed the business executive's acceptance of what computers spit forth into an excitement about—and participation in—shoving data into them. With stunning rapidity, business discovered that given enough units and the right software, PCs change *processes*, often dramatically.

No longer are managers personally estranged from the tools that for so long held DP departments in thrall. Check any photo in any business publication: The personal computer has become a desktop appliance, a fixture with only its applications and its potential unfixed. The numbers confirm that this approbation is profound and widespread. International Data Corporation, the Boston-based market research firm, projects a workstation for every white collar worker by 1987, with PCs representing a third of that total.

But George Morrow is right—there is no free lunch. PCs don't deliver Valhalla. They doctor work

# INTRODUCING THE PRINTER THAT MAKES THE BEST IMPRESSION ON ANY SYSTEM.

Most printers have been designed to work best with just one computing system.

So if you bought different systems for different reasons, you also ended up buying different printers. And matching each printer to its system.

Now there's the LA210™ Letterprinter, compact and flexible enough to do the job of 2 printers. Or 3. Or 4. Because the LA210 gives you a serial interface to match Digital's own complete line of systems, and an available parallel interface for the IBM personal computer and compatibles. You can even order plug-in cartridges that emulate three of the most popular IBM compatible printers.

Which means, quite simply, you can expand your computing capabilities any way you see fit. For word processing, data processing, bit map or mosaic graphics. For VAX™

PDP-11™ or any other Digital system, as well as the IBM environment, too.

And you don't need to worry about spending a lot of money for a new printer for each system.

## **THE LA210 DELIVERS WHAT YOU NEED WHERE YOU NEED IT.**

The LA210's system inde-

pendence is rivalled only by its general versatility.

For applications with reams of output, like business accounting or complex scientific programming, the LA210's 9x7 dot matrix printhead will print up to 240 characters per second, or a full double-spaced page every 10 seconds.

But when your needs

change, so can the LA210.

Flick a switch and the LA210 shifts to an 18x33 matrix for crisp, near-letter quality copy at up to 40 characters per second.

Or let your host computer change modes for you automatically under program control.

There's more, too. With its standard Courier type face, the LA210 can print 11 languages,

plus Digital's VT100™ line drawing set. And it gives you a choice of more than 35 optional faces and fonts – Courier, Orator, Gothic, APL, and italics as well as special custom fonts – through plug-in cartridges that let you vary your type face even more. Finally, the LA210 lets you print bold or condensed and change faces or fonts on a dynamic character-by-character basis. So your output is truly customized to suit just about any presentation you have in mind.

Plug-in cartridges also allow the LA210 to emulate three of the most popular IBM compatible printers – the IBM Graphics Printer, the Epson MX80™ with

mosaic graphics, and the MX80 with Grafrax™ bit map graphics. So you can produce charts and graphs with all the resolution and professional look of bit map graphics. Yet still retain complete compatibility with software that generates mosaics.

All without a hitch. All without compromising a bit of the power of the software you're using.

**STANDARD EQUIPMENT  
THAT OTHERS CALL  
OPTIONS. AND OPTIONS  
OTHERS CAN'T MATCH.**

It wouldn't make sense for a printer this versatile to lack any of the features you really need.

So standard equipment includes a 2k buffer and adjustable forms tractor with acoustic cover.

Making the LA210 one of the quietest printers in its class as well as one of the fastest.

Add the optional bi-directional tractor, and you can easily handle superscripting and subscripting and full page reverse for multiple column printing.

There's even a cut sheet

feeder to speed up correspondence on your letterhead.

The LA210 also comes with one more feature no other printer can offer. Digital's exceptional reputation. We've set industry standards with products like VAX and PDP-11 systems. We've done the same in terminals and printers with our VT100, LA36, LA120, and others. In fact, with more than 750,000 printers installed worldwide, we're a recognized leader with a proven record of reliability. And we back every printer we sell with one of the most comprehensive service plans in the business.

**ONE SOLUTION FOR AN  
OFFICE FULL OF NEEDS.**

No matter what your office needs may be, Digital has you covered with the new LA210.

You can work with systems within Digital's broad line of personal computers, within any of our larger systems – all the way up to the largest VAXcluster™ systems – or within the IBM PC environment.

You can handle mountains of throughput at draft speed, or print professional looking letters with near-letter quality. You can print bit map or mosaic graphics.

You can even customize documents – word

by word or letter by letter if need be – with a broad range of type faces and special effects.

All with a single printer.

So whether you already have a number of different systems in place and want the economies of a single printer that can handle them all, or you just want the added flexibility for future expansion, no single printer handles all your problems like the LA210 from Digital.

**BEST ENGINEERED  
MEANS ENGINEERED  
TO A PLAN.**

The LA210, like every Digital hardware and software product, is engineered to conform to an overall computing strategy. This means our products are engineered to work together easily and expand economically. Only Digital provides you with a single, integrated computing strategy from desktop to data center.

For a detailed brochure or more information, as well as the name of the Authorized Terminals Distributor or Digital Representative near you, call 1-800-DIGITAL, extension 700. Or write Digital Equipment Corporation, 129 Parker Street, Maynard, MA 01754.

**THE BEST ENGINEERED  
COMPUTERS  
IN THE WORLD.**

**digital™**

flow and alter work habits, sometimes maddeningly. They're not guarantors of an error-free existence; as George has also been heard to admonish, computers sometimes just enable you to make mistakes faster.

That humbling shot of reality aside, PCs also liberate. They foster productivity. They keep costs down. And they nourish the bottom line. Personal computing has become part of the business world's daily diet—the vaunted good, cheap sandwich. Thanks largely to the business community's voracious appetite for new applications, companies large and

small are taking personal computing places few anticipated when all this began less than a decade ago.

When the only computers around were as big as a bus, a manager's intentions were apt to be obscured in translation from business plan to flowchart. Today, in a very real sense, the business community has assumed the role of systems designer. Software developers write code with business users, not just a sliver of silicon, in mind. Hardware companies vault barriers to satisfy the demand for squeezing more from the machine. It's a cycle whose upward spiral Wall Street must envy: As users gain savvy, new product genres

emerge, and the PC itself undergoes redefinition. At the same time, ever-smarter software means that new users—or users new to a given application—can get up and running with unprecedented speed.

That cycle typifies this issue of *PC World*. New categories of business software match more specific, more sophisticated requirements. And the best do so with surprising ease. That applies to a pair of new power tools for the business class, featured in "Review." Both break the mold and do so with few compromises. "Reflex: Analysis With Finesse" evaluates Analytica's *Reflex*, a data analysis tool with the

structure of a data manager, the trappings of a spreadsheet, and the face of a Macintosh. As described in "Enable: Compact and Capable," the five-function integrated program achieves stand-alone power in each of its components—and does so on a refreshingly meager diet of RAM.

This issue also snags a second business software trend of note. Almost imperceptibly, such mainstays of corporate personal computing as 1-2-3 and dBASE have become "environments"—homes to an infinite variety of designer applications that lift them out of

the realm of pure application software. "Ready-to-Run Accounting" assesses one in an expanding medley of templates designed with business productivity in mind. In "Hands On," "A New Way to Frame Projects" continues that theme with an application that'll help you turn *Framework* into a project manager.

As today's personal computer approximates the power of yesterday's mini, the line between micros and mainframes continues to blur. Increasingly, business users are instigating efforts to run mainframe data through PC software. "From Here to Mainframe (and Back)" in "Getting Started" is a primer on what you need to know

before building that bridge to your local repository of corporate data. In "State of the Art," we examine a budding revolution in application programs as personal computer software continues to converge upon the mainframe world. "Experts on Call" looks at knowledge-based systems and explores the ways in which they're extending the reach of both the PC and the expert behind the keyboard.

The fourth major business computing current tackled in this special issue is surely the most delicate. Unauthorized duplication of

# 250,000 customers made us do it. The WYSEpc.

We established a precedent on better than 250,000 desktops with our terminals. So when our customers got ready to include PCs in their plans, they didn't think they should have to settle for less than Wyse style, performance and economy.

We agree. And now you can get the WYSEpc with IBM compatibility in hardware, software and expandability. We've thoroughly tested more than 350 software packages and accessories. It runs even the acid-tests—Lotus 1-2-3 and Flight Simulator—in beautiful Wyse style.

Our price includes dual floppy drives, monochrome 14" tilt/swivel monitor, height-adjustable keyboard, 256K RAM, two serial ports, one parallel port, MS-DOS with GW-BASIC—and more.

There's also an IBM PC/XT compatible model with a 10-Megabyte Winchester disk. A color graphics option is available on either model.

For more information about how much less all this costs from Wyse, call the regional office nearest you.

SOFTWARE SHOULDN'T TIE YOU UP IN KNOTS.

**INTRODUCING ABILITY.™**

**THE BUSINESS SOFTWARE THAT  
WORKS WITH YOU. NOT AGAINST YOU.**

Hard to learn software can tie you to your chair. Great way to spend your evenings?

That's not the way it has to be any more. Now you have the ABILITY™

It's the new business software for people who don't want to marry a computer simply in order to get great results.

ABILITY—spreadsheet, database, word processing, telecommunication, graphs and "Presentation!"; an exclusive new feature to present ideas with new impact.

It's powerful and sophisticated. Sophisticated enough to be easy.

A good example of what easy means is the exclusive ABILITY library. This unique product feature organizes your work to help you achieve what you want.

Not the typical, aimless files in which you hunt for the one you need. Instead, an easy to use arrangement—neatly grouped by the type of work you're doing.

Alphabetical. Truly easy.

With some business software, even adding a simple file is a hassle. A deletion can require awkward commands and irritating changes.

Not with ABILITY.

You want to make a change? No problem. You don't have to worry about remembering juicy phrases like ".xtx", ".ovl", or other popular favorites, like ".exe" and ".bas".

Not when you have the ABILITY. We took the time and effort to shield you from that kind of nonsense.

To us that's the whole point. Software shouldn't make you struggle.

You can learn ABILITY in less than a day. It will make your job easier, faster and even more fun.

To learn more about ABILITY, please check with your local, IBM-authorized dealer, or write us at Xanaro Technologies, Inc., 3100 Mill Street, Suite 219, Reno, Nevada 89502.

(In Canada write to Xanaro at 321 Bloor Street East, Suite 815, Toronto, Ontario M4W 1G9).

	ABILITY	SYMPHONY	FRAMEWORK

Suggested retail price	\$495	\$695	\$695

# NOW YOU HAVE THE ABILITY.

# HAZARDOUS DRIVING.

A disk drive with a dirty head can be a real dead end. Because too much oxide build-up, or even a speck of dust can turn this sensitive component into a diskette-eating monster. Data can be distorted or even lost entirely.

Why not steer clear of it all with Read/Right? Our full selection of head cleaning kits and products starts with our exclusive Heads & Screens™ kits. They're available in all popular sizes (3½, 5¼ and 8"). And they give you more cleaning for your money, because they clean both the heads and the screen for about the same price as kits that clean only heads. Each kit includes a free supply of our unique Kleen & Dry™ Screen Cleaning Pads. You can also choose our economical Floppy Disk Head Cleaning kit for cleaning only the heads. Either way, you won't need a driver's license because everything's so easy to use.

For other areas of the computer, or any other electronic office equipment, we've got a selection of pre-moistened cleaning pads, anti-static products, lint-free wipers,

compressed air dusters, swabs and much more. In fact, it's the broadest line of precision cleaning kits and products around today. Everything to put you on easy street. Send for our free booklet, Read/Right's "The Care And Feeding Of Your Computer And Office Equipment." Read/Right Products from The Texwipe Company, 650 E. Crescent Avenue, Upper Saddle River, NJ 07458 (201) 327-9100.

**READ/RIGHT™**

Ken Greenberg

software poses a thorny and fundamental dilemma for individual users, businesses, and software vendors alike. In the "Community" section, "Copying Software: Who's Right?" examines software piracy in depth, laying out the findings of *PC World's* own reader survey on the prevalence of piracy and user attitudes toward it. This special report also scrutinizes copy-protection schemes, legal ramifications, site licensing, and the ways in which one major corporation copes with the problem.

In this edition we've also assembled an eclectic mix of observers and catalysts of the PC as a business tool. William Ouchi, the author of *Theory Z*, recommends friendly political persuasion to help marry off telecommunications to personal computers; James Fallows, Washington Editor of the *Atlantic*, reflects on the PC's contributions toward founding a global village; Richard Nolan, one of corporate America's preferred data processing consultants, chronicles how and why the MIS community gingerly but inevitably embraced microcomputing; science fiction visionary Isaac Asimov looks ahead at the PC as a vehicle for expert systems and ruminates on the contest between human and synthesized thought; and Edmund G. Brown, Jr., the former California governor, pins

**ACHIEVE THE POWER  
AND SPEED OF TOMORROW'S  
TECHNOLOGY. TODAY.**

**INTRODUCING  
THE EXEC. PARTNER<sup>TM</sup> FROM  
PANASONIC<sup>®</sup>**

The Panasonic Exec. Partner. What makes it an executive? The 7.16 MHz 8086-2 microprocessor for high-speed processing. So you can do more in less time.

What makes it your partner? Like all ambitious achievers the Panasonic Exec. Partner gets along with others. Namely, IBM hardware and software.

You'll also accomplish more with the new high-resolution plasma display. It lasts four times longer, offers clearer definition and is easier to read than an ordinary screen.

The Exec. Partner's built-in dual mode printer will help

you make a good impression. From silent, draft-quality mode to correspondence quality.

The 256K internal memory has built-in expandability to 640K. So the Exec. Partner will run the most sophisticated data base management programs. And its expansion slot allows you to fulfill the needs of specific applications like telecommunications and Local Area Networks.

Tomorrow's technology for today's executives. The new Panasonic Exec. Partner.

**Panasonic  
Industrial Company**

# Two

## Maximizer™. And Maximizer-AT™.

Most companies would be satisfied with successful multi-function boards like these.

No one else's quality is so high. We perform exhaustive tests on everything, not just once but 3 times. We use multi-layer construction for better noise immunity.

The only returns we've been getting are customers coming back for more. And no one else offers so much for so little: **Maximizer** comes with 64K-512K RAM. **Maximizer-AT** comes with 128K to 4MB. Each comes with a printer spooler, and not just a parallel port, but a bidirectional I/O interface.

We don't just give you one RS-232C serial port. You can add a second serial port and even a game control adapter. **Maximizer** features RAM disk software plus clock and calendar, with battery backup. And both boards allow you to disable any unused function with a simple flick of a switch.

With all this, you'd think we'd be happy, but our engineers are still looking for ways to make it better.

For the dealer nearest you, call (408) 943-9480.

At Sigma Designs, we have a simple philosophy: It's our job to be dissatisfied. So you don't have to be.

# Once upon a time, you needed a manual even to type a memo...

**P**ronto frees you from the curse of voluminous, unintelligible software manuals.

Just load the disk into your computer and you're ready to start typing... business and personal letters, memos, notes, outlines, lists... right now.

For just \$69.95, Pronto offers you all the advanced features you find in the big, complicated packages.

- A dynamic, interactive guide that lets you learn about those portions of the program that are useful or interesting to you—at your leisure or as you need them.
- "Windows" and window "zoom". • Print previewing.
- Automatic text and format storing capabilities.
- Formatting capabilities enable you to change margins, line or paragraph justification, line lengths or spacing, et cetera as you're typing.
- "How-to" indexes answer all your questions at the touch of a button.
- But best of all, because it's so advanced (and easy to use!) Pronto will keep up with you as your typing needs become more complex.

Live and work happily ever after. Get Pronto right now! If you're not satisfied with its performance, simply return the disk to us within 30 days for a full refund.

Until it's available in retail stores, Pronto can be purchased through Electronic Software Publishing (ESP). Call (800) 228-1551 today!

the competitive hopes of American business on the technology that produced the PC—and on an economy that optimizes its use.

As Richard Nolan suggests, the advent of the PC has inalterably shifted control of processing power from computer experts to computing professionals. Call them gurus. Or power users. Or just plain businesspeople.

Even as office automation, information centers, and micro-to-mainframe links fray the edges of PC autonomy, my guess is that control over PCs will remain "in the field." The PC revolution cannot be repealed; consider only the speed with which it took off, the palpable productivity gains it engendered, the energy that continues to fuel new applications and new architectures. With emerging technologies and innovative software, the dog is finally wagging the tail: Problem solving is the goal, the PC is the means.

This issue celebrates the PC as a potential boon to every business. Delivering on that promise isn't always easy, but as long as the PC remains *personal*, computing is everybody's business.

Sandwich, anyone? ●

*Ken Greenberg is an Associate  
Editor of PC World.*

# CXI is now compatible with what's-her-name.

That's good to know.

It means the CXI 3278/79 PLUS coaxial connection is now 100 percent compatible with IRMA.<sup>™</sup> So you can add our new hardware to your network and run all the same software she runs. Without changing a thing.

Not your mainframe application software. Not your PC software. Not even old what's-her-name.

So if nothing changes, why go with CXI? Simple.

Our CXI 3278/79 PLUS emulator

gives you more to work with. You get one host session, one PC DOS session and two notepads. All on the same screen at the same time. No toggling back and forth between sessions. And no wasted effort whatsoever.

We're easy to connect, too. Just slip our 5-inch board into any available slot—even a short one—on your IBM<sup>®</sup> PC, XT, AT or compatible. Attach the coaxial cable to a 3274/76 cluster controller. And start sharing information direct with your mainframe.

You should know, too, all our products are now soft-loaded. Not PROM-based like IRMA. So when it comes time to upgrade, you simply insert a new floppy. Instead of new PROMs.

And that goes for our new 3278/79 STANDARD connection as

well. It's feature-for-feature identical to IRMA. Except for one thing.

It costs up to \$300 less.

Interested? For a brochure about these and other CONNECTWARE<sup>™</sup> micro-to-mainframe solutions, call us at 800/221-6402. In California, call 415/424-0700. Or write CXI, Inc., 3606 West Bayshore Road, Palo Alto, CA 94303.

We'll make you forget all about old you-know-who.

We don't have all  
the answers,  
just more of them.

**CXI**

# How we improved Structured Query Language.

Actually, we didn't change a thing.

We just combined it with the best relational database management system.

Introducing INFORMIX®-SQL.

It runs on either UNIX™ or MS™-DOS operating systems. And now with IBM's SQL as part of the program, you can ask more of your database. Using the emerging industry-standard query language.

To make your job easier, INFORMIX-SQL comes with the most complete set of application building tools. Including a full report writer and screen generator. Plus a family of companion products that all work together.

Like our embedded SQLs for C and COBOL. So you can easily link your programs with ours. File-it!™, our easy-to-use file manager. And C-ISAM™, the de facto standard ISAM for UNIX. It's built into all

our products, but you can buy it separately. And when you choose RDS, you'll

be in the company of some other good companies. Computer manufacturers including AT&T, Northern Telecom, Altos and over 60 others.

And major corporations like Anheuser Busch, First National Bank of Chicago and Pacific Bell.

Which makes sense. After all, only RDS offers a family of products that work so well together. As well as with so many industry standards.

So call us for a demo, a manual and a copy of our Independent Software Vendor Catalog. Software vendors be sure to ask about our new "Hooks" software integration program. Our number: 415/424-1300.

Or write RDS, 2471 East Bayshore Road, Palo Alto, CA 94303.

And we'll show you how we took a good idea and made it better.

**RELATIONAL DATABASE SYSTEMS, INC.**

INFORMIX is a registered trademark and RDS, C-ISAM and File-it! are trademarks of Relational Database Systems, Inc. IBM, UNIX and MS are trademarks of International Business Machines Corporation, AT&T Bell Laboratories and Microsoft, respectively. © 1985, Relational Database Systems, Inc.

# MAKE ROOM FOR A NEW MASTER

New **DIAGRAM-MASTER™** helps you visually communicate complex processes and relationships such as: timeschedules, product flow, reporting structures, and much more.

**Organize your organization.**

Watch your organization grow right on the screen as you respond to **DIAGRAM-MASTER's** easy-to-follow prompts. Labels and boxes are sized automatically.

**Make your point on time.**

Display project schedules graphically, and give your audience "the big picture." Choose your time interval, name the activities, and insert up to three different types of bars for each activity.

**Draw your own conclusions.**

Our Drawing Board gives you all the graphics power you need to create unique business diagrams, or to customize your organization and Gantt charts. Create your own Library of shapes, or use ours.

**DIAGRAM-MASTER** joins forces with **CHART-MASTER®** and **SIGN-MASTER™**—the most widely used business graphics software family—to make quality presentations easy to create on any IBM or IBM-compatible personal computer.

# THE AMERICAN BUS NEVER LOOK

## SONY BRINGS THE BRILLIANCE OF TRINITRON® TO COMPUTER MONITORS.

From now on, business people all across America can enjoy all their favorite programs on a Sony Trinitron.

Because Sony proudly unveils the first computer monitors in the world endowed with Trinitron technology. RGB monitors which, in the laudatory words of Computer Buyer's Guide and Handbook, give you "crisp, brilliant, utterly flicker-free images that take the eyestrain and headaches out of both color graphics and text or data processing."

We've achieved this through technological breakthroughs that literally divide the computer-monitor world in half: Sony's, and all the others'.

First, the patented one-gun, one-lens Trinitron system itself, with a picture so vivid, so critically lifelike, it's become a legend.

Typical coarse dot pitch vs. Sony Trinitron super-fine dot pitch.

Second, Sony Trinitron's exclusive Super Fine Pitch™ Aperture Grille. It dramatically increases the number of red, green and blue electrons reaching your screen.

Which dramatically increases the vibrance and brightness of the colors reaching your eyes.

And third, a dot pitch so fine, the horizontal resolution of a Sony is not only the highest in its class, but "close to that of models costing twice as much" (Computer Buyer's Guide and Handbook).

You can enjoy this extraordinary picture quality on screens ranging from 9"—the first ultracompact monitor in the business capable of displaying 2,000 characters of text—to 13"—a model that lets you switch from software to

With a Fine Pitch Aperture Grille, Trinitron monitors give you dramatically brighter colors than the conventional shadow mask.

soaps at will by merging a computer monitor and full-feature TV into a single unit.

They're all compatible\* with the IBM® PC, Portable PC, PC/XT and PC/AT through built-in RGB circuitry. And compatible with most Apple® and other personal computers through optional accessories.

So call Sony for further information at 1-800-222-0878 (In New Jersey, 1-800-222-0879).

Because there's no longer any reason to view your technologically-advanced computer through a technologically-deprived monitor.

## SONY®

### Information Products

registered trademarks, and Super Fine Pitch a compatibility: The microcomputer industry lacks its monitors will be compatible with any combination of non-Sony products you choose to connect to it. While your Sony dealer may be able to help, you must determine for yourself the

# BEFORE AT&T, PERSONAL COMPUTERS PRETTY MUCH KEPT TO THEMSELVES.

There's more to the AT&T PC than a high-performance computer.

There's an ability to connect. To integrate. To network. And, with enhancements, to communicate with other PCs. For more efficient moving and sharing of all kinds of information.

For today's needs there's the AT&T Communications Manager. It organizes data and voice communications. With its built-in modem and software to manage two phone lines, you can transmit data over one phone line while dialing on the other.

As you move towards networking, you'll need STARLAN, our low-cost local area network. You can use existing phone wires to link computers, terminals,

## THE COMPUTERS WITH THE FUTURE BUILT IN

printers, workstations and other devices. So you can share information resources.

By now, you can see how the AT&T computer network develops. Since our computers are always easy to expand and upgrade, they can be part of an entire communications network

—from the AT&T PC to your mainframe.

For more information, call your AT&T Information Systems Account Executive, visit an authorized AT&T dealer, or call 1 800 247-1212.

We'll open your eyes and ears to the remarkable AT&T PC. And we might even leave you speechless.

**AT&T**

The right choice.

John C. Dvorak

# The Last Computer Book

Is the computer book dead? The book publishing and distribution establishment have returned their attention to more traditional fare.

When the first summer fog rolled into San Francisco last May, it brought with it a cultural fog called the American Booksellers Association convention. Prior to the show's arrival, the death knell had been sounded for computer books and bookstores as software distribution channels. Hot products with great expectations, like the *Whole Earth Software Catalog*, failed to recoup their megabuck advances. The New York-based publishing industry had reverted to its old formulas over the past year. Forget computer books, kid. Think romance novels; think calendars glamorizing steroid-shooting, grease-coated, naked young males, photographed after a gentle spray of moisture from a houseplant atomizer. Computer books? Faugh!

Que Publishing, Osborne/McGraw-Hill, Weber, Sybex, and other computer book publishers were at the show in a futile last-ditch attempt to regain the attention of the market. They mostly languished while the crowds lined up for Mr. T. "I pity the fool who writes computer books, grrrrr!"

So what happened to the good old computer book? It's gone forever. The smart money in nonfiction is banking on books about corporations. After watching *In Search of Excellence* sell a few million copies (the book was given no initial chance of success by the New York illuminati), the New Yorkers are now going to do it their way. Their way means another book with John "Megatrends" Naisbitt's name on it. Maybe Jane Fonda can do *The Corporate Workout*.

By this time next year there should be battalions of books about how you or your company can do better simply by reading them. The key to success with this kind of book is to write it for the middle- and lower-level managers who have nothing better to do than read books all day—books that say their bosses are boneheads.

Meanwhile, where were all the electronic publishing divisions created a few years ago when computer books were about to over-

(continues)

One great idea deserves another.

“My idea was to give  
my AT users the performance  
of a minicomputer.”

## Our IDEA Supermax multifunction board lets her do that at microcomputer prices.

Get the performance of a minicomputer for the price of a microcomputer with Supermax,

the latest addition to the IDEAboard line.

The new IDEA Supermax gives users more memory and greater options than ever before. Now they can have an AT board that goes beyond 3MB of RAM. IDEA Supermax lets users go all the way from bare board to 4MB of memory.

And we don't stop there!

Two serial ports and one parallel port are standard with the Supermax. These powerful interfaces make your AT the kingpin of your office computing system.

And IDEA Supermax features outstanding price and performance, too.

At 3MB and 4MB of RAM, you save thousands of dollars and still get three standard I/O ports. That's a four figure cost advantage over the competition.

You'll never lack additional memory for integrated software applications like Symphony™ or Framework™ when you plug in Supermax. In a LAN with the AT acting as a file server, you can partition memory on the Supermax for individual users on

the network. You can even combine the Supermax with our 10MB to 120MB IDEAdisks to build the AT into a desktop supercomputer.

Like every IDEAboard, the Supermax comes with our free library of software, including IDEAmenu, RAMfloppy, Printer Spooler, Diagnostics, Clock Routine, and more.

For your other applications, these IDEAboards offer the same price and performance advantages as the Supermax:

- IDEAmux 384 has 384K RAM, parallel, serial, game ports, and clock/calendar.
- IDEAmimi short I/O card is perfect for the XT, Portable, and PC/3270 short slots. Your choice of two serial ports, parallel port and clock.
- IDEA Minimax has the same short slot size and holds up to 384K RAM.

So when you have a great idea for your IBM AT, look to IDEA to make it a reality.

Call 800-257-5027 for the IDEA dealer nearest you.

# You're in Good Company When You Program in BetterBASIC

All of these companies rely on BetterBASIC to write their software programs. They have found that BetterBASIC combines the features they need from BASIC, Pascal, C and Forth in one familiar environment. Some of these features include the following.

**640K** Now you can use the full memory of your PC to develop large programs.

**STRUCTURED** Create well organized programs using procedures and functions that are easily identified and understood and completely reusable in future programs.

**MODULAR** Use procedures and functions grouped together to form "library modules."

**INTERACTIVE** BetterBASIC acts like an interpreter, responding to the users' commands in an immediate mode. However, each statement is actually compiled as it is entered.

**EXTENSIBLE** Create your own BetterBASIC modules which contain BetterBASIC extensions (ideal for OEMs).

**COMPILED** Each line of the program

is compiled as it is entered into the computer's memory rather than interpreted at runtime. The optional Runtime System generates EXE files.

**BetterBASIC** Runs on IBM PC, IBM PC/XT and compatibles.

**CALL 1-800-225-5800** (In Canada: 416-469-5244) Order BetterBASIC now, or write Summit Software Technology, Inc.™, P.O. Box 99, Babson Park, Wellesley, MA 02157. Prices are listed below.

BetterBASIC: \$199 Runtime System: \$250  
8087 Math Module: \$99

Still not convinced? Order the BetterBASIC sample disk which includes a demo, a tutorial, compatibility issues, 50 lines of BetterBASIC and more. Only \$10.

MasterCard, VISA, P.O. Checks, Money Order, C.O.D. accepted.

BetterBASIC is a registered trademark of Summit Software Technology, Inc.

IBM PC and IBM PC/XT are registered trademarks of International Business Machines Corp. Tandy is a registered trademark of Tandy Corp. Illustrated above are registered trademarks of the following companies: Mobil Oil Corp.; AT&T; General Electric Co.; Westinghouse Electric Corp.; TRW, Inc.

take fiction in sales? Publishing companies that jumped onto the computer-book bandwagon quickly discovered that while typical book salespeople can say things like "Tracy Kidder is a heck of a writer," they stand agape when asked a simple question like "does the book include information about operating systems?" The response turns out to be, "Huh? Operating systems? Is that something doctors do?" Then a fly zooms into their mouth.

So the simple solution is to avoid the problem. Besides, computers generally clash with checked jackets and striped pants, the standard attire of a sales "pro."

The last computer book may well have been Steve Ditlea's *Digital Deli*. The publishing community figures that if publisher Peter Workman (who uses a combination artsy-craftsy/ICBM approach to selling his products) can't make a best-seller out of a computer book, nobody can.

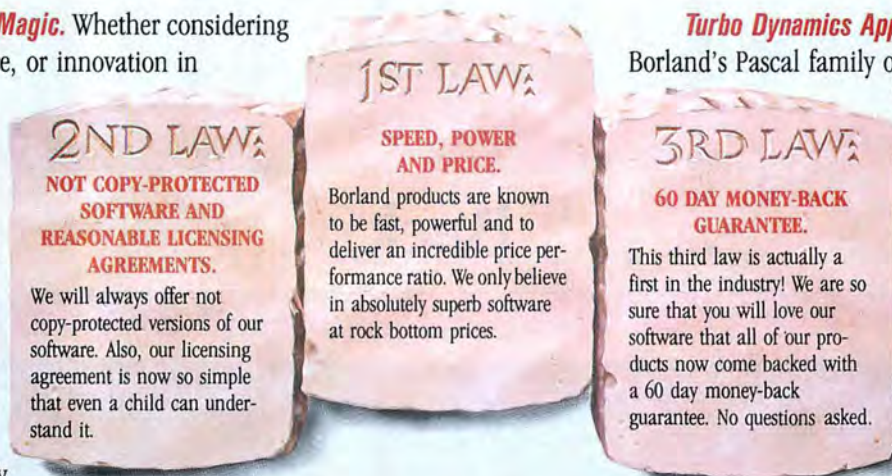

At the show Workman told me his company was "disappointed" with the book's sales. He didn't think any computer book will ever make it. I couldn't help noticing the pair of plastic Hagar-the-Horrible horns that Workman had on his head. Hagar-the-Horrible

(continues)

# Borland Introduces the Laws of *TURBO DYNAMICS*<sup>™</sup>

**Laws That Work Like Magic.** Whether considering technological excellence, or innovation in areas such as pricing, not copy-protection, licensing agreements, site licenses, 60 day money-back guarantee —Borland is clearly recognized as the software industry leader. The following three laws of "*Turbo Dynamics*"<sup>™</sup> exemplify our pledge for excellence.

**Turbo Dynamics Applies to Turbo Pascal.** Borland's Pascal family of products is growing by leaps and bounds. You can now join hundreds of thousands of users and enter the world of Turbo Pascal programming. And remember, all three laws of *Turbo Dynamics* apply to all Borland products.

## **TURBO PASCAL<sup>™</sup> \$69.95**

**The industry standard.** With more than 350,000 users worldwide Turbo Pascal is the industry's de facto standard. Turbo Pascal is praised by more engineers, hobbyists, students and professional programmers than any other development environment in the history of microcomputing. And yet, Turbo Pascal is simple and fun to use. **Free spreadsheet** included on every Turbo disk with ready-to-compile source code. **Options:** We offer the exciting Binary Coded Decimal (BCD) option for your business applications as well as an 8087 option for your number-crunching applications at a very low charge. Please refer to the coupon. **Portability.** Turbo Pascal is available today for most computers running PC-DOS, MS-DOS, CP/M-80 or CP/M-86. **Jeff Duntmann, PC Magazine:** "In its simplicity it achieves an elegance that no other language compiler has ever displayed."

## **TURBO GRAPHIX TOOLBOX<sup>™</sup> \$54.95**

**High resolution monochrome graphics for the IBM PC.** The Turbo Graphix Toolbox will give even a beginning programmer the expert's edge. It's a complete library of Pascal procedures and functions. Tools that will allow you to draw and hatch pie charts, bar charts, circles, rectangles and a full range of geometric shapes. Procedures that will save and restore graphic images to and from disk. And much, much, more. You may incorporate part or all of these tools in your programs and yet we won't charge you any royalties. Best of all, these functions and procedures come complete with commented source code on disk ready to compile.

## **TURBO TUTOR<sup>™</sup> \$34.95**

**From start to finish in 300 pages.** Turbo Tutor is for everyone from novice to expert. Even if you've never programmed before Turbo Tutor will get you started right away. **A must.** You'll find the source code for all the examples in the book on the accompanying disk ready to compile. Turbo Tutor might be the only reference on Pascal and programming you'll ever need.

## **TURBO DATABASE TOOLBOX<sup>™</sup> \$54.95**

**The Turbo Database Toolbox is the perfect complement to Turbo Pascal.** It contains a complete library of Pascal procedures that allows you to sort and search your data and build powerful applications. It's another Borland set of tools that will give the beginning programmer the expert's edge. **Get started right away: free database!** Included on every Toolbox disk is the source code to a working data base which demonstrates how powerful and easy to use our search system, Turbo-Access, really is. Modify it to suit your individual needs or just compile it and run. **Remember, no royalties!**

# Front,

# Back,

No matter how you look at it, Master Piece® from Kensington makes your IBM® PC more accurate, reliable, accessible, and last longer, too.

Master Piece protects your PC from damaging power surges and spikes with the best two-stage surge suppression circuitry available. It protects your PC, software and data from RFI and EMI line noise. It even protects your PC from dangerous static shocks, with static dissipation built right into its silver nameplate.

Master Piece also makes your PC more convenient. It has five outlets so you can plug all your components into one place. It gives you one master switch for your whole system and five individual power switches for your components, all right at your fingertips. And it gives you a hidden swivel that lets you adjust your monitor to the viewing angle most convenient for you.

Master Piece, the most important, most convenient, most elegant accessory ever made for the IBM PC. For a detailed brochure, see your local dealer. Or contact Kensington at 251 Park Avenue South, New York, NY 10010; (212) 475-5200.

\*Modem surge suppression available in Master Piece Plus.

# Borland's SuperKey™ lets one powerful keystroke do the work of hundreds and helps keep your confidential files ... confidential!

**SUPERKEY TURNS 1,000 INTO 1!** Yes, SuperKey can record lengthy keystroke sequences and play them back at the touch of a single key. Instantly. Like Magic. Say, for example, you want to add a column of figures in 1-2-3. Without SuperKey you'd have to type seven keystrokes just to get started. ["shift-@-s-u-m-shift-(")]. With SuperKey you can turn those 7 keystrokes into 1.

**SUPERKEY HELPS PROTECT YOUR CAPITAL INVESTMENT.** SuperKey, at your convenience, will make your screen go blank after a predetermined time of screen/keyboard inactivity. You've paid hard-earned money for your PC. SuperKey will protect your monitor's precious phosphor ... and your investment. This feature alone justifies your SuperKey purchase!

## **SUPERKEY KEEPS YOUR 'CONFIDENTIAL' FILES ... CONFIDENTIAL!**

Time after time you've experienced it: anyone can walk up to your PC, and read your confidential files (tax returns, business plans, customer lists, personal letters ...). With SuperKey you can encrypt any file, even while running another program. As long as you keep the password secret, only YOU can decode your file. SuperKey implements the U.S. government Data Encryption Standard (DES).

## **SUPERKEY PROTECTS YOUR WORK FROM INTRUDERS WHILE YOU TAKE A BREAK.**

Now you can lock your keyboard at any time. Prevent anyone from changing hours of work. Type in your secret password and everything comes back to life ... just as you left it.

### **THE CRITICS' CHOICE**

*"It's unquestionably the best new program I've seen since Borland's SideKick."*

**Stephen Manes, PC Magazine**

*"The encryption features were extremely easy to use because of some elegant incorporation of pull-down menus and clear prompts ..."*

*SuperKey is a large amount of functionality in a small amount of code at a low price."*

Circle 223 on reader service card

cartoon books were the hot product from Workman this season. The company was celebrating by giving away Hagar horns to all comers. More than a few bookstore owners roamed around the show with those idiotic horns on their heads.

Bookstore owners, unfortunately, look to the New York publishers for guidance. Who could know better what's happening in society than guys in tailor-made three-piece suits lounging in fancy 40th-floor offices overlooking 6th Avenue? Of course bookstore owners in middle America should know what's happening in the country, but it seems they've been badgered to death by salespeople. In the process, they've somehow lost the simple power of observation. And it shows.

The small stores just can't figure out why more poetry isn't sold. "People watch too damn much TV," they say. "Have you seen our newest pop-up books, by the way?"

The TV-book schism was mocked outside of Moscone Center by a group of tongue-in-cheek protesters condemning books and praising TV with signs that said "Less reading, more viewing." They called themselves the Couch Potatoes. Undoubtedly they were

actually a group of TV-hating zealots looking for a cheap media plug.

Meanwhile, across from the potatoes was a sincere protest group promoting a book claiming that Acquired Immune Deficiency Syndrome (AIDS) is caused by silver dental fillings. Maybe the dental/AIDS book will fill a cavity in the marketplace. Whatever the case, the computer book fad is over. Things are back to normal in bookland. The best sellers are still gossipy Jackie Collins books and picture books and calendars and gimmick books. The bookstore owners can relax and wipe their brows knowing they won't have to put in any more effort than usual. But maybe it's for the best. Otherwise we might have to live with 1000 books about the history of the Macintosh. And who needs that? ●

Telescan's use of advanced technology makes it one of the fastest, easiest to use, and comprehensive stock analysis systems available

## Telescan helps you invest as well as the Insiders!

### Software and on-line database for stock analysis

#### Telescan covers most every stock you'll want to know

With up to 12 years of information on over 7200 stocks, you'll have all the data you're ever likely to need at your fingertips. Updated every day. Earnings, sales, dividends, cash flow, capital spending, book value in simple graph form. Moving averages, cycles, momentum, on-balance volume, relative strength, trendlines, channels if you are more technically inclined.

#### Indicators you won't find anywhere else

Like our insider tracking service which not only tells you who bought and sold what, within 24 hours of release by the SEC, but how good, or bad, insiders have bought or sold in the past. Like our unique indicator which shows if your stock is over or underpriced by Wall Street.

#### No computer experience necessary

Telescan is simplicity itself. Automatic log-on. Clear instructions are always displayed on the screen. You press one key to get the information you want. Telescan does the arithmetic for you and displays only the buy and sell signals you need.

#### You can afford to use Telescan everyday

High speed and nominal connect charges keep the cost of using Telescan to a minimum. And with the automatic save feature, you can look at more stocks and for much longer than you thought possible.

#### And we keep your Telescan system updated free

Once you subscribe to Telescan, we provide you with free updates, so you get program enhancements, new indicators, etc. as soon as they are available. Got a

question? No problem, just phone our 800 number for a quick answer.

#### 100% money back guarantee

Buy Telescan only if you like it. You must be completely satisfied or we'll refund your money. No questions asked.

## If you buy a TI 855 printer now, you won't have to upgrade to one later.

Don't tack just any printer on your new PC for now, thinking that you'll get what you really need later. Start with the best, a TI 855 or TI 865 printer. That way you can put the money you'd have spent on a needless upgrade on some other smart investment.

You see, our OMNI 800™ Model 855 is actually three printers in one. For word processing, it delivers letter-quality printing that rivals the best daisy wheel printers around. For data processing, it prints at 150 characters per second. And for your graphics, it reproduces screen or OMNI 800 is a trademark of Texas Instruments, Incorporated.

monitor images in the finest detail.

Of course, these advantages are all true of our TI 865 wide-carriage printer, too.

What's more, since our printers are among the easiest to use, you can utilize all the capabilities built into your PC and software right from the start. Instead of sometime later. You even have a choice of over 30 different plug-in type fonts, any three of which can be printed on the same page without ever stopping the printer! Just touch the control panel and it happens. Simple. So every document looks just the way you want it to. Professional.

As for reliability, TI printers are legendary. Just ask any major airline.

So don't downgrade your PC's performance with a printer you'll outgrow in a month. Get yourself a TI 855 or TI 865 printer now. It's easy. Just call 1-800-527-3500, ext. 801, for the TI Dealer near you.

# *THE LEASING EDGE*<sup>SM</sup>

## **Keep your company current, with data communications systems from General Electric.**

### **The Leasing Edge<sup>SM</sup> means no obsolescence.**

When you lease from General Electric, your company can keep pace with the snowballing advances in communications equipment. You can trade up any time for more sophisticated systems or lease different equipment to answer a new need right away. You're spared the capital investment that purchasing entails. What's more, GE gives you the option to purchase any or all of your equipment any time.

### **The Leasing Edge<sup>SM</sup> means GE Service.**

There are 60 General Electric leasing/service centers strategically located from coast to coast. This ensures prompt, on-site installation and maintenance for your equipment, no matter where your branch offices are.

### **The Leasing Edge<sup>SM</sup> means convenience.**

Leasing from GE is just as easy as it is efficient. Simply call toll-free 1-800-GE-RENTS and you'll get a fast response from the GE leasing center nearest you.

Keep your company current with the leasing edge. For your General Electric catalog of up-to-date equipment from leading manufacturers, call 1-800-GE-RENTS (1-800-437-3687).

**The Leasing Edge<sup>SM</sup>**

# Introducing In·a·Vision

## Complex Drawing Made Easy

We created In·a·Vision just for you. The engineer who needs more productive drafting support. The designer who needs versatility for alternate ideas or quick revisions. The architect who needs to manage a variety of working drawings. And the businessman who needs first-class presentation materials as well as detailed flow charts and organization charts.

### Point. Click. Draw.

Now all you do to create complex technical drawings, systems designs, blueprints, diagrams, illustrations, and proposals is point,

click and draw. With In·a·Vision's mouse support, windowing, icons, and pull-down menus, you produce drawings more quickly, accurately and efficiently than ever before.

In·a·Vision's advanced technology includes many features not found on comparable systems costing thousands more. For example,

you can pan around in a user-definable drawing space up to 68" x 68" and zoom in on specific areas for greater detail. Scale, rotate and dimension symbols, fill an area with your choices of predefined colors and patterns, as well as draw lines with multiple styles and widths. Other features include overlays, predefined and user-definable page sizes, rulers, grids, and symbol libraries.

### Multi-tasking in a PC-based CAD system.

In·a·Vision uses multi-tasking to enable you to continue drawing while printing hard copies as well as edit multiple drawings simultaneously.

Unlike more expensive CAD systems, In·a·Vision is easy to install and use. Even the computer novice can be productive immediately. And In·a·Vision is not copy-protected.

### Ten Day Trial Period.

We're so sure In·a·Vision will

make you more productive, we'll give you ten days to prove it to yourself. If In·a·Vision doesn't improve your productivity, return it within ten days for a full refund.

In·a·Vision will make your complex drawing tasks simple and make you more productive. Satisfaction guaranteed. Dial

# Letters

## *Reactions and responses from the PC World community*

### Misunderstood Mainframe

I read your publication regularly and find it to be the best in its field. However, I suggest that you be a little more careful when commenting on areas of computing with which you are apparently unfamiliar.

The editorial response to James W. Franklin's letter ["The First Word Processor," *Letters*, PCW, May 1985] states that "the System/360 was the first programmable processor" and that "the IBM 7094 was one of the PC's ancestors, with tubes and boards that had to be wired by hand." Perhaps you meant to say that the System/360 was the first *micro*-programmed processor—it certainly wasn't the first stored-program computer. Second, while some of the peripheral equipment that supported the 7094 may have contained tubes and hand-wired boards, to so characterize a transistorized, stored-program computer that supported compiler languages such as FORTRAN is clearly a misrepresentation of the power and capabilities of the machine.

James A. Shields  
Columbia, Maryland

*Pardon our wayward trek into mainframe history. You certainly are correct. We intended no affront to the IBM 7094, a venerable representative of programmable second-generation hardware using solid-state components. Readers seeking additional information may want to consult "The Architecture of IBM's Early Computers," in the IBM Journal of Research and Development, Vol. 25, No. 5, September 1981. —Ed.*

### Challenging the Myth

Permit me to add a few details to David McCune's description of Graphic Software Systems' GSS-Drivers as an implementation of the virtual device interface (VDI) ["The Myth of the Virtual Device," PCW, April 1985].

First, the generic labels available to the application programmer are not limited to Display, Printer, and Plotter but also include Camera, Metafile, Joystick, Mouse, Grafin, and Grafout. This choice permits the use of input as well as output devices.

A major advantage of the VDI is the portability of applications that use it. Programs written with the DOS version of GSS-Drivers need only to be recompiled for use under UNIX. No translation or recoding is required.

GSS now has a device driver development package available, and many peripheral manufacturers are producing their own VDI device drivers.

The VDI's device independence is no myth; programmers are benefitting from it right now.

Joseph H. Rawlings, III  
GSS Customer Support  
Engineer  
Wilsonville, Oregon

*The GSS implementation of the VDI works. But while the VDI is a useful programming tool, it isn't always a godsend. Expecting an interface to many devices to be truly virtual is unreasonable.*

*It's true that VDI calls can be used to inquire about the characteristics of a particular device. But a programmer faced with writing handlers for a variety of devices with widely differing graphics capabilities may easily wonder what*

# J A V

A high jumper in mid-air, performing a Fosbury Flop over a bar. The athlete is wearing a red singlet with a white logo and the word "ENULIX" on the back. The background is a warm, orange-brown gradient. The text "J A V" is at the top in large, pink, sans-serif letters, with a horizontal pink line below it. The text "WE'RE REWRITING THE PC RECORD BOOKS" is on the right in bold, black, sans-serif letters.

**WE'RE  
REWRITING  
THE PC  
RECORD BOOKS**

**Breakthroughs in flexibility and performance let you upgrade your PC storage and optimize your total system.**

Introducing Javelin, the first storage subsystem that lets you increase your IBM PC, PC XT, or PC AT capacity to exactly the level you require. No more, no less.

How does Javelin do it? By offering you the widest range of storage capacities available today. 5¼" Winchester disk drive from 36 to 110 MB and ¼" streaming tape backup of 60 MB. A choice of two peripherals — one disk and one tape, or two disks.

Whether you use Javelin as added storage to a stand-alone PC or as a high-capacity, high-performance file server in a network — you only pay for what you really need.

**Keep your options open for the future.**

The SCSI\* technology used in the Javelin offers easy future expansion. This technology also allows for backup and restore without CPU intervention — with special commands included in the controller.

**Javelin's rigorous quality program.**

Javelin's reliability, like that of every Emulex product, is built in and guaranteed. All active components are pre-aged. Subassemblies are cycled environmentally — under power, performing diagnostic tests and the total system is integrally tested.

\*The Small Computer System Interface (SCSI) is an interface standard that specifies the mechanical, electrical and functional requirements for a small computer I/O bus interface and command set for peripheral devices commonly used with small computers.

Javelin features a full range of utilities that allow for flexible expansion with minimal user intervention.

Call or write us for more information, or ask your dealer for a demonstration. Seeing Javelin in action is a breakthrough experience.

**Javelin's unique features include:**

- Easy to install and use
- 100% IBM compatible
- 30ms average access rate
- Compact, desk-top design to complement your IBM PC
- Network ready
- Designed for data intensive applications
- Reliable backup and restore utility
- Ideal data-base management storage/retrieval device
- Backup media interchangeability
- Advanced disk and tape diagnostics

Javelin is a product of Emulex Corporation, an industry leader in the development of high-performance controllers, communications products and packaged subsystems for PC's, micro, mini and super mini-computers.

3545 Harbor Blvd., P.O. Box 6725, Costa Mesa, CA 92626, (714) 662-5600

is "virtual" about the interface. To be sure, using the VDI is easier than writing your own drivers for each device, but it is not the panacea that its name implies. —David F. McCune

### Relating to Six

I found a major technical error in your review of ASAP Systems' *Six* data manager ["Easy to Relate," PCW, April 1985]. The article states that the screen directory defines "a hierarchical relationship between files" and that "data cells can be accessed only by a screen defined at a lower level of the di-

rectory." This is simply not true. A screen's data can be accessed from other screens listed before and after it in the directory.

The review also claims that the "rigid screen hierarchy incorporated in the system makes design changes difficult to implement." Not only is there no screen hierarchy, but *Six* is extremely flexible. The name, length, type, and validation parameters of a data item can be changed at any time. And *Six* automatically transfers data between files during a major design change such as moving a billing address from a customer file to an invoice file. To say that "*Six* favors those who have a well-

planned design and don't anticipate making changes" is clearly false.

When a reviewer's choice is based upon technically unsound reasoning, he or she does a disservice not only to the product developer but to the publication's readership.

Victor N. Gamaly  
ASAP Systems, Inc.  
Soquel, California

*I don't believe I've done a disservice to anyone, least of all the readership of PC World. My reasons for favoring one product over*

## WHERE DID THAT NUMBER COME FROM?

Circle 56 on reader service card

another are based more on accessibility than on technical merits. I still believe Power-base to be much easier to use and more flexible than Six.

For example, it's difficult in Six to change a file structure that involves an index after data has been added. You must duplicate the original screen, save the new screen with changes, and then delete the old screen. That's not very friendly.

As for the technical objection, I stand corrected. It is possible to do forward and backward chaining of indexed elements between screens. This is not controlled via a hier-

archy, but your documentation is unclear on this point. —Manuel Sotomayor

#### Good Enough for Amateurs

Michael Guttman missed the point about Infoscope ["Tunnel Vision," PCW, April 1985]. The program is designed for people who are not expert users and is obviously not meant to compete with the dBASEs of the world.

Infoscope is the first program I've seen that is truly user-friendly, and its manual is written in plain English. The program's limited memory is adequate for the applications it was intended for. In all, for a rank amateur who uses a personal computer for all kinds of

household jobs, Infoscope is excellent.

Conrad Perl  
Springfield, Virginia

Perhaps if the Infoscope manual didn't explicitly say that the program "has been designed to accommodate users with all levels of expertise" (page 2) and that it can be used to "manage almost any collection of data you are likely to have" (page 3), Mr. Perl might have a point. As it is, I don't think you have to be an expert to come up with an application that requires simple arithmetic or the ability to make global changes to a

# The test three out of four

It's simply no contest.

Compare operating sound levels on four of the leading \$500-range printers and one stands clearly below the rest.

The Mannesmann Tally MT85/86.

A printer so perceptibly quieter that once you hear it, you won't hear of anything else.

Which is why we suggest the following:

Go to your Mannesmann Tally dealer for a test listen. And run the MT85 or wide carriage MT86 through its paces.

Hear how quiet it is. See how crisp and clean its draft and NLQ characters are. Watch output zip by at a speedy 180 cps. Or at 45 cps NLQ on one of two resident fonts or one of three additional type style cartridges.

And rest assured. This excep-

*According to tests conducted in the independent laboratories of H.L. Blachford, Inc.\*, the MT85 is significantly quieter than its major competitors.*

\*ISO 7779 test pattern, front bystander position, overall rating, June 1985.

# printers don't want you to hear.

tional printer is fully compatible with Apple® ImageWriter™, IBM® Graphics™ and the Epson® FX series.

So call now for a free do-it-yourself test brochure and the name of the Mannesmann Tally dealer nearest you. And put us to the test.

*Mannesmann Tally MT85*

If any other printer can match the quality, flexibility and durability of the MT85/86, then let them be heard.

The silence is deafening.

data base—neither of which Infoscope supports. If these sorts of limitations don't bother Mr. Perl, fine. However, they certainly bothered me and others to whom I showed the product. —Michael Guttman

## Setting the Record Straight

Your article on multiuser data management software for local area networks ["A Matter of Public Record," PCW, May 1985] confuses some of the features of System Automation Software's PC version of *reQuest* with those of the version we produce for the Convergent Technologies (CT) line of computers marketed by NCR, A.B. Dick, Burroughs, and others.

Both versions of *reQuest* will export data in ASCII, SYLK, and DIF formats; however, the PC version imports only ASCII files into a *reQuest* data base.

PC *reQuest* requires no "command language interface" because it is a menu-driven system that responds to English commands. Finally, *reQuest* accesses data on a

(continues)

# The TeleVideo AT. The Performance AT.

The Performance AT™ is quite an appropriate name for TeleVideo's® new computer. Especially when you measure performance by what's most important—memory, flexibility and speed.

## 30% Faster.

The Performance AT is designed around the Intel 80286 running at 8Mhz—a third faster than the 6Mhz IBM® AT. A standard 640 Kbyte memory and eight expansion slots give you better configuration flexibility. And our AT has an edge with its 20 Mbyte hard disk and Personal Mini network compatibility.

You'll run the popular PC software library, as well

as hundreds of powerful mini computer and multi-user programs. And the TeleVideo AT offers standard graphics capability with remarkably enhanced 640 x 400 display resolution.

## Starts at \$3395.

Innovative design brings you these significant performance advantages at a price that's a good deal less than the IBM AT.

And this could be the least expensive AT-class computer to own. Because the quality of its components promises better reliability and less costly down time.

Should you need it, the Performance AT carries a complete warranty and easy TRW service around the world.

Call toll-free (800) 521-4897. Or, in California, (800) 821-3774. Ask to see the Performance AT. A computer with the power to save you hundreds of dollars.

IBM is a registered trademark of International Business Machines.

# LOTUS PRESENTS A NEW ORC

To help you conduct business more efficiently Lotus® introduced the Symphony™ Style of Management. Symphony software gives you all the tools you need in one package—spreadsheet analysis, word processing, database management, business graphics and communications.

And now Lotus introduces three important improvements in Symphony software:

**New Symphony is easier to learn and use.**

The first time user can now get started in less

than 20 minutes. We've also added new step-by-step instruction manuals and a new tutorial disk to help. And as your abilities increase, Symphony will keep pace.

**New Symphony is more compatible.**

Now PC users can select the Lotus product that's right for them and still work together. Because Symphony data can now be shared with both 1-2-3® and new Jazz.™

**New Symphony can handle more than ever.**

With Symphony, release 1.1, you can write longer documents, build bigger spreadsheets and

NOW THE SYMPHONY STYLE OF  
MANAGEMENT IS AN EVEN MORE EFFECTIVE  
WAY TO CONDUCT BUSINESS.

## DEMONSTRATION FOR SYMPHONY.

databases, and store more information than ever before.

All of this makes Symphony the ultimate management tool for the PC. It allows you to command the endless streams of information that must be analyzed and organized for management decision-making. Plus Symphony has optional Add-In products to meet your needs, like Text Outliner, Spelling

Checker and Symphony Link.™

For your own private performance, visit your authorized Lotus dealer today. If you already own Symphony, call 1-800-TRADE UP, (in Canada 1-800-447-4700) and we'll tell you how to get an upgrade kit.

**Symphony™**  
**Lotus®**

# SYSLOG

## SYSTEM LOG UTILITY

SYSLOG automatically logs all of your computer time. Maintains detailed records of dates, times, user, project, type, and elapsed time. Reporting options are equally detailed by user, project, date, or range. You can even create graphs of usage with Lotus 1-2-3™ and Symphony™ or do some number crunching with dBase™. So unobtrusive, you'll hardly know Syslog is there. Only \$34.95 + Shipping.

Finally! A pop-up calculator for the programmer. In addition to the features of a standard calculator, P-Calc includes many functions just for the programmer. P-Calc features decimal, hexadecimal, octal, and binary radix conversions, logical AND, OR, XOR, One's Complement, Bit Shifts, and more. A wide display lets you handle double words. Makes short work out of tough problems. Even functions like a programmable! A great companion for Pascal, C, and assembly language programmers. Only \$49.95 + Shipping.

## PROGRAMMERS' CALCULATOR™

**APEX RESOURCE, INC.**  
23 Christine Court  
Stormville, NY 12582-9612

## Correction

In "Inside Modems" (PCW, July 1985), the price and phone number listed for the Qubié PC212A/1200 modem were incorrect. The modem's list price is \$279, and the correct phone number for sales information is 805/987-9741. In addition, the article didn't mention the modem's auxiliary serial port connection. We apologize for any inconvenience this error may have caused.

# Meet The Princeton Graphic Systems Family.

**The right monitor at the right price.** Princeton Graphic Systems offers you a complete family of high performance personal computer monitors. Monitors that deliver the compatibility, resolution, and reliability you need for any application and any budget: from word processing to sophisticated business graphics.

**HX-12E.** High resolution RGB monitor 640x350 lines noninterlaced - .28 mm dot pitch -Compatible with IBM Enhanced Graphics Adapter -Nonglare screen -\$785

**HX-12.** High resolution RGB monitor -640 x 200 lines noninterlaced -.31 mm dot pitch tube-Nonglare screen -\$695

**MAX-12.** Amber monochrome -720 x 350 lines -Enhanced to interface with IBM color or monochrome adapter card -Nonglare screen -Can display 16 shades of amber -\$249

**HX-9/9E.** Nine inch, high resolution RGB monitor non-interlaced -.28mm dot pitch tube -9E compatible with IBM Enhanced Graphics Adapter -Nonglare screen -Green/amber switch -Apple/IBM colors - Etched dark glass screen -\$650/\$750 (9E)

**SR-12P.** PGS's top of the line RGB monitor 640x480 lines noninterlaced - .26 mm dot pitch - Analog input allows for the display of 4,096 possible colors -Compatible with IBM Professional Graphics Adapter -Nonglare screen -\$999

**SR-12.** Super-high resolution RGB monitor -640 x 400 lines noninterlaced -.31 mm dot pitch tube - Nonglare screen - Requires interface card -\$799

**Princeton accessory product line.** Undergraduate tilt/swivel monitor base, ColorView card, Green/Amber switch, RGB-80 card and Scan Doubler card.

## Princeton Graphic Systems. The only real choice.

For office or home use, Princeton Graphic Systems has a monitor that's right for you. Inquire at your local computer store about our complete line of high resolution color and monochrome monitors; monitors that live up to the Princeton Graphic Systems' tradition of quality, performance, and value. **Princeton Graphic Systems.** 601 Ewing Street, Bldg. A, Princeton, N.J. 08540. (609) 683-1660 Telex: 821402PGSPRIN (800) 221-1490 Ext. 306.

# THE FAMILY TREE

## JRAM-3

## BRANCHING OUT

Tall Tree Systems presents JRAM-3, the newest member of the JRAM family. JRAM-3 is a fourth generation multifunction memory board and the successor of the highly praised JRAM-2. Designed to meet the latest expanded memory specification standard being implemented by the major spreadsheet vendors, JRAM-3 can access up to eight megabytes of memory for larger, more efficient spreadsheets. JRAM-3 can also be used for DOS memory, electronic disk, print spooler, and program swapping applications!

Determined to maintain our reputation as the price leader in memory expansion, Tall Tree Systems offers JRAM-3 fully populated with two megabytes for an amazing \$699. A JETDRIVE/JSPOOL combo disk is included free of charge. This is the same highly acclaimed JRAM software that has helped make Tall Tree Systems the pioneer in the industry

for bank switched memory and RAM disk technology. The new combo disk features JPAGER which allows any expanded memory application program to utilize multi-megabyte memory.

The family tree wouldn't be complete without an AT version. Look to us in September for the new JRAM AT-3, our third generation 16 bit board providing support for expanded spreadsheets. JRAM AT-3 will be available with two megabytes at \$799.

Don't forget the rest of the JRAM family either. We'll continue producing our popular JRAM-2 and our present JRAM AT board, along with our full range of "slim daughter board" modules. The JRAM-2 and JRAM-3 can co-exist in the same computer, but only the JRAM-3 can be used for expanded memory applications. Use JRAM-2 for DOS, multi-tasking, print spooling, and electronic disk.

To complete the family line-up we feature JDISKETTE. This controller card lets you put 1.2 megabyte diskette drive(s) in your PC or XT. You can read, write, and format the AT high density diskettes and communicate easily between a PC or XT and an AT. You won't lose a single slot, since JDISKETTE replaces your old controller and handles up to four internal floppy drives. Free of charge with JDISKETTE, you will receive the popular JFORMAT software, a DOS compatible device driver that gives your computer the ability to handle expanded disk formats.

Welcome to the family!

*Leaders have always recognized good advice...*

## Bring your company's presentation graphics into the computer age with the best recommendation you can make: Hewlett-Packard.

**H**ewlett-Packard's Graphics Plotters introduce *professional-quality* graphs and charts to the office... quality that, quite frankly, makes the competition look stone-age by comparison.

Combine our brilliant color capability, precise line quality, and proven reliability—and HP becomes the obvious choice for your presentation graphics needs. When it comes to plotters, it's easy to see why HP has become the world's Number One recommendation.

### Compare the quality of an HP Plotter...

Before making *your* graphics plotter recommendation, find out how HP stacks up against the competition. Here's a quick checklist:

Are the lines sharp and bold? Do they meet precisely? Are the diagonal lines smooth? Is the text easy to read?

In a chart, is the area fill uniform? With HP, the answer is always yes, yes, and...yes.

Runs with leading PC's and software packages.

HP Graphics Plotters are compatible with most of the personal computers in your office, including IBM, Compaq, and AT&T—as well as a host of HP computers. You even have a choice of many off-the-shelf software packages, such as Lotus 1-2-3™ and Symphony™,\* that give you “first-day” productivity.

Send today for your **FREE** sample plots—and see exactly what we mean.

Return the coupon—or call us toll-free at (800) FOR-HPPC. We'll send you a detailed brochure, a list of available software, plus sample plots from both an HP Graphics Plotter and a leading printer. Don't resort to stone-age methods before seeing the difference an HP Graphics Plotter can make. Call Hewlett-Packard *today*.

\*1-2-3 and Symphony are trademarks of Lotus Development Corporation.

*Leadership in Business Graphics.  
For Leaders in Business.*

**HEWLETT  
PACKARD**

1101502

**YES,** I'd like to make the most informed business graphics recommendation I can. Please send me your detailed brochure, plus sample plots so I can see exactly what my company's presentations have been missing. I understand I will receive this information without cost or obligation.

# At Applied Computer Products, we've got it all—competitive prices plus support personnel second to none.

Many computer companies think of service and support as "extras"—and jack up their prices accordingly.

At Applied Computer Products, we see things differently.

We offer the PC buyer the most economical computer package available. One that includes incredibly low-priced IBM and compatible hardware, software and peripherals, the assurance of fast, reliable service, knowledgeable answers to technical questions, and expeditious, complete warranty maintenance.

**Consulting** . . . Problem solving is what sets us apart from the other telemarketing and direct retail companies. We don't just take orders. Our dedicated support team is available to answer any of your questions. We apply our knowledge and experience to analyze the special needs of your business in order to recommend a system of hardware and software components best suited to perform the job.

**On-Time Delivery** . . . We fulfill the order accurately and ship on-time! We never make promises we can't keep. So, you'll be given a realistic date for

delivery . . . usually an early date, because we stock a comprehensive inventory.

**Competitive Pricing** . . . Purchasing in large volume gives us an advantage, and we pass that advantage along to our customers. So, you don't have to be concerned about paying for our extraordinary service. It's the thing that gives us a competitive edge, it's our difference.

**Technical Support** . . . Our dedicated support team is available to answer your questions and to provide continuing service after your purchase. Installation, setup, on-site problem solving and exchange or repair service are vital parts of our customer commitment.

**Warranty and Maintenance** . . . We are a factory authorized maintenance center for hundreds of products including IBM. The warranty on any equipment is at least 90 days parts and labor. If you encounter any problems

just call our technical department for a prompt resolution.

These are just a few of the reasons why you should call now and learn what a difference "Applied" makes

when a company stakes its name on it.

## **Our Policy**

- VISA or MC, no surcharge.
- Pre-approved company check, certified check or COD.
- Allow time for company checks to clear.
- Volume purchase agreements available. Government, corporate and institutional PO's accepted.
- Call for shipping charges. No additional charge for split shipments.
- 90-day parts and labor warranties on all equipment; up to 5 years on many products.
- Orders subject to availability. Prices subject to change without notice.
- Returns may be subject to restocking fee.

For competitive prices, prompt service and full support call

# The IBM-PC... **HOT-LINE**

## Two Exceptional Modems For Your IBM-PC

### Internal

#### Our ProModem 1200B Gives You A 3rd Serial Comport Free

**\$399**

When you plug our \$399 1200/300 baud modem card into your IBM or Compatible PC, you suddenly have an additional serial Comport available to use.

This means you don't have to disconnect your printer, plotter or other serial device from Comport 1 or 2 when you use our ProModem 1200B to communicate with the outside world.

And that's just the beginning. The unit has a host of features such as auto answer and auto dial, programmable intelligent dialing, built-in speaker with volume control, help commands, extensive diagnostics, separate voice and data jacks, and Hayes command set compatibility.

If you check prices, you'll find our \$399 ProModem card costs less than modems that don't do nearly as much. ProModem 1200B comes with a sophisticated communications package from Mycroft Labs called "MITE" which provides for transfer of any type of text and binary files, with five error checking protocols including XMODEM. You can't lose. Buy our ProModem 1200B and get a Comport free!

### External

#### Transfer 500 Pages Of Text Without Tying Up Your PC

**\$495**

Priced at just \$495, our Hayes Compatible ProModem 1200 is the best 1200/300 baud standalone modem you can buy. It runs rings around Hayes and the rest.

One reason is our optional Communications Buffer and Alphanumeric Display which make our ProModem 1200 a veritable genius!

Imagine, a printer and electronic message buffer expandable to 512K with two levels of security — password and call back. It buffers up to 500 pages of text so your printer can print while your computer computes.

Even though you're gone, or your computer is busy or turned off, ProModem 1200 will answer the phone, collect messages, send out electronic mail and display time, date and 24 status and help messages.

The communications is in the modem, and electronic mail becomes a background function, where it belongs.

#### Simple To Use

Our \$149 Communications Buffer is a 4 by 6 card that plugs into the ProModem 1200 motherboard. It comes with 2K of CMOS battery-backed memory, expandable to 512K. Part of the memory is used as a dialing directory with the balance reserved for storage. For \$99 more, a front panel Alphanumeric Display can be added.

## The PC's Mid-Life Crisis

*Credit an obscure Renaissance man for one of the most cogent ideas of the immediate postwar era.*

Scholar, professor, inventor of mechanical calculators, progenitor of the Manhattan Project, and science advisor to President Franklin D. Roosevelt—Vannevar Bush was all these. But Bush also had a knack with a crystal ball.

PC World View reports new developments in computer technology, items of interest to computer enthusiasts, and the most significant and enticing insights about industry trends and personalities. We've reserved the "Grapevine" section of this column for industry reports that are still at the speculative stage.  
—Ken Greenberg

Vannevar Bush, spiritual father of the personal computer, tinkers with an invention.

Two generations have passed since Bush detailed what proved to be a most amazing bit of prescience. Vannevar Bush, you see, predicted the personal computer.

This August marks the 40th anniversary of the publication of his article "As We May Think" in the

*Atlantic Monthly*. World War II was almost history. Pioneering work with computers was under way. The few in existence consisted of small empires of vacuum tubes that filled entire rooms. But what Bush had in mind was a miniature machine:

"Consider a future device for individual use, which is a sort of mechanized private file and library. It needs a name, and, to coin one at random, 'memex' will do ...

"It consists of a desk, and while it can presumably be operated from a distance, it is primarily the piece of furniture at which [the individual] works. On the top are slanting translucent screens, on which material can be projected for convenient reading. There is a keyboard, and sets of buttons and levers."

Bush went on to describe the memex—the memory extender—in detail. It could act as a calculator, or it could store millions of pages of text and pictures in structured form—a kind of massive relational data base. Bush foresaw specialized data bases with built-in "trails." Much like today's expert systems, these programs would help chemists synthesize compounds and physicians diagnose illnesses.

# View

News and notes for the computing community

No one ever attempted to build the memex, but Bush's ideas influenced future researchers, including Alan Kay, who led the pioneering research into personal computers at Xerox, and Douglas Englebart, inventor of the mouse. All of which suggests that Vannevar Bush did at least as much inspiring as prognosticating. —*Ted Nace*

## Viennese Valley?

Me-tooism is all too entrenched in Silicon Valley, as slumping earnings and flirtations with bankruptcy painfully demonstrate. Shelves are crowded with too much product, too little differentiation.

But if you're a country whose industry is on the skids and fading fast, you don't merely consider duplicating products—you vow to duplicate an entire industry.

Singapore is passé; Austria has begun proposing to Silicon Valley companies that they give the Old World a spin. Bearing gifts of lucrative subsidies and promising easy access to European markets, an arm of the Austrian government has come knocking on the doors of California's high-tech manufacturers. ICD (Industrial Cooperation and Development) Austria has set up shop in Menlo Park, California, and rolled out a red carpet that extends all the way to Salzburg.

A government-chartered organization created to court and counsel potential business investors, ICD Austria is doing its wooing via MAP, the Manufacture in Austria Program. And according to MAP literature, the advantages awaiting foreign manufacturers in Austria are legion. They include a stable work force with a relative aversion to strikes; salaries in the

electronics industry as much as 40 percent below those of European neighbors; enticingly low tax rates; duty-free export to Europe's 350 million consumers; advanced transportation and telecommunications systems; industrial sites, vacated by Austria's moribund steel industry, now at the ready; and a panoply of financial incentives.

In lieu of candy and valentines, ICD is prepared to ply investors with grants of between 15 and 50 percent of R&D and operational costs (including such bennies as \$5000 cash grants per job created), "generously subsidized" loans, and a percentage of building and equipment leases. Investors can even use some manufacturing sites gratis for up to three years; at that time, they can either continue the lease at commercial rates or buy the facility outright for a depreciated price.

Foreign investment in Austria has risen from \$1.8 billion in 1973 to \$3.3 billion in recent years, thanks in part to dollar transfusions from such American heavyweights as GM and ITT. Can the silicon stalwarts of Santa Clara be far behind? —*Marina Hirsch*

## Heaven Can't Wait

*World View* correspondent David Kaye, a law professor at Arizona State University, was leafing through an assortment of arid professional journals not long ago when he spied a piece from *Probate Notes*.

The article, entitled "How to Computerize Your Probate Practice," divvied up the field into three classes: the ominous Pre-Death Software Programs, the more decisive Post-Death Software Programs, and Kaye's favorite, "an especially intriguing category designated simply as Other Related Software Programs."

You don't suppose these packages support billing by the hour ...

## PC Clones! Remember?

Quick now, what do NCR, Leading Edge, Victor, Sanyo, Zenith, Olivetti, Xerox, Hitachi, and Epson have in common?

If you guessed they're about to gobble each other up T. Boone Pickens-style, thereby inundating the world with junk bonds, nice try. No, it's simply that they all know the meaning of perseverance. Every one is doggedly turning out *new* PC compatibles—not AT look-alikes. Right now. In mid-1985. And just when you thought the PC-clone market went the way of supply-side economics.

The moral is, if you can't be on time, at least make a credible showing. For Zenith and NCR,

sleek is in. Leading Edge is vying for price leadership. Olivetti is selling the AT&T PC 6300 as the real thing, with Xerox cutting in on that dance. In all, it's an appealing group of machines, distinguished by faster processors or lower price tags or extra compartments for storage devices, or, in NCR's case, a detached monitor (finally). Like Victor and Sanyo, all belatedly learned the perils of infidelity to the PC standard, and most are unerring this time out.

But let's be brutally honest here: Few of these machines have any kind of a shot at a share of the PC retail market. The market has congealed around a handful of vendors, none of whom seems likely to stumble fatally. Yet the lateness of the hour aside, this fresh batch of PC compatibles reflects maturing technology and a more sensible approach to doing as IBM does.

Makes you wonder whether a few more players might be alive and kicking had manufacturers not been so hasty to get something, anything, on dealer shelves back in '83.

## Rhyme and Reason

To most people computers and poetry seem to be as improbable a combination as Mister Rogers and Mr. T, but poet Michael Newman specializes in the unlikely.

A protégé of the English poet W. H. Auden, Newman also studied neurophysiology at Columbia Medical School. His restlessness with both mainstream medical research and "normal" poetry sparked the creation of his own lyrical kingdom that straddles the boundary between the two.

Newman staked his claim to immortality with a vast assemblage of poems distinguished by titles like "Steroids: An ode to what just fixed my tendon," but he eventually took on the challenge of designing educational board games. Despite such whimsical names as Cell City and Lymphofuzz, the games were intended to introduce children to formidable topics like endocrinology and virology.

The peripatetic Newman, who now heeds a different muse, has created what he bills as the world's first poetry processor. Using color and sound to indicate meter and rhyme schemes, Newman has transformed the PC into a loom for weaving verse into classical forms—sonnets and sestinas and villanelles—while enabling budding computer poets to keep

track of a poem's myriad elements. Newman's program also boasts a hefty data base of successful poems that permits you to clone Shakespeare or Browning, borrowing a master's structure but substituting your own words.

Dubbing poetry "the ultimate word game" for children and "natural-language programming" for adults, Newman insists that his package—which awaits full-scale commercial development—will be every bit as popular in the home as in the classroom. He cites the success of music composition programs as justification for his conviction that fitting poetry to an interactive medium will breathe new life into hitherto dormant lyrical forms.

Drawing on physiological research, Newman notes that "the musical intonation of speech—prosody—causes blood to flow to right-brain cell circuits, engendering images. It also sends reward chemicals to the brain. Poetry is as marketable as a drug but delivers the virtues of prayer."

Besides which, he adds, it's fun—"the only game worth playing besides basketball." —*Ted Nace*

Michael Newman, peripatetic purveyor of poetry processing

## Big Blue's News

\*\*\*\*\*

### *The Good, the VAD, and the Ugly*

To whom does a real estate contractor turn when setting up a PC-based project management system? How does a budget-conscious hospital go about automating its manual medical records system? And what oracle can dispense wisdom to the CPA who must take the PC plunge to stay competitive?

Until recently, the only source and solace for specialized business

(continues)

## Big Blue's News

(continued)

applications was the retail computer store, which supplied the PCs, sometimes the right but often the wrong software, and seldom any training. Sad to say, most retail outlets lack the patience, inclination, and technical wherewithal to help a business get started with PCs.

Enter the IBM Value-Added Dealer (VAD). IBM-approved VADs not only deliver and set up PCs, they often provide specially crafted software, peripherals, technical support, and training. While a VAD won't necessarily supply what was once referred to as a "turnkey" system, these dealers promise the next best thing. VADs offer hardware and software combinations that range from a few thousand dollars to more than \$100,000.

The ranks of PC VADs—already 600 strong—are swelling as IBM certifies more and more of them. The benefits of a VAD network are obvious: IBM penetrates vertical markets (particularly in such areas as medicine, real estate, accounting, and law) via merchandisers steeped in these customers' special needs. A VAD, in the wry words of one dealer, can "leverage the credibility of its software" with the imprimatur of IBM's logo—and have a more or less guaranteed supply of machines. For the user, it means attentive hand-holding and a system cut to fit.

The lure of IBM's pinstripe coattails is apparently irresistible to companies large and small. "People stock XTs like legal pads—they're a commodity item," says Lisa Stockberger, marketing director for Voicetek, a VAD that sells voice messaging systems with the XT and the AT. Adds Voicetek treasurer Scott Wolf, "In the corporate world IBM is a known quantity, so selling our product is that much easier. And IBM gives VADs a substantial leg up on dealers when it comes to getting machines."

For those desperately seeking systems like the AT, a VAD can be an alternative when retail shelves are bare. But even VADs are occasionally left in the cold—and the chill varies proportionately with the size of the VAD and its dependence on IBM.

Software Shop Systems, which bundles its *Software Shop Construction System* accounting program with the AT, generates nearly 50 percent of its business from VAD sales. When AT production ground to a near-halt in January, the company was forced to buy machines on the gray market—from retail stores and discount outlets—to keep its doors open as customer demand for the AT snowballed.

Buying a so-called gray-market machine—one that has passed from hand to hand before reaching its final home—is perilous for customer and VAD alike, however. It isn't covered by IBM warranty. VADs playing the gray-market game also forgo the standard 33 percent equipment discount, clearing 8 percent at best.

Of course, the heavy hitters in the PC VAD world assert that IBM doesn't play favorites when it comes to hardware supplies. One of IBM's largest VADs, Technical Marketing Services (TMS) of Nashville, Tennessee, hawks software and the PC family to every business niche from churches to CPAs. Richard Hagemeyer, a director at TMS, pointedly notes that VADs do not have priority over retail dealers—but quickly admits that his company has never had much trouble getting PCs.

Whatever the perils, VADs continue to hitch their wagons and profits to IBM. Although enthusiasm runs high, VADs are cautious about becoming too dependent on IBM. While the Big Blue logo lends a VAD a certain cachet, most are making deals with competing manufacturers—as insurance for a case of the blues.

# Pascal Unlimited.

Once you've gotten some experience under your belt, you'll find that even with a very decent program like Turbo Pascal®, you start scraping the ceiling of its abilities. You need a Pascal that's conditioned for the serious developer.

## New Microsoft® Pascal.

A totally comprehensive and complete package, it lets you tackle large projects by giving you the utilities, features, and support libraries that professionals expect.

Unlike Turbo, Microsoft Pascal offers separate compilation. So you can create your own module to use and re-use in your Microsoft language programs.

In addition to full XENIX® compatibility, our compiler also supports the new Microsoft and IBM® Networks.

If you've already invested in Turbo Pascal, we'll make it worth your while to move up. We're offering a rebate of \$40 when you upgrade to Microsoft Pascal.

# You need a dot matrix and a daisy wheel printer!

## You get both in the *Twinriter 5*

Your office needs demand the capability of both a dot matrix and a daisy wheel printer! Now you can have the ultimate flexibility in printers. The ease and speed of dot matrix and the letter quality of a daisy wheel has now been combined in Brother's new **Twinriter 5**. You'll find two heads are better than one!

This two-in-one printer gives you both daisy wheel and dot matrix functions at the touch of a fingertip. Add to this, Brother versatility, and you have the first truly all purpose printer. There are over twenty different type-faces in easy-to-change cassette daisy wheels. Plus cassette ribbons that slip in and out avoiding inky finger problems while giving you the choice of printing in four colors.

Then there's the question of compatibility. Once again you don't have to decide. **Twinriter 5** interfaces with almost every computer on the market. In the printer's command mode, you can select both word processing and data processing. This

assures proper operation under various software—word processing, graphics, spreadsheet and integrated packages.

**Twinriter 5** is the best of both worlds. High resolution graphics in four selectable densities and letter quality text in the same document. Bit image printing in the graphics mode. A full complement of print format and word processing functions that can be controlled by ESC sequence. And hardware options for paper feeding attachments.

**Twinriter 5** comes to you with Brother's reputation for reliability. It's engineered to last

with exhaustive quality control standards applied at every stage of manufacture from design to production. That's reliability you can count on.

When you need letter quality and dot matrix capabilities, Brother **Twinriter 5** is the logical solution to your printing needs.

**Twinriter 5. The two and only.**

# Compare the best known project management systems.

Harvard Total Project Manager

**\$495**

Microsoft Project

**\$250**

Project Manager Workbench

**\$1,150**

# You'll find Workbench is by far the cheapest.

It's reasonable to assume that any micro system with "project management" in its name can do the same kind of job for you—right?

*Wrong.* A number of well-known systems really can't do the job at all. They're inflexible. Tedious to use. Unable to cope with real-world problems. In fact, they do little more than play back the data you put in.

Among the leaders, only Workbench integrates Gantt charts, dependency networks and resource spreadsheets to give you every tool you need to plan and control your project.

**Only Workbench** gives you simultaneous control over a large number of interdependent projects. No wonder it's the choice of so many Fortune 500 corporations.

**Only Workbench** summarizes fixed and variable costs at all levels, even across multiple projects—and keeps revising them as you change the project conditions.

**Only Workbench** alerts you to staff overload, and automatically reschedules your project to remove it.

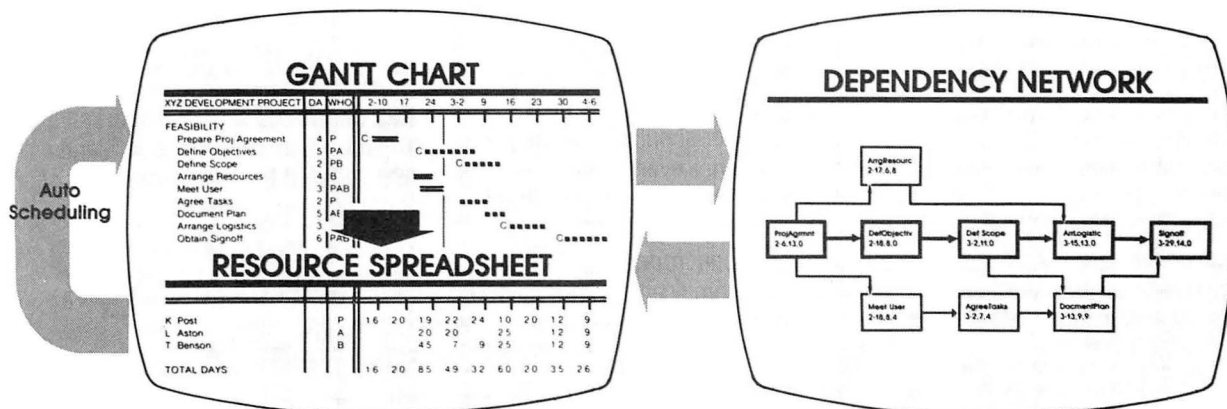

**Only Workbench** gives you "what-if?" capability—with response time so fast, you can consider many changes in your project schedule and compare their effects in seconds.

**Only Workbench** offers the ease of a "menu" mode for the new user, and the power of an "expert" mode that allows the experienced user to execute commands with single keystrokes.

**Only Workbench** maintains a full-time hotline to answer your questions—not with some half-trained customer service person, but an experienced consultant at the other end.

Hundreds of managers who were lured by the low cost of other systems have junked them in favor of Workbench. Because the low-priced systems couldn't help them. And Workbench does.

Once in a while, you really do get what you pay for.

Call or write for a free demo diskette!

*"Without question [NFL Challenge] is the finest computer game I've ever seen—but then I like football."*  
John C. Dvorak San Francisco Examiner

# Put the NFL at your fingertips.

Hands-on pro football excitement is as close as your keyboard with **NFL Challenge** from Xor. This is the officially licensed NFL action computer game with offensive plays and defensive sets based on the ones in NFL playbooks, plus complete updatable rosters for all 28 NFL teams. All impressively packaged.

Every game can be the Super Bowl when you take the field with Xor **NFL Challenge** software. Feel the pressure as you choose starting lineups, drive down-field against the clock, and go head-to-

head, down-by-down against the league's most innovative offenses and formidable defenses. It's the most intense computer simulation of the pro football experience ever devised.

Xor's **NFL Challenge** requires IBM® PC or PC/XT with DOS 2.0, 256K bytes of memory, monochrome monitor with IBM® monochrome card or RGB color monitor with IBM® color graphics adapter. Also runs on the IBM® PC/AT.

With **NFL Challenge** from Xor, you have 50-yard line seats for every game!

## Ordering Information

**NFL Challenge** will be in short supply. To kick off your NFL season, send us \$99.95, or if you're in a hurry-up offense, order by major credit card:

# The Help Screen

*PC World offers answers and advice at every level*

This month we look at Hewlett-Packard's top-of-the-line plotter and laser printer, transfer Apple II data to the PC, and create a 43-line version of WordStar for use with the Enhanced IBM Graphics Adapter.

Karl Koessel

## *The Plotter Thickens—Unattended*

*Q. My company graphs management production data with 1-2-3. We use an Okidata 93, but we would like to get a plotter to enhance the output. Our problem lies in the number of graphs we produce. Of the various plotters on the market, we have yet to find one that automatically advances to the next preselected graph. Our discussions with plotter manufacturers have led us to conclude the trouble is the software. Is there software (or hardware) available that will produce selected graphs when left unattended?*

Dave Nichols

Glen Burnie, Maryland

A. The solution to your problem encompasses both software and hardware. You need software that, unattended, can plot selected graphs consecutively—and you need a plotter that can eject a finished plot and automatically reload paper. Hewlett-Packard's 7550 is an 8-pen plotter with a built-in, 150-sheet paper bin (which can use either 8½- by 11- or 11- by 17-inch paper). Because 1-2-3 requires that you interact with each plot, you'll need a different graphics package in order to use the HP plotter's auto-loading capability. Both *Graphwriter*, from Graphic Communication, and *KeyChart Presentation Graphics Software System*, from SoftKey Software Products, enable you to select several graphs (including those imported from 1-2-3) and generate each graph consecutively (and in any quantity) without further effort on your part.

## *Controlling the LaserJet*

*Q. My firm recently purchased the Hewlett-Packard LaserJet Printer, and we're extremely impressed with its range of features. Accessing those features, however, isn't easy; doing so with BASIC is feasible, but that's a pretty clumsy approach. Do you know of any utility programs that convert LaserJet escape codes into DOS commands and assign each one to a function key?*

Wing Lee

Tacoma, Washington

A. First, check out Ted Nace's article in the "Hands On" section of this issue ("Dress Up Your Documents"). Nace's tutorial explains how you can use the HP LaserJet with *Microsoft Word* and *WordStar*. Independent of an application program, you can assign LaserJet escape codes to DOS function keys using the technique described in "Key Reassignments With DEBUG," \*, \*, PCW, Vol. 2, No. 13. You might want to ask your local HP authorized dealer or sales office for a copy of the "HP LaserJet Printer Third Party Software List." It's a useful compendium of programs, written by independent software vendors, that support the LaserJet.

## *Picking Text Files From an Apple*

*Q. As a former owner of an Apple IIe, I've naturally created a large number of data files with that machine. I recently purchased an XT and want to transfer these same data files to its hard disk. Are you aware of any hardware I can install in my XT that will en-*

I'm  
IBM  
Compatible

# Two-for-one special.

Tired of the perplexing decision about which desk-top computer to buy?

We don't blame you. Many people are familiar with the sophistication, power and advanced technology of the Macintosh. Others admire the IBM PC and its library of almost 10,000 software programs.

So which computer should you buy?

Well, now MacCharlie from Dayna Communications gives you an easy answer. Because with MacCharlie, your Macintosh becomes compatible with IBM PC software—and you benefit from the best of both worlds.

MacCharlie actually enhances IBM PC software. Your Macintosh

menu bar and window sizing are still active with the mouse. So now you have use of options like the clipboard, calculator and notepad with IBM PC software.

And through MacCharlie, you can link Macintosh to IBM serial networks and mainframes. Data files are also transferable from Macintosh to IBM and vice versa. Even if you have already taken the plunge into the IBM PC world, you now have the means to advance to Macintosh and still keep your software library intact.

So have your Macintosh and IBM PC software too, with MacCharlie, and enjoy the best of both worlds.

## MacCharlie<sup>TM</sup>

## Why people choose an IBM PC in the first place is why people want IBM service...in the first place.

After all, who knows your IBM Personal Computer better than we do?

That's why we offer an IBM maintenance agreement for every member of the Personal Computer family. It's just another example of blue chip service from IBM.

An IBM maintenance agreement for your PC components comes with the choice of service plan that's best for you—at the price that's best for you.

Many customers enjoy the convenience and low cost of our carry-in service. That's where we exchange a PC display, for example, at any of our Service/Exchange Centers.

And for those customers who prefer it, we offer IBM on-site service, where a service representative comes when you call.

No matter which you choose for your PC, an IBM maintenance agreement offers you fast, effective service.

Quality. Speed. Commitment. That's why an IBM maintenance agreement means blue chip service. To find out more about the specific service offerings available for your PC, call 1 800 IBM-2468, Ext. 553 and ask for PC Maintenance.

Blue chip service from **IBM**

able it to read my Apple floppy disks and transfer that data to the 10MB hard disk?

If such an arrangement isn't possible, how might I go about transferring data directly from an Apple to the PC? (For the time being, I have access to a colleague's Apple II.) Exactly what equipment do I need to carry out such a transfer? I wish to transfer directly—without telephone lines and a modem—because the telephone service in this part of the world isn't terribly reliable.

S. P. Crow

Bombay, India

A. The PC's floppy disk controller can be programmed to read most non-DOS formats. It cannot, however, read Apple DOS or ProDOS formats.

Apple Turnover, from Vertex Systems, enables you to read, write, and format Apple DOS disks. (Vertex Systems intends to support ProDOS eventually.) The package consists of a disk containing the program to manipulate Apple DOS disks; a board, which plugs into a PC expansion slot; and a cable, with which you connect the IBM disk controller to the Apple Turnover board. The floppy drive cable currently connected to your IBM disk controller is then connected to the Apple Turnover board.

(continues)

## Internal 20 Meg \$599 External 20 Meg \$749

The affordable PC20 hard disk system is one of the most IBM compatible setups around—you'll be able to boot directly from the quiet, 3-1/2 in. drive. This highly reliable and rugged drive uses plated media. Our free software lets you get the most out of your hard disk—1dir organizes directories with a visual shell that speeds operation and frees you from the intricacies of DOS commands. And our exclusive 5-1/4 in. controller fits into a short slot—perfect for computers like the Tandy 1000, Panasonic Sr. Partner, and IBM Portable PC. PC20 comes complete with a low power drive, controller, bezels, cables and illustrated instruction manual.

Circle 430 on reader service card

## HR31 200 RGB Color (.31mm) Monitor \$399

Assembling your dream machine? Start with a high resolution (.31mm dot pitch—28% finer than IBM's) RGB monitor at a price hundreds less than Princeton's. A black matrix picture tube (large 14 in. diagonal) provides for brilliant colors and reduces screen glare. HR31 200 plugs into an IBM color/graphics adapter (640 x 200) card. And you'll pay no extra for our tilt and swivel base.

## You know that choosing the right software is serious business. So does WATCOM.

So before you make any decisions about your software needs, talk to WATCOM—the people major software users around the world have trusted for years.

WATCOM has the products you need to get the job done right. Proven performers like WATFOR\*, WATFIV\*, WATBOL\*, and SCRIPT. Plus new leaders in software for PC workstations and micro-to-mainframe communications. Networks, language interpreters and compilers. Text preparation and data management. All WATCOM products are human engineered to provide the optimum in people efficiency and productivity. And they're designed to run compatibly on IBM mainframes and PC's, Digital main-

frames and micros, and Commodore micros.

Whatever you need is backed up by WATCOM's innovative maintenance and support services. You'll be kept up to date with the latest in product enhancements and information. And our publications and seminars will help you get the most out of your software investment. WATCOM. Quality products. Professional service. And a reputation built on more than 150,000 licensed mainframe and micro software programs throughout the world. So talk to us before you decide. After all, choosing the right software is serious business. For you. And for WATCOM.

### Make the Right Choice: WATFOR-77 — PC and 370

Optimizing programmer productivity makes WATFOR-77 the right choice.

WATFOR-77 significantly reduces the time required for program development by compiling and executing the program directly in the computer memory in one step. Together with excellent debugging and error diagnostics, WATFOR-77 optimizes programmer efficiency and overall productivity.

WATFOR-77 is the newest member of the WATFOR family of debugging FORTRAN compilers and is ideal in business, educational, and scientific applica-

tions. Supporting the full FORTRAN 77 language, WATFOR-77 is now available for the IBM PC\* DOS and 370 VM/SP CMS\*.

Make the right choice. Call or write WATCOM today and we'll tell you all about WATFOR-77 or any of WATCOM's other people-efficient products.

**WATCOM**

There's also another, cheaper method. If your colleague's Apple and your XT have serial ports, and you and your colleague have communications software, you can obtain or make a null modem cable to link the serial ports and transfer data from one computer directly to the other. This method, however, entails the headache of dealing with wiring requirements, various cable connectors, and two communications packages.

#### *Compressed WordStar and the EGA*

*Q. How did you generate a 43-line WordStar display with the IBM Enhanced Graphics Adapter and Enhanced Color Display, as shown in Screen 1 of "Clearly Resolved," PCW, June 1985?*

*Dana Cline  
Denver, Colorado*

A. To patch WordStar so it will display 42 screen lines above the function key assignments line, place a copy of DEBUG (which resides on the DOS Supplemental Programs disk) in drive A: and a copy of WordStar (WS.COM, WSOVLY1.OVR, and WSMMSG5.OVR) in drive B:. Type **DEBUG B:WS.COM <Enter>**. At the hyphen prompt, type **E 248 <Enter>**. A string of hexadecimal numbers ending in ':0248' will appear, followed by a 2-digit hexadecimal number and a period. The 2-digit number—18 (24 decimal), if this value has not been modified previously—is the number of

## BT60 Streamer \$895 The Stack \$999

Don't suffer the loss of losing data. **BT60 Streamer** uses a half-height streaming cartridge tape unit that runs on a 5-1/4 in. controller card. Menu-driven software makes it easy of use. Copies up to 60 Megs on one tape at an amazing 5 Megs per minute! Recommended for systems with at least 130 watt power supplies. **The Stack** includes our **PC20** internal hard disk system and the **BT/SP10** tape backup system. **BT/SP10** plugs into the floppy controller card--no extra slot needed--and is accessed like a floppy. It uses spools of tape (\$12.95 each or 6 for \$59.95) that hold up to 10 Megs each. Software provided allows you to back up the **PC20**.

Circle 29 on reader service card

## HR 134 (Amber) \$149 HR 39 (Green) \$139

Looking for an exceptional value on a high resolution monochrome TTL monitor? Our models offer super crisp text and graphics capabilities (720 x 348 resolution) and plug into an IBM monochrome (or compatible graphics) adapter card. Both the **HR 134** and **HR 39** have 12 in. diagonal screens, IBM-matched color styling and include a tilt and swivel base.

# Let David Rose tell you about our powerful new ProKey4.0.

David Rose, inventor of ProKey.

**Spend 2 minutes learning how to add a powerhouse of function to your keyboard with a terrific new version of ProKey!**

"Suddenly others have discovered what RoseSoft has known since we invented the ProKey concept. If your keyboard could work a whole lot harder, your life would be a whole lot easier.

The original idea behind ProKey was a program that would let you store strings of keystrokes you could recall at a touch. Now there's ProKey 4.0 and it's better than ever."

## **ProKey 4.0 keyword macros unsnarl PC use.**

"If you're a serious PC user, you probably use a variety of software programs. Spreadsheet. Word processing. Database. Communications. Plus the special-function programs you use to run your business or department.

And all these programs have different complicated commands that are tedious to type and easily forgotten. How much easier life would be if all you needed to operate your program was a small vocabulary of sensible words.

Want to log onto Dow Jones with your communications package to check on how your IBM stock is doing? Just type the keyword you previously selected for this function, "IBM". Need to print a profit and loss statement? Typing "p&l" is all it takes.

Behind the scenes, ProKey 4.0 checks its memory for the string of commands required to carry out the task and executes them automatically. Forgotten what functions you have available? Just call up the built-in menu that describes them in plain English.

Need to add a function? Enter the commands. Enter a description. Store them both away without leaving the program you're working with.

Built-in editing, English language menus, multi-character macro names and the ability to instantly change sets of functions. These are just four of the exciting new features that make ProKey 4.0 the most powerful macro processor you can buy."

## **ProKey 4.0 lets you customize your keyboard.**

"Only ProKey has the unique Layout program that lets you redesign your keyboard to correct design flaws the manufacturers built in. You can change the location of any key, create a DVORAK layout, or make a duplicate set of arrow keys away from the keypad."

## **ProKey Is the Industry Standard.**

"ProKey has all the features you need to make your life a whole lot easier. And RoseSoft has three years experience supporting customers who use macros. Including over 80% of the Fortune 100.

Don't be misled by the recent claims of ProKey imitators; they're comparing themselves against old versions of ProKey.

The choice is simple. Do you want an unknown, untested product in its first generation, or ProKey 4.0's power and features? The difference in price will hardly pay for dinner. The difference in performance is like night and day."

ProKey 4.0 runs on IBM and other compatible MS-DOS computers, and works with 99% of the software they use. \$130 suggested retail price at software dealers everywhere. Or call RoseSoft. (206) 524-2350.

4710 University Way N.E.  
Seattle, WA 98105  
(206) 524-2350

Circle 162 on reader service card

screen lines that *WordStar* uses above the function key assignments line. Type **2A**, which is 42 in decimal, and press **<Enter>**. Then type **W** **<Enter>** to write the change to disk and **Q** **<Enter>** to quit **DEBUG**. Finally, to avoid confusing this altered version with your regular *WordStar*, rename this program with the command **REN B:WS.COM B:WS43.COM** **<Enter>**.

Now that you have a 43-line *WordStar*, you need a way to switch the Enhanced Graphics Adapter (EGA) into its 43-line text mode and back into its 25-line text mode. Type **DEBUG** **<Enter>**. At the hyphen prompt, type **A** **<Enter>**. This invokes **DEBUG**'s assembler so you can create a small .COM file that will change the EGA's screen mode. (If you've never done any assembly language programming, don't fret—it's a snap with **DEBUG**.) Now type the following assembly language instructions, pressing **<Enter>** after each line:

```
MOV AX,2
INT 10
MOV AX,1112
MOV BL,0
MOV DL,2B
INT 10
MOV AX,40
MOV ES,AX
MOV SI,87
```

## AT Enhancement Kit (ATK-1) \$1595

Our AT enhancement kit is the best way to turn your Basic AT into an enhanced version--and then some! By adding the Basic Time **AT4X4Plus** with 512K of memory to your system, you'll have 640K of contiguous memory with 128K above 1 Megabyte (double split memory addressing) for use with **VDISK**. **AT4X4Plus** comes standard with a serial and parallel port. Up to 4 Megabytes of memory, three more serial ports and a game port are optional. The **44 Meg** (as opposed to a 20 Meg) hard disk is a high-speed voice-coil-driven model with a 30 ms. average access time.

Circle 36 on reader service card

## BT6Plus 64K \$179 BT6Plus 384K \$279

Simply, the best deal on a PC multifunction board--bar none. Basic Time's six function board, the **BT6Plus**, includes memory sockets for adding 64K to 384K, parallel printer port, asynchronous (RS-232C) serial communications port, battery-powered clock/calendar and electronic disk emulation & print spooling software. Optional game port. Comes complete with an easy-to-understand installation instructions/user's manual.

## YOUR DAYS OF BUYING GRAPHICS TERMINALS ARE OVER!

Now there are two ways to use your PC to access popular mainframe graphics products like SAS/GRAPH\*, TELLAGRAPH\*, RS/1\*, DISSPLA\*, and PLOT-10\*. Joining our popular **SmarTerm 125** DEC\* VT125 ReGIS graphics emulator, our **NEW SmarTerm 4014** product gives you full Tektronix\* 4010/4014 plus DEC VT102 emulation. View the entire graphics image on the PC screen, or use the powerful instant ZOOM feature to magnify a selected portion of the

screen image to full Tektronix 1024 x 780 resolution.

Using Picture Playback, pictures drawn by the host can be saved, sent to other users, examined in detail using ZOOM mode, and printed or plotted offline. Like all SmarTerm emulators, SmarTerm 4014 includes powerful text and binary file transfer facilities, PDIP\* and XMODEM protocol support, and TTY mode to link you to popular time sharing services.

By the way, if you only need text terminal emulation, be sure to ask about our SmarTerm 220, SmarTerm 100, and SmarTerm 400 products.

Join the more than 25,000 "FIRST CLASS" people who use SmarTerm. Try it for 30 days with full refund privileges.

# Enhanced Keyboard ff5151 \$159

An affordable, productive solution to your non-standard keyboard. ff5151 uses solid-state capacitive key switches--giving you tactile feedback through your fingers. Avoid Num Lock confusion with our separate cursor control and numeric keypads and LED indicators on the Lock keys. We've returned keys to their standard setup including an extra wide Control key adjacent to the **A** for Wordstar users. Other features include an extra Control key in the function key row, 3-position height adjustment and sleek color matched styling. Plugs into IBM PC, PC/XT and Compaq Deskpro.

# Helps simple tension.

We can't do anything about mergers. Takeovers. Or elevators that stick.

But we can do something about the nail-biting suspense of faulty floppy disks:

Make a diskette that's certified 100% error-free and guaranteed for life. Which we conservatively estimate to be 200 years at the rate of one read/write pass on

every track, every hour of every day.

A little overkill, but nowadays, you can't be too careful.

That's why every 3M diskette must live up to 327 of the most

---

# relieve nervous

demanding standards ever devised. Standards that even reject a floppy if the label's a little crooked.

Which means when a floppy leaves here,

**3M**  
diskettes

we know it won't flop.  
So you can find relief from nervous tension due to faulty floppies.

One less thing to worry about.™

---

Circle 310 on reader service card

# CopyWrite

## BACKS UP IBM PC SOFTWARE

Hundreds of the most popular copy-protected programs are copied readily. CopyWrite needs no complicated parameters. It needs an IBM Personal Computer, or an XT or an AT, 128k bytes of memory, and one diskette drive. CopyWrite will run faster with more memory or another drive.

CopyWrite is revised monthly to keep up with the latest in copy-protection. You may get a new edition at any time for a \$15 trade in fee.

CopyWrite makes back up copies to protect you against accidental loss of your software. It is not for producing copies for sale or trade, or for any other use that deprives the author of payment for his work.

To order CopyWrite, send a check for \$50 U.S., or call us with your credit card. We will ship the software within a day.

**Quaid Software Limited**

45 Charles Street East  
Third Floor  
Toronto, Ontario M4Y 1S2  
(416) 961-8243

Ask about ZeroDisk to run copy-protected software from a hard disk without floppies.

```
A 105 < Enter >
MOV AX,1122 < Enter >
MOV BL,0 < Enter >
MOV DL,19 < Enter >
< Ctrl > - < Break >
A 117 < Enter >
AND BYTE PTR [SI],FE < Enter >
MOV AX,100 < Enter >
MOV CX,B0C < Enter >
INT 10 < Enter >
RET < Enter >
< Ctrl > - < Break >
R CX < Enter >
23 < Enter >
N 25.COM < Enter >
```

If you have an IBM Monochrome Monitor attached to your EGA, type **E 101** < Enter > **2** < Enter > . For either monitor, finish by typing **W** < Enter > **Q** < Enter > .

You now have two .COM files: 43.COM and 25.COM. 25.COM does not restore the cursor on the Enhanced Color Display, nor does it restore the 9-by-14 character set on the Monochrome Monitor, and so must be followed by the command **MODE 80** < Enter > . To simplify the use of your 43-line WordStar, create the following batch file, called W43.BAT:

```
43
WS43
25
MODE 80
```

Finally, copy MODE.COM from your DOS disk onto this disk. To use your 43-line WordStar, type **W43** < Enter > . When you exit WordStar, the Enhanced Color Display or Monochrome Monitor will return to its 25-line text mode.

# BRAVO!

## For Value Line's New Investment Software.

"VALUE/SCREEN is a fast fundamental analysis screening package that can save you hundreds of hours in screening and analysis time . . . It is a powerful and flexible program. . ."  
*PC Magazine (July 10, 1984)*

"I recommend this program to . . . anyone . . . who wants the ability to sift easily and rapidly through large amounts of monthly stock market statistical data."  
*Financial and Investment Software Review (January/February 1984)*

" . . . saves me 2 days work per week."  
*Business Consultant, McAllen, Texas*

" . . . it makes perfect sense that Value Line should have sought to boil down its database into a package that could run on a personal computer. This is just the kind of information that makes VALUE/SCREEN particularly valuable. . ."  
*Wall Street Computer Review (August/September 1984)*

"It is so user-friendly, a complete idiot could operate it. It is almost impossible to make an error."  
*Money Manager, Carlisle, Mass.*

" . . . I found the program interesting and useful. . ."  
*Computerized Investing (April, May 1984)*

"With VALUE/SCREEN and my computer I can do months of tedious evaluations in a couple of hours a month. Instead of following only 20 or 30 stocks, I can follow over 1,000 in a moment's notice."  
*IBM Advanced Customer Service Representative, San Antonio, Texas*

 *and smaller.*

The new Okidata Microline 192 does everything the bigger, bulkier printers do. And more. But in a much smaller space.

It's easier to operate, too. With push-button menu select programming, so you never have to touch a DIP switch to set fonts, line widths, underlines and such.

It's compatible with your computer. Just plug it in and put it to work, without changing control codes. And, it's compatible with you. Long-life cartridge ribbons pop in and out without so much as smudging a finger.

Super-quiet operation and super-fast bidirectional throughput make the new Microline 192 one handy printer to own. All this, plus our full one-year warranty (try to find that on most printers), makes it the only one you should own.

The new Okidata 192 and the wide-column 193. Simply stated . . . better.

# Theory PC

*William G. Ouchi*

A leading business analyst suggests grass-roots action is essential if the PC is to become an indispensable management tool.

**T**he personal computer is not yet a universal appliance. Although the PC has gained wide acceptance—in California, for example, one in nine households has one—the industry's once-frantic growth rate has calmed of late. Explanations for the current hiatus abound, but the primary reason may well be the difficulty of using a PC as a communications device. If it doesn't afford effortless and inexpensive access to on-line services and data bases, videotex, and other PCs, some have suggested that a computer isn't much more than a costly typewriter or calculator—hardly tomorrow's miracle worker.

The difficulty of telecommunications via PC is part of a vexing cycle: Consumers will not buy PCs in massive numbers unless thousands of diverse services are available, but service providers will not introduce new home banking, news, or electronic mail services for the mass market until millions of PCs are sitting next to the toasters and the TVs.

When the nascent PC industry confronted a similar chicken-and-egg problem at its outset, a lively, competitive market provided the

solution. The marketplace encouraged development of both hardware and software standards; consequently, consumers could buy what they needed at an affordable price. Why hasn't the marketplace provided a similar solution for telecommunications? More to the point, will it do so, given a tad more time?

Because the communications industry itself is, in several key respects, a natural monopoly rather than a "perfect" market (although this, too, may change with new technology), the telecommunications problem resists a market solution. A market solution assumes a rough equality among providers and a similar equality among consumers; members of each group must have unrestricted access to the others. But in the telephone network business, which forms the heart of the PC user's communications system, real efficiency for all users exists only if a single provider dominates each locality. (For long distance services, the economies of scale are more limited, enabling several long distance carriers to compete effectively with one another.)

Without government regulation of natural monopolies, the consumer is at the monopolists' mercy. For this reason the FCC and other federal agencies regulate most aspects of local telephone service, and each state public utilities commission sets the rates that those companies ("network carriers") may charge their customers.

Network carriers are restricted primarily in the range of software services they're authorized to offer. At present, the Bell operating companies are prohibited from providing all but a very narrow range of technical services. We're

still some distance from being able to plug a PC into a phone jack and seamlessly reconcile analog and digital information. Anyone who has a PC at home or in a small business knows that direct communication with another personal computer simply can't happen without additional cost (read: modem) and bother (read: communications software).

Local phone companies are not permitted to receive unaltered output from an IBM PC and deliver it in usable form to Apple, Wang, or

Hewlett-Packard machines, or even to another IBM PC. They *are* permitted to perform the protocol conversion that a modem-equipped PC needs to talk to a mainframe—a translational trick that lets you tap into The Source and CompuServe. Unregulated value-added network carriers, such as Tymnet, can also provide this service.

In fact, such value-added networks are allowed to provide any sort of service we might want, but they can't economically run wires into our homes and businesses (and thereby impinge on the phone company's natural monopoly). Our current problem is that the people who *can* efficiently offer universal network service to homes and offices aren't allowed to provide PC services, and the people permitted to supply those services cannot realistically deliver them to small users. How, you might ask, did we get ourselves into this fix?

The answer, curiously, was the desire to protect the consumer's interests. When AT&T was parceled out two years ago, the company's regulators and competitors

feared that if Bell operating units were permitted to sell PC services to consumers, they would crush competition, offer fewer services at higher rates, and generally leave consumers worse off. For this reason, the local regulated carriers, both Bell and non-Bell, were prohibited from offering such services. At the time, computer manufacturers endorsed this decision.

Today, however, the situation has changed dramatically. Many hardware manufacturers, on-line service providers, and consumers large and small feel that the PC's usefulness has been artificially limited by the restrictions imposed on local telephone companies. Few feel that telephone companies should be completely deregulated. The regional phone companies are eminently capable of delivering carefully delineated PC services to consumers who otherwise could not afford the modems, boards, and communications software required for one PC to communicate with another. If local phone companies were allowed to connect one PC user to another and to provide inexpensive, easy connections to independent vendor services, the PC's full potential would be a *fait accompli*. Indeed, it's likely that all segments of the electronics industry would expand rapidly as consumers availed themselves of a wide range of new services.

The day will come when you'll be able to plug a PC directly into a telephone outlet and send a message to Oxnard or Oshkosh or to

your Uncle Walter's personal computer (whatever the make) in Walla Walla—and, unlike today, do so without fretting about the hardware and software that make it possible. How soon? Perhaps sooner than you think.

Like any democracy, our government responds swiftly when a consensus forms. The interests of consumers often differ from those of producers. But when consumers' and producers' interests converge, government policy change can be accomplished quickly. The consumer's role is to let both producers and government officials know that change is essential.

In this case, it appears that the interests of consumers and producers just may converge. Both sides want the small business computer to be more useful for telecommunications, and both will benefit directly if the personal computer becomes a universal appliance. Many segments of the computing and telecommunications industries are seeking areas of telecommunications policy consensus to present to the government. Projects underway at universities, within industry trade associations, and inside government agencies seek consensus to redefine the role of the local telephone company—a role that will, in the end, benefit the consumer.

Standard protocols in telecommunications are bound to take

root as they did with software operating systems. Just as software standards were decided in the marketplace, so should telecommunications standards be decided by the votes consumers cast with their dollars.

On questions of public policy, however, consumers cannot vote with their pocketbooks. Public policy on the proper role of the network carriers will be decided by government officials. If home and business users of personal computers let their elected representatives know that they want a flexible, easy-to-use telecommunications system—and if the producers agree that this development will provoke rapid expansion of the industry—then the change will come, and come quickly. ●

# Compare the Hercules<sup>™</sup> Color Card to IBM's.

Five reasons why the Hercules Color Card is better.

**IBM Color Adapter \$244**

**Hercules Color Card \$245**

- |                  |  |   |
|------------------|--|---|
| 1. Compatibility | Runs hundreds of graphics programs.              | Runs the same hundreds of graphics programs. "The Hercules Color Card is so nearly identical to the IBM Color/ Graphics Card that it's almost uncanny." PC Mag. |
| 2. Printer port. | None.  | Standard. Our parallel port allows you to hook up to any IBM compatible printer.  |
| 3. Size.         | 13.25 inches. Limited to long slots.             | 5.25 inches. Fits in a long or short slot in a PC, XT, AT or <i>Portable</i> .  |
| 4. Flexibility.  | Can't always work with a Hercules Graphics Card. | Always works with a Hercules Graphics Card by means of a software switch.   |
| 5. Warranty.     | 90 days.   | Two years.  |

Any one of these five features is enough reason to buy a Hercules Color Card. But perhaps the most convincing reason of all is just how easy the Hercules Color Card is to use: "Right out of the box, the Hercules Color Card goes into an empty expansion slot, ready for you to plug in. . . and go to work—no jumpers, no software. For most applications, it's just that easy." PC Magazine.

Call 1-800-532-0600 Ext. 432 for the name of the Hercules dealer nearest you and we'll rush you our free info kit.

**Hercules.**  
We're strong on graphics.

# From Here to Mainframe (and Back)

Business computing increasingly depends on a fluid interchange of data among computers, whatever their size. Here's a primer that traces the path from PC to mainframe, with stops at points in between.

*Janet Goldenberg and Raymond Panko*

||||| Once they were as haughtily independent as rival marching bands, each following their own drummer and blaring their own tunes. But more and more, PCs and mainframes are playing in the same ensemble. Inspiring this new movement is the recognition that each computer fills a niche the other can't: Nimble and inexpensive PCs can process data without hefty timesharing costs and long delays, while mainframes can apply gargantuan processing power to huge centralized data bases.

Those who've tried to unite these contrapuntal talents have faced significant problems. From a technical standpoint, micros and mainframes represent two ends of a hardware-software spectrum that must be adjusted for scale. Although random access to corporate data might seem desirable for improving productivity, that very accessibility terrifies some DP managers because of its potential threat to security. For users, entering mainframe territory has its own perils, such as strange operating systems and unfriendly software. But this much is indisputable: By their very presence in the mainframe world, PCs are transforming the tasks to which corporate data is applied—and that change is beginning to pay off for everyone.

As personal computers gain in power and pervasiveness, their ability to talk to mainframes becomes more routine. Estimates from International Data Corporation (IDC), a market research firm, reveal 190,000 micro-to-mainframe links currently in place, nearly double the total of a year ago. IDC projects 260,000 installations by the end of 1986.

The reason is simple: PCs are now almost cost-competitive with many of the dedicated mainframe terminals they can mimic—but the PC delivers far greater versatility (what data processing buffs like to call off-line processing capability). And new hardware and software is making it easier than ever to unite the two worlds.

### ■ Why Link Up?

PC users currently have several powerful incentives for tapping into mainframes. First, they can download data from corporate or commercial data bases, such as The Source, or upload files to a central data cache or an electronic-mail depot. Second, their PCs can act as kite strings to powerful software that runs on the mainframe—thus gaining access, on a time-sharing basis, to such products as NOMAD and Focus or to mainframe application software, particularly statistical analysis packages and transaction processing systems. Third, the mainframe can act as a server for PC networks that is more efficient than PC-based local area networks (LANs); by using existing connections to the corporate mainframe, PCs can not only share data but access sophisticated peripheral equipment such as high-speed printers and large-

capacity disk drives. This capability is particularly handy for DP shops because the PC can store data otherwise bound for often backlogged mainframe disk drives.

Office automation represents a fourth, much-heralded application. Serving as workstations that are fully integrated into a corporate voice-data network, PCs can take advantage of systems that provide electronic mail, calendar management, and other complex sharing of local and centralized computing resources.

Of these inducements, the most compelling is generally the need for significant data transfers: Retrieving information from a mainframe, then handing that data off to the PC for further analysis; and feeding PC-based data to the mainframe for additional massaging.

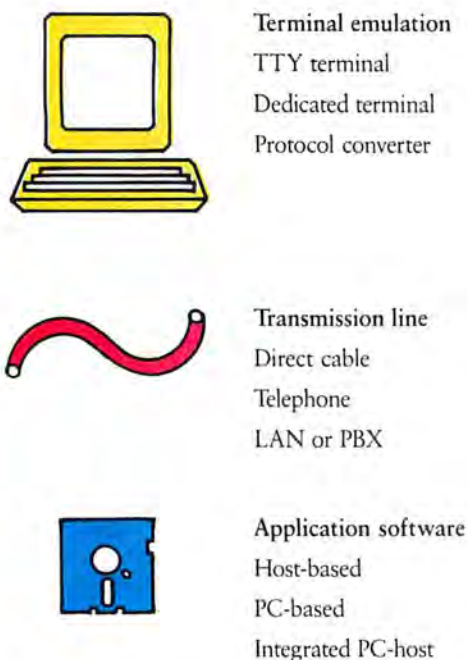

### ■ Terminal Variety

In the meantime, establishing basic micro-mainframe links remains a first, halting step for many firms. Joining a PC to a mainframe requires three ingredients: a transmission line between the PC and the main, or host, computer; application software, which usually resides on the host but may be on the PC or on both; and hardware and software capable of turning the PC into a terminal and of understanding a host's transmission (see Figure 1).

This last element lies at the heart of the connection between micros and mainframes and is divided into two components: terminal emulation—the PC's ability to masquerade as one of the terminals that normally serve the host, and protocol conversion—the capacity to translate between the telecommunications protocol of the host and that of the PC. A PC in this guise can be wired directly to a host computer network, or it can be connected remotely—usually over telephone lines, but sometimes by radio or satellite. Terminal emulation is becoming increasingly popular; roughly 200 programs currently crowd the market.

If you are linking your PC to a larger computer, the host will likely require that your PC emulate one of two broad classes of terminals: TTY or dedicated (host-specific).

**Figure 1: Road map for the PC-host link**

The venerable TTY terminal, the earliest and most generic approach, is still both the most popular and the cheapest. TTY is, simply put, the lowest-common-denominator solution, but it remains the only inexpensive way to communicate with an IBM mainframe. A “dumb” terminal in that it lacks intrinsic processing power, the TTY uses a time-honored set of protocols, or electronic standards, to communicate with the host computer: It sends and receives data asynchronously (one character at a time), it uses the ASCII (American Standard Code for Information Interchange) character code, and it employs the RS-232C interface to connect with the outside world. Like a teletype (from which it derives its name), a TTY terminal is line, rather than full-screen, oriented.

Because this set of standards has been around for so long, many if not most mainframes can work with TTYs—and you can access the host through a conventional 300- or 1200-bps modem. But not all mainframes jibe with TTYs—and even if a link can be established, the old-fashioned TTY terminal may not be able to use some of its host’s more modern, full-screen software. In addition, the TTY “standard” fails to stipulate all facets of protocol, such as

whether the connection is to be full- or half-duplex, the rate at which data flows, and how each device tells the other to pause if one transmits data too quickly. With TTY emulation, spelling out the details is up to you (see the sidebar “Rules of the Game”).

And if your PC lacks an RS-232C serial interface board, you’ll need to spend about \$80 for one, along with software to do the actual TTY emulation. Such communications packages range in price from \$35 to \$350; *PC-Talk III*, *Crosstalk XVI*, and *Smartcom II*, for example, all support TTY emulation.

### **Dedicated Workers**

Dedicated terminals, by contrast, are tailored to work with a specific model or group of host computers. IBM’s mainframe family, for example, uses the 3270 line of terminals; smaller IBM business computers use the 5250 series. Each performs perfectly with its respective host because it speaks the host’s language: It communicates asynchronously or synchronously as the host’s protocol demands, matches the host’s data transmission speed, and works with all of the host’s software, offering full-screen access to data.

Dedicated terminals are easier to install than TTYs because the protocols are preset; you needn’t know anything about them. On the negative side, it’s usually costly to emulate a dedicated terminal—roughly \$1000—in part because of the additional hardware dedicated terminal emulation requires. Terminal emulation software is not available for every host-PC combination; dedicated terminals work exclusively with one type of host computer.

To emulate a dedicated terminal that is able to communicate with its host, you need a kit that includes both a specialized expansion board for the PC and software for both computers. For those seeking to mimic IBM dedicated terminals, DCA’s IRMA family of micro-to-mainframe links is a popular way to do so. The basic \$1195 kit includes a board that lets you cable your PC directly to the host’s network (see the discussion under “Protocol Converters”).

## Rules of the Game

*Janet Goldenberg*

Like the ritualized courtesies of diplomats, communications protocols enable disparate types of computer equipment to negotiate on common ground. These electronic standards, which govern everything from the rate of data transmission to the way data is encoded, are usually set by the host computer and must be brought into accord before any exchange can occur.

When setting up your micro-mainframe link you will probably encounter the technical terms that follow. The main point to remember is that you needn't know precisely what the jargon means—you just need to ensure that the protocol is the same at both ends of the connection.

*Synchronous/asynchronous.* Inexpensive and low-performance communications products almost always exchange data asynchronously; that is, they transfer data in single-byte units that can be traded without synchronizing both devices' internal clocks. More sophisticated devices, including many mainframe computers, usually send data synchronously

—that is, in large, tightly organized blocks. Although technically harder to accomplish, synchronous transmission can occur many times faster than asynchronous, better accommodating the volume of data that mainframes handle. But because there is no widely accepted standard for synchronous transmission, you must ensure that the devices you connect use the same synchronous protocol.

*Character code.* When computers talk to the outside world, they represent their keyboard characters with a standard set of numbers called a character code. All personal computers and most non-IBM minis and mainframes use the 128-unit ASCII code, in which each alphanumeric and control character is represented by a number between 0 and 127. IBM mainframes use a different, 256-unit code called EBCDIC, which incorporates extra characters and control codes. If both PC and host run the same communications software, they may also be able to transfer data in raw binary format, making possible the exchange of compiled programs as well as alphanumeric information.

*Interfaces.* TTY and VT 100 terminals employ the standard RS-232C serial interface, which uses a special

chip to send data one byte at a time. Dedicated terminal boards have proprietary types of interfaces that can often send data much faster—but will work with only one type or family of computer.

*Bits per second/ baud rate.* These terms are often used interchangeably to describe the rate at which data flows between two devices, but at high transmission speeds only *bits per second* is correct. In micro-to-mainframe connections these speeds typically range from 300 bps for TTYs using inexpensive modems to 2 million bps or more for cabled, dedicated terminals.

*Half- and full-duplex.* When making a connection, two computers must agree on whether their conversation will be “you talk, I listen,” as on a CB radio (*half-duplex*), or two-way, as with a telephone (*full-duplex*). Full-duplex is the preferred mode because the characters that appear when you type are actually echoes from the other device. If all else is well, this mode provides steady confirmation that your message is being received intact.

IRMA also comes with software that enables you to customize your keyboard and toggle between the host and your personal computer. Optional software provides enhanced data security, smoother file transfer, and other features.

### The VT 100 Alternative

Tucked between the two major categories is a third terminal, the Digital Equipment Corporation VT 100.

Like a TTY, a VT 100 is an asynchronous ASCII RS-232C terminal, transmitting at much slower speeds than a dedicated terminal. Unlike a TTY, however, the VT 100 has some intelligence and is capable of full-screen editing. The VT 100 also relies on a more sophisticated protocol than does the TTY.

All DEC hosts can work with a VT 100, as can a variety of other minicomputers from various vendors. Emulating a VT 100 requires the same serial board you'd use for TTY emulation, plus a terminal emulation program. The better VT 100 terminal emulators can mimic TTYs and the older VT 52 terminals as well, thus permitting access to IBM mainframes.

Because PCs can emulate many kinds of terminals, your choice depends on the type of host computer you want to address. If the host won't talk well—or at all—to a TTY-type terminal, your only alternative may be dedicated terminal emulation. But if you must connect to several different host computers—for example, to both Dow Jones and the corporate mainframe—TTYs may be your best bet. To allow for multiple contingencies, some users install two or more terminal emulation kits on their PCs and buy communications software that can emulate both TTY and dedicated terminals.

### Protocol Converters

A protocol converter is electronics in a box or on a board in the communication line between PC and the mainframe (see Figure 2). This device functions as a clever double agent: It tricks the host computer into perceiving your PC as a dedicated terminal while convincing your PC that the host is an ordinary TTY host. If you want to connect an assortment of PCs to your company's main computer, you may be able to enjoy the benefits of both TTY and dedicated terminals by installing a dial-in protocol converter at the host. Thus, you can cheaply configure all your PCs as TTYs, yet have most if not all the advantages of dedicated terminals. The principal drawback is a transmission speed limited to 19,200 bps—positively poky compared to the million-plus bps rates possible with dedicated terminals cabled directly to the mainframe.

But on the plus side, protocol converters resolve a variety of disparities in communications conventions. Their diplomatic talents range from packaging data for transmission and error checking to performing character code conversions (from the PC's ASCII to the IBM mainframe's EBCDIC [Extended Binary Coded Decimal Interchange Code]).

### In Control

Once you've decided which terminal to emulate, the next step is to select a transmission link between your PC and the host computer. (In a practical sense, the type of terminal emulation influences the mode of transmission, so it's not entirely a matter of choice.) If the host and the PC are physically close, you can use direct cabling or a local area network; otherwise, you must use telephone lines.

If your terminal emulator is a TTY type, its RS-232C interface puts strict limitations on the speed and distance of the hookup. Because the RS-232C was designed to send data via modem over telephone lines—an error-prone procedure at high speeds—its transmission rate is limited to 19,200 bps. The RS-232C standard requires that TTYs be kept on a fairly short leash: about 50 feet, or just long enough to reach to the nearest telephone jack. Although TTY terminals and hosts can be connected directly, and though special devices can boost the distance between them, the RS-232C is basically a short-distance interface (see Figure 3).

In contrast to the primitive restrictions imposed by TTYs, dedicated terminals can be cabled to a main computer over much greater distance—across an office floor or through an entire building. They can also communicate at rates of up to 4 million bps. But to do all this, a PC must use the host's specific cabling system. Figure 4 shows the cabling path for an IBM mainframe, which uses a device called a local controller to direct traffic from several nearby terminals. A remote controller, also shown, does the same for terminals dialing in by telephone.

Controllers are special devices that effectively manage the time demands on a single mainframe, enabling the big box to serve multiple terminals. Although the activity of a controller is invisible to the user—indeed, users appear to be connected to the mainframe directly—all terminals are actually linked to a controller on the mainframe network.

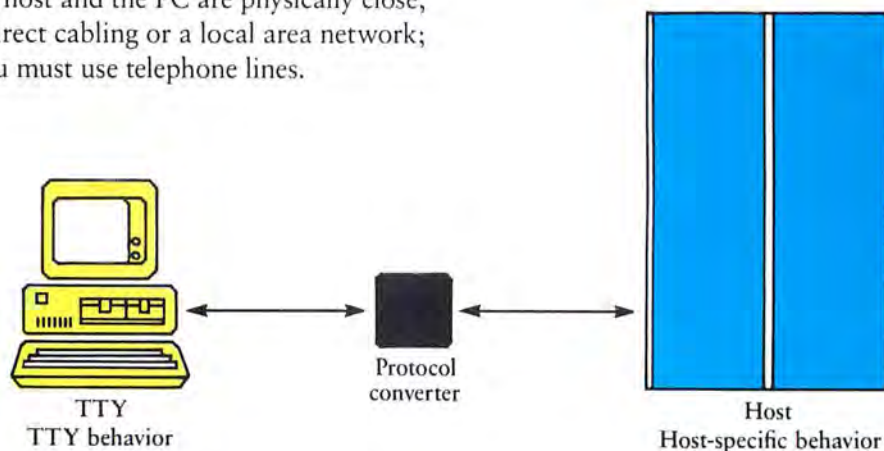

Figure 2: The protocol conversion process minimizes disparities between terminal and host.

In that network, the mainframe may be next door or in the next state. A controller can be attached directly to the mainframe (dubbed local, or channel-attached, communications) from a distance of up to 2000 feet in the same building. Beyond that distance

*Although the activity of a controller is invisible to the user—indeed, users appear to be connected to the mainframe directly—all terminals are actually linked to a controller on the mainframe network.*

the controller communicates by modem to another controller, which in turn is hooked up to the mainframe directly—hence, remote communications.

AST Research, among others, is working on a way to eliminate the necessity for micro-to-mainframe boards in every PC—and for costly controllers as well. AST recently released a \$2200 board that links one PC on a local area network to an IBM mainframe and enables every other PC on the network to function as a dedicated terminal.

If a direct connection isn't feasible, you'll need compatible modems at either end of the telephone line. Any terminal can be linked to a host via phone lines and a modem, but of course the speed of the modem imposes its own limits. And only the most sophisticated modems perform error detection, vital

for typically noisy phone lines. Special equipment is often needed to connect a TTY terminal to a host for such local communications.

You might also rely on a LAN or PBX (private branch exchange or telephone switching computer). Many organizations have now installed LANs or PBX systems that can accommodate both TTY and dedicated terminals. Once a signal reaches the LAN or PBX port, it can travel to any host in the system, regardless of distance. With a special IBM interface, the port can transfer data at 2 million bps.

(There is one caveat: When makers of LANs and PBXs boast that they can handle synchronous communications—preferred over asynchronous because it is much faster—they usually mean only IBM's brand of synchronous communications. Actually, several standards for synchronous communications exist, varying with the manufacturer. To confuse matters further, IBM itself has two of these: an older bi-synchronous standard and a newer SDLC [synchronous data link control]. Some LANs and PBXs support only one of these, while others support both.)

### The Business of Applications

Once you've set up your PC-host connection, you'll need software to function as an intelligent gatekeeper between the two worlds. This software, which runs on the host and perhaps on the PC as well, is designed to smooth the technological bridge

Figure 3: Connecting a host and a TTY using the RS-232C interface via modems over the telephone system

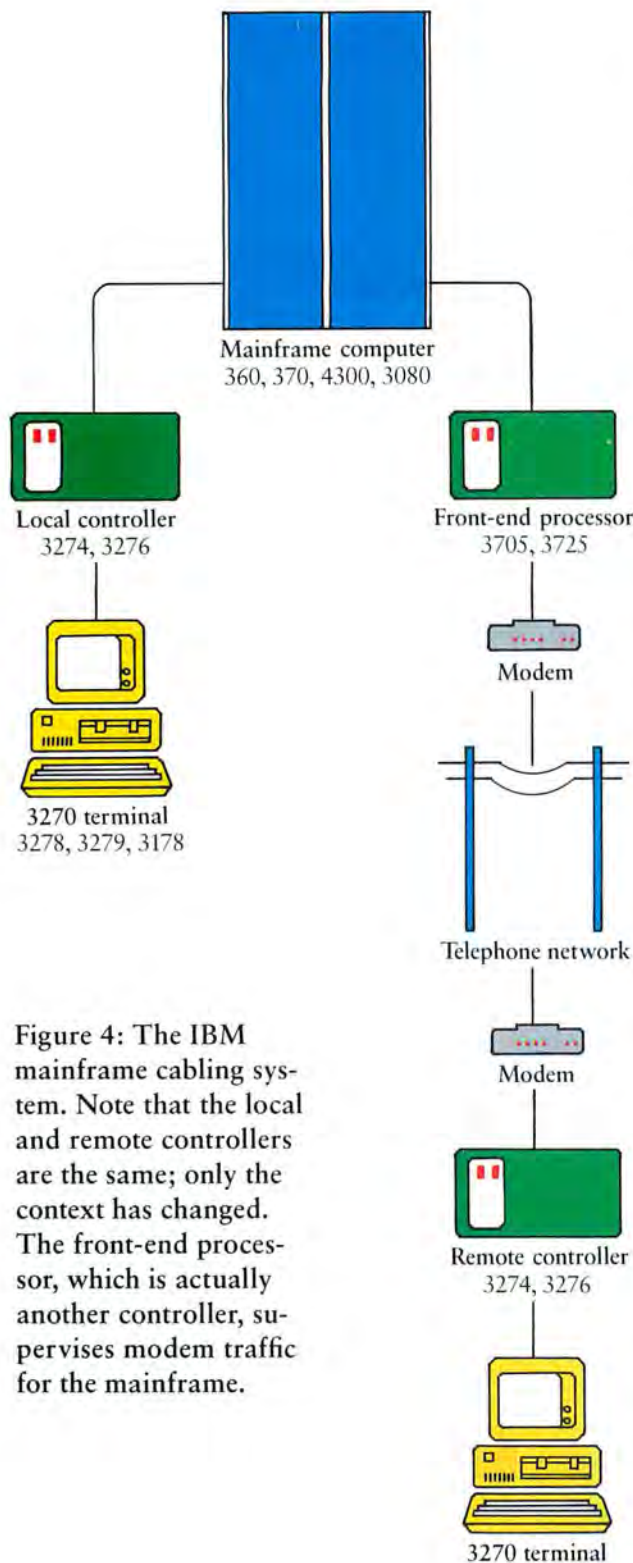

Figure 4: The IBM mainframe cabling system. Note that the local and remote controllers are the same; only the context has changed. The front-end processor, which is actually another controller, supervises modem traffic for the mainframe.

between computers and to shelter nonprogrammers from the often unfriendly realm of mainframe software.

Until recently, a PC posing as a terminal could at best only download data from the host computer and capture it to disk. To manipulate this data with PC-based software, such as *dBASE* or *1-2-3*, you had to laboriously reenter it in the proper format. Now, a new generation of software can capture and convey data automatically. Informatics General's *Answer* series, which includes versions for *1-2-3*, *dBASE*, *Reflex*, and *Cornerstone*, is one such offering. *Answer*'s Extractor component resides on the mainframe, handling security, data base access, and scheduling. A corresponding PC-based component translates incoming data to the proper format for the program in question. To use a program like *Answer*, you can rely on either TTY or dedicated terminal emulation.

Also new and noteworthy is *Symphony Link*, a Lotus product that enables *Symphony* users to talk to IBM mainframes. *Symphony Link*, used in conjunction with an IRMA board, provides dedicated terminal emulation, two-way data transfer, and access to mainframe programs and utilities. On the drawing board is *Symphony Link*'s full integration with Cullinet's ICMS (Information Center Management System) mainframe environment. Via its *Universal Link* facility, ICMS will also open the mainframe to dedicated terminals and to PCs running *1-2-3* and Cullinet's *Goldengate* integrated package.

The *Answer* series and Lotus/Cullinet products work because several companies have put their heads together, fashioning related products for micro and mainframe. By PC standards, however, packages like these can be costly. A typical Lotus/*Answer* configuration for 50 personal computers sells for around \$45,000 (or \$900 per PC), and you must buy additional software for any other PC applications you wish to incorporate. Moreover, this price tag does not include the cost of dedicated terminal boards or other communications devices, which are required for each PC. And it certainly does not take into account the expense of mainframe software, which runs well into six figures.

Adapting mainframe software for the PC represents a smoother—and far more cost-effective—approach. When one vendor is the source of both

software products, micro and mainframe can exchange sophisticated files while losing very little in translation. Mainframe data can be downloaded to the PC, manipulated off line, then merged again with

*Adapting mainframe software for the PC represents a smoother—and far more cost-effective—approach. When one vendor is the source of both software products, micro and mainframe can exchange sophisticated files while losing very little in translation.*

the mainframe data base, thereby substantially reducing time-sharing costs. Focus, a so-called “fourth-generation” mainframe package, has spawned *PC/Focus*, an early, successful entry in this product genre. With a terminal emulator and an IRMA board, a *PC/Focus* user can read and write files in both environments as if they were one (see “A New Focus on Data Management,” *PCW*, February 1985).

#### Multiple Submissions

Setting up one micro-mainframe connection can be difficult, but if you want to communicate with more than one mainframe, the complexities can be daunting. To talk to all the computers on your list, you may have to outfit your PC with two or three terminal emulation packages and communications boards. Although a single universal terminal emulator would be preferable, it isn't here yet.

You may also be confounded by the need to remember the myriad passwords and commands required to operate the various systems you use. While good communications software can store logon routines for several host systems, once you're on line it's up to you to recall the command structure of the system you're using. The ideal solution—still some time away—is software that lets you phrase your query in natural language and then translates it precisely into

your host's peculiar argot. But for the moment, cosmopolitan computer users will simply have to master a wealth of detail.

In the not-too-distant future we will see the emergence of sophisticated software that lets PCs, hosts, and LANs harmonize more completely. Until then, micro-mainframe communications remains an early, auspicious duet. ●

IBM PROPRINTER  
CAN PRINT ALL-  
POINTS-ADDRESSABLE  
GRAPHICS. →

## Built to take it. Priced to take it with you. The new Proprinter from IBM.

There's just one thing that's as remarkable as the rugged reliability of our newest personal printer—and that's its price. Under \$550.

The new Proprinter is built by IBM to last. And simplicity of design is what makes it so reliable.

Yet the IBM Proprinter is a full-featured machine. It has three printing speeds to give you everything from fast first drafts to sharp, near-letter-quality correspondence. It takes perforated

computer paper for long jobs and—without removing the paper—will easily print on a sheet of stationery or an envelope, thanks to a handy slot in front.

With its all-points-addressable graphics and its comprehensive character set, the IBM Proprinter supports most popular software.

The new Proprinter attaches to every IBM PC and to other leading personal computers. And it's just part of our growing family of personal printers. All are

designed to serve a single purpose: To give everything you do the finishing touch.

For the IBM Product Center or authorized dealer nearest you—or for free literature—call 1 800 IBM-2468, Ext. 553/LH. Or contact your IBM marketing representative.

IBM Personal Printers...The Finishing Touch

# The PC as Innovator

*Edmund G. Brown, Jr.*

The former governor of California reflects on the quantum leap in productivity—and economic potential—that PCs represent.

**T**he computer is the Proteus of machines, taking on a thousand forms and serving a thousand functions. Its truly revolutionary character, however, lies in its interactive capacity. Unlike a book, a telephone, a radio, or a TV, a computer reacts to the information it receives and processes it according to instructions we give it. The computer can also be combined with other machines such as the videodisk player to further augment its extraordinary capacity. For each of us, this new technology offers the ability to handle the unprecedented quantities of information modern life now requires, thereby enabling us to learn and work with significantly greater effectiveness.

The arrival of the personal computer could not have been more opportune; its power to enhance productivity is crucial to our becoming a more efficient and competitive society. The United States is paradoxically enjoying one of

the richest yet one of the most vulnerable economies in history. Our salaries and our services cost so much that poorer competitors, particularly in Asia, are gaining increasing advantage through their lower-cost operations. In this sense, our strength is a weakness that impedes us. This strange phenomenon (known as the retarding-lead syndrome) is a tendency among prosperous societies to decline and fall behind—a result of relying on deeply entrenched but obsolete patterns of national behavior. Unless we use our technology—particularly the computer—to create new market niches for our high-cost economy, we will simply be overwhelmed by the onslaught of foreign goods at once higher in quality and lower in price than our own.

As if these commercial pressures were not enough, ominous world demographic shifts are inexorably turning the population of the United States into a diminishing and aging minority. In the next 15 years 750 million people will enter the world's work force; more than 90 percent of them will live outside the United States and Europe. In most countries the median age is significantly lower than in the United States; in Mexico it is half that of our own.

Such monumental change leaves us no choice but to innovate at a faster rate, automate pervasively, and tap into neglected pools of human talent, particularly older workers and minorities. For the foreseeable future, our principal task will be to inspire and educate enough people to ensure that our economy can meet the mounting foreign competition. Letting millions of people fall below their potential is a disaster for the individuals and the nation. We must

design an environment of lifelong learning that fully equips us all to keep pace with the dizzying changes of the marketplace.

Despite modest educational reforms of the last few years, we have not yet restructured our learning system to enable people of all backgrounds and ages to use these new information tools. The coming advances in telecommunications, computational power, and educational software will soon make a type of universal literacy possible.

So much formal education still consists in memorizing data—data that will eventually reside in a data base and be accessible by PC. As we incorporate the computer into our lives as a brain outside our brains, what we can learn and what we need to learn will change. One obvious example of such change is the replacement of the slide rule by the pocket calculator. In the future we may, with the aid of computer simulation, teach the laws of motion to younger students than is possible in the traditional curriculum.

Each state needs to create experimental schools where students have access to their own PCs. In such schools both curriculum and teacher training could be designed to fit the new technology, rather than being an afterthought. Close cooperation would be established with educational research centers

to ensure that new ways of learning would be developed and widely shared. Geographically separated, teachers and students could work together via electronic “learning networks,” breaking down the walls that segregate contemporary education into specific places and named institutions. Students using word processors might, for example, compose essays at a much earlier age than is

train and even to inspire. This requires a major public commitment to those schools and to those areas of our country where educational achievement lags behind the national average.

The personal computer can improve our lives if we as a society learn to exploit its potential. The problem isn’t strictly technical; it’s also a deep political and educational challenge. The past weighs

*The arrival of the personal computer could not have been more opportune; its power to enhance productivity is crucial to our becoming a more efficient and competitive society.*

now customary—and learn to revise them until they met a standard of excellence. Using a network, these students could also learn to collaborate with others, whether in their own classroom or in another city. One can easily imagine such a model being successfully applied to the fields of mathematics, art, history, and science as well.

This transformation in learning demands leadership in Washington, in the state capitals, and in school districts across the country. Otherwise, it will be impossible for lower-income areas to gain equitable access to this new technology. We cannot afford to squander human talent. If we intend to reach our competitive potential, we must be prepared to

heavily upon us and inclines our educators and politicians to resist innovation. In today’s explosive world, however, we will prosper only as we combine wisdom with technology and continually equip ourselves to fit a profoundly changing world. ●

*Edmund G. Brown, Jr., now heads the National Committee on Industrial Innovation.*

# Hayes sets the standard for personal computer communications. Again. Smartmodem 2400.™

**The new fast mover from Hayes. The telecomputing leader.** When it comes to communications products for personal computers, we're the leader! Hayes Smartmodem 1200™ set the industry standards for quality, reliability and performance.

Now our new, faster Smartmodem 2400 goes even further to lower telephone line costs and improve user productivity. So, at twice the speed of a 1200 bps modem, it quickly pays for itself in any high-volume communications operation.

Smartmodem 2400 provides a quick link to minis and mainframes. Both synchronous and asynchronous transmissions are supported by an advanced version of the well-known Hayes "AT" command set. You can download from the IBM mainframe at the home office. Send data to the mini upstairs. And guarantee accurate transmission with information services.

With worldwide communications in mind, Smartmodem 2400 was designed to meet CCITT international standards. It provides a fast, cost-effective way to transmit data between approved countries.

**New version of Hayes Smartcom II® communications software** creates a complete telecomputing system with Smartmodem 2400. Our new Smartcom II, Version 2.1, is available for the IBM® PC and many popular compatibles. Smartcom II makes the most of Smartmodem's exceptional features, at the same time it makes communicating easy for you. And, if you're currently using an earlier version of Smartcom II, Hayes offers a \$25 upgrade to Version 2.1.

So if you're looking for ways to streamline your communications, see your authorized Hayes dealer right away. For a hands-on demonstration of Smartcom II and our new Smartmodem 2400. Guaranteed to get you moving fast!

**Hayes Microcomputer Products, Inc.**, 5923 Peachtree Industrial Blvd., Norcross, Georgia 30092. 404/441-1617.

#### Smartmodem 2400

- Direct connect • Asynchronous and synchronous communications
- Accommodates Hayes-compatible modems of slower speeds • Meets CCITT worldwide standards • Keyboard control of all communications parameters • High speed indicator • Voice/data capabilities • Call progress monitoring
- Two-year limited warranty with optional four-year extended warranty available.

#### Smartcom II

- Hayes Verification and XMODEM protocols • Emulates DEC® VT 52 and VT 100/102 • Totally unattended operation
- Voice/data capabilities.

**Hayes®**  
Innovative products  
for enterprising people

# EXCLUSIVE REPORT

## Copying Software: Who's Right?

Do you use unauthorized copies of software? This and other equally straightforward queries about software piracy were sent to PC World readers. Here's what they told us.

*Darcy DiNucci*

**||||** The software industry claims its profits are being plundered by software pirates. These unscrupulous users don't think twice about stealing any program they want—not by slyly lifting it from a dealer's shelf, but by typing COPY \*.\* b: at the DOS prompt. In a few minutes and for the cost of a floppy disk, they have a software package worth perhaps several hundred dollars.

The war the software industry is waging against these shadowy "pirates" has ranged through myriad copy-protection systems and heated lawsuits. But the question remains: Where's the enemy? A highly publicized survey by the market research firm Future Computing reported that unauthorized copies

accounted for 50 percent of the software in use, costing the software industry \$1.3 billion in revenues between 1981 and 1984 and threatening an additional \$800 million loss in 1985. Other studies and industry analysts, however, have downplayed the phenomenon. No one is sure how much copying goes on or how substantial a threat to the software industry it poses, but the armies continue to clash.

PC World asked a random sample of subscribers what they thought about the issue. Three themes ran through the survey: How widespread is copying? Why do people do it? And how can the issue be resolved?

How pervasive is unauthorized duplication of software? Nearly 60 percent of our sample have used illegal copies.

Why do people do it? For good reasons. They want backups, they want to use programs on their hard disks, they want to test programs before they commit their office budgets—and they don't think any of this is too much to ask. They feel uncomfortable with the software industry's pricing and licensing policies. They *don't* do it just to save money.

How can the issue be resolved? Perhaps it won't be as difficult as software publishers and users fear. The so-called pirates agree with publishers on many

points. They believe they should pay for the programs they use, and they understand the need for copy protection. Yet they are wary about product quality, and they're convinced that any copy-protection scheme can and will be overcome. Primarily, it's the definition of *unauthorized copy* they contest: The uses to which they feel they are entitled have been labeled illegal. Some compromise is in order.

### ■ The Respondents

Those who completed the survey constitute a fair representation of *PC World's* subscribers, but probably not of the population as a whole. Respondents represent a group that is highly influential in shaping the PC's role in business. Thirty-five percent describe their jobs as top management, 11 percent are in management information systems or data processing positions, and most of the rest are dispersed through other professional positions: professional practice (such as law and medicine), analysis, marketing, and engineering. Forty-six percent earn

between \$35,000 and \$65,000 per year. The respondents are preponderantly male (91 percent), and 69 percent are between the ages of 31 and 50.

Sixty-three percent use a personal computer both at home and at work. Eleven percent use a personal computer only at home, and 23 percent use a PC only at work. Sixty-two percent work in large companies (those with more than 100 employees), with 25 percent in companies that employ more than 5000. Fifteen percent represent companies of fewer than 5 employees. Sixty-one percent of the respondents consider themselves advanced computer users.

### ■ How Many Copies?

In the survey, "unauthorized" software is defined as "any copy of a program that was made without the approval of the manufacturer," in accordance with the licenses that accompany most software packages. (An excerpt from IBM's license, containing typical terms, is shown in Figure 1.) Fifty-seven percent of survey respondents admit to having used unauthorized copies of software.

**EXCLUSIVE REPORT**

The percentages are about the same in large and small companies, but higher for those respondents who consider themselves advanced users and for those who use computers both at home and at work.

Those who have used unauthorized software report that about 27 percent of their business software is unauthorized; they have an average of 8.3 authorized and 2.2 unauthorized programs at work. This does not translate to a 27 percent loss in revenues for software publishers, however; these same users say that if they couldn't have obtained a free copy, they would have bought only one of their two unauthorized programs. Responses are about the same for large and small companies. (See the sidebar "The Corporate Clampdown" for an example of company efforts to stop piracy on the job.)

According to the survey, the home is the main site of unauthorized software duplication and use. Those who have used unauthorized copies of software have an average of about six authorized and five unauthorized copies at home. Members of this contingent say they would have bought approximately 25 percent of those unauthorized programs if they couldn't have copied them. The total amount of software at home is almost equal to that at the workplace.

Only a few respondents (1 percent) don't know whether their software copies are authorized. This suggests that the industry's attempt to educate the

public about software protection laws has worked and has perhaps reached the saturation point—at least for the management sector that the respondents represent. People who use unauthorized copies know what they're doing.

### Multiple Motives

The raw numbers seem to confirm software publishers' fears: A majority of business users possess illegally copied software. Our other results, however, reveal the fuller picture. These "pirates" and their booty are not what the industry imagines.

In seeking the reasons people copy software illegally, we used a two-pronged approach. First, the survey listed several possible explanations and asked those who had used unauthorized software to rank the importance of each. Following the list was space for respondents to name their own reasons. Second, the closing section of the survey form offered all respondents a chance to address the general topic of software piracy.

The simple explanation that it just doesn't make sense to pay for something you can get for free didn't click with respondents; only 10 percent of those who have copied software attribute significant importance to this rationale. The other simple out—it's okay because everyone does it—didn't gain much support either; only 8 percent of those who use unauthorized software subscribe to that explanation.

Nor is it true that people who copy software can't afford to buy the programs they need; most respondents rank this reason as only "somewhat" or "not at all" important. (It is more crucial, of course, to those who earn less than \$20,000 than to those with larger incomes.) In support of the low ranking most people give this reason, other survey results show that, except at the extremes, income seems unrelated to whether or not someone copies software.

### Demonstrable Need

Easy explanations of copiers' motives, then, won't suffice. Those who have used unauthorized software say they are more than willing to pay for a good product—and often have. But, they explain, they have been burned too often by plunking down several

Have you ever used unauthorized copies of software?

hundred dollars for a program that didn't fit their needs. They conclude that in the absence of available demonstration software or money-back guarantees, the only way to forestall such costly mistakes is to copy the program. Seventy-two percent of those who have used unauthorized software indicate that not wanting to risk money on a program they'd never used was "important" or "very important" to their decision to copy.

Many respondents say that after a trial, they have often bought a package for its documentation and support. "I have no qualms about a one-time unauthorized use of a software product to test it for my needs and equipment and to verify that it works," avers one respondent. "If it works correctly, is well

documented, offers decent customer support, and meets my needs, then I'll buy it. There is a great deal of misrepresented, poorly documented, and poorly written software on the market."

Sixty-three percent rank the opportunity to experiment with new programs as "important" or "very important" to their decision to copy. As one respondent says, "People I know with unauthorized copies are generally like myself—they want to see what it does and how it works. If it's good, they'll attempt to purchase it for the documentation." Quite a few respondents suggest that the availability of demo disks would curtail piracy considerably.

### IBM Program License Agreement

YOU SHOULD CAREFULLY READ THE FOLLOWING TERMS AND CONDITIONS BEFORE OPENING THIS PACKAGE. OPENING THIS PACKAGE INDICATES YOUR ACCEPTANCE OF THESE TERMS AND CONDITIONS. IF YOU DO NOT AGREE WITH THEM, YOU SHOULD PROMPTLY RETURN THE PACKAGE UNOPENED AND YOUR MONEY WILL BE REFUNDED.

#### LICENSE

You may:

- a. use the program on a single machine;
- b. copy the program into any machine-readable or printed form for backup or modification purposes in support of your use of the program on the single machine (Certain programs, however, may include mechanisms to limit or inhibit copying. They are marked "copy protected.");
- c. modify the program and/or merge it into another program for your use on the single machine (Any portion of this program merged into another program will continue to be subject to the terms and conditions of this Agreement.); and,
- d. transfer the program and license to another party if the other party agrees to accept the terms and conditions of this Agreement. If you transfer the program, you must at the same time either transfer all copies whether in printed or machine-readable form to the same party or destroy any copies not transferred; this includes all modifications and portions of the program contained or merged into other programs.

You must reproduce and include the copyright notice on any copy, modification or portion merged into another program.

YOU MAY NOT USE, COPY, MODIFY, OR TRANSFER THE PROGRAM, OR ANY COPY, MODIFICATION OR MERGED PORTION, IN WHOLE OR IN PART, EXCEPT AS EXPRESSLY PROVIDED FOR IN THIS LICENSE.

IF YOU TRANSFER POSSESSION OF ANY COPY, MODIFICATION OR MERGED PORTION OF THE PROGRAM TO ANOTHER PARTY, YOUR LICENSE IS AUTOMATICALLY TERMINATED.

Figure 1: A typical software license, like IBM's standard license, excerpted here, allows the buyer to make copies for use on a single machine only. Transferring a copy to another user automatically terminates the agreement, that is, revokes the buyer's right to use the software. Having two or more copies in use breaks the law. The user accepts the terms of the license by opening the software package.

**EXCLUSIVE REPORT**

### What Price Piracy?

Forty-seven percent of those who have used unauthorized software also indicate that programs' unreasonable prices are "important" or "very important" to their decision to copy, and 64 percent agree that people wouldn't copy programs if software manufacturers charged reasonable prices. Underscoring that sentiment, 65 percent say they have purchased programs they could have obtained for free because they considered the price of the software reasonable. Several respondents state that the software industry has brought the problem on itself by exorbitant pricing. "If manufacturers weren't so greedy when setting prices, fewer unauthorized copies would be made," opines one respondent.

Ashton-Tate president Edward Esber, Jr., sees the problem differently. "I don't think pricing is unfair. We as an industry have failed to convey the value

of our software," he told *PC World*. "We price software all in one. There's a little component of upgrades, a little component of training, of customer support, material cost, and profit. We have not priced our software with [the possibility of] copying in mind. One only has to say to people, 'If you think pricing is unfair, here are my financials. Tell me where I'm overspending.'"

### Restricted License

Many of the unauthorized copies reported are simply backups—exceeding the one copy granted by most licenses. One poignant explanation: "I've reformatted the hard disk on my AT six times. If I relied on manufacturers' backup schemes, I wouldn't have any backups left. I use *CopyWrite* [a bit-copying program that specializes in overcoming copy-protection systems] to make all the backups I need." The need for backup copies is cited as an "important" or "very important" reason for copying by 76 percent of those who have used bootleg software.

Others find the licenses' stipulation that purchasers can't use their business software on their home machines objectionable. "It's silly to have to buy a separate copy of a program for home when I could, in all fairness, just stay at the office and use it anyway," one reader comments; another notes, "When I buy a book I can read it anywhere—not only at my desk or at home." And another states, "Having paid for the use of a program, I expect to be able to use that program legally wherever I require. This suggests the need for a change in the definition of 'unauthorized copy.'" Of those who have used unauthorized software, 47 percent call the need for a copy for home use an "important" or "very important" factor in their decision to copy.

The need to transfer programs onto a hard disk is "very important" to 43 percent of those who have used unauthorized software. To do this, they have often had to turn to a bit-copying program to bypass copy protection—a potential licensing violation, but unreasonable? Thirty-five percent (perhaps those without hard disks) rank this motive "not at all important."

(continues on page 134)

Why do you use unauthorized copies of software?\*

\*based on number of respondents ranking reason as "important" or "very important"

# The Corporate Clampdown

*Kristin Anundsen*

"Most people who make copies of software don't realize they're not supposed to. They don't read the license information that comes in the software package. We see this mainly as an education problem," says Robert Proctor, systems analyst at Chevron Corporation in San Francisco.

Nearly half those surveyed in our poll believe their employers are doing a good job of preventing unauthorized software duplication at the office. (Employees of large companies have a higher opinion of their employers' efforts than do employees of smaller firms—54 percent versus 40 percent.) Chevron's education effort is an example of corporate action taken to ensure that employees don't copy software at the workplace.

Chevron's computer services department carries out its "copying awareness" program primarily through a newsletter distributed to everyone who uses a personal computer at work. Every two or three months, the newsletter runs an article that explains the reasons for adhering to copyright laws or a story about a company that has been sued for software copyright infringement. The computer services department also ensures that each personal computer in the company sports a sticker warning about copyright violations.

Proctor says Chevron rarely finds illegal copies of software in its offices. When it does, the company destroys the bootleg copy and offers to buy a copy of the software for the employee. The user is not punished.

"We've never found a case where the copying is a deliberate violation of the copyright laws or our policy of compliance," says Proctor. According to Proctor, an employee generally makes a copy for someone else as a convenience measure, and the illegal copy often turns up when the new user innocently asks for help.

How many copies are made by those who know better than to ask for help is an open question. It is also difficult to tell whether employees take copies home. Proctor assumes that few do.

Proctor understands the limitations of any company's ability to police software use. "As more and more people in the company use personal computers, and as the types of software multiply, the potential for illegal copying increases," he notes. "The answer is to make sure employees know they could get their companies—and themselves—into a lot of trouble if they violate copyright laws."

*Does your company need an immediate vehicle for informing employees about software copyright laws? ADAPSO will be glad to provide its "Thou Shalt Not Dupe" brochure, which contains an explanation of the software laws and a sample policy statement. For a free copy, or to order a batch at a nominal charge, contact ADAPSO, 1300 N. 17th St. #300, Arlington, VA 22209, 703/522-5055.*

## Pinstripe Suits

Kristin Anundsen

Piracy doesn't pay—at least that's what software publishers are trying to convince their customers. To get the point across, they're suing alleged copiers for hefty amounts. The spectre of litigation flashes a clear warning to would-be pirates: Flout the copyright laws at your own peril.

That peril could be considerable. Lotus Development collected an undisclosed amount in an out-of-court settlement against Health Group and another in a suit against Mueller for alleged illegal copying of 1-2-3. MicroPro International was joined by ADAPSO in a \$225,000 suit against a subsidiary of American Brands, which was accused of making unauthorized copies of MicroPro's *WordStar*, *SpellStar*, and *MailMerge*. American Brands settled out of court and published a mea culpa. MicroPro had previously sued two other companies but couldn't collect because those companies went out of business.

The use of software is controlled by copyright and license laws. Software copyrights are protected by the Software Protection Act, which was incorporated into the Federal Copyright Law in 1980. This law stipulates that a user can make only archival copies of a software package.

License agreements, which fall under the purview of state law, generally take the restrictions further. Some prohibit the buyer from making even the archival copies allowed by copyright law, mandating that the buyer must receive backups from the

publisher. Generally, licenses also specify that the buyer is entitled to use the program on one machine only.

Software license law is a murky area. The controversy centers around what is known as the shrink-wrap license. When you buy PC software, the license is usually packed just under the plastic wrapping. A large sticker on the outside ordinarily proclaims that when you break the seal to extract your purchase, you have agreed to the terms of the license. Many legal experts feel that this kind of "agreement" is not legally enforceable because the buyer has nothing to say about the terms and often can't read them prior to purchase. Negotiated licenses, which are signed by both buyer and vendor, are regarded as legally more substantial.

The legal weight of software licenses will probably remain unsettled for some time. Law depends on precedent, established by a history of cases fought in the courts. So far, no precedent has been set; defendants have settled out of court.

Lindsay Kiang, legal counsel for Lotus Development, is confident that the law will back software publishers when the shrink-wrap license finally has its day in court. "We're not looking for a test case," he says. "It's fairly clear to me that shrink-wrap licenses are valid and legally enforceable."

Software developers are trying to solidify their legal ground by persuading state legislatures to introduce software license protection bills. Louisiana's Software License Enforcement

Act, which declares the lawfulness of the standard licenses, is the prototype for a bill introduced in the Arizona and California legislatures. Outcry from computer consultants and consumers, however, has delayed action on the proposed legislation. For Vault Corporation, maker of the Prolok copy-protection scheme, the Louisiana law is apparently enough. Earlier this year, Vault filed a \$100 million civil suit in that state against Quaid Software, publisher of *Copywrite*, a bit-copying program.

If your company learns that it's being sued for copyright infringement, you can be sure it's in trouble already. A software manufacturer isn't likely to go after a corporate customer unless the manufacturer has already amassed volumes of evidence—litigation is expensive for plaintiff as well as defendant. And the plaintiff need only show that the defendant has made more than the archival copies allowed under copyright law.

How do software publishers determine that a firm is making illegal copies? Perhaps a conscience-stricken or disgruntled former employee reports it. "I get about five calls a week reporting unauthorized copying," says E. Ric Giardina, MicroPro's legal counsel. Other tip-offs could be technical support requests from several people giving the same code number, or employees ordering upgrades and unwittingly sending in old disks that turn out to be unauthorized copies. Software companies seeking to verify suspicions have been known to inquire of photocopy centers in the vicinity of the suspected lawbreaker

whether large numbers of a particular manual have recently been reproduced.

Statutory damages (those provided for by statute) can be as high as \$50,000 for "each willful infringement." Alternatively, the plaintiff can demand compensatory damages to offset financial losses suffered as a result of piracy, or recover from the defendant any profits made through use of the pirated materials.

Thus far, legal struggles over unauthorized copying have been confined to the corporate realm. Says Lotus's Kiang, "We have a range of responses, depending on the extent of the problem. We've sued large corporations that tolerate or encourage copying. If [the copying] isn't blatant or organized, we often handle the matter through correspondence."

What about home users who make a few extra copies of *dBASE II* or *1-2-3* for their personal use or to share with a friend? That's just as illegal, but chances are they'll get away with it. It's simply not worth it for software firms to go after the little guy.

"We don't want to sue a lot of people," Kiang says. Lotus hopes to stop known copiers through letters and legal action. For the rest, the company is counting on the publicity the big cases generate to get the word out: Copying is illegal, and it will not be tolerated.

|| *Thanks to Jordan Breslow and Thorne D. Harris III for legal help.*

## Piracy Redefined

*PC World's* definition of "unauthorized software" as "any copy not authorized by the manufacturer" is strict. When respondents say they have one authorized and three unauthorized software copies, they could mean the original copy, which they use, and three backups. Some respondents worry that they'll be considered pirates for making such copies, although they feel they are acting scrupulously to protect the manufacturers' rights; they emphasize that they always buy their main working copy of a program. One respondent states, "At no time is an 'unauthorized' copy being used at the same time as an authorized [one]."

The users' good faith is most strikingly demonstrated by one statistic: 80 percent of those who have used pirated software have at least once purchased software that they could have obtained free. The reasons underlying such behavior may be illuminating to the software industry.

One respondent puts it succinctly: "I buy because of what is offered with the purchase—support

and small, neat manuals." Seventy-nine percent of those who have used unauthorized programs decided to buy software rather than copy it because they wanted the documentation. Sixty-six percent say the need for updates contributed to the decision to buy, and 41 percent cite the need for service and support.

Less tangible forces motivate others. Twenty-seven percent say their company's policy against copying holds them back. Twenty percent are kept from copying by their feeling that it is wrong. Only about 1 percent do not make copies because they worry about what would happen if they were caught.

## Copy Protection

The narrowness of the gap between users' and publishers' attitudes becomes even more striking when you consider the respondents' views on copy protection. This issue has been a major bone of contention for software publishers and consumers. Consumers have denounced every technical means publishers have used to prevent copying of their disks; the schemes simply interfere with use of the product. But 57 percent of the respondents believe that software should be protected and that manufacturers cannot allow random copying. Forty-eight percent of respondents dismiss the idea that copy protection is not needed because most people don't make copies (but 26 percent hold to that theory).

Publishers take note: 69 percent of those who have used unauthorized software say they would have no objection to any software-protection scheme that didn't interfere with their own use of the program, but 43 percent have at some point decided not to buy software because it was copy protected. Asked what specific copy-protection schemes would stop them from purchasing a program, 62 percent veto a hardware lock, and 48 percent blackball the Prolok-type "fingerprint" scheme that requires that the original "key" disk be present in the system each time the program is run. Twenty-eight percent find uncopyable disks unacceptable even with a backup provided.

Why have you purchased software when you could have copied it?

Only 13 percent object to a Superlok-like scheme, which permits the user a certain number of installed copies. The so-called "worm," which causes a program to self-destruct if its code is tampered with, would keep 83 percent of the respondents from buying the program. (See the sidebar "How You Gonna Stop Me?" for an overview of schemes in use.)

Only 10 percent of the group say none of the common copy-protection systems the survey names would discourage them from buying a program. Contrast this figure with the 69 percent who theoretically support transparent copy protection, and you see the problem. One respondent fumes, "I am furious with Ashton-Tate for screwing up *dBASE III* [with its copy-protection scheme]—it won't work with my PC-compatible's hard disk. Naturally, I purchased a \$40 device to permanently install [the program] on a hard disk."

*Fifty-seven percent of respondents believe that software should be protected and that manufacturers cannot allow random copying.*

Of the unauthorized copies in use, more than half (57 percent) are of copy-protected programs. Those who call themselves advanced users have copied no more protected programs than users in other categories. Those who use computers only at home, however, have duplicated many more copy-protected programs than any other group (an average of about 9 programs as opposed to the general average of about 4). These results support the popular belief (held by 77 percent of the respondents) that trying to protect software is fruitless because someone will always figure out how to overcome any protection scheme.

For our sample, bit-copying programs such as *Copy II PC* constitute the most popular method of bypassing copy protection; 68 percent of those who have used copies of protected programs have taken that route around the bar at least once. Fifteen percent have defeated a protection scheme via their own

programming, and 11 percent have obtained a bypass method through a club, user group, or bulletin board. Thirty-three percent don't know how the copy protection was broken; they obtained the program after the copy protection had been removed.

### Market Impact

Does piracy have a stranglehold on the software industry? Software publishers plead that the industry depends on innovation, and nobody's going to work his or her heart out on a new product if that labor won't be rewarded. They maintain that pirates are robbing themselves; without the lure of profit to spur programmers, software R&D will dry up. Although 51 percent of survey respondents agree with that theory, their sympathy does not seem to hinder copying. One skeptical respondent comments, "The incredible profusion of PC software demonstrates that pirating does not suppress software development."

(continues on page 138)

How have you bypassed copy protection?

## How You Gonna Stop Me?

Kristin Anundsen

A *Microsoft Project* user was startled recently by a message that appeared on his display while he was using the Norton Disk Look utility with the program:

INTERNAL SECURITY  
VIOLATION

The tree of evil bears bitter fruit,  
crime does not pay.

THE SHADOW KNOWS  
...

Trashing Program Disk

This, he concluded angrily, was a hidden "worm," a snare laid by the manufacturer to prevent unauthorized duplication by destroying the program disk—along with whatever data it contained—when anyone attempted to make an illegal copy. He'd heard about worms, but his company had decided not to buy any software that contained them. This one, however, seemed to have sneaked past the defenses.

As it happens, the message was only a scare—the product of a programmer's devious sense of humor. The worm did not exist, and his program disk remained intact. In fact, the rumored copy-protection worm seems to be apocryphal. Vault Corporation, a leading purveyor of copy-protection systems, reportedly once began developing a worm, but dropped the project when word reached the press and software consumers responded with outrage.

Mother Jones' Son's Software uses a more lighthearted, though pointed, approach. Appended to the license for its software is the warning, "30 days after you violate this agreement, ownership of your eternal soul passes to us." Some vendors claim that this warning is about as effective as any other method in use.

Software manufacturers have tried virtually every means imaginable to stop users from copying software. The worm scare and the wry threat are unusual approaches, but indicative of the attention software publishers are giving the issue. Copy-protection methods usually use hardware, software, or a combination of the two to prevent disk copying. The goal is to deter piracy without interfering with authorized use. Thus far, no scheme has been completely successful on either count.

Vault Corporation's Prolok is one of the most widely used copy-protection systems. Prolok consists of a physical "fingerprint" stamped on disks the company sells to software publishers. (Other similar schemes, including Vault's Unilok product, use magnetic marks.) The software checks for the fingerprint each time the program is run; if the user has copied the program to a different disk, the program will not execute. You can make any number of backup copies, but to use the program, the code must be copied back onto the

original disk. If you use 1-2-3 you are familiar with the effect of this method (1-2-3 uses Filelok, a related Vault product.)

Softguard Systems' Superlok represents another common approach. Superlok counts the number of copies made from each disk. You can make only as many backup copies of a Superlocked disk as the vendor specifies—three is a typical limit. You can install the program onto a hard disk or other floppies and then “un-install” copies back to the original disk to set the copy meter back. Ashton-Tate's products, including *dBASE III* and *Framework*, and the original release of *WordStar 2000* use this method.

Each of these systems sounds reasonable, likely to bother only those who are foiled in their attempts to copy the software illegally. But these techniques—and almost every other approach tried—have proven to be thorns in the sides of all users. Owners of hard disk systems have complained about Prolok's requirement that the original floppy disk be inserted each time the program is run, denying the user the convenience of loading the program from the hard disk. To answer this complaint, Vault now offers a version for hard disk use that resembles the Superlok scheme.

The Superlok system is fairly unobtrusive but still creates a problem by allowing only limited backup copies. Users have also had trouble using the system on non-IBM hard disks, although Softguard has reported progress on that front.

Two years ago, in an effort to find a secure and usable copy-protection system, ADAPSO—whose members include such industry powerhouses as Ashton-Tate and Lotus—created a clearinghouse to solicit and disseminate ideas for the ideal copy-protection device. This year, the organization proposed a copy-protection standard.

ADAPSO's proposal is a hardware/software team called a lock and key; the system is similar to others already on the market, such as the Metafile system from Metafile Information Systems. Although the ins and outs of implementation haven't been established as of this writing, the concept is fairly clear. The *key* is a device that plugs into a hardware *key ring*, which the user connects to the computer's serial port. The key ring's pass-through connection allows other peripherals, such as modems or printers, to connect to the same port. (ADAPSO expects that computer manufacturers will eventually build a key ring into their machines.) The *lock* is code, embedded in an application, that must connect with the key before the protected program can run. You can make unlimited copies of the disk, but the program won't run on any computer that doesn't have the key in the key ring.

*(continues)*

The system's proponents cite a number of advantages: the scheme could be used on any computer that has a serial port (which most do); vendors could relax their "no return" policies, knowing that the user couldn't have made extra copies of the disk without obtaining extra keys; and the lock and key could control the number of copies of a program used under a site license.

The Microcomputer Managers Association, a New York group whose membership includes PC managers from 500 companies, has protested the ADAPSO system loudly. The group claims that it would be too difficult for large organizations to administer distribution of keys. The organization also points out that not every computer has a serial port to hold the key ring. Joe Diodati of Softguard Systems adds, "Once you establish a standard, you give the copy busters a target they all can shoot at."

The question is not settled; despite ADAPSO's advocacy, software manufacturers—even those that belong to ADAPSO—are far from reaching consensus on the ideal copy-protection scheme, and consumers complain about all the methods. Ultimately, as long as people delight in the challenge of overcoming software security systems, it's unlikely that any copy-protection system will work. The technical battle between software manufacturers and consumers seems likely to drag on.

Some industry analysts suggest that software copiers might actually exist symbiotically with the software industry. They point out that illegal copying greatly increases a product's market penetration and name recognition. *WordStar*'s long and successful life has often been attributed to this effect—and the program's preeminence has crowded many others out of the field. To test this theory, we asked respondents possessing unauthorized software whether they have ever recommended a favorite bootleg program to a friend. Eighty percent say they have. One respondent supports the symbiosis theory with this comment: "I use unauthorized copies at home only to familiarize myself with the program. Based on this knowledge, I purchase the software for work. This only benefits the software company, since I am learning and recommending software that I would otherwise not have tried."

*PC World*'s survey suggests that the industry doesn't have much to worry about from piracy. Those who copy are hardly the dastardly outlaws the industry alleges. They will, generally, pay for what they use. One reader offers a reasonable suggestion: "Offer a free test period using a copy-protected version. Upon purchase, sign a license agreement indicating no copies will be made with an unprotected version."

Send software into the world with no protection? Why not? Not only does protection seem unnecessary, it has thus far proved of little value. Although ADAPSO (Association of Data Processing Service Organizations) and individual members like Lotus Development are still erecting bulwarks, others have already laid down their arms. Almost daily, headlines in industry journals announce the conversion of another software publisher—MicroPro, Samna, Microrim, Borland—to the ranks of the unprotected. Each PR department hauls out the same lingo: "In the interest of our customers' needs, we have dropped copy protection."

As an alternative, several companies are announcing site-licensing plans, in which software publishers negotiate licenses with individual companies,

often offering price concessions for large purchases. Such licenses free the purchaser (and seller) from monitoring adherence to individual licenses for each software copy (see the sidebar “License to Copy”).

Meanwhile, incorporation of personal computers into the data management superstructures of business, combined with the increasing use of PCs in local area networks, will inevitably bring about more broadly defined policies, generally in the form of site licenses. The refusal of many to buy copy-protected products and the outcry for site licenses has already had an effect.

*Results support the popular belief that trying to protect software is fruitless because someone will always figure out how to overcome any protection scheme.*

Even the stickiest issue—software prices—may be slouching toward resolution. Prices are dropping, especially under site license plans, though whether the industry and users will ever agree on what constitutes a fair price for business software is an open question. A delicate, if incalculable, balance appears to exist between pricing and the urge to copy. Observes one respondent, “Borland International [manufacturer of Turbo Pascal and *SideKick*] has shown that good products, fairly priced, can succeed in the market”—with or without copy protection.

Is there any way to end software piracy completely? Probably not. In the end, software publishers, like the record and videotape manufacturers before them, may just have to accept the eventuality that when the technology is available, people will copy their products; it’s unlikely that an air-tight copy-protection scheme can ever be devised. But the self-confessed copiers represented in the survey are generally a scrupulous lot. They’re more than willing to play by the rules—if they consider the rules fair. They’re not asking much, and their cries are almost unanimous: reliable demonstration disks or money-

back policies, the rights to make unlimited backups and to use their software on all their PCs, and no copy protection to gum up the works. One respondent, comparing the software industry to other publishers, points out, “Copyrights provide some protection, but low cost and quality provide effective protection.”

“You copy?” The phrase is Cape Canaveral lingo for “You understand?” For today’s PC user, “You copy?” is a symbol of misunderstanding. It’s not so much a question as an unpleasant reality, a consequence of the software industry’s perceived failure to play fair. *PC World*’s survey conveys user frustration, but that sentiment is balanced by a degree of empathy and a desire to meet the industry halfway in resolving the thorny matter of software piracy. ☹

Darcy DiNucci is Assistant Editor for *PC World*.

(For the sidebar “License to Copy,” please turn page.)

Which copy-protection plans would stop you from buying programs that used them?

## License to Copy

*Kristin Anundsen*

What's a software manufacturer to do? Suing a customer for copyright infringement isn't the best way to cement a vendor-user relationship. But what if the only alternatives are either to saddle all your customers with unwieldy copy-protection devices or to let yourself be robbed by pirates?

What's a DP manager to do? It's hard enough to ensure that the possibly hundreds of PC users under your purview obtain the software they need. It's almost impossible to make sure they don't copy it for somebody else.

A number of vendors and corporate users have devised a solution. It's site licensing—standard operating procedure for mainframe software and, many corporations are finding, an increasingly attractive strategy for large PC installations. The standard shrink-wrap licenses and prices for PC software were intended for individual users and are ill-suited to the corporate environment. As one respondent to our survey pointed out, "I don't want to pay full price for multiple copies of software within a business site. I don't need multiple copies of the documentation."

In a traditional site license agreement, a user pays a lump sum for the right to use a particular software package throughout a given site, but PC site licenses are as varied as the customers themselves. Even the definition of *site* is elusive; it may mean one

building, a local area network, or a multinational corporation with all its subsidiaries.

Almost any type of agreement between user organization and vendor that bypasses the standard shrink-wrap license has been termed a site license. Some site licenses are simply agreements to discount the purchase of multiple copies of a program. At the other extreme are software firms that allow the buyer to make unlimited copies throughout a site after payment of a flat fee. Most site licenses, however, allow the user to make or use a specified number of copies for a certain fee. Licenses vary in amount of documentation, upgrades, and support provided. Some licenses go so far as to authorize employees to duplicate software for use at home—for an added fee.

One of the most liberal site license plans is that offered by Select Information Systems, a division of Summa Technologies. Select charges \$7000 for the right to make unlimited copies of its *Freestyle* word processing program and documentation for on-site use. For \$2800 more, it allows a licensed company's employees to make copies for personal use. A year of technical support costs another \$1000. Select's package is a good deal for many organizations, since the \$7000 fee is equivalent to the purchase price of only 25 copies of the

program. The Multimate Corporation, on the other hand, expects to control the number of copies in use. Its site license price schedule establishes fees based on how many copies are in use.

Site licensing offers users two major benefits. Under a flat-fee, unlimited-copy plan, users can stop worrying about legal liabilities arising from copyright infringement. They also generally receive substantial discounts—the cost is often 50 to 80 percent less than for individual purchases of the software. Organizations such as universities, with many workstations and limited ability to monitor software use, are good candidates for site licensing.

Software manufacturers also win. They too avoid lawsuits. They receive large advance payments. Sales volumes go up, sometimes dramatically, and the licensing arrangement encourages companies to standardize on one software package. Under site licenses that allow users to make copies, manufacturers avoid the costs of floppy disk and documentation duplication, as well as the expense and bother of shipping, billing, and inventory. And the clear-cut, mutually-agreed-upon license is a relief to all concerned.

PC site licensing was pioneered by small companies trying to gain a foothold in the market by meeting a consumer demand that larger companies could afford to ignore. As user demand for site licenses grows, even the market leaders are starting to

jump on the bandwagon. MicroPro and Multimate now offer site licenses for their popular word processing programs, but some manufacturers—most notably and resolutely Lotus Development—are still holding out.

Although some vendors feel that site licensing makes piracy irrelevant, others point out that customers who obtain site licenses are still responsible for making sure the software stays on site, and that, where applicable, it's used on only the specified number of workstations—a difficult task without copy protection or another security system.

Customers have a few reservations as well. Some complain about having to pay for duplication and documentation, and a few feel that they may receive inferior service as “second-class” customers who have paid in advance and no longer need to be courted. Calculating the net benefits can be complicated.

Although clearly no panacea, PC site licensing appears to have a bright future. If users want something, competitive pressures usually dictate that they'll get it.

# Cautious Capital

Venture capital funded start-ups have been the rage in America's silicon valleys, gulches, and glens since the PC was born. As the personal computer industry matures, entrepreneurs are putting their money where they believe the brightest new markets are.

*Jane Ferguson*

 Malthus could have predicted the ugly scene that followed the high-tech frenzy of 1981-83, when an estimated 1200 companies came screaming into the world with venture capitalists as their midwives. He would have nodded wisely as one after another was savaged in the personal computer shakeout that decimated

firms such as Osborne and Ovation and left unscathed only the strongest, such as Lotus and Compaq.

What went wrong? Everything seemed to be in place: Investors were eager to cash in on the next high-tech success story, venture capitalists were awash in backing and actively sought out investments, and people and companies with promising ideas were plentiful. What was lacking was a demand for products. The massive amount of capital that was showered on start-ups temporarily waived the law of supply and demand but couldn't repeal it permanently.

"The natural market predators were at bay," says David Gold, a San Jose, California, consultant to venture capitalists. "Any little seed got to survive." Came the cruel dawn of 1984, and many of those seeds succumbed. "The natural predators are back," Gold says, and the hardest hit were the hundreds of "me-too" companies, those whose products, whether personal computers or word processors, were undistinguished from the surrounding offerings.

Mirroring the growing pains of the industry as a whole, the U.S. venture capital pool expanded from \$12.2 billion in 1983 to \$16 billion last year, according to the authoritative *Venture Capital Journal*, a publication based in Wellesley Hills, Massachusetts. But new money in 1984 amounted to \$3.2 billion, a slight dip from 1983's \$3.4 billion and the first slide since 1977.

## Proceeding With Caution

No one disputes that venture capitalists have been watching the weeding-out process in horror. The question is whether they are taking their \$16 billion bundle and fleeing the personal computer field altogether for greener pastures. Surprisingly, most aren't.

These days, it is much harder for a start-up company to get money from more cautious and selective venture capitalists, but millions of dollars are still being doled out to those companies that

avoid saturated markets and focus on fresh market niches. The glut of personal computers, disk drives, word processors, and integrated software packages has made these products steadily less appealing to investors. What has caught the backers' attention is job-specific (or vertical market) business software and hardware, artificial intelligence, and data communications—fields that allow start-ups to avoid butting heads with the entrenched leaders of the personal computer industry.

#### Carving Out a Niche

One such venture-capital-fed success is Optionware Inc. of Bloomfield, Connecticut.

Ian Boyd, Optionware's president, figures that it costs \$5 million to bring a new piece of software to market these days, much of which is gobbled up by the advertising and marketing expenditures needed to be heard above the

competitive roar. Boyd began scouting around for venture money in February 1984, after surviving without it for two and a half years on \$1.6 million he had himself provided with help from a bank. It took him a year to get another \$3 million.

Optionware's line of templates works with Lotus Development's 1-2-3, and hence is aimed at 1-2-3's 750,000 users. Boyd predicts they'll turn to his products so they won't have to develop specific program applications themselves.

Although many venture capitalists liked what he was doing, Boyd says they had a hands-off attitude toward the software industry. "The whole venture process took an enormous amount of

**Entrepreneur, heal thyself: "The reason to go public is to fund growth already demonstrated by demand." —Floyd Kvamme of Kleiner, Perkins, Caulfield & Byers**

time," Boyd says. "It's a problem for a young company. You have to go the venture capital route to survive and thrive." The very search for money robs the company of the precious time it needs to devote to getting its products on the market as quickly as possible. "The top executive team is stretched to its limits," says Boyd, adding that the quest for venture capital cannot be delegated. In other words, you have to showcase your best players in the bid for bucks.

Hitting the road in February 1984, Boyd says that by March he had received a \$1 million offer but "stupidly" turned it down because

he didn't think it was enough. He hadn't considered that he could get money from more than one venturer, a strategy he employed in August 1984, when a total of \$1.2 million came through from Aetna Life & Casualty and Technology Translations, both of Hartford, Connecticut. Those two firms followed through with another \$1.8 million last January.

Boyd still retains controlling interest in his firm, which he says wouldn't have been the case had he depended on venture dollars from the start. It's not unusual for a firm's owners to lose as much as 95 percent control of their firm when taking on venture capital.

What sold the venture backers on Optionware was Boyd's pitch that his firm is the first mass-market developer and publisher of business software that analyzes everything from department budgets and market share to personal income tax and sales quotas. To back his claim, Boyd began with 56 distinct software packages priced at \$99 each, along with a management team that included a former vice president from Pepsico and other corporate heavyweights familiar with mass marketing.

### ■ Up With Vertical Markets

Vertical market software also rang the bell for Venture Founders of Waltham, Massachusetts, when it decided to back Softbridge Microsystems of neighboring Cambridge. But unlike Optionware's mass market approach, Softbridge is targeting its \$4500 vertical market product at financial planners who serve clients with annual incomes of \$100,000 and up.

The *Softbridge Financial Planner* wraps 1-2-3, *MultiMate*, and Relational Database System's *Informix* data manager into an integrated package along with the Softbridge financial planning programs. "I see this as the next wave of computer software," says Joseph Frye, a general partner in Venture Founders, the lead investor in Softbridge, and one of several investors to pump an additional \$3 million into the start-up in second-round financing last December. "Our product is not a blank sheet. It's already thoughtfully designed to do 90 percent of the job. [Its users] are thinkers, not programmers," Frye adds. The financial planning package is just the first of what Softbridge hopes will be a lengthy skein of offerings aimed at specific professional markets.

### ■ Hardware Heroics

Software firms aren't the only ones on the receiving end of venture capital in a tight market, although their lower overhead certainly makes them more attractive candidates. One well-heeled hardware start-up is Zaisan, which bills itself as the first company to enhance a PC-compatible personal computer with a telephone for simultaneous voice and data communications. The ES.3 Professional Workstation retails for \$2595, and the company also makes a dumb terminal.

Since February 1984, Zaisan has managed to attract a whopping \$21 million in venture capital, making it one of the top venture-funded firms in the United States. Mark Fowler, president of the Houston-based company, actually had to turn down investors. The huge amounts of capital necessary

to start production forced Fowler to give up majority ownership and spread shares among a host of investors, including Burr, Egan, and Deleage of Boston; L.F. Rothschild of New York; Hambrecht & Quist of San Francisco; and the Mayfield Fund of Menlo Park, California.

But with all that cash can come trouble, particularly if the key ingredients—timing, management, and product—don't coalesce. While Compaq Computer, Zaisan's Houston neighbor, parlayed its venture dowry into profitability and market penetration, Zaisan has been struggling to stay afloat. The company experienced a round of layoffs, then mulled over soliciting yet another round of venture financing. Officials attribute the turnabout to an overestimation of demand.

"There are pockets of opportunity in and around the data communications industry," says Mayfield Fund's Norman Fogelson. In addition to companies like Zaisan that make integrated voice-data computer systems, Mayfield has put its money behind manufacturers of satellite communications systems, high-speed multiplexers, test equipment for fiber optics, and teleconferencing systems. Mayfield is also a major backer of 3Com's EtherSeries local area network (LAN). With no clear industry standard, the LAN field is wide open but exceptionally risky. Where and how the dust settles around industry heavyweights IBM and AT&T may determine the de facto standards that govern success for network players of all sizes. "The sur-

vivors will be those who mesh with the ultimate industry standards," Fogelson notes.

### A Graphic Example

Top-rated investment firms Sevin Rosen Management Company of Dallas and Kleiner, Perkins, Caulfield & Byers of San Francisco made fortunes as lead investors in Lotus Development and Compaq. In February 1984, they turned their attention to General Parametrics of Berkeley, California, whose VideoShow 150 business graphics presentation system remains one of a kind. "They sought me out," says Herb Baskin, president of the hardware and software company he established in 1981. "I never had an interest in venture capital—it found me. We keep our eye on developing excellent products, not on developing capital."

Baskin won't say how much he received—he reportedly started the company with \$100,000 of his own money and \$500,000 from friends—but he loves to expound on General Parametrics' product line. The company's \$595 software package, *PictureIt*, helps executives create high-quality color business graphics that are stored on disk. The disks are inserted into the \$3500 VideoShow 150 unit, a portable, briefcase-size system that displays the graphics and comes equipped with video outlets so the presentation can be videotaped with voice-over as it is being given. Other accoutrements

**Product before profit:** "We keep our eye on developing excellent products, not on developing capital." —Herb Baskin, creator of the VideoShow

include a \$2999 video image recorder to produce instant slides and a \$699 program called *PrintMaker* that produces on-the-spot hard copy for handouts (see "Show Business," PCW, June 1985).

### Lessons Learned

What can be learned from a hardware company that attracted venture capital even in the dark days of 1984? Baskin bristles at

the suggestion that venture capitalists masterminded the very high-tech craze that sealed the doom of so many companies in the personal computer industry. He claims all the hullabaloo over venture capitalist responsibility for the excesses of 1983—and today's wariness—arises from victimized companies that weren't much good anyway.

**Conspicuous success: "I don't owe anything to anybody. Part of the risk of management is not knowing where the next dollar is coming from." —Sandra Kurtzig, budding venture capitalist**

"The public has to take responsibility for its actions," says Baskin. Venture capitalists, who make their money putting the young companies they finance on the public block, were simply developing supply to meet investors' demands. Observes Baskin, "Say I have an old Ford worth \$500. The Ford becomes a hot model and everyone wants to give me \$2000 for it. I sell the piece of junk for \$2000. Who's at fault? Did I push it on anyone? No. I just took advantage of the situation."

Baskin describes as "hysterical" the new-issues market of 1983 when investors stood ten deep to

buy shares of the latest high-tech company at inflated prices—and then got burned when the stock hit the skids. "People are the wiser for it now," he says. "There's been a restoration of a more orderly market."

#### ■ Too Much, Too Soon?

Meanwhile, Sandra Kurtzig, whose decade-old Ask Computer Systems is one of Silicon Valley's most conspicuous successes, believes some entrepreneurs got the raw end of the venture deal. "They didn't have the chance to be entrepreneurs. They were paid start-ups. Premature ideas got funded before they should have." Kurtzig, who recently left Ask, has dabbled as a venture capitalist herself.

Kurtzig defines entrepreneurs as people willing to take the risk of starting their own company. When a venture capitalist encourages a manager of a company to

to anybody. I didn't have the experience to know what to do with money if I had it. I made every mistake possible."

Kurtzig, however, extols the virtues of venture capital and says if she were to do it again, she'd get venture backing and thus start on a faster track. Still, she acknowledges the traps. In the fervor of 1983, some venture capitalists were bringing their seedlings to market at a scorching pace—sometimes within two years, instead of the routine seven to ten. "Managers never had the opportunity to struggle together through thick and thin," she says. Ask had that opportunity. Kurtzig's company was almost seven years old when it went public in 1981, giving her the time to learn from mistakes. Would Ask be as successful today if it had had a cushion of venture capital to fall back on? "Probably not," Kurtzig concludes.

■ *Kurtzig believes some entrepreneurs got the raw end of the venture deal. 'They didn't have the chance to be entrepreneurs. They were paid start-ups.'*

jump ship and start another venture—and pays a salary that is greater than what the manager had been making—there's no risk. "Part of the risk of management is not knowing where the next dollar is coming from, so you really have to think through what you're doing," says Kurtzig, who started Ask on a shoestring in 1974 and, without the benefit of venture capital, built it into a \$65 million company. "I didn't owe anything

#### ■ Time Is Money

Times have changed, proclaims Regis McKenna. His prominent firm, Regis McKenna Public Relations of Palo Alto, California, caters to hot high-tech companies. "We don't have the luxury of waiting five years to grow a company," says McKenna, noting that most

products have only six months to get out the door before they're either killed by look-alikes or out-dated. Firms have to mature rapidly to avoid being swallowed by larger companies on the prowl for technology.

In today's market, McKenna says, a start-up needs \$5 million in seed capital, and another \$25 million in second- and third-round financing. Then it's time to make, for instance, \$100 million in the public market to support volume production. Despite the cynical contention that venture capitalists watch the market with greedy eyes and jump in when they can cut the best deal, McKenna claims public offerings are made "to get the company to a size where it won't fail, not to make individuals rich."

Floyd Kvamme, a partner with Kleiner, Perkins, Caulfield & Byers and a former Apple Computer executive, says some companies are ready to make a public offering in two years, while others never are. "The reason to go public is to fund growth already demonstrated by demand in the marketplace," he suggests. He allows that venture capitalists contributed to the industry shakeout by propping up poor performers even when it became apparent they would never stand on their own. That applies with particular force to the hordes of disk drive start-ups and most of the PC-compatibles manufacturers.

Kvamme thinks it's too simplistic to point the finger at venture capitalists for the abundance of high-tech failures. The entrepreneurs themselves and the investment bankers underwriting public offerings also figure in the picture. "There are lot of feet in that fire," he observes.

**Riding high:** "We don't have the luxury of waiting five years to grow a company." —Regis McKenna, CEO of Regis McKenna Public Relations

## ■ Going Public

In 1983, the new issues market was dominated by high technology firms. Nearly 900 companies went public, raising a record \$12.95 billion, according to Norman Fosback, editor of *New Issues*, a Florida-based publication covering initial public offerings. It wasn't uncommon for a company with no earnings history to offer stock at \$22 a share and get mounds of cash from a technology-hungry public. In some cases, stock sold for 40 times a company's earnings, reflecting pie-in-the-sky expectations. And venture capitalists, who typically cash out in public offerings, were making a killing.

The only place left to go was down. As the casualty list of technology companies grew, investor

Software Publishing was one of the few technology firms that managed to pass through the fine sieve of last year's discriminating new-issues market. The highly successful company, which markets the *pfs*: series from its home base in Los Altos, California, has a long and solid track record by Silicon Valley standards. Established in 1979, the company financed its initial growth with \$1.2 million from Melchor Ventures. It could have taken advantage of the buoyant 1983 market but decided to wait. "We felt valuations were inflated and investors would be hurt," says Kathy Bailey, the firm's vice president of finance. "We didn't want people to remember us as the company that lost 50 percent of its money. We're in this for the long term." Software Publish-

Meanwhile, some venture capitalists remain undeterred by the shakeout. Many continue to look for opportunities in the computer field, according to Joseph Frye of Venture Founders, who insists the slowdown doesn't mean they've switched to biotechnology or bacon bits. "Venture capitalists are being worked very hard now," cleaning up "messy situations" in their portfolios, Frye says. "There's no scarcity of venture capital, but there is a scarcity of time."

## ■ A Taxing Proposition

Capital gains tax rates may determine the future of high-tech venture capital. The industry received a huge boost in 1978 when the rate was cut to 28 percent from 49 percent, and again in 1981 when it dropped to 20 percent. If the engines of entrepreneurship had been humming, they then began to roar. The Reagan administration's current proposal to drop the rate to 17.5 percent would signal another boost for venture capitalists.

While the tax law hangs in the balance, discriminating financiers still are aggressively seeking out first-rate companies with new ideas, says Baskin. Investments are being made more cautiously, with an eye toward products that meet demands in a market that is no longer booming. The only venture capitalists in full retreat are those who didn't choose carefully during the high-tech binge. ●

*'Venture capitalists are being worked very hard now,' cleaning up 'messy situations' in their portfolios, Frye says. 'There's no scarcity of venture capital, but there is a scarcity of time.'*

ardor cooled. Venture capitalists began spending their time and money nursing the wounded in their portfolios rather than funding new ventures. By 1984 the ranks had thinned considerably. Only 15 percent of 1984's 531 new issues were high-technology firms. And their single-digit price-to-earnings ratios and moderate offerings—in the \$7-per-share range—mirrored the caution on Wall Street. The \$4 billion raised in 1984 only highlighted the excesses of 1983.

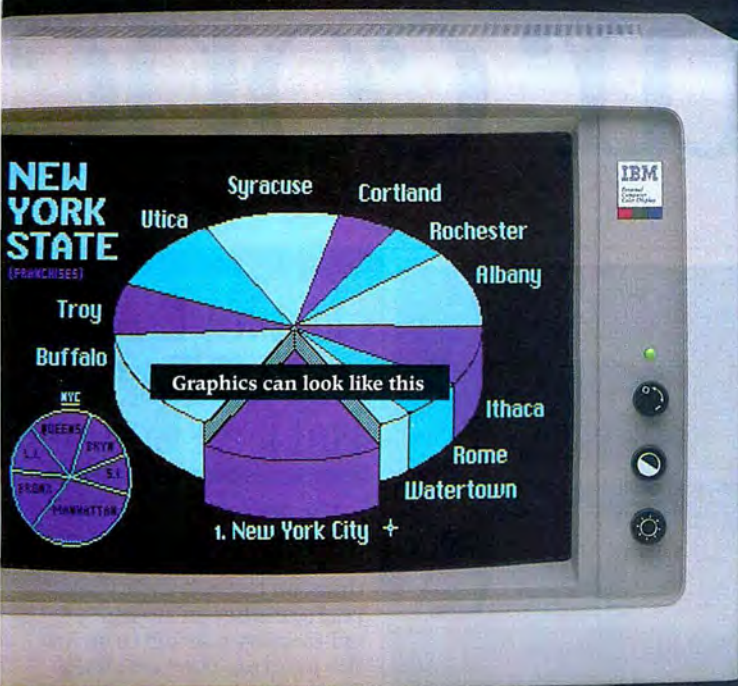

ing made its move in November 1984, netting \$10 million on a \$7-per-share offering. The stock climbed to \$16.50 three months later.

General Parametrics' Herb Baskin expects to take his company public later this year. Along with some financial analysts, he believes the market will have relaxed its stiff attitude toward technology issues by then, and prices won't be as lean as in 1984.

# With AST A Little More Money Buys You A Lot More Color

*The Graphix Partner™ with a standard color card*

*The Graphix Partner™ with AST's ColorGraphPlus™*

**Announcing the more colorful color card—ColorGraphPlus.** Don't settle for dull, lifeless 4 color graphics. AST's ColorGraphPlus color card offers up to 16† sharp, vibrant colors in the standard 320 x 200 resolution—for about \$50 more than you'd expect to pay for an ordinary color card.

In the high-resolution 640 x 200 mode, ColorGraphPlus gives you up to 4† full colors. Other color cards offer only black and white.

**There's more.** ColorGraphPlus features our memory expansion option—allowing you to add even more colors—for up to 8† vivid colors in the high-resolution color mode.

We've also included a Parallel Port as standard on ColorGraphPlus, making printer and plotter connec-

tions easy and convenient. And there's a software switch, providing compatibility with our Preview!™ graphics card.

**Complete IBM® color card compatibility.** ColorGraphPlus runs all the software designed for IBM's color card in the same resolutions, with at

least as many colors. And many of those application programs already support ColorGraphPlus' additional color capabilities, including some of your favorites like Symphony™ by

Lotus®, PC Draw™, Graftalk™, Business Graphics Systems™, Graphix Partner—as illustrated above—and many others.

**AST—number one in PC enhancements.** Because ColorGraphPlus is from AST, you're guaranteed first class quality, service and support for evolving color standards. Extensive

testing and comprehensive burn-in procedures ensure the product satisfaction you expect from the industry leader. And each ColorGraphPlus card is backed by AST's one year warranty. An optional two year warranty is also available.

To get the most color from your display monitor call our Customer Information Center (714) 863-1333. Or write, AST Research, Inc., 2121 Alton Avenue, Irvine, California 92714 TWX: 753699 ASTR UR.

†Number of displayable colors is software dependent. ColorGraphPlus and Preview! trademarks of AST Research Inc. The Graphix Partner trademark of Brightbill-Roberts and Company, Ltd. IBM registered trademark of International Business Machines. Symphony trademark and Lotus registered trademark of Lotus Development. PC Draw trademark of Micrografix. # Epson *all* your conc

**You have  
your computer.  
Now you want  
a printer.**

**And you  
have natural  
concerns.**

**Can you  
get a serious  
printer without  
having to spend  
serious money?**

**What about  
compatibility?**

**How reliable  
are they?  
Read on.**

## *YEARS AHEAD OF THE* **COMPETITION**

*While most other printers only offer  
standard 90-day warranties, we stand behind  
Epson printers for a full year.*

*Of course, the warranty is one benefit of  
owning an Epson that very few people ever have the  
opportunity to take advantage of.*

*Another benefit you probably won't use is the  
industry's strongest local service network. But it's  
nice to know it's there.*

**Is it an Epson  
????? **OR** ?????  
Isn't it an Epson?**

**For over a decade, major  
computer companies have  
staked their own reputa-  
tions on the reliability and  
performance of Epson  
printers by coming to us for  
the printers they sell with  
their computer systems.**

**The most  
TRUSTED  
printers  
in the  
WORLD**

**For years, the combination of an  
IBM® desktop and Epson® printer has  
been considered the best of both  
worlds.**

**And today, more homes and busi-  
nesses rely on Epson printers than  
any other printers in the world. And  
the reason is this. Like your IBM  
computer, you know you can count on  
an Epson printer. Designed for per-  
formance and built for years of worry-  
free service, most Epson printers  
have been working longer than most  
printer companies have been in  
business.**

**You know you need a printer to get  
the best from your computer. And,  
if you're going to spend your good  
money, you shouldn't have to settle  
for something unproven or less  
than reliable.**

**Check around. Now you can afford  
an Epson. Why settle for anything  
else?**

## **INCOMPATIBILITY:** *the irreconcilable difference.*

**Software drives your computer.  
Software also drives your printer.  
And it's very possible that your  
computer software will not be com-  
patible with your printer.**

**This can be shocking when the  
p's on your monitor come out as  
q's on your printer.**

**But Epson printers are the stan-  
dard to which virtually all major com-  
puter software is written. And IBM®  
PC's have been paired up with Epson  
printers as long as there have been  
IBM PC's. So just select the Epson  
printer and interface recommended  
for your particular IBM model.**

# answers erns in print.

## HARD COPY DECISIONS MADE EASY.

Your IBM PC and our Spectrum™ LX-80. It's the perfect match for home computing. With the low cost Spectrum LX-80 dot matrix printer and parallel interface, you can print in draft mode at a speedy 100 characters per second. And produce Near Letter

Quality results at 16 characters per second. On any

"So the question is:  
'Which Epson?'"

paper. The SelecType feature gives you push-button access to a wide variety of typestyles. And as with all Epson printers, your investment is protected by Epson's full-year warranty.

Your IBM® PCjr and our Spectrum™ LX-90. Our Spectrum LX-90 offers full print compatibility with your PCjr through Epson's Printer Interface Cartridge

(PIC™). Like the Spectrum LX-80, it prints out at 100 characters per second in draft and at 16 cps in Near Letter Quality. Along with the friction feed for plain paper, it features a tractor feed for continuous form computer paper. Spectrum LX-90 also gives you SelecType pushbutton typestyle control and Epson's full-year warranty.

*Epson dot matrix printers have very graphic advantages. Besides the versatility of draft and Near Letter Quality and the corresponding speed options, they can draw some very convincing pictures, including true circles.*

Recently in Martinez, California, two cats knocked an Epson printer 4 feet onto a tile/concrete floor. Although it didn't land on its feet, the printer is still running.

**NOW THAT  
YOU CAN  
AFFORD  
AN EPSON,  
WHAT ARE YOU  
WAITING  
FOR?**

## INTO VITAL STATISTICS.

Data. You live with it every day. What you need are the tools to make it come alive. Comprehensive analytical tools. Mathematical precision. And graphics capabilities to broaden your insights—to help you visualize, analyze, and communicate your findings quickly and convincingly.

And now you've got it. With STATGRAPHICS—a new PLUS\*WARE<sup>™</sup> product from STSC. STATGRAPHICS is the only PC software to fully integrate a wide variety of statistical functions with high-resolution color graphics. Giving you the power and precision you used to find only with mainframe software.

STATGRAPHICS' unique interactive environment allows you to generate graphs from within the statistical procedures. You can change a variable and see the effect—immediately. So your job is easier and you're more productive.

### MORE OPTIONS FOR MORE COMPREHENSIVE ANALYSIS.

STATGRAPHICS features over 250 functions for analyzing data—including analysis of variance, regression analysis, experimental design, quality control procedures, multivariate techniques, nonparametric methods, and extensive forecasting and time series analysis.

It also lets you enter data at the keyboard or access data stored in standard ASCII files, LOTUS<sup>®</sup> 1-2-3 worksheets, and DIF files used by other popular software packages.

### TELL A CLEARER, MORE DRAMATIC STORY.

STATGRAPHICS includes a wide variety of graphics programs such as two and three-dimensional line and surface plots, bar and pie charts, histograms, time sequence plots, and quality control charts.

The graphics are supported on color and monochrome graphics boards, dot-matrix printers, and pen plotters for presentation quality graphics.

### SOPHISTICATED STATGRAPHICS IS SURPRISINGLY SIMPLE TO USE.

STATGRAPHICS is completely menu-driven, and includes a comprehensive user's guide, online HELP screens, tutorial, and handy reference card. And STSC's HELP-Line is only a phone call away—giving you ready access to our staff of technical experts.

### TAKE A LOOK AT STATGRAPHICS.

### AND LOOK NO FURTHER.

STATGRAPHICS is the most advanced statistical graphics software available for PC's. And the complete system is just \$695.

To order STATGRAPHICS, or for more information, contact your local dealer or call 800-592-0050 (in Maryland, 301-984-5123). Or write STSC, Inc., 2115 E. Jefferson St., Rockville, MD 20852. Major credit cards accepted.

**Problem-solving at the speed of thought.**

**STSC**  
A Comtel Company

STATGRAPHICS operates on IBM PC's and compatibles under DOS, Version 2.0 or later. A minimum of 384K RAM, a graphics adapter and compatible monitor, and two double-sided disk drives or a hard disk are required. An 8087 math coprocessor and 512K RAM are recommended. STATGRAPHICS is a registered trademark of Statistical Graphics Corporation. PLUS\*WARE is a trademark of STSC, Inc. LOTUS is a registered trademark of Lotus Development Corporation.

Circle 16 on reader service card

# BEFORE YOU GET ON THE WRONG TRACK, READ THIS ABOUT THE ONLY ROM-BOOTABLE, PLUG-COMPATIBLE, XENIX SUPPORTING, HEAD-CRASH PROTECTED, HIGH-PERFORMANCE HARD DISK UPGRADE KIT FOR YOUR IBM PC-AT.

**Recording Media**  
99.94% error free unformatted  
100% error free formatted.  
Maximum deallocation is  
10KB/MB.

Up to 30% faster  
than IBM's drive.  
Exceeds IBM specification  
for AT high-performance  
hard disk. Average Access  
20 & 30 MB: 39ms  
40, 56, 72 MB: 28 ms

Bootable ROM supports

Only from CORE.

Rotary Voice Coil (RVC)  
R/W head positioner  
Fast and Accurate

**ATplus** T.M.

ATplus drives are  
manufactured  
for CORE by

Full one year warranty.  
Service available worldwide.  
(drive shown with cover removed)

**Automatic Park & Lock (AP&L)**  
Senses power interrupt, retracts  
heads to safe landing-zone. Heads  
never land on data, virtually  
eliminating risk of data loss.

**Memory option.**  
18 - 128 Kilobit (150ns) D-RAM  
chip set. Adds 256 KB to PC-AT  
basic model making 512KB PC-AT.  
With an ATplus drive, you can  
build the PC-AT IBM should have  
built in the first place.

## THE BALANCING ACT OF 1985.

You didn't buy an  
IBM PC-AT just to  
balance your checkbook.  
You bought it to crunch  
lots of numbers and  
words, in the shortest  
possible time. A labor  
saver. A time saver.  
Hence, a money saver.

So, do your part for effective  
money management;  
hard disk storage is no  
place to be penny-wise and  
pound foolish.

## TELL 'EM YOU NEED HIGH SPEED AND DATA PROTECTION.

These and other  
important features do add  
cost, but that makes a  
premium drive.

Anything that can be  
made, can be made  
cheaper, sell for less, offer  
lower performance, and  
probably die young.

Remember, usually  
you get what you pay for,  
and you ALWAYS get  
what you don't.

## ALL HARD DISKS ARE NOT CREATED EQUAL.

There are vast differences  
in the speed and reliability  
of Winchester hard disks.  
Since the IBM PC-AT is an  
incredibly fast machine, a  
slow drive can make an AT  
run like an XT.

So, before you get stuck  
with a slow drive in your  
AT, save your boss two  
grand and buy an XT.

Or better yet, buy the AT  
and avoid any drive with  
Access Times over 40 milli-  
seconds.

## RELIABILITY: WHERE HAS ALL THE DATA GONE?

Now tell 'em the drive  
must have a data protection  
scheme. One that's  
easy to use and reliable.

Winchester heads read  
and write while "flying" a  
few microns above the  
data surface. If the heads  
contact the recording  
media, you risk a head  
crash, and significant or  
total data loss.

So, even a fast drive  
without data protection is  
virtually worthless. Frankly,  
we'd rather sleep at  
night.

## BEWARE OF USER-DEPENDENT PROTECTION SCHEMES.

Some drives have a  
safe landing zone for the  
heads, but you need to call  
a separate program to  
send 'em there. If you  
don't call that program,  
and most folks won't, the  
heads in these drives  
ALWAYS land on data  
when powered down.

The slightest bump or  
vibration can move the  
heads, wiping out those  
data tracks. And the R/W  
heads can become  
contaminated, thus  
increasing the error rate,  
slowing down average access  
until the whole drive  
fails.

Consequently, those  
drives offer a very high  
risk of head crashes, a  
false sense of security, and  
little else.

What's your data  
worth? \$200? \$400?  
Specify AUTOMATIC  
data protection. ATplus  
has it. And it doesn't cost,  
it pays.

## PEACE OF MIND.

Specify AUTOMATIC  
park and lock of the heads  
on power down.

This system provides  
unparalleled head crash  
protection, by sensing  
power loss to the drive,  
and retracting the heads  
to a dedicated landing  
zone before they can land  
on your data.

Since this is 100%  
automatic, user-dependent  
risk is eliminated.

## OUR DRIVES HAVE ALL BEEN TO BOOT CAMP.

Avoid drives that  
CLAIM PC-AT compatibil-  
ity but can't BOOT the AT.  
By the time you juggle the

diskettes necessary to use  
one of those drives, the  
phrase "user-hostile" will  
have deep personal significance.

We believe that  
computers ought to serve  
people, not the other way  
around.

## BEWARE OF THE BARGAIN BAND-SCHLEPPER.

Avoid drives with in-  
expensive Band-Stepper  
positioner technology.  
These were pretty good  
way back in 1980, considering  
that's all anyone had.  
But by today's standards,  
they're inaccurate and  
very mechanical.

They waste time looking  
for the right track to read  
or write. And they're  
worth no where near the  
price you'll pay for 'em - in  
more ways than one.

## THE HIGH TECH SOLUTION.

Specify state-of-the-art  
ROTARY VOICE COIL  
(RVC) head positioner and  
CLOSED LOOP SERVO  
technologies.

This system uses a  
DEDICATED SERVO  
SURFACE (DSS) for  
continuous head location  
information.

The RVC and DSS  
use a large scale microprocessor  
to translate new  
track-look commands into  
current that is applied directly  
to the RVC.

# It's Your Move To Improve!

For years we have been selling our products through distributors hoping that they will provide better technical support and services to our customers. Lately, we find that most of them are not really technical and sensitive enough to satisfy our customer needs. In order to provide quality products and services at factory prices, we have decided to sell to you direct by passing distributors. Each of our products comes standard with an easy do-it-yourself installation guide. If you still have problems, our highly trained technical staff is only a phone call away to answer any of your questions.

To further back up our commitment for high quality and better services, our policy is one year warranty and a 30-day no-questions-asked money back guarantee on most of our products.

Remember. No loss. No stalemate. Make your move to improve. Call us at our hotline.

# ERROR-FREE SPREADSHEETS. EVERY TIME.

## ►The most powerful spreadsheet checking tool you can buy.

Spreadsheets can look perfect, and still be wrong. That's why more than 10,000 users who rely on accurate spreadsheets now depend on the Auditor.<sup>™</sup>

This simple error-trapping utility displays and prints out the formulas behind your spreadsheets—lets you check and verify figures, totals and projections quickly and easily.

Our latest version of the Auditor also offers 8 completely new features making it *the most powerful and useful debug program yet devised for spreadsheet software such as Lotus<sup>™</sup> 1-2-3,<sup>®</sup> Symphony<sup>™</sup> and SuperCalc<sup>™</sup>.*

## ►New Cross-Reference Feature.

This powerful addition lists all the places worksheet cells are referenced. The resulting flow-chart enables you to trace the logic of your spreadsheets from start to finish. Individual reports allow cross-reference by cell, function, or range name.

## ►Macro Analysis added.

Each macro contained in your worksheet is now extracted and displayed, with calls to all other macros traced and detailed. User-defined menus are completely expanded and explained.

## ►Sorry, Sideways.<sup>™</sup>

Our new easy-to-use Sideprint utility lets you print your spreadsheets sideways—without print files or gluelines.

## ►Worksheet Map speeds error-spotting.

This new report gives you a birds-eye view of your worksheet. The contents of each cell are represented by a single character, so errors can be easily spotted by observing changes or breaks in recurring patterns.

## ►Other new features.

- On-line help
- 5 new report options
- No print files required
- Audit worksheet sections by range name or window name

## ►Proven popularity.

The Auditor prints cell formulas in a two-dimensional grid. This grid matches the layout of your spreadsheet exactly so you can verify formulas and spot errors or omissions at a glance—without moving your cursor from cell to cell.

Long formulas are wrapped around for easier analysis. And the locations of all named and other special ranges are listed.

## ►A small price to pay.

The Auditor costs just \$149. And that's a small price to pay for spreadsheets you know you can count on.

## ►How to get your copy.

You'll find our powerful new Auditor at all leading computer stores. If your dealer is out of stock, just call our toll-free order number: 800-645-5501. California residents call 800-556-6699.

We accept VISA or Mastercard. Site licenses available.

The Auditor is a trademark of Consumers Software Inc. Lotus 1-2-3 and Symphony are trademarks of Lotus Development Corp. Sideways is a trademark of Funk Software. SuperCalc is a trademark of Sorcim.

AUDITOR<sup>™</sup>**  
FOR SPREADSHEETS YOU CAN COUNT ON

# The Personal Connection

James Fallows

A leading journalist and computer sage extols the potential of the machine to bring businesses—and people—together.

Within the memory even of computer greenhorns, the symbolism of the industry has undergone one enormous change. Starting in the late 1940s, when the first hulking, room-size computers were being assembled and George Orwell was foreshadowing the nightmare of the computerized totalitarian state, computers were seen as the ultimate instruments of oppression and control. Computers would launch nuclear wars, by accident or on their own initiative. They would store forever every indication of our socially deviant traits. When Norman Mailer wrote *The Armies of the Night*, about the 1967 protests against the Vietnam War, he used the computer as a shorthand for everything that was brutalizing and impersonal. He did not need to explain the reference; his readers could be expected to understand.

## Voting for Autonomy

But within the last five years computers have come to carry precisely the opposite connotation: Far from being instruments of oppression, they have become a major force for independence, diversity, decentralized control. The change did not follow from such cuddly commercial imagery as Apple pioneered; the crucial factor was that information that had once been the monopoly of data processing departments and government agencies could suddenly be obtained and used on thousands of desks.

So powerful is the new identification of computers with democratization that columnist John Evan Bremner, among others, has suggested that the gravest threat to the Soviet police state's survival is not the Star Wars initiative, or the Islamic-separatist movement, or the farm crisis in the Ukraine, but rather the emergence of the computer. The Soviet Union cannot afford to forgo the benefits of the era's dominant machine; but it also cannot afford the uncontrolled spread of information that

computers would permit. How much more rapidly would the samizdat circulate when passed not by hand but across a computer network?

The significant change in the computer's image, from oppressive to liberating, was fostered by the falling prices that made computers widely available and by the communications networks that enabled information to flow. The continued spread of communica-

tions systems—modems, data banks, electronic-mail networks—will, I believe, soon be responsible for a second fundamental change in the computer's connotation. Until recently, computers were seen as isolating people from one another. But eventually these machines will be understood and valued, like the telephone, as basic tools of social communion.

### Social Significance

During the early years of the personal computer revolution, when operating systems were churlish and few useful programs could be found, mastering a computer meant developing a passion; and like chess and other noncarnal passions, understanding and using a computer were largely solitary pursuits. Other people might physically be present, across the chessboard or at the computer club, but the excitement and drama were internal, independent of human company.

With the rise of communications systems, computers should become less interesting in themselves, as objects for endless tampering (often called programming), and more important as vehicles for what human beings have always most valued: establishing contact with others. Again like the telephone, computers seem certain to change our patterns of communication without changing our nature.

Some practical-minded, businesslike changes in communications are already upon us. I now take it for granted that when I have written an article, I will be able to send it through my modem to friends in Texas, Massachusetts, and Washington state and receive their comments within an hour. My sense of awe is rekindled only with difficulty. I could not rouse it even when I stood by a pay phone at a U-Tote-Em in Lubbock, Texas, and sent from my portable computer an article to someone sitting in an office that overlooked Times Square. Ten years ago overnight courier services seemed revolutionary. The sales projections you worked up this afternoon in Boston could be on your Dallas manager's desk by noon the next day! Now the couriers are being forced into a freight-handler's role, since businesses with communications systems can transfer sales projections, internal reports, and financial data from coast to coast in seconds, and call on the couriers only for items too bulky to travel through a modem. Law firms can instantly pull citations from Lexis; financial analysts can follow an entire industry's performance via Nexis; other businesses as well have come to rely on the countless high-priced data bases now available.

### Momentum Toward Equality

Because the exorbitant cost of these services restricts their benefits to the privileged, some people fear that data bases and computers in general will open yet another gap between the rich and the poor, the computer-literate and

to afford computers, the ability to communicate is more fairly shared than at any other moment in history.

Perhaps in turning to computerized communications, we may further drain the juice of human contact from an already arid so-

*Until recently, computers were seen as isolating people from one another. But eventually they will be understood and valued, like the telephone, as fundamental tools of social communion.*

the computer-ignorant. This complaint reflects a confusion about what computers have and have not changed. If you are not yourself a lawyer, has the lawyers' use of Lexis left you any worse off than you were when they merely had law books and you did not? The same technology that created Lexis has also fostered The Source, CompuServe, MCI Mail, and the thousands of free or low-cost bulletin boards through which students, retirees, and, yes, lawyers, can share information with one another.

Like the coming of the telephone, these networks create a new means of communication, one that should make society more, not less, equal. Not everyone can afford a Centrex system, but because so many people can afford telephones, and will be able

cial life. If so, then the atavistic fears about computers' effects may prove justified. Yet we have long revered those who maintain a faithful correspondence, through letters that may be weeks in transit, with friends who live continents away. Why should that effort be any less honorable—any less warm, loving, or human—simply because the delivery time is measured in minutes rather than months? ●

# TAPE IT EASY.

**B**oy, are you in for a surprise. You know you need mass storage. And you know you need some kind of backup.

But what you don't know is that making a backup from your hard disk can take the patience of a saint. And tax the memory of an elephant.

Unless, of course, you have a little TLC. The new TrimLine Combo from Corvus. You get mass storage (20 Mbytes). The incredible speed and efficiency of a hard disk. And an integral tape backup.

But there the similarity between a Corvus and anything else ends.

First of all, your TLC fits in beautifully. Between your IBM PC's monitor and base. No bulky boxes. And no clumsy cables and wires to trip over.

Next, you get the world's easiest tape

backup system. If you like using command lines, fine. The TLC will accommodate you. But if you're more interested in simplicity, just use one of the TLC's menus. And one of your fingers.

You can back up the entire disk. All your data for the day. A group of selected files. Or just one single file. As a matter of fact, you can back up whatever you want. Which will save you quite a bit of time and aggravation.

You'll also find backed up files in seconds with the TLC's Directory. No more searching an entire tape just to find one file.

Finally, you'll enjoy the backup speed of the TLC. There's no formatting of blank tapes (which can save you about two hours). And no worry about losing data to bad sectors the format has called good.

Scared? Don't be. Just tape it easy. Check out the TrimLine Combo from Corvus.

In addition to all the features, it's one of the lowest-priced tape backup systems you can find.

For more information and the name of your nearest Corvus TLC dealer, call (800-4-CORVUS).

# Reflex: Analysis With Finesse

Analytica has come up with an unconventional approach to data analysis, inspired by both 1-2-3 and the Macintosh. Reflex breaks the mold, enabling you to get more from your data than you may have thought possible.

*Stephen A. Blumenthal and Gail Rosen*

||||| As any regular reader of these pages knows, the market is flooded with data management products striving for new heights in user-friendliness. While such programs may be so amiable they all but kiss you good-night, there's often a price, in the form of serious design limitations, for all that ease of use.

Perhaps the best way to create a friendly, accessible, *useful* data manager is to forsake the data base management system (DBMS) orthodoxy altogether. And that's precisely what Analytica has

sought to do. Analytica's *Reflex* is neither full-fledged data manager nor spreadsheet, but a hybrid that marries the data manipulation talents of the former to the analytical capabilities of the latter—and tosses in graphics for good measure. Not only is the program friendly and fast, it also enables you to establish quantitative relationships between fields within the same record—something ordinary data management products simply don't do.

This novel product slant has some notable limitations of its own. *Reflex* does not have a programming language, is not fully relational, does not support macros, and, although it requires a graphics board, does not support color. Moreover, because the program is RAM-based, *Reflex* requires that you have a minimum 384K of RAM at your beck and call (the program alone takes up 290K); that leaves only enough room for relatively small data bases or for byte-size chunks of files exported from other programs.

### ■ Circling the Elephant

As in the parable of the blind men and the elephant, how you characterize this program depends on the angle from which you view it. If you're a seasoned devotee of 1-2-3, you'll find *Reflex* strangely familiar; as a modest DBMS with analysis capabilities, *Reflex* can even be an adjunct to 1-2-3. In *Reflex*, however, the emphasis is as much on the current state of business as on spreadsheet-style forecasting. If you're new to data management, *Reflex*'s interactive graphics will be a distinct aid to productivity, not to mention enormous fun.

Then again, if you're looking for a full-blown data manager that can apply the usual complement of DBMS features to sizable data bases without requiring additional hardware, *Reflex* is liable to leave you cold. But even if this program doesn't fill the bill as the definitive data manager, it's certainly a package you can use effectively from the start.

*Reflex* is designed with the technological neophyte in mind. The program should prove invaluable to anyone from sales managers who must monitor sales by product, container size, store location, and salesperson to stockbrokers who compare customer objectives with the performance of investment products maintained in client portfolios. Whatever the situation, *Reflex* serves small businesses that need to

track and analyze data and sort, filter, and file customer lists and sales reports—as well as overworked middle managers who may not need a transactional data manager like *dBASE III* or *R:base 5000* (and who, in all probability, lack the time to master such a demanding product).

### ■ A Petal From Lotus

*Reflex* draws heavily on 1-2-3's visual style but has received a Mac-like facelift. As in 1-2-3, *Reflex*'s commands appear at the top of the screen; when you make a selection, a pull-down menu of additional options appears, while an explanatory line at the bottom of the screen helps you get your bearings. To choose a command, you move the pointer to the menu option via cursor key (or mouse). Up to three windows can appear on the screen simultaneously, and the program has a readable sans serif character set—essential to operating in graphics mode. Analytica even built in a mechanism that highlights the menu options available in the current mode. As on the Mac, unavailable options appear in a dimmed font. Choosing a forbidden option produces a polite warning in the corner of the screen. Should you actually make an error, *Reflex* will beep at you.

Learning to use *Reflex* is like taking a refresher course in 1-2-3. And since the less you have to learn, the better, being able to apply knowledge of the Lotus program to another product is a treat.

Points of similarity between the two programs abound. An apostrophe before a cell entry indicates a text cell; you use the slash key to call the command line and then select a command by typing its initial (for example, V for View); the <Esc> key enables you to back out of a command series. And like 1-2-3, *Reflex* makes extensive use of the PC's function keys. The <F1> and <F2> keys invoke the Help and Edit functions, and <F9> recalculates. The Choices function key, <F10>, proffers a list of current field names from which to select and changes dynamically as those names change. Choices, which is accessible from any point in the program, can also list relevant file names, display formats, report attributes, and other options. The remaining keys perform functions

unique to data managers, such as paging through records, bringing up the next or previous record, moving directly to the first or last record in a file, and sorting and filtering records.

Five Different Viewpoints

With *Reflex*, you work with five “views”: Form View, used for building a data base; List View, for arranging the data base in list form; Graph and Crosstab Views, for displaying and analyzing data; and Report View, for printing information from any of the other four views.

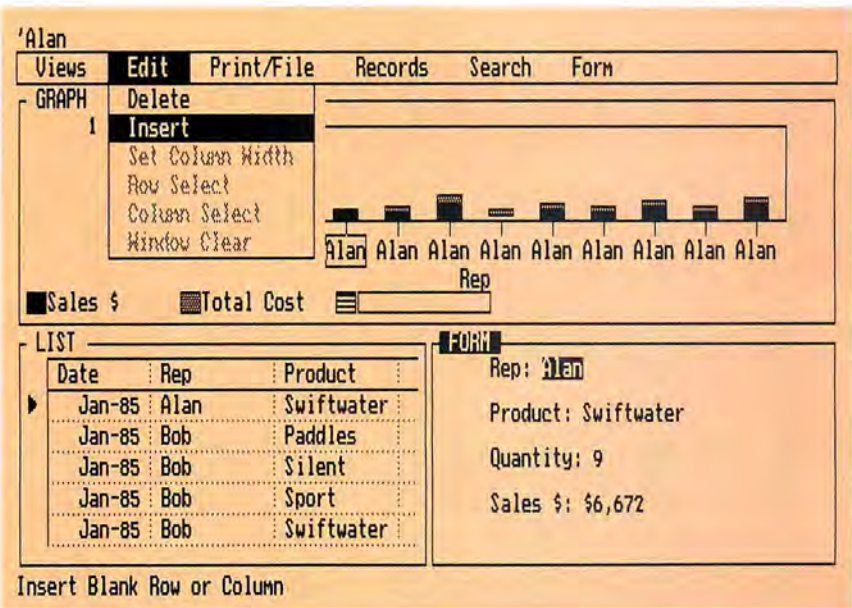

Each of *Reflex*’s five views can display the same information but in different format; commands are consistent throughout the views, and any change you make in one view is reflected in the others. List View’s column-and-row data display permits instant, side-by-side comparison (see Screen 1). Within List View you can reshuffle or temporarily delete columns with celerity. Moving data could scarcely be easier; you type the column heading where you want it and presto, the column moves. For differing perspectives on data, you can split the screen horizontally or vertically and inspect up to three views simultaneously. Needless to say, a program that displays sales figures identifying your best customers on half the screen—and simultaneously enables you to page through those customer records on the other half—is worth its weight in educated guesses.

Formulating the Form

In producing work screens analogous to the familiar paper forms used in commercial transactions, *Reflex* follows the current trend in business software: You design the form by typing field names where you want them and then build the data base by filling in the blanks. Personnel files, sales reports, and inventory control systems are classic examples of records better stored within the mysterious reaches of machines than on the mashed pulp of a thousand evergreen forests.

You begin using *Reflex* with the Form Design screen, a blank display on which you draw your form. While this form appears to be the electronic equivalent of the venerable 3-by-5 card, it boasts built-in spreadsheetlike calculation capabilities. You place the cursor where you want a field name to appear, then type in the name you assign to that field. Press <Enter>, repeat the process for as many fields as you need, select Form Exit Design, and the monster lives. You are automatically returned to Form View, where you may begin data entry.

*Reflex* accepts up to 65,000 records per file, 128 fields per record, and 254 characters per field. The size of a working data base is limited by RAM and the total number of characters in a record. If, for example, you had 10 25-character fields per record, then you’d need 300K of work space to hold 1200

Screen 1: Reflex can display up to three windows at a time—a handy way of enabling you to view one record in detail while the program lists related records (pointing to the record you’re scrutinizing) and displays a graph of one salesperson’s performance.

records. The *Reflex* data base structure is malleable—fields can be added, deleted, modified, or moved as you desire. With the Edit command, you can correct errors, change field names, and expand or contract the fields themselves.

Record creation is a fill-in-the-blanks process, using the form you designed. An editing line at the top of the screen displays the entire field entry; though the form itself initially displays only as many characters as fit in the blank, you can scroll across the entire field. Field entries can include numeric data, text, and dates. Field categories can be changed without modifying field information. Once you've entered data in any field on the first record, *Reflex* automatically creates a new blank record at the end of the data base, enabling you to continue with data entry.

### Reflex Action

In most data bases some information (such as brand names, dates, or container sizes) will be repeated from record to record. The *Reflex* Vary Tool largely eliminates the tedious typing such an assignment requires. Like 1-2-3's Range Copy command, Vary can create a series of records with duplicate data already filled in.

For example, analyzing monthly results from five departments over a five-year period would ordinarily require 300 records. With *Reflex*, you complete 1 record, and the Vary command then creates the same record for each division. You use Vary again to create division records for each month, and then a

third time to create monthly division records for each year. The Vary command works with any type of field.

An even slicker way to put Vary to work is to engage its "what-if" capability. By automatically changing data in a series of records, *Reflex* can reflect the impact of projected business strategies. Varying an entry in a numeric field (for example, increasing the value 25 to 75 in increments of 5) makes "what-if" scenarios easy to construct.

### Keeping Tabs

If the Vary command enables a DBMS to act like a spreadsheet, the *Reflex* Crosstab View attends to the here and now—a "what is," rather than "what if," approach.

When it's necessary to keep track of sales representatives—not to mention specific product performance and market penetration—managers are likely to find Crosstab View the program's greatest contribution to making short work of long jobs. In Crosstab View you can perform flexible analyses through data base manipulation. Cross-tabulation lets you compare and cross-total data between any given set of records, and it automatically provides summaries of your data.

With Crosstab View, overall sales can be compared to total sales for each product and simultaneously compared to total sales for each sales representative. This three-dimensional analysis yields a

**Screen 2: The List View** allows you to retrieve a specific record from the data base, then zero in for a closer look.

26	\$16,639	\$640		

chart that tabulates total sales for each product by representative (see Screen 2). A host of built-in mathematical functions are at your disposal, among them sum, average, standard deviation, variance, minimum, and maximum. You can display numerical Crosstab chart entries in a variety of formats (fixed, general, scientific, financial, percentage, or currency) with up to 15 digits of precision.

### Filter Kings

As any businessperson knows or soon learns, filtering data fosters quick analysis. Answering the objective question "How many customers do we have in Hoboken?" helps solve management's more existential question "Is sending salespeople to Hoboken worthwhile?" You can filter a *Reflex* data base for a list of records meeting certain criteria—for example, all sales in excess of \$10,000. To enter filter conditions, you choose from a list of such logical operators as equal, greater than, and less than signs (the documentation includes a complete list). Filtering creates a subset of the data base, which the program treats as the working data base. The screen displays only the filtered information, although, of course, the complete data base is still safely stored on disk.

*Reflex* allows any field in a record to be a sort field. The program handles up to five sort fields, each of which may be sorted in ascending or descending alphabetical, chronological, and/or numerical order. Thus, two records with identical data in a primary sort field can be resorted on the second field of your choosing. Records with identical first and second fields are sorted on the third specified field, and so on. A sort through the records in any view establishes the order for the entire data base in all the views. *Reflex* is case-sensitive when searching and sorting.

By setting search conditions in a sort, you can also locate an individual record—a helpful feature in determining, for example, which client in the Southeast enjoyed the highest mail-order volume or in tracking individual sales performances.

### Clarifying With Graphs

For a truly graphic portrayal of data, *Reflex* enables you to create graphs and then use them as the basis of additional data analysis. You can, for example, zero in on a particular graph item—say, the name of a hotshot salesperson—and split the screen to see his or her customer records in the Form or List View.

Screen 3: With Reflex's Graph View you can track that fire-brand salesperson—and determine whether rising curves are flukes or recurring phenomena.

And because graphics are integrated with all *Reflex* views, the impact of a change in any view is immediately apparent in the graph (see Screen 3). What's more, you can move the cursor along the points of a line graph and see the Form or List View for the data represented by any point.

To graph data, you select Graph from the view choices. The graph can replace Form or List data or occupy a portion of a screen split horizontally or vertically. *Reflex* supports five graph types: scatter, line, bar, stacked bar, and pie chart. You simply choose one and specify the *x*- and *y*-axis fields, and the graph appears.

You can scroll through a graph if it occupies more than one screen, and you can change it instantly from one type to another. While graphs usually consist of individual records displaying points for each value, *Reflex*'s built-in functions are also available in the graphics component. Using @SUM, for example, the program can calculate and then total summary values (that is, records with the same value in the *x*-axis field, such as the name of a sales rep); these aggregate values, rather than the individual points, will then be plotted on the screen (see Screen 4).

### ■ Esoteric Functions

*Reflex* contains an assortment of additional functions that speed calculation and analysis tasks. The program's Field & Sort settings create display formats and control the massaging of data during sorting, filtering, and the setup of calculated fields.

In *Reflex* parlance, a calculated field is one containing a formula that operates on data included in other fields—and, accordingly, generates new information. Several fields can be linked to create models and thus provide another way of performing the redoubtable "what-if" analyses. In addition to arithmetic operators, formulas can make use of logical operators and the full complement of *Reflex*'s built-in functions.

On top of the functions already specified, *Reflex* boasts a number of financial functions (present and future value, compound growth rate, and equal loan payment calculations) and additional mathe-

matical functions (random number generation, rounding up to 15 digits, pi, and a few trigonometric functions). Even the date function contains a useful wrinkle: It can return not only the current day, month, and year but also the number of days, months, and years between two dates. With the program's special functions, a calculated field will return a true or false statement based on whether that field has an error or null value.

### ■ Reporting for Duty

*Reflex*'s report production facility is particularly easy to use, making it all the more impressive. Without much bother you can create both detail and summary reports that include calculations of totals, averages, counts, minimums and maximums, variances, standard deviations, percentages, and running totals. Subtotals can be printed at any break in a sort field. You can, for example, generate a subtotal based on a change in a date field, obtaining total sales for the day as a subtotal of total sales for the reporting period.

*Reflex* reports are created on screen, but not quite according to the what-you-see-is-what-you-get method. The on-screen report displays only the field names; to see the report as it will appear in print, you need to spend a few moments calling up the Preview feature. If you don't like what you see, Preview permits adjustments. From Report View, you can print lists of information, mailing labels, and summaries of data base records. Headers, footers, titles, and conclusions can be included with a few keystrokes.

A significant drawback, however, is the program's inability to integrate graphics into a report. You can combine a graph window with text on screen—but not in the final printed document. Interestingly, although the program does not support color, you can produce color graphics output on the HP 7470 and 7475A six-pen color plotters.

## Rules for Importers

In the best of all possible worlds, *Reflex* would be put to use scoping out data you routinely enter in your favorite spreadsheet or DBMS, then hand off to the new kid. Analytica more or less planned it that way; *Reflex* can read data from 1-2-3, *Symphony*, *dBASE*, and *pfs:file*, and it understands both DIF and ASCII formats. *Reflex* enables you to import selected *dBASE* fields, an essential capability for a program whose limited work space won't tolerate ingestion of large *dBASE* files.

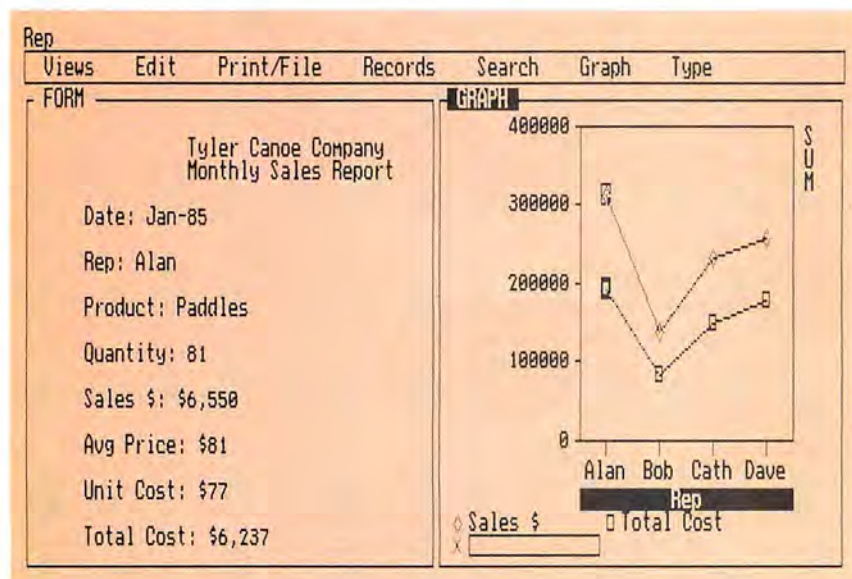

Using Report View, you can export *Reflex* files for use with most word processors, *dBASE*, 1-2-3, and *Symphony*. Simply enter Report View and choose the names of the fields you wish to export. A few keystrokes later the *Reflex* file is printed to disk as a report, where your recipient program can have at it.

Truth to tell, however, translating "foreign" information into a single data base format is not a snap; properly identifying the location and the type of data to be translated can be time-consuming. This is so despite a useful tool that supplies a format for designating information to be translated. *Reflex* reads 1-2-3 files, for example, as if it were translating a *Reflex* List View—row by row. Each column label is a

field name, each column consists of field values, and each row represents another record. For convenience, *Reflex* will recognize data identified by 1-2-3 range names. You can also rearrange the columns of a List View or, by filtering, temporarily dispense with extraneous data.

## Thanks for the Memory

Every silver lining has a cloud; for *Reflex*, it's the amount of memory it needs—lots. Analytica suggests a minimum 384K, but even home users are kidding themselves if they intend to use this program with less than 640K. The program's RAM-based approach results, on the one hand, in much faster searching and sorting and, on the other, in the enrichment of the good people who make expansion boards. (On yet a third hand, there's the inherent vulnerability of holding all your irreplaceable records in RAM. Save to disk regularly when using *Reflex*, or you may suffer the random wrath of power failures.) A spokesperson at Analytica confirmed that the company is evaluating a variety of hardware and software approaches to accessing memory above 640K.

Screen 4: The Graph View also serves as a convenient means of measuring one sales whiz's performance against the entire crew.

While we're on the topic of hardware, the *Reflex* manual notes that the program requires either an IBM Color/Graphics Adapter or a Hercules Monochrome Graphics Card. You'd think that if you were bereft of either you couldn't use the product. Not so, fortunately; a Quadcolor board worked without a hitch. Obviously, boards compatible with *Reflex* video drivers exist; perhaps someday Analytica will share the list of acceptable boards with the world. (The aforementioned spokesperson indicated that the next release of *Reflex* may support color.)

### Power at the Ready

The *Reflex* package includes a poorly fitting function key template (Compaq owners can request an alternate), a notebook-size manual, a disk of sample data bases used with the manual's tutorials, an excellent help disk, and a McGraw-Hill paperback entitled *Reflex in Business*. The book offers 17 examples of "typical" business analyses speedily wrought through use of the program.

For most nontechnical business users, the power available in data managers like *dBASE III* remains untapped because it isn't exactly what the doctor ordered—or what day-to-day chores call for. Just as most of us won't be jumping off cliffs in the fragile embrace of hang gliding equipment, neither are we likely to take seriously the prospect of programming our way to data management nirvana. Particularly if we don't have to.

*Reflex* is commendably accessible and offers thorough, even elegant, analysis capabilities that other DBMS products lack. Indeed, thanks to an intelligible structure and an enticing interface, it even manages some 1-2-3 feats, but with less pain and a bit more flash. Given this unique position, *Reflex* could well find a distinct and comfortable market niche. The most serious threat may come from Lotus itself: version 2.0 of 1-2-3 reportedly contains a clutch of *Reflex*-like enhancements.

Thanks to recent agreements, *Reflex* users can now access Informatics General mainframe data and run the package on 3Com's EtherSeries local area networks. Both developments should make *Reflex* attractive to the growing office automation market.

*Reflex is commendably accessible and offers thorough, even elegant, analysis capabilities other DMBS products lack.*

Without claiming definitively that *Reflex* embodies a fundamental new approach to business software, we're convinced the program does offer novices and PC veterans alike the pleasure of useable power—providing your machine sports a graphics board. That's a big caveat, and if your PC is not so equipped, you'll miss out on the satisfaction—and, yes, enjoyment—that using *Reflex* offers. ●

*Stephen A. Blumenthal is a Washington, D.C., attorney and director of regulatory relations for the Securities Industry Association. Gail Rosen is a freelance technical writer based in Berkeley, California.*

# Ready-to-Run Accounting

If your accounting needs are modest, 1-2-3 provides a hospitable home for a surprisingly complete general ledger template.

Ralph Soucie

||||| As useful as stand-alone accounting systems are, they tend to be both costly and complex. If you're willing to shell out \$500 for a general ledger package—and then buckle down for the conversion from manual to PC-based accounting—before you're through you'll probably spend still more for payroll and inventory-control modules. For small businesses eager to automate their bookkeeping, a more modest approach is called for.

Good news. Alfred Publishing's *Ready-to-Run Accounting*, a template that works with 1-2-3 and *Symphony*, may be just what the controller ordered. At less than \$50, *Ready-to-Run Accounting* acts and feels more like a full-fledged program than a template.

For purposes of this review, I tested only the 1-2-3 version; Alfred Publishing describes the *Symphony* release as “functionally identical.”

As with any Lotus template, of course, certain restrictions apply. The limited scope of *Ready-to-Run* isn't likely to attract CPAs or businesses in need of heavy-duty accounting. Because templates are often tightly written to conserve RAM, don't look for elaborate context-sensitive help screens. And unless you're on intimate terms with 1-2-3's macro capabilities or *Symphony*'s command language, you'll be confined to the program structure Alfred Publishing gives you—but what a useful structure that is. As an introduction to basic automated accounting—either cash or accrual—you can hardly go wrong with this template. That's true whether you're an old hand at 1-2-3 and *Symphony* or just getting acquainted with either Lotus package.

## ■ Easy Does It

Installation is a snap: Simply place the template disk in drive A: and type *Lotus* (for 1-2-3) or *Symphony*. A batch file then copies the appropriate version to your blank formatted disk in drive B:. From there you can experiment with dummy data included in the template. Before you enter live data, invoke a few macros to clear out the sample files, and you're on your way.

You move about the 14 linked *Ready-to-Run Accounting* worksheets exclusively through labeled macro commands, so familiarity with 1-2-3 isn't mandatory. If you're comfortable with 1-2-3's command line, you'll like *Ready-to-Run*'s fidelity to the original. Data entry is as straightforward as filling in the blanks of an on-screen input form (see Screen 1). Other input screens help you enter bank deposits, receivables, payables, and general journal entries. You can post entries to previous accounting periods, run updates and reports midmonth (or any time), and maintain books based on 13 four-week periods rather

than on one entire calendar year. The template even flags simple data entry errors, such as alpha characters in a numeric field, accounting periods in excess of 13, or account numbers that don't jibe with the chart of accounts.

Program documentation, which is in the form of a softbound book, indicates that *Ready-to-Run* will handle up to 450 checks per month, although even 200 would seem to justify the purchase of a stand-alone general ledger package. The template comes with

Screen 1: Data entry in *Ready-to-Run* is a fill-in-the-blanks exercise.

charts of accounts and financial statements for four business categories: professional office, grocery, real estate, and generic small business.

*Ready-to-Run* can generate and date-stamp seven classes of reports, including trial balance, detailed general ledger, and journal (or transaction) listings; charts of accounts; financial statements; non-aged accounts receivable; and accounts payable. All financial statements are derived from a data base of transactions. However, keep in mind that this is a general ledger package; the accounts payable and accounts receivable components are rudimentary at best—each supports only 100 accounts.

Capacity to print invoices is also limited. *Ready-to-Run* cannot

produce departmental statements, inventory reports, or statements of changes in financial position. Unlike some 1-2-3 templates, *Ready-to-Run* offers no help with graphics.

### ■ Improvised Accounting

Because *Ready-to-Run* data files fit neatly into a canned application, they are off-limits to anyone using 1-2-3 for other purposes. Here again the template beast rears its ugly head: Just as the office PC guru can't import *Ready-to-Run* accounting data into a stand-alone general ledger, neither can anyone automatically import data from 1-2-3 or any other program.

However, this limitation has an important exception. Alfred Publishing has attempted to anticipate the 1-2-3 novice's basic accounting needs, as the template's default business categories suggest. But to the veteran for whom macros are old hat, customization *is* feasible—and probably a good deal easier than tinkering with the formatting codes commonly found in dedicated general ledger modules. You can access template macros on screen or peruse the manual for detailed listings.

You may want to alter the template to create specific account descriptions, but it's more likely that you'll patch the ledger and statement files to delete superfluous accounts. Opting to customize means adjusting cell references, an activity that, once undertaken, must be executed with care lest formulas be corrupted.

*Ready-to-Run* is generally bug-free; I encountered only a few minor kinks. The General Journal screen, for example, prompts for a

description of 'this payment'. Anyone attempting to record depreciation or write off a bad debt at this point might correctly conclude that a gaffe had occurred, but the goof is the template's, not the user's. The correct response is to forge ahead fearlessly.

### ■ A Worthy Primer

If you're a soldier in that army of small businesses that have yet to choose a general ledger package and aren't sure precisely how to go about doing so, *Ready-to-Run Accounting* provides a painless and inexpensive way to survey your fiscal terrain. Its manual, an excellent primer on double-entry accounting, makes such assessment that much easier. If you're willing to append macros here and there, you can even adapt the template to personal financial management.

Alfred Publishing plans additional modules for payroll, inventory, accounts receivable and invoicing, and accounts payable. If properly implemented, these packages may well make *Ready-to-Run* powerful enough to give the best of the stand-alone general ledger packages a run for their money. ●

# Enable: Compact and Capable

Is integrated software still viable? Can a five-function package be quick, friendly, flexible, full of features—and still manage to do everything in 192K of RAM? Meet Enable.

Merrily Shinyeda

There don't appear to be many shrinking violets at The Software Group of Ballston Lake, New York. This venture capital funded start-up, which devised and markets *Enable*, a five-function integrated package, claims the product sets new standards for the genre by offering full integration without sacrificing features, speed, ease of use, or your T-bills. Sound familiar? Is The Software Group just one more boxcar in a long freight train of

integrated software hyperbole—and, if truth be told, disappointment?

Surprise, surprise. Compared to integrated packages that slickly weave together components of limited functionality or force you to go to night school to master them (while they mangle your work habits), *Enable* does break new ground.

If sold individually, *Enable's* word processing, spreadsheet, data management, graphics, and telecommunications components would fare well indeed. With the five rolled into one, *Enable* offers the level of integration you need to combine files created with individual modules into a single document that can be displayed on the screen, edited, and printed. The program reformats text, sorts and selects records, and performs computations, all at lightning speed.

What's more, *Enable* is relatively easy to use, with a uniform command structure and a working environment that complement the five applications. (Version 1.0 was evaluated for this article; where appropriate, the article also describes enhancements included in version 1.1, which was released this summer.)

Now for the slightly bad news. *Enable* is available in two flavors—one for floppy-disk-based systems and another for hard disk systems. Although the program is tightly written and boasts near-seamless integration, only the hard disk edition is worth serious consideration. The floppy-disk-based offering requires disk-swapping so extensive that running *Enable* without a hard disk is just about unthinkable.

## Master Control

Unlike 1-2-3 and *Symphony*, which are spreadsheet based, or *Framework*, which centers around an outline processor, *Enable* relies on a sophisticated central supervisory component similar to the control program you'd find running on an IBM/370. The Software Group calls this the Master Control Module (MCM).

The MCM insulates users from DOS, handling systemwide functions and containing features common to all five elements. Concentrating this capability in one place eliminates system redundancies and allows *Enable* to operate on an economical 192K of RAM, although 256K is advisable. As the super traffic cop and chief integrator, the MCM deals with memory allocation, file management, macros, windows, limited concurrency, and hardware configuration. While *Enable* obtains a good deal of its blistering speed from its origins in machine code, the MCM enhances the program's quickness and provides its striking degree of consistency from function to function.

Above all, the MCM does windows—the gist of integration in *Enable*. The program can display up to eight windows containing documents created under different program components. These windows can be moved about, reduced or expanded in size, or overlaid on one another. You can copy cells from a spreadsheet displayed in one window into a report in another window by means of several menu-driven steps. In similar fashion, you can combine

word processing documents, insert graphs into text documents, or copy data base records into a spreadsheet.

In version 1.0, this is a “cut and paste” process, so subsequent changes to the source document are not reflected in the inserted

retrieve what you've saved by simply pressing <Alt>-<F9> and the character name you assigned it. Similarly, you can design a macro to produce a spreadsheet template that will display cell labels and enter formulas in appropriate positions.

*The MCM is a superb memory and task manager. It allows the simultaneous running of one primary application, a print spooling program, and a communications session.*

material. That limitation is reportedly overcome in version 1.1: Updates in both the DBMS and the spreadsheet are reflected throughout the program's modules. What's more, previous restrictions on data interchange between modules—from the spreadsheet to the DBMS, or from word processing to either the spreadsheet or the DBMS—have been lifted. That means, for example, that a field in a data management record can contain the name of a spreadsheet, which is then available to be displayed or printed.

The MCM contains all text-editing functions. You can tinker with a spreadsheet or records in a data base, change legends on a graph, or even edit text you've just received during a telecommunications session. For repetitive tasks in any of *Enable*'s modules, the MCM's macro facility makes it possible to store frequently used commands and keystrokes for later execution. You might, for example, want to store under a single character a word processing document format including left and right margins and tabs or boilerplate paragraphs; you can

Macros can also be interactive, as The Software Group demonstrated in fashioning *Enable*'s training module. With this capability, you can design on-screen presentations using a combination of graphs and other data and specify the timing of your choice. A macro can also prompt for data entry by using a “wait for input” command following a message. These macros can be saved on disk as word processing documents and altered later if necessary.

The MCM is a superb memory and task manager. It allows the simultaneous running of one primary application, a print spooling program, and a communications session. This concurrent processing feature makes it possible to capture data sent from another system while a report is being printed and a spreadsheet recalculated.

As file caretaker, the MCM is also responsible for saving, deleting, copying, and renaming files.

Through the MCM, *Enable* can display the names of all files on the disk or limit the display to those created under a specific application. The MCM can also import and export ASCII and DIF files as well as those created with *dBASE II*, *1-2-3*, *VisiCalc*, *WordStar*, *MultiMate*, *EasyWriter*, and *Volks-writer*, which means you needn't start from scratch with *Enable* (see the discussion under "File It Away").

With version 1.1 of *Enable*, you can write your own menus or create customized pop-up windows, help screens, and error messages, any of which can be jazzed up with color. And should you need a DOS command that's not in the MCM's repertoire, you can access DOS without leaving the program.

## Getting Oriented

*Enable's* Main menu provides access to the five applications. Selecting an application from the Main menu activates a Top Line menu that displays the command choices for that component. Except for the DBMS/ Graphics module, menu structure and operation are consistent throughout; *Enable* generally relies on the PC's function keys to trigger operations. DBMS/Graphics offers a great many more commands than a Top Line menu can hold, and so relies on a chart that contains every option.

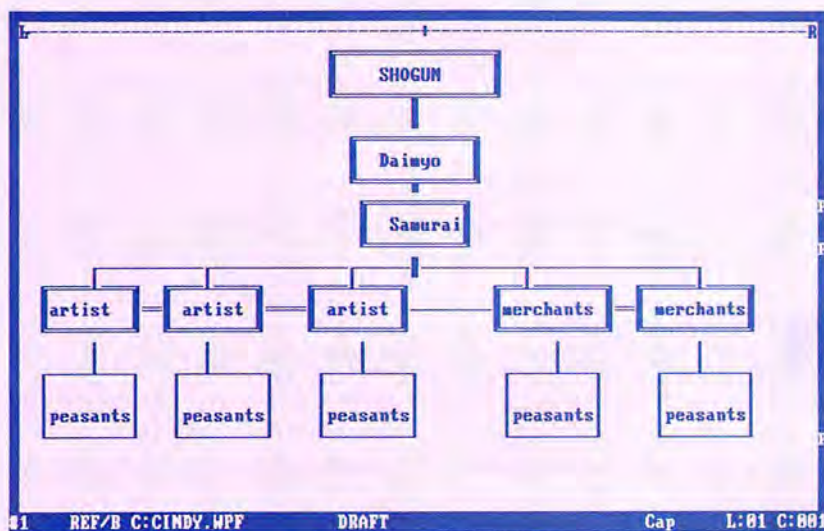

*Enable's* consistency and surface simplicity notwithstanding, most discerning users would balk at having to labor through a multi-level menu to perform simple

functions such as line deletions or global recalculations. For these users, *Enable* offers "expert commands." Relying on a combination of function and alphanumeric keys, *Enable* users can circumvent the menus. The entire process—both keyboard contortions and reliance on memory—is, however, uncomfortably reminiscent of *WordStar* and a far cry from the convenience of *1-2-3's* command initials option.

## Working With Words

*Enable* combines an impressive list of text-editing features with the ability to integrate graphs, spreadsheets, and data base information into a single document. Indeed, because the word processor can be pressed into service in any *Enable* module, this component truly does quintuple duty.

*Enable* takes a two-fold approach to editing and viewing word processing files. For quick and dirty input and editing, *Enable* offers a draft mode. In that mode, the screen is littered with rulers, page breaks, and other stylistic notations. Page endings are not automatically adjusted as text is inserted or deleted, which eliminates delays between edits. For final on-screen proofing and last-minute editing, *Enable* provides a what-you-see-is-what-you-get mode, sans control characters. In that more formal mode, the document appears on screen exactly as it will when printed—complete with bold type, headers and footers, and footnotes.

Screen 1: An organization chart generated with the *Enable* word processor and the box-drawing character set

Flexible formatting capabilities make it possible to enhance documents with block-indented paragraphs and variable line spacing. A full range of print attributes can further emphasize important points. *Enable*'s superscript and subscript features and box-drawing character set were clearly created with the real world in mind; you can use them to generate fairly intricate organization charts (see Screen 1).

Most single-function word processing packages generate headers and footers and number pages automatically. While *Enable* can't alternate the placement of headers and footers—a requirement on double-sided manuscripts—it can automatically number pages and insert the date. Unlike some word processing packages, *Enable* supports headers and footers of unlimited length. In addition, *Enable* makes footnote creation and renumbering a breeze.

*Enable* is just as talented when searching for and replacing text. You can search forward or backward to locate exact occurrences, or you can direct the program to ignore case or execute wild-card searches. You can also mark relevant passages with the electronic equivalent of a paper clip.

When entering numerical data, you can use *Enable*'s calculator mode to perform arithmetic operations and most of the functions offered in the spreadsheet module. For serious writers—or writers of serious reports—version 1.1 contains several potent additions: automatic indexing and table of contents features, plus multiple-column copy and move capabilities.

Screen 2: *Enable*'s spreadsheet is modeled on Lotus's familiar 1-2-3

A rudimentary mail merge facility for personalizing form letters and generating labels rounds out *Enable*'s stable of word processing tools. While this mail merge function can't sort or select from a mailing list, it does tie into the DBMS module, where sophisticated sorting and report generation can be done.

### Crunching Numbers

At first glance, the *Enable* spreadsheet feels like an old friend; its structure and commands suggest a slimmed-down 1-2-3 (see Screen 2). In version 1.0, The Software Group issued standard worksheets measuring 255 rows by 255 columns. The updated version of *Enable* permits you to configure those 65,000-odd cells in any of six ways, from the old 255 by 255 to 4095 rows by

15 columns. And you can reconfigure any spreadsheet while you're in it.

That's still on the puny side if you look at the numbers alone—1-2-3 tops out at 2048 rows by 256 columns. But there's more to *Enable* than meets the eye. Because the program employs virtual memory—a technique that allows information to be paged in and out and thus avoids the storage of unused “white space”—a worksheet's size is limited only by available disk space. Theoretically, eight worksheets can be open at once, but *Enable* lacks a *Multi-plan*-like facility to genuinely link worksheets. *Enable* does, however, permit consolidation of portions of worksheets. Data from a spreadsheet stored on disk or displayed in a second window can be copied, added to, or subtracted from values contained in designated cells.

For worksheets that extend over several pages, *Enable*'s Border option lets you choose the rows or columns to repeat on each page, making it easy to interpret data on

any page without having to refer to the first page for row and column headings. You can include a one-line header or footer—implemented via the word processor—that identifies the spreadsheet and provides other important information.

*Enable* includes more than 50 built-in arithmetic, logical, financial, and statistical functions. Calculations can be automatic, manual, or iterative. (The iterative option lets you specify up to 20 recalculations for resolving intentional circular references.) Under typical circumstances, recalculation is swift, but if you really want to fly, *Enable* obliges with support for the 8087 math coprocessor. To ease the process of identifying related formulas and editing circular references, *Enable* can highlight all cells that reference a specific cell; you can also vary a critical cell and check your results before moving on. Additionally, you can create a window to list formulas, range names, and a given worksheet's status.

Transferring a customer list from *Enable*'s DBMS module to a pertinent spreadsheet is as straightforward as copying the list from an open data base window. You can mark records and designate fields in any order. When these data base values and labels are transferred into a specified worksheet range, the program automatically adjusts column widths to accommodate the new entry and recalculates any formulas on the spreadsheet accordingly.

The latest release of *Enable* suggests that The Software Group is intent on wooing Lotus devotees.

*Enable* now fully supports 1-2-3 macros; users making the switch can convert their existing macros or create *Enable* macros with the same commands.

### Seriously Managing Data

Unlike some data management packages, *Enable* has not forsaken ease of use in its quest for power. Data base design consists of screens full of questions, options, and instructions. These queries and choices also guide you through each step of data base manipulation and maintenance. Given this interactive approach—plus enough time and storage space—you could create a massive 130MB relational data base of some 65,000 records. Each record can have up to 254 real and computed fields, and a field can extend to a maximum of 254 characters. As many as 16 fields per record

tight integration, the *Enable* word processor actually creates the input screens). If you're interested in even greater customization, the word processor can be used to reposition fields and insert additional descriptive information. The system can automatically supply data required for certain fields, such as those for current date and time. You can access other *Enable* data bases and transfer specific information into designated fields. Fields can accept formulas and can even be made conditional; a "go to field if" statement can be attached to a field, further simplifying data entry. Such an option automatically advances the cursor to a predetermined field if a specific value has been entered. In addition, version 1.1 of *Enable* endorses direct conversion of 1-2-3 data into the DBMS module format.

 *The latest release of Enable suggests The Software Group is intent on wooing Lotus devotees. Enable now fully supports 1-2-3 macros.*

can contain a word processing document or a worksheet.

*Enable*'s data manager doesn't compel you to work in an alien environment as do some spreadsheet-based integrated packages. By simply responding to questions, you define a field's length and characteristics. To ensure the accuracy of data entry, up to 20 validation criteria and user-constructed error and help messages can be attached to each field.

*Enable* builds a full-screen input form from your responses (in yet another example of the program's

You can search a data base via *Enable*'s structured query language or its prompt-driven query commands. Records can be sorted on up to eight fields using Boolean, arithmetic, relational, or wild-card operators. Sorted records are temporarily stored as a "select set." It's possible, for example, to extract a list of employees who have been with the com-

pany ten years or more, earn between \$25,000 and \$30,000, and participate in an employee stock option plan. The resulting select set can be further sorted by zip code and merged with a form letter using the mail merge function. Output can also consist of a customized report or graph illustrating the relationship between earnings and plan participation.

*Enable's* data management functions are easily accessible by heeding the prompts and plucking options from the menu screens. On the other hand, this approach can become tedious and may eventually impede productivity; indeed, this process should be tightened up considerably. For instance, rather than presenting a blank input form when you add records to a data base, *Enable* requires that you press <F10> and then select from the options Next, Ignore, or Quit.

Similarly, moving from one function to another requires too many keystrokes. Once you have added information to your data base and want to edit a record, you have to press <F10> and select Quit. Pressing <F10> again returns you to the Main menu, where you have to select EditOpts and then Edit Select from the pull-down menu that follows. Sound grim? It doesn't end there. You must specify both the file and the input form, then wait for the program to find the file. The expert commands hasten this process

somewhat but require you to memorize multiple keystrokes.

In evaluating version 1.0, I was confounded by an inability to access three key DBMS functions—

resolution, while the source document is displayed on a monochrome monitor. When displaying graphs in color, *Enable* offers two palette choices—each containing

*Enable's data manager doesn't compel you to work in an alien environment as do some spreadsheet-based integrated packages. By simply responding to questions, you define a field's length and characteristics.*

merge, verify, and update—that were included on menus and in the manual but weren't implemented until version 1.1.

You can navigate your way around the DBMS report writer via menus, or you can use the module's command language. In generating output, *Enable* leaves much to your discretion: Reports can include virtual fields, fields from multiple data bases, and up to 16 page break conditions.

#### ■ Illustrating a Point

*Enable's* Graphics module yields seven distinct graph types: two-dimensional vertical or vertical stacked bar, three-dimensional vertical bar, three-dimensional vertical stacked, pie, line, or *x-y* chart. These graphs may contain up to eight data groups selected from a spreadsheet or data base, and they can be enhanced with vertical or horizontal grids, shading, and coloring. Graphs can be displayed on a graphics monitor in either two-color high resolution or four-color medium

three colors—to complement your choice of background color.

A graph derived from a spreadsheet or a data base can be captioned by transferring labels directly from the source document and adding a main heading and subheadings. To create presentation-quality graphics, these titles can be displayed or printed in any of nine fonts. If you've got a color plotter, you can print titles in up to ten colors to distinguish the data groups.

If a graph is based on spreadsheet data, its settings are automatically stored with the worksheet. Graphs can be saved as a separate word processing file—the text of which, like any word processing file, can be edited, reformatted, and printed. Want to incorporate graphs into an existing

text file? Use *Enable*'s windowing feature to modify the graph's size and position, then invoke the program's copy command to transfer the graph into the text file. You can view the results on the screen as a compound document, in which charts and worksheet (or text or DBMS file) coexist simultaneously (see Screen 3).

### On Line and Ready

*Enable* offers two approaches to communications—quick connect and setup. If you subscribe to an on-line service like Dow Jones, Arbitron, or News-Net, or if you exchange data regularly with other computers, you can create and store up to 64 communications setup routines simply by answering a series of prompts. Once a setup is stored, establishing a connection is just a matter of a few keystrokes; quick connect is in fact a subset of the setup option.

*Enable*'s communications component is hardly an afterthought. You can send and receive data at rates of 110 bps to 9600 bps. The package supports the XMODEM file transfer protocol and includes its own data transfer method that boasts enhanced error-checking features. Version 1.1 adds VT 100 terminal emulation to this lineup.

Receiving data—and quickly putting it to good use—is a snap. At any time during a transmission, you can enter the word processing module, then capture and edit the file. Communication is uninterrupted, and data is stored in a

buffer in RAM. The Software Group claims that if both sender and recipient are using *Enable*, transmission of worksheets and graphics is error-free.

### Looking for Output

*Enable* is extremely able at a number of things, but generating output isn't always one of them. On a floppy-based system, printing can be troublesome if space is at a premium on your data disk. When the print command is given, *Enable* temporarily transfers a print utility file called TSGPRT.SSP to the data disk. Once your file has been printed, TSGPRT.SSP is deleted. The size of this extra file is generally twice the size of the data file. Because this file must reside on the data disk, it's essential that adequate space be left on your disk to accommodate it.

Should the TSGPRT.SSP file need more space than you've got, you have the option of deleting a file, copying surplus files to another disk (and then deleting them from the working disk), or canceling the print request. If you choose to cancel the request, *Enable* will warn you that data may be lost. Assuming you cancel, you'll also find that the TSGPRT.SSP file remains on your disk and that the directory indicates you're fresh out of disk space.

Once a print command has been executed and printing begins, there appears to be no way to cancel a print command. If you need to interrupt printing for any reason, you'll have to turn off the printer and restart the system. If you do so, however, you'll find

Screen 3: A line graph generated in the spreadsheet mode is combined with a text or DBMS file to create a compound document.

that the pesky TSGPRT.SSP file remains on your data disk. Accordingly, deleting the TSGPRT.SSP file whenever a print command has been aborted is mandatory.

#### File It Away

For *Enable*, a program without a hefty base of users, smooth file translation is essential. The

#### An Amiable Workhorse

*Enable* isn't perfect, but it's well designed and does include the requisite essentials plus an impressive complement of extended features. The first round of enhancements bodes well for the product. Version 1.1 admirably addresses some of the limitations and drawbacks of 1.0. For version

Although The Software Group built (and brags about) a product that exhibits a modest appetite for RAM—and thus appeals to a broad segment of the market—the logistics of actual usage commend *Enable* only to hard disk owners. Still, it's a mark of *Enable*'s value that the deeper you go into the program, the more power and sophistication it yields. On speed and degree of integration alone, *Enable* sets an enviable standard. Based on its auspicious first offering, The Software Group is *able*—and then some. ●

*Enable is extremely able at a number of things, but generating output isn't always one of them. On a floppy-based system, printing can be troublesome if space is at a premium on your data disk.*

good news is that you can transfer your *dBASE II* or *1-2-3* files to *Enable*. The bad news is that doing so can be extremely time-consuming. I sat patiently for 3 minutes while *Enable* painted onto the screen, line by line, a *1-2-3* file of 300 rows by 12 columns. *dBASE* conversion takes a bit of effort; you must initially convert files to the *Enable* format, then specify the fields to fill.

One other disk-related quirk is also worth noting. *Enable* copies a 33K *1-2-3* transfer utility (SYS-TEM.TSG) onto the disk before it begins to transfer a *1-2-3* file. As with interrupting a print request, there is no way to halt data transfer once it begins other than re-starting the entire system.

1.2, The Software Group should consider adding an automatic "save to disk" facility. Notations throughout the documentation warn that Quit does not save files; you must remember to return to the Main menu (or press <Alt>-<F10> to bypass the Main menu in favor of the Save menu) to store a file.

Program documentation is clean, accessible, and sensible. Recognizing that not everybody is going to want or need all five *Enable* functions all the time, The Software Group made the manuals modular. With comprehensive spiral-bound booklets for each program component, you're spared the tedium of thumbing through a thick binder in quest of information on a persnickety detail.

*Merrily Shinyeda is a Contributing Editor for PC World and director of the Sierra Group, an information systems market research company based in Tempe, Arizona.*

# And the Word Is Good

With its vastly improved manual and new array of features, Microsoft Word has become the born-again word processor.

*Burton L. Alpers*

When *Microsoft Word* was introduced in 1983, it rapidly gained a reputation as one of the most powerful word processors available for the IBM PC and compatible computers. Two subsequent revisions (versions 1.10 and 1.15) added even more power: a merge capability with IF... THEN... ELSE logic, a spelling checker, and a revised copy protection scheme enabling the program to run on the PC AT.

*Word* also became known as difficult to use. Actually, the program itself has never been difficult—it contains one of the simplest, most elegant user inter-

faces yet produced for a powerful word processor. But the documentation, which was disorganized, confusing, and poorly indexed, seemed intentionally designed to hide that fact. Thus, an outstanding program was rendered inaccessible to many users.

Times change, and it appears that Microsoft has heeded the complaints. Version 2.0 has been released with new documentation and an excellent on-line tutorial that should bring a novice up to speed painlessly and quickly.

Better documentation is only part of the story. This new version smoothes out some rough edges, corrects important omissions, and adds further capabilities. The program still sells for its original \$375 list price and, in fact, now includes a 30-day money-back guarantee.

## An English-Language Interface

The first thing you notice about *Word* is that it speaks to you in English rather than computerese. Some other word processors ask you to mark the beginning and end of a “block” of text before specifying an action (cut and paste, underline, and so forth). A “block” is a natural way for a programmer to think of a unit of text, but it is not the way a writer thinks. *Word*, on the other hand, asks you to select one or more characters, words, sentences, or paragraphs for action. That is to say, the program approaches these concepts in the same way that you do.

Selections are immediately highlighted in inverse video, and actions are accurately represented on the screen. For instance, underlined text is underlined on the screen, and boldface text becomes bold. On a computer equipped with a color graphics board, all other print enhancements (italics, strikeouts, small caps, subscripts, superscripts) are also accurately represented. On the IBM Monochrome Display these latter enhancements appear underlined unless the computer contains the new IBM Enhanced Graphics Adapter.

Most operations are available as menu selections, eliminating the need to remember the control codes that were common in word processors of an earlier generation. At the same time, the keystrokes required to activate commands are typically fewer than with other word processors.

### The Mouse

Actions such as text selection, paging through a document, opening and closing windows, and selecting and activating commands can be accomplished with either the keyboard or an optional mouse. (See "War of the Words," *PCW*, Vol. 1, No. 8, and "Getting the Word," *PCW*, Vol. 2, No. 4, for detailed descriptions of these operations.) Considerable debate has occurred about the usefulness of the mouse in word processing in general and in *Word* in particular. One Microsoft competitor has been quoted as saying it will include a mouse in its program when humans grow a third hand.

Others, myself included, rave about the wonders of the beast.

An essential point has been overlooked in all this discussion of the mouse: There is more than one kind of word processing. For high-speed production typing you can live very well without the mouse. You may even be better off, because you can type faster if you don't move your hands from the keyboard.

*The Spell function is smoothly integrated with Microsoft Word and reasonably speedy in comparison with other spelling programs.*

But for creative writing and editing, the mouse is a natural, intuitive tool that keeps your attention focused on the content and scope of your work. With the mouse, you point first to the paragraph or sentence you want to move and then to the place where you want to move it. Point at the location where you want a window, and the window opens. For this kind of work, mouse operation rapidly begins to feel like an extension of yourself, and you are not likely to worry about whether your hand has left the keyboard.

### The Editing Screen

The editing screen in *Microsoft Word*, version 2.0, has several new enhancements. In earlier versions only 19 lines of the 25-line screen were available for text. The remainder of the screen was occupied by borders, a menu, and ruler and status lines. You can now use 22 lines for text. The menu appears only when you strike <Esc>, which is how you move from text mode to command

mode (similar to using the slash key in 1-2-3). If 22 lines of text are not enough, the program also supports the Hercules Graphics Card, which can generate a 43-line screen.

The new IBM Enhanced Graphics Adapter (EGA) and Enhanced Color Display are supported as well. The standard EGA produces *Word's* graphics on the IBM Monochrome Display. When con-

figured with an extra 128K, the EGA also provides color graphics on a standard RGB monitor and high-resolution color graphics on the IBM Enhanced Color Display. Using *Word* with the EGA and the Enhanced Color Display produces such an excellent image that I now do all my word processing in color (using white text on a blue background).

*Word* provides a unique solution to the what-you-see-is-what-you-get problem. In other programs and in earlier versions of *Word*, you can't tell whether words are spread out on the screen because you have inadvertently typed too many spaces or because the computer is justifying the text; nor can you tell whether you have used the <Space> bar or the <Tab> key to space text.

Version 2.0 of *Word* solves both those problems with its Complete screen-verification option. When text is displayed in this mode, each

space you have typed appears as a faint dot. Spaces that the computer generates for screen justification are empty. Tabs are represented by small arrows. Thus, it's easy to distinguish what you have typed from what the computer has supplied.

### The Mysterious Library Function

*Microsoft Word* has always listed a function called Library. Previously, attempts to activate it produced a message saying that the Library was reserved for future use. The Library has now been implemented, and it contains three options: You can run a program or issue a DOS command from within *Word*; you can hyphenate the current document; or you can engage the spelling checker to correct the current document.

Being able to run another program or issue a DOS command from within *Word* adds great flexibility. For example, I keep a BASIC telephone dialing program installed on a RAM disk. I can now activate the Library option while in the middle of a word processing session. The program prompts me with 'LIBRARY RUN:', and I respond with **E:BASICA E:PHONE-P**. Within 3 seconds the phone dialer is ready. After I make my calls I exit the phone dialer and am greeted with the message, 'Press a key to resume *Word*'. The program returns immediately, with the cursor exactly where it was.

You can use the Run command to format a new disk if the need arises, to copy a file, or to perform any other legitimate DOS operation. A similar Run option exists

in *WordStar*, but I have never been able to get it to function properly. Problems ranged from the option's not working with a given version of DOS to its locking up my machine and destroying my work. This *WordStar* experience prompted me to try every variation I could think of with the *Word* option, but I could not force the program to fail.

*Word*'s second Library function—a hyphenation routine—allows you to approve or change each hyphen the program inserts, or simply let the program make its own choices. Hyphens are "optional"; that is, a hyphen will appear in the printed document only if it is needed at the end of a line. You can do all the editing you wish without worrying about an inappropriate hyphen appearing in your final copy.

 *The copy-protection scheme made RAM disk operation clumsy in previous versions of Word. Although version 2.0 has simplified this operation, RAM disk operation may not be worth the effort with this program.*

The automatic hyphenation routine is embarrassingly accurate. The first time I used it, I overrode the program's decisions on 9 of 11 words. According to my dictionary, I was wrong in all 9 cases.

The third Library function allows you to check the spelling in your current document with an 80,000 word dictionary. (You can also engage this spelling checker from DOS to check any *Word* document.)

The Spell function is smoothly integrated with *Microsoft Word* and reasonably speedy in comparison with other spelling programs. You can see misspelled words in context, and an excellent dictionary lookup function allows you to select the word you want with a cursor key or the mouse. You can easily add words to the Main Dictionary, which is used for all documents; a User Dictionary, which you can invoke as an option; or a Document Dictionary, which is checked only for a specified document.

The spelling checker contains several interesting subprograms that can be invoked from DOS or from the Library. These include word counts, word frequency counts, and anagram generation. The current release has a minor bug in the word count and word

frequency subprograms, however. Unlike the rest of *Word*, these subprograms require you to supply the drive letter and the path name for the document to be processed. These subprograms always look to drive B: for text unless instructed differently; apparently, they cannot be configured to recognize another default drive.

## Style Sheets

A style sheet stores all the formatting information you wish to preserve about a document type. You can save any formatting options available in *Word*. Style sheets are stored in the Gallery. You might have style sheets for memos, letters, draft and final versions of articles, tables, and so on. When you create a document,

The new version's style sheets are simply structured, eschewing the verbal barrage that characterized earlier incarnations of the program. Usage choices now consist of Character, Paragraph, and Division. These choices specify the unit of text you wish to encompass with a style change—a group of characters, a paragraph, or a larger section of the document.

*One file-conversion utility has implications far beyond word processing. This program is the Rosetta stone for the tremendous variety of translations performed on the PC.*

simply invoke the appropriate style sheet and the document is automatically formatted. You can also use style sheets to experiment with different formatting styles.

Version 2.0 contains some important style sheet improvements. First, their creation and use are clearly explained with detailed examples in both the new documentation and the on-line tutorial. The old manual essentially said, "Word has style sheets. Here's an example." Trying to learn from that documentation was like scaling Annapurna. With the new manual, however, anyone should be able to learn to use style sheets in short order.

Second, the style sheets themselves have been simplified. In previous releases you chose a Usage for each style sheet from among 29 different terms, including Normal Division, Front Matter, Nested, and Folio. In addition, each Usage had several Variants.

Once you select a Usage, the program suggests a Variant. You can accept the selection, or override it by choosing a Variant from the list provided on screen. In addition to showing possible Variants, the list also displays those you have already assigned. If you use style sheets created with previous versions of *Word*, they will automatically be converted to the new structure.

## Printer Support

*Word* now directly supports almost 50 printers, including the Hewlett-Packard LaserJet and the Apple, DEC, and Xerox laser printers.

Additional printer support is available. The Microsoft Special Interest Group has placed a program called WORDPR.BAS on CompuServe. This menu-driven program will automatically create

a *Word* printer driver for any printer; the driver will produce all print enhancements except proportional spacing.

## Compatibility

*Microsoft Word* is copy-protected. Mercifully, it does not use *Prolok* copy protection, so you needn't keep a floppy disk in drive A: for hard disk or RAM disk operation nor worry that a "worm" (a mechanism that some copy-protection schemes reportedly use) will be planted in your system to destroy data. The program comes with one backup disk, and the Setup program allows you to copy the program to a hard disk once.

Because it is copy-protected, the standard *Word* program cannot be run on a network. Microsoft's telemarketing division makes a special network version available on request. (The pricing policy for multiuser versions had not been determined at press time.)

The copy-protection scheme made RAM disk operation clumsy in previous versions of *Word*. Although version 2.0 has simplified this operation, RAM disk operation may not be worth the effort with this program. I ran several tests of various configurations, including floppy disks only, hard disk only, floppy disks for text with program files on a RAM disk, hard disk for text with program files on a RAM disk, and all-RAM-disk operation for both hard disk and floppy disk systems. The only operation in which RAM disk use made a difference was automatic hyphenation. The speed of other operations that I tried (loading and saving files, global search and replace, and so on) was relatively unaffected by RAM disk use.

Although *Word* can create text macros (abbreviations for frequently used text) with its glossary function, it cannot create command macros (sequences of commands that are run often). Consequently, it's a great relief that this version of *Word* is fully compatible with *ProKey*, version 4.0. With the two programs, you have full macro capability.

### New Strategies and Functions

*Word's* new documentation has not only been made comprehensible, it has been enhanced with explanations of strategies for important specialized tasks. Procedures like preparing text for telecommunications, dealing with ASCII files, and writing programs with *Word* have their own sections in the manual. Topics of less general interest, like mixing multicolumn and single-column formats on the same page, are dealt with in a question-and-answer section.

My only serious objection to earlier versions of *Microsoft Word* was the program's inability to keep successive paragraphs together. Although a Keep Together option prevented one paragraph from being split by a page break, there was no way to force two paragraphs to stay on the same page without resorting to manual pagination. This presented a problem in long documents when you didn't want to leave a subheading stranded at the bottom of a page.

The new version has remedied this omission. You can now invoke a Keep Follow option that guarantees paragraphs will stay together no matter how automatic pagination slices up the document.

The pagination process itself has been improved in version 2.0. Unlike most word processors, when you are editing, *Word* does not show how pages will appear; it shows the page breaks that existed the last time the document was printed. This strategy is useful if you like to make corrections on hard copy first, then transfer them to disk. If you need to see the revised page breaks, you can invoke the Repaginate command. That command has been speeded up in version 2.0 and contains a new option. You can accept the page breaks the program proposes or modify them by using the cursor keys—an interesting and useful compromise for dealing with pagination.

Version 2.0 comes with two translation utilities. The first, called CONVWS, is a variation on the CONVERT program in earlier versions. It converts *WordStar* files into *Microsoft Word* files. The second utility, CONVERTD, is a generalized file-translation routine with implications far beyond word processing. It will convert columnar ASCII files, delimited ASCII files, DIF (Data Interchange Format) files (such as those produced by *VisiCalc*), *dBASE II* text files, *Multiplan* files, and *1-2-3* files. CONVERTD can produce files in any of those formats (except *1-2-3*) and in *Microsoft Chart* format. This conversion utility is the Rosetta stone for the tremendous variety of translation work performed on the PC.

### Summing It Up

Ever since the first version of *Word* was released, I have planned to write a book teaching how to use the program. I am dropping the project. The new documentation and tutorial are so good that the need for such a book has evaporated. Microsoft has turned a documentation disaster into a model manual.

*Microsoft Word* is outstanding. If you are in the market for a word processor, you owe it to yourself to take advantage of the 30-day guarantee and test the program. It is not just one of the best word processors available; its price makes *Microsoft Word* a bargain in comparison to the competition. ●

*Burton L. Alperson is a professor of psychology at California State University at Los Angeles and a Contributing Editor to PC World. He is also director of training and development for Regent Data Systems in Los Angeles.*

# Asimov Ponders PCs

*Isaac Asimov*

I think, therefore I am ... a computer? PCs are slowly climbing the IQ scale, but no one knows if they will help humans make better decisions. Isaac Asimov examines how far a computer's reach can exceed its grasp.

Every advance in problem-solving tools must have given rise to vague fears. One can well imagine predynastic Egyptian architects suspiciously viewing the first measuring sticks. "People will grow dependent on these mechanical contrivances," they might have said disapprovingly. "They will forget how to judge distance with a keen eye and mind and will place responsibility for decisions on these inanimate pieces of wood. Instead of making a slow, good decision, they will make a quick bad one."

I dare say that the abacus, Arabic numerals, the slide rule, and the mechanical calculator all roused similar misapprehensions.

Now it is the personal computer—and its "intelligent" software—that seemingly will shield us from responsibility and allow our minds to wither.

Yet all problem-solving advances, whether wooden sticks or electronic spreadsheets, have confronted humans with a tautological enigma: A solution is implicit

in the information given to solve a problem. Even as we seek the solution to  $7 \times 9$ , we possess information that implies the inevitable answer, 63. We could look at a multiplication table, or if we had time, we could arrange 9 heaps of 7 pebbles each and then count all the pebbles. Although the multiplication table supplies the answer faster and eliminates the error-prone counting process, the result is the same in each case. If we have plenty of time and nothing else to do, and if we count very carefully, we can dispense with the multiplication table—but no one ever does so because speed and freedom from error are all-important.

And so it is with the personal computer. For secretaries and scientists alike, mechanical devices have given way to this all-purpose electronic tool. The personal computer can store entire libraries on its capacious disks and calculate

billions of times faster than we can without error. Nevertheless, once a computer is given information together with instructions for manipulating that information, the answer is implicit. We could start with the same information, employ the same manipulations, and reach the same inevitable answer, providing, of course, that we had

enough time and were sufficiently careful to avoid error. But because the time needed to solve complex problems excludes this approach, we insist on using computers and, indeed, have built business systems so intricate that we can no longer do without them.

However, the spectre of GIGO—garbage in, garbage out—stalks us. If your name has ever been bulk-mangled in a piece of

“personalized” mail, or if you’ve ever tapped in the wrong numbers on an adding machine, you’ve discovered that the inevitable answer can be explicitly wrong. The personal computer is as prone to this kind of error as any other problem-solving device and will hand you the wrong answer just as calmly. There is danger in trusting the computer, but so is there danger in trusting your finger to alight on the proper line in a multiplication table. The flaw, as always, lies with the human being.

There are many ways to check answers, but the best way to sift the gems from the garbage is simply recognizing when an answer looks wrong. Here the human brain tellingly outperforms the computer. Computers can solve astoundingly complex problems, but the human brain has an ability far beyond this—call it intuition, if you will.

You can feed dictionaries into a computer along with all the rules

## Microcom Internal 1200B PCjr/modem \$259.

JR. CONNECTION continues to offer hundreds of ways to save hundreds of dollars upgrading your junior. This month we're offering an extra special price of \$259 on Microcom's ERA 2 — an internal 300/1200 baud error correcting modem designed especially for the IBM PCjr.

The package comes complete with the auto answer/auto dial modem, menu driven communications software, owner's manual and full

four year warranty. With this package you can send letters, use electronic bulletin boards and information networks, perform error-free file transfers, play games or conduct business meetings with people all over the country.

For a regular supply of junior add-ons and software at super low prices keep calling our junior specialists at 1-800/IBM-jrPC or 603/446-7761. And watch for special savings every month in this space.

## 1-800/IBM-jrPC

# PC ← CONNECTION®

# PC Palace.

## A man's phone is his castle.

Whether you call up on our toll-free number, or tool up in your private coach, PC Connection will roll out the red carpet. Because here under the majestic skies of Marlow, NH (pop. 547) we're offering a regal selection of PC add-ons and software at prices even a pauper can afford. Backed by warranties and support services as solid as the crown jewels.

## My kingdom for a DOS.

You know the feeling of power you have when you first get a PC? You can do anything! In no time at all! Better than you've ever done it before! It's like being sixteen again.

But after a while, the novelty wears off. Things get ordinary. It's time to conquer new lands, learn new languages. It's time to call PC Connection. We'll make you feel like queen (or king) for a day.

Because our job is to figure out

how you can put your PC back on a pedestal without spending a king's ransom. We've checked out those new integrated software packages, we've tried those new printers, we've micro'd to mainframe, moused to menu, and modemmed to more mailboxes than most might mention.

## On your knees, bees.

When you call us, you not only get honest advice, you get some very sweet deals. Like the vessel of pure New Hampshire royal nectar we're sending free to everyone who places a \$500 order between now and August 30.

Just call 1-800/243-8088 or 1-603/446-3383, M-F 9:00 to 9:00; Saturday to 5:30. If you're planning to visit, call ahead to make sure what you want is in stock. The showroom closes at 8:00 M-F and at 5:00 on Saturday.

A container of PC Connection honey, featuring our most hair-apparent mascot. Free to all commuters, but not commercial accounts. Limit one per customer.

For the IBM-PC (XT & AT) exclusively.

# PC CONNECTION®

of English grammar, all the exceptions to those rules, and all the idioms that lie outside the rules. The computer can then write idiomatic English, in some cases novels and even poetry, though the results would be thoroughly uninspired.

I don't know any but the simplest rules of English grammar, and I seldom consciously apply them. Nevertheless, I instinctively write correctly and, I like to think, in an interesting fashion. I know when something sounds right and when it doesn't, and I can tell the difference without hesitation, even when writing at breakneck speed. How do I do this? I haven't the faintest idea. And because I don't know how I do it, I cannot possibly program a computer to reproduce what I do. The human brain is not a number cruncher. It manipulates numbers with dreadful slowness, and without the aid of tools as simple as pencil and paper, it is more likely than not to

make errors. Its expertise lies in intuition, insight, fantasy, imagination, and creativity. The human brain can invent and grasp situations it has never experienced or, on the basis of incomplete information and uncertain understanding, deduce at least reasonably correct answers. It's unlikely that a computer can do these things any more than a human can integrate complex equations in nanoseconds or instantly recall a month's worth of business transactions.

It is, of course, conceivable that computers will someday exhibit all the complexities of the human brain, but not in the foreseeable future. The human brain has 10 billion neurons and nearly 100 billion subsidiary cells connected in an astronomically complex wiring scheme. A neuron is itself an enormously intricate system of proteins and passageways.

Besides, why should we build a computer to do what humans already do so satisfactorily? Would we train a human from birth to do what even the simplest computers do so well? I think not.

The personal computer, then, in the course of its development, will remain a tool, ever more complex,

and perhaps ever more able to question the instructions given it. Yet however complex, I doubt the computer will ever match the intuition and creative powers of the remarkable human mind.

In my opinion, the future will see computers and humans, each representing totally different forms of intelligence, working in cooperation rather than in competition and accomplishing more together than either could possibly achieve alone. ●

# THE GRIZZLY™ MAKES BLACKOUTS BEARABLE.

## No one can hold a candle to The GRIZZLY.™

It's the one Backup Power Supply System that gives your hardware, software and data *complete* protection against blackouts, brown-outs and power sags as well as surges.

When your power goes down, the advanced VRS technology of The GRIZZLY™ provides an instant switchover to battery backup, while it warns you with an audible alarm, giving you ample time to calmly shut down your computer

system to avoid damage or critical data loss. Even momentary voltage fluctuations, which constantly occur, are tamed by The GRIZZLY. The Pulse Width Modulated, regulated output is your assurance that you receive constant, stable, clean power.

The GRIZZLY VRS, available in 200W, 300W, 500W, 1000W and 2000W models. Each tested for complete reliability and designed for ease of use. Just plug it into

any standard three-wire grounded outlet, switch it on and you have all the power of the king of the forest.

**DON'T PLUG IN WITHOUT US.**

# Experts on Call

Artificial intelligence is budding on personal computers, primarily in the form of expert systems—programs that take the facts you provide and supply limited solutions or predictions.

*Janet Goldenberg*

■■■■ Purists may disdain them as dim-witted step-children of artificial intelligence (AI) research, but so-called expert systems are fast emerging as a power tool for decision makers—a major new category of program to stand alongside spreadsheets, data base managers, and word processors as essential productivity aids. Instead of crunching numbers or words as the others do, expert systems crunch facts and rules to mimic the analytic processes of human professionals. Although AI gurus question whether these programs are “intelligent” in the human sense (that is, able to understand what they know, come up with new thoughts, or engage in wide-ranging, fairly coherent conversation), expert systems have proven professionally competent in impressive ways.

MYCIN, developed at Stanford University in the mid-1970s, was the first computer program to rival human doctors in the diagnosis of bacterial diseases. *Prospector*, created at SRI International in the

late 1970s by programmers working with a team of top geologists, is credited with discovering a large molybdenum deposit at Mount Tolman in Washington State.

The need to master complexity in an increasingly complex world—whether in professions like medicine or in newly deregulated industries like banking—is fast propelling these tools beyond university AI labs. In the next few years, say market watchers, expert systems (also known as advisory or knowledge-based systems) will function as everything from retail sales aids to foremen in robotic factories, from intelligent assistants for scientists to interactive encyclopedias.

As truly intelligent programs become established, many tasks now requiring human experts will be delegated to less highly trained practitioners, changing the expert's role from day-to-day decision maker to strategic planner and arbiter of difficult cases. For large companies these changes will bring savings in salary and training costs and may reduce expensive, perhaps disastrous, human errors. Small businesses will be able to buy "canned" expertise, which will help them compete with high-powered rivals. According to DM Data, a market research firm that tracks the AI industry, expert systems will be part of a \$4.2 billion artificial intelligence industry that by 1990 will touch every aspect of commerce.

#### Migration to Microcomputers

Although large-scale expert systems have been proving themselves on minicomputers and mainframes for several years, AI developers are just waking up to the systems' potential for personal computers. While you can't yet buy many ready-made applications for the PC and compatibles (which are hampered by their modest speed and memory size), about a dozen tool kits let sophisticated users build their own small expert systems—without having to learn specialized programming languages such as LISP. Called shells or tools and selling for \$50 to \$15,000, these sophisticated software products supply all the components you need (except knowledge) to build a simple expert system in any field.

One such program is Texas Instruments' *Personal Consultant*, which runs on the TI Professional Computer; it is modeled on MYCIN. Says TI product development manager William Turpin, "We wrote in LISP so you don't have to." A leader in developing expert systems for personal computers, TI boasts that it is spending more on AI research than Japan is on its entire fifth-generation project.

*Personal Consultant* has already been put to commercial use. At Dallas's Infomart, a showplace for computer systems from many manufacturers, first-time computer buyers can sit at one of 13 workstations in the lobby and receive a free, 15-minute consultation that advises them on the right system for their needs and budget. This expert system, designed by Boeing Computer Services Company of Seattle

*Small businesses will be able to buy 'canned' expertise, which will help them compete with high-powered rivals.*

using *Personal Consultant*, gives buyers more in-depth guidance than the average salesperson could supply.

While many observers think that tools like these are the vanguard of a great wave of AI software for business, they agree that the existing products are still very limited. The average expert system shell available for the PC allows only a few hundred expert rules of thumb—enough to troubleshoot a malfunctioning air conditioner or another fairly simple machine—compared with the thousands of rules a mainframe computer can handle for problems as difficult as diagnosing an ailing jet plane.

"The problems that can be run in a 200-rule environment are really pretty small in comparison to all of the interesting problems," notes Larry Geisel, president of Carnegie Group, a research spin-off of Carnegie-Mellon University and a major developer of commercial AI applications. "The fact is that most problems you can solve with a 200-rule system you can already solve pretty well without AI."

And Bruce Johnson, partner in charge of AI at Arthur Andersen & Company, one of the Big Eight accounting firms, says that while the PC's ubiquity

makes it an appealing tool, the business problems he tackles have so far proved too challenging for it. "There are two difficulties," Johnson states. "One is that many problems, such as multiuser interaction in marketing applications, may require a centralized solution. The PC doesn't work for that type of problem. Second, when you find a problem that could be tackled with the PC, then you must look for a software product that will fit. What we're finding is that most of the software products today don't have the capacity to handle real problems, or that they don't let you interface with data bases or other software."

But with the introduction of the PC AT and the appearance of comparable machines such as Compaq's 286 models, the difference between personal computers and minicomputers is shrinking fast. Industry watchers predict that within about three years microcomputers will approach the power of today's \$75,000 LISP and Symbolics machines (specialized minicomputers for AI development), making them increasingly attractive for AI applications.

One firm betting on this trend is Arity Corporation of Concord, Massachusetts. Headed by Peter Gabel, who was development manager of no less venerable a product than Lotus's 1-2-3, Arity recently received a million dollars from Lotus and Boston's UST Capital Corporation for development of AI-based software for the PC. But rather than creating tools to build expert systems, Gabel's company is striking out for the next frontier: ready-made applications. Arity has already released a PC-based version of the AI language PROLOG, aimed at developers of AI software, and is working on several off-the-shelf applications.

Some observers believe that one of these products is an artificially intelligent variant of 1-2-3, which would know how to help the user customize it. But Gabel denies this. "There certainly are a number of opportunities there, but we don't see those as the opportunities we'd really like to go after. We're building products that will incorporate a lot of AI technology—not so much expert systems as PC productivity tools that will focus on information management in general." Gabel won't say what these tools are exactly, but he hints at a new and flexible "knowledge base" manager that would surpass today's hidebound, record-oriented data base management programs.

### ■ Ghosts in the Machine

It's often hard to say what a top expert has that a mediocre expert lacks, but what all experts share is a storehouse of factual knowledge woven together by rules of thumb. For instance, a bank officer knows that an applicant's ability to repay a loan is often linked to his or her credit history, bank balance, and similar factors. By weighting and cross-referencing these criteria, the officer can reach a viable decision on whether to approve a particular loan.

This task could be automated with conventional computer languages such as COBOL or BASIC, because at some level every computer program is an expert system. But programs written in LISP or PROLOG, AI's main development languages, are far more powerful and flexible. Consisting of nests of statements and data that resemble a nightmarish algebra exam, AI programs can manipulate complex interrelationships more easily than can old-fashioned procedural programs. They are thus better able to leap between branches in a tree of knowledge, pass one set of assumptions on to another, and revamp their own contents without extensive reprogramming.

Because experts' reasoning processes tend to be similar across disciplines, however, expert systems are seldom written from scratch. Instead, programmers use generic shells, or frameworks, that supply the appropriate "consultation paradigm," which is usually diagnosis or prediction. These shells have two essential components, both invisible to the user but important to understand.

One, the knowledge base, consists of facts linked by IF ... THEN rules. These are supplied by the person who builds the expert system, usually with the help of a programmer called a knowledge engineer. The practical rules-of-thumb, known as heuristics, narrow down a search through the knowledge base in much the same way that a human expert eliminates unpromising avenues of inquiry. The sophistication of the program and the speed and memory size of the computer determine how many rules the expert system can encompass. But size isn't necessarily critical. Many useful expert tasks—even relatively costly ones—can be expressed in just a few dozen rules.

Driving this fact-and-rule apparatus is the "inference engine," the part of the program that crunches logic. While humans draw conclusions by various methods—logic, association, imaginative leaps, and perhaps other ways not yet identified—most inference engines function at a primitive logical level, using principles familiar to every student of freshman symbolic logic. ("All men are mortal; Socrates is a

*Complex and irrational realms like the stock market are too chancy to model, at least in their entirety—especially on a PC.*

man; therefore, Socrates is mortal" is a classic example of *modus ponens*, the most basic and frequently used syllogism.) This elementary approach isn't necessarily a handicap, since even thorny expert problems usually require only the simple matching of conditions and solutions.

Another task of the inference engine is to control the order of reasoning. The most common order is "backward chaining"—reasoning backward from a result such as "the car won't start" to figure out the causes. When chaining backward, the inference engine usually asks questions in an order that eliminates the most global, frequent, or easily cured ills ("Are you out of gas?") before proceeding to more technical or unlikely causes ("Has someone stolen the distributor cap?").

Also embedded in some inference engines is one of expert systems' most powerful features—the ability to draw conclusions from uncertain or sketchy data. This power to use "fuzzy sets" lets the computer transcend its usual obsession with certitude to make seat-of-the-pants guesses, much as humans do. By specifying rough "certainty factors" (expressed as percentages or as points on a graphic scale), a user can adjust the strength of an assumption from "true" or "false" to various shades of "maybe." ("If the suspect's car is at the crime scene, it is 70 percent certain he is still in the area" might be one such assumption.) When the program is run, the inference engine interpolates the certainty factors to come up with one or more weighted conclusions.

### ■ Shell Game

Tempting as this power is for prognosticators, at present only problems that are sufficiently empirical, such as those in engineering or medicine, or that involve structured selection, such as catalog searching and equipment configuration, are good candidates for expert systems. Complex and irrational realms like the stock market are too chancy to model, at least in their entirety—especially on a PC.

To judge whether a PC-based expert system shell might be appropriate for a task you'd like to perform, Teknowledge, developer of the expert systems tool kit *M.1* for the PC and of specialized applications for large companies, recommends giving your problem the "telephone test." Says Rosann Stach, Teknowledge's corporate development manager, "Think of something you can explain on the telephone in 15 minutes without using graphics or other visual aids; it'll probably fit on a PC. But if it takes 4 hours to explain (which means it probably requires several thousand rules), or if it requires sensory input such as temperature measurement, then it probably won't fit."

PC-based shells occupy several tiers of complexity and difficulty. Some virtually require that the system builder be a programmer, while others are accessible to casual users. But at run time, almost all

## Choosing an Expert System Shell

Not all expert tasks can be modeled on a computer, no matter what the computer's size. At present, the best candidates for computerization are highly empirical tasks, such as weather forecasting or machine repair. Also suitable are structured selection problems such as equipment configuration or choice of a computer system.

*Hardware.* Although a few products will run on a PC or compatible with as little as 128K of RAM, most expert systems hit their stride around 640K, the upper range of PC memory. The shells themselves are large, and the data and rules you add also fill considerable space, making a hard disk desirable. Among personal computers, the PC AT and its compatibles come closest to the speed and RAM needed by full-scale expert systems. Even so, by current AI standards most programs that run on them are limited.

*Size of knowledge base.* Expert systems shells vary widely in the number of rules they can accommodate or create. Generally speaking, the more rules, the more powerful a program, although some sophisticated tasks can be handled quite well by a surprisingly small number of rules, perhaps only a few dozen. The hardware constraints of the PC and XT limit most rule bases to fewer than 500. By comparison, mainframe computers can handle several thousand rules. If your problem requires only a few dozen rules, however, a less expensive and less complex program for the PC might fill the bill.

*Inference engine.* Different tasks rely on different analytical models, such as diagnosis, prediction, control, repair, or instruction. No single program can be all things to all people. Currently, most PC-based expert-system shells tend toward diagnosis and planning. If you do other work, they may not suit your purposes. Likewise, some programs are forward chaining (they reason from present conditions to a likely outcome), although most are backward chaining (they reason from the outcome to its causes). Programs also vary in their ability to tolerate uncertainty. This capability can be valuable in activities such as prediction, where even the best estimates are rough or more than one possible answer exists.

*Time and cost.* Program cost, which varies from \$50 to \$15,000, is not necessarily linked to power or ease of use. Generally, the more complex and expensive tools require significant training to use, yet their results may not be any better than those achieved with a cheaper, easier-to-learn program—especially if the task is modest. Since both low-end and high-end products are generally used for modeling, a program with a limited range of features may be less confusing for a first-round effort. And the cost should be appropriate to the task. For example, a stock brokerage would probably not want to use a \$200 PC-based shell to model a multimillion-dollar investment strategy, but a sole proprietor might find such a program useful for tax planning.

simulate natural-language question-and-answer sessions, using phrases the system builder has supplied. If a user doesn't understand the reasoning behind an inquiry, most programs will display the applicable rules on demand.

Deductive, rule-based systems like *M.1* are the most versatile types of shells, but they are also the most difficult to work with because they require the builder to formulate knowledge as IF ... THEN rules. This may present a challenge for people who have difficulty articulating what they know. Many products use menus to guide the development process, while

*Enterprising developers are certain to create expert system modules and market 'run-time' versions of them—stand-alone programs that already contain data and do not require users to have the tool-kit software.*

some programs, including *M.1*, use more flexible but harder-to-learn command languages similar to *dBASE II*'s.

Whereas most programs force you to discover rules yourself, inductive systems like *Expert-Ease* and *RuleMaster* distill these rules from the case histories you enter—a boon for nonprogrammers. *Expert-Ease* has been used to find patterns in research data and to streamline manufacturing. One drawback to the inductive method, however, is that you must be sure the cases represent every applicable contingency (for example, the upper and lower income requirements for approving a home loan). If you don't have a clear idea of these criteria to begin with, you can never be sure you've entered enough examples.

A third category of program, generally called decision-modeling software, consists not of expert systems but of ready-made applications with some AI talents. These programs, including *Lightyear*, from Lightyear, Inc., of Santa Clara, California, and *Arborist*, from Texas Instruments of Dallas, evaluate the pros and cons of any alternative according to weights

you supply. For example, they might help you compare different models of cars. Yet because they have no built-in knowledge about car buying, such programs couldn't tell you whether your choice was practical. Thus, the real value of these decision modelers may be to document and help analyze the criteria by which a decision was reached.

Apart from their value in introducing AI concepts, PC-based expert system shells are breaking ground in another area. With these products professionals can for the first time create simple applications without the aid of programmers—thus avoiding what AI luminary Edward Feigenbaum has called the "knowledge acquisition bottleneck." This phrase refers to the tedious process by which a programmer extracts an expert's knowledge and installs it in a computer program. To date, this task has been the most daunting and expensive aspect of expert system development, not least because programmers who are skilled at both programming and extracting knowledge are in short supply.

Louis Roth, manager of materials system research at Westinghouse's R&D division in Pittsburgh, Pennsylvania, reports that his group chose PC-based expert systems precisely because such programmers are hard to find. Working with several products—including *Personal Consultant*, *Expert-Ease*, and *M.1*—materials engineers at Westinghouse have been building their own small knowledge bases since late 1984. When complete, these components will be uploaded to a LISP machine and compiled by AI programmers into a large, cross-disciplinary advisory system. Westinghouse plans to use this system to give structural engineers a far more vivid understanding of the building materials they use.

"Under the old systems approach," Roth says, "we had to fight the experts tooth and nail to pull information out of them. There was a lot of resentment because they didn't want their brains put in a box." Now, with engineers designing their own expert systems, everybody profits. Westinghouse gains permanent "fingerprints" of the engineers' knowledge, and, Roth asserts, the engineers "develop a more coherent view of what they know and don't know, which helps them think more clearly."

Commercial software developers are likely to use the expert systems tool kits in a similar way. Just as a mini-industry has grown up around specific applications written with *dBASE II*, enterprising developers are certain to create expert system modules and market run-time versions of them—stand-alone programs that already contain data and do not require users to have the tool-kit software.

### ■ Limitations

For scientists, expert systems' potential to gain a wider view—to pool expertise and to cope with increasingly complex specialties—is one of the main attractions. "Our field is very complex, and it's hard to keep it all in your head," says Neil Pessall, a colleague of Roth's at Westinghouse who specializes in metal corrosion in nuclear steam generators. Far from feeling threatened by expert systems, he believes these programs will free him from having to memorize large bodies of information. "Eventually," Pessall notes, perhaps in jest, "an expert will be a person with a portable computer and a box of disks."

But seasoned AI programmers are rather more skeptical. Not every field of knowledge can be modeled on a computer, and it is costly, if not impossible, to model more than 80 or 90 percent of most specialized fields. What's more, most expert systems are still islands unto themselves, unable to link up with other software or data. Developers are just beginning to harness expert systems to software written in the C language, giving an AI boost to traditional computing tasks. But a heftier challenge is that of tying up to external data bases, which lack innate logical hooks (such as "a sloop *is a type of* sailboat") for the knowledge system to grasp. Until some way is found to automate the assignment of these hooks, massive data bases will have to be hand-edited to supply the missing links—a Herculean undertaking.

Perhaps more to the point, some observers wonder whether reliance on expert systems is even a good idea. Despite their mystique of infallibility, computerized experts are currently no more accurate than human ones, and they may never be. Will false confidence in intelligent machines make decision makers lazy and, worse yet, able to avoid responsibility for mistakes? Will use of these tools smooth over incompetence, letting mediocre performers masquerade as stars? "The big promise of expert systems

was that thinking would no longer be necessary," software developer Gary Martins of Intelligent Software remarked at a recent AI conference. "You talk to experts, you frame the talk in IF... THEN rules, you put those rules in the knowledge base, and zing! out comes astonishing performance. Well, that's just palpably absurd."

"An expert system should never, ever be used as anything other than a tool," cautions Harvey Newquist, editor of *AI Trends*, an industry newsletter. "If a doctor tells you you're going to die in 15 minutes, you still want a second opinion."

As for PC-based systems, some critics claim that many are little better than high-priced novelties. Today's shells range in price from \$15,000 for the PC AT version of *RuleMaster* to \$49.95 for McGraw-Hill's new *MicroExpert*, yet the power they bestow is not all that disparate. "All of them have to be regarded as entry-level products," says Newquist. "Some are mere toys and can do little tiny things. Some are very practical for small applications. But you've got to remember that a PC is limited by how small it is. If you want something bigger, something that's going to analyze medical problems, for example, you're going to have to go up to a DEC VAX or an IBM 4300 [both minicomputers], or something larger."

Like Newquist, Martins cautions buyers not to be bamboozled by the trendiness of artificial intelligence. "There is a substantial niche for PC-based programs," he says. "But as that niche begins to be populated, you'll find really good products coming from the traditional PC suppliers, who will see that this market is becoming real and will jump in with good tools for \$150 instead of fad tools for \$15,000. The mythology is that all this stuff is based on some deep, heavy, esoteric science that only a few Ph.D.'s can understand. But the truth is, if you take the covers off those machines, there are some pretty simple-minded programs inside." ●

## Expert System Shells

### Exsys

Exsys, Inc.

P.O. Box 75158, Contract  
Station 14

Albuquerque, NM 87194

505/836-6674

List price: \$200, demo disk \$10

Requirements: for "small  
memory" version 128K, DOS  
1.10 or 2.00; for "large  
memory" version 192K, DOS  
2.00; one disk drive (hard disk  
recommended)

Comments: Exsys allows up to  
400 rules with 128K and 3000  
rules with 640K. It is menu-  
driven and designed for non-  
programmers; it tolerates uncer-  
tainty and can explain why a de-  
cision was made.

### Expert-Ease

Human Edge Software Corp.

2445 Faber Pl.

Palo Alto, CA 94303

415/493-1593

Jeffrey Perrone & Assoc.

3685 17th St.

San Francisco, CA 94114

415/431-9562

List price: \$695

Requirements: 128K, one disk  
drive (hard disk recommended)

Comments: Developed by Don-  
ald Michie, director of Scotland's  
Turing Institute, Expert-Ease is  
an outgrowth of Michie's quest  
to automate the knowledge-en-  
gineering process. Unlike most  
other shells, Expert-Ease works  
by induction, extracting rules  
from examples the system  
builder enters. It is menu-driven  
and easy for beginners to use but  
limited in application. (For ex-  
ample, it does not allow certainty

factors.) Expert-Ease runs under  
the UCSD p-System and comes  
with a p-System utility for for-  
matting data disks.

### Insight 2

Level Five Research Inc.

4980 S. Hwy. A1A

Melbourne Beach, FL 32951

305/729-9046

List price: \$495

Requirements: 128K (256K  
recommended), DOS 2.00, one  
disk drive

Comments: An expanded, up-  
graded version of Insight, Insight  
2 has a Pascal interface that can  
manipulate data files in dBASE  
II. Both versions use a propri-  
etary language called PRL (Pro-  
duction Rule Language) to for-  
mulate expert rules, which can  
then be applied through simple  
menus. Maximum rule base in  
both versions is 615 rules with  
128K, 1800 rules with 256K,  
with certainty factors allowed.

### KDS

KDS Corp.

932 Hunter Rd.

Wilmette, IL 60091

312/251-2621

List price: Development System  
\$795, Playback Utility \$150,  
Playback Module (for users of  
prefabricated applications) \$495  
Requirements: playback mode  
192K, development mode  
256K; DOS 2.00; two disk  
drives (hard disk recommended)

Comments: Written in assembly  
language, KDS allows for an ex-  
ceptionally large rule base—up to  
16,000 rules per knowledge mod-  
ule. Menu-driven, it lets you en-

ter rules in conversational En-  
glish and guides you through the  
process of distinguishing one IF  
... THEN instance from another.  
It performs forward or backward  
chaining and can drive external  
programs in DOS.

Knowledge Engineering System  
(KES)

Software Architecture &  
Engineering, Inc.

1500 Wilson Blvd. #800

Arlington, VA 22209

703/276-7910

List price: \$4000

Requirements: IBM PC XT or  
AT with 512K (640K preferred),  
8087 math coprocessor

Comments: This rule-based,  
backward-chaining program can  
write knowledge bases that ex-  
ceed available RAM, thus sup-  
porting relatively large prototype  
systems. A subset of the pro-  
gram, Micro-PS, is faster and will  
run with 128K.

### M.1

Teknowledge Inc.

525 University Ave.

Palo Alto, CA 94301

415/327-6600

List price: \$10,000, recom-  
mended training \$2500, M.1a  
\$2000

Requirements: 192K, DOS 2.00,  
two disk drives

Comments: Oriented toward  
programmers, M.1 is among the  
more powerful, flexible tools for  
creating small applications. It  
typically forms a maximum of  
about 200 backward-chaining  
rules using a dBASE-like com-  
mand language. M.1 allows cer-  
tainty factors and can show how  
decisions were made. Interface  
utilities can link M.1 to external

software or data bases or to information-gathering devices via an RS-232C port. M.1a, an evaluation package for nonprogrammers, can be used to create rudimentary applications.

*MicroExpert*  
McGraw-Hill Book Co.  
Professional & Reference  
Division

1221 Avenue of the Americas  
New York, NY 10020  
212/512-2000

List price: \$49.95

Requirements: 128K, DOS 2.00,  
one disk drive

Comments: MicroExpert uses rules, which can be written with any standard word processor, to produce small, functioning expert systems that will tolerate uncertainty. A sample program included in the package deduces tree species from leaf types.

*Personal Consultant*  
Texas Instruments, Inc.

Data Systems Group  
P.O. Box 809063  
Dallas, TX 75380  
800/527-3500

List price: \$3000, product  
training course \$1500

Requirements: 512K, DOS 2.10,  
10MB hard disk

Comments: This menu-driven development tool allows up to 400 rules, created through question-and-answer interaction. A built-in IQLISP module lets programmers link a system to standard DOS business software. Personal Consultant allows certainty factors and answers queries about its reasoning.

*RuleMaster*  
Radian Corp.  
8501 Mo-Pac Blvd.  
P.O. Box 9948  
Austin, TX 78766  
512/454-4797

List price: for PC or XT version  
\$5000, for AT version \$15,000

Requirements: 256K; with PC  
XT, DOS 3.00 or PC/IX; with  
PC AT or compatible, DOS  
3.00, PC/IX, or Xenix; with  
PC, two disk drives

Comments: This menu-driven tool lets nonprogrammers create rules from examples; advanced users can write rules from scratch using Radial, RuleMaster's proprietary development language. RuleMaster allows both backward- and forward-chaining inference. Systems will explain reasoning on demand and can handle uncertainty. RuleMaster accepts input from sensory devices, data bases, or any language running under UNIX—including FORTRAN, Pascal, C, LISP, or PROLOG.

*TIMM-PC (The Intelligent  
Machine Model)*  
General Research Corp.  
7655 Old Springhouse Rd.  
McLean, VA 22102  
703/893-5915

List price: \$9500 including  
training (additional licenses  
available at a discount)  
Requirements: 640K, 10MB hard  
disk, 8087 math coprocessor  
(80287 math coprocessor with  
PC AT)

Comments: Originally designed for minicomputers and mainframes, TIMM-PC guides nonprogrammers through question-and-answer sessions that elicit examples and information. From these, TIMM-PC deduces rules that a developer can modify until

the system works properly. TIMM-PC handles uncertainty and can define unfamiliar terms. It allows 90 rules per expert system in the primary knowledge base, and can link any number of expert systems together, provided that their cumulative knowledge base does not exceed 500 rules.

## **Decision Modeling Software**

*Arborist*  
Texas Instruments, Inc.  
Data Systems Group  
P.O. Box 809063  
Dallas, TX 75380  
800/527-3500

List price: \$595

Requirements: 512K, DOS 1.10  
or 2.00, graphics controller,  
10MB hard disk (8087 math  
coprocessor optional)

Comments: Not an expert system but an automated version of the decision tree analysis method taught at business schools, this menu-driven program allows graphic representation of branchings and can indicate certainty factors numerically or on a pie chart.

*Lightyear*  
Lightyear, Inc.  
1333 Lawrence Expwy.  
Santa Clara, CA 95051  
408/985-8811

List price: \$495

Requirements: 192K, DOS 2.00,  
two disk drives

Comments: This menu-driven program lets you rank and compare strategic alternatives, using conditional branching and certainty factors. Certainty can be expressed in words, numbers, or on a graphic scale.

# A Model for Peaceful Coexistence

*Richard L. Nolan*

An accomplished data processing analyst assesses the personal computer's place in the corporate scheme of things.

If you've ever had the pleasure of running a computer department, you probably know well that managing the machines is a business unto itself. All the principles of manufacturing, marketing, accounting, and research apply; you're also subject to such traditional business foibles as loss of control, noncompetitive costs, resistance to change, and complacency.

Data processing (DP) professionals—those among us charged with administering computer resources—now face our toughest leadership challenge: managing amid a technological sea change. This period of discontinuity, which commenced in the early 1980s, will in all probability last from five to seven years. Whatever their size or field of endeavor, organizations experience such dislocation as they move from the "DP Era" to the "Micro Era."

This transition occurs in reasonably well defined, predictable stages. In the model sketched in

Figure 1, Stage IV—Integration—represents the Micro Era's first phase, during which organizations learn to manage such technologies as personal computing, computer-aided design, and office automation. The key challenge is fostering peaceful coexistence between established mainframe approaches and ascendant microcomputer strategies—and doing so, in some corporations, even as microcomputers attain critical mass. The period of overlap involves both recasting the DP department's function and giving business users responsibility for applications development and maintenance. For the DP organization, such a shift initially means decentralization.

Replacing a dominant technology with one that is improved but still evolving is scarcely a novel phenomenon. Precisely the same pattern characterized the aircraft industry during the early

1950s, as some companies recognized that the internal combustion engine wouldn't suit the next generation of airplanes. Boeing and Douglas made the transition to the turbojet before Lockheed, previously the industry leader. Foresight and insight enabled these two aircraft pioneers to reap early benefits from turbojet technology, and both dominated the commercial aircraft market throughout the 1960s and 1970s.

The race among organizations to absorb technology marks the course of history, from steam power stealing the wind from sailing ships to Michelin's radial tire

technology supplanting bias ply. For today's managers the lesson concerns the importance of leadership and timing.

When DP departments attempt to serve newly enfranchised PC users, they plunge headlong into rough water, often losing control during the struggle to implement an alien and frequently misunderstood technology.

The winners will be companies that successfully manage their computer investments during this tumult. The flip side involves DP managers who react inappropriately to problems of hardware and software control. Some, for example, attempt to prevent the proliferation of personal computers

by zealously duplicating PC software on mainframes. The enlightened approach entails assessing the unique attributes of the fresh technology and aligning it with the company's business objectives.

Ironically, the DP organization itself is often the main barrier to a smooth transition. Management information systems (MIS) managers understand the older, more mature technology, while newer technologies are by definition associated with risk control and management uncertainties.

Technological discontinuity is a known organizational issue—it doesn't explode on the scene spontaneously, without warning. To avert the negative consequences of change, the DP manager must keep an open mind and foster a similar outlook within the MIS department. Indeed, the entire DP community should encourage a

"learning" environment throughout the company and provide minimum control—but vigilantly monitor computing resources to ensure that DP control isn't abandoned altogether.

During the transition, senior management often depends on DP department leadership to choreograph a diverse array of technologies. Yet direct, top-level monitoring typically fails to accompany the leadership role. This responsibility without authority invariably hampers the corporate DP director, who must rely on sophisticated mechanisms such as executive steering committees, corporate strategic plans, and detailed

negotiation to achieve something approaching harmony.

During this period of integration, micros and mainframes co-exist, but fiefdoms persist. As microcomputers proliferate and pockets of technology open their contents to the company, the Integration stage begins to yield to the Architecture stage. That stage represents a maturing of technology; it's a period during which the company prepares a computer-based foundation for doing business—and comes to regard the word *computer* in its most generic sense. The terminology expands from mainframe parlance to all computer technologies. The organization begins to make decisions about which data bases and com-

munications products are appropriate. While this evolution rarely means that all organizational units will report directly to an information systems department (where the seeds of proliferation took root), it usually triggers the hiring of a computer functional executive (CFE), who is assigned a leading role in the companywide coordination of computer technologies.

To succeed, the CFE must reshuffle the DP department, fashioning it into a central repository of essential expertise that can be shared among the company's organizational units. The reconstituted DP group should be charged with such functions as maintaining data bases for corporate finances, products, and customers. As a corporate utility, the DP department will also handle the communications that join the mainframes used for transaction processing, the PBXs (private branch exchanges) for voice communication, and the microcomputers that serve as workstations.

Finally, the microcomputer environment must mesh with, and find a secure niche in, the company's overall computer architecture for "doing business." In that way, peaceful coexistence among micros and mainframes can serve as a gateway to increased productivity. ●

*Richard L. Nolan heads Nolan, Norton & Company, a multinational management consulting firm based in Lexington, Massachusetts.*

**Figure 1:** The shift from mainframes to micros often triggers a period of dislocation, as this schematic of the stages of computer growth indicates.

## The new IBM Color Jetprinter brings you more programs in living color.

There's nothing quite as satisfying as the dash and emphasis of color printing. And nothing as assuring as a color printer that does what your software says it should.

That's why the new IBM Color Jetprinter was designed with software in mind. It does spreadsheets, data bases, word processing and graphics in brilliant color. In fact, it is supported by more PC programs than any

other printer of its kind.

The Color Jetprinter prints in seven colors. Quietly. It does near-letter-quality text and it's all-points-addressable for graphics. It's small. Cleans its printhead by itself. And uses leakproof ink cartridges.

The new Color Jetprinter attaches to every IBM PC and to other leading personal computers. And it's just part of our growing family of personal printers. All

are designed to serve a single purpose: To give everything you do the finishing touch.

For the IBM Product Center or authorized dealer nearest you—or for free literature, including a software compatibility guide—call 1 800 IBM-2468, Ext. 553/LI. Or contact your IBM marketing representative.

**IBM®**

IBM Personal Printers...The Finishing Touch

# Dress Up Your Documents

Laser printers like Hewlett-Packard's LaserJet can add a top hat, white tie, and tails to your office documents. Now, word processors like Microsoft Word and WordStar can put on the ritz in the high style of desktop typesetting.

## *Ted Nace*

||||| The Hewlett-Packard LaserJet is the first of a new generation of printers that are bringing a touch of typesetting to office desk tops. The LaserJet supplies a variety of proportionally spaced fonts that can spruce up your pages—if your word processor holds up its end.

Word processing programs are responsible for embedding codes in the text that give format instructions to the LaserJet. Almost any word processor can be configured to take advantage of laser printing;

which one you use depends on how fancy you want to get. For simple documents such as letters and memos, a little tinkering with plain old *WordStar* will give you a variety of fonts that are as handy as the function keys.

To produce more sophisticated documents with such features as right justification and multicolumn pages, you'll need a program with powerful formatting capabilities. Many such programs are available, but *Microsoft Word* is the first designed from the ground up with laser printing in mind. A session with *Word* and the LaserJet hints at the future of office typesetting.

The following pair of articles will show how to get the most out of the LaserJet with *Microsoft Word* and *WordStar*.

||| *Ted Nace is a freelance writer in Berkeley, California.*

## Setting the Style With Word

||||| The LaserJet unleashes the page design possibilities latent in *Microsoft Word*. *Word* was introduced before the release of the HP LaserJet, but Microsoft anticipated the typographical powers of laser printers and planned the program accordingly. With *Word*'s style sheets and the LaserJet's fonts, you can create documents fit to be seen in the best company.

*Word*'s style sheets use methods developed in professional typesetting to create the most effective and polished-looking documents with the least amount of effort. Once you decide how your document should look—whether you want paragraphs blocked or indented, headings centered or flush left, type boldface or light—you define those styles on a style sheet and forget about them while you type.

*(continues on page 208)*

## WordStar à la Mode

||||| *WordStar* can't turn the typesetting somersaults of *Word*, but it too can take advantage of the LaserJet's changeable fonts. After completing the steps described below, you'll have two versions of *WordStar* you can easily switch between—one an unaltered version to use with a standard printer and one for special jobs using the LaserJet's 92286B proportional cartridge. You can rely on *WordStar*'s workaday power for all your in-house needs, then run your documents through the LaserJet to dress them up before sending them out.

### ■ Doubling Up

Before you begin, format a system disk (with the /S option of DOS's FORMAT command). Then copy the file MODE.COM from the DOS disk onto the new disk. Next, copy the following files from the *WordStar* disk onto the new disk:

WS.COM  
WSOVLY1.OVR  
WINSTALL.OVR  
WINSTALL.COM  
WSMSG.S.OVR  
WS.INS

*(continues on page 211)*

## Setting the Style With Word

(continued)

When it's time to format the document, you assign each element in the file a shorthand code that designates its style, and the program does the rest.

*Word's* utility disk provides a number of style sheets, and you can create additional sheets yourself. With the LaserJet's fonts, you can take design an extra step, adding pizzazz by choosing the right typestyle for each element on a page. Here's how.

### Creating a Style

Look at the difference between the documents shown in Figures 1 and 3. Both contain the same information, but one presents it in more readable form by using a variety of formatting elements. These include varied left margins; centered elements; non-uniform vertical spacing; blocks of text aligned in tables; and different fonts for subheads, text, tables, and footnotes.

When using style sheets, you enter the text first and format it later. Begin by typing the document in Figure 1 exactly as shown and saving it. Do not use any extra tabs, spaces, or lines—the style sheet will take care of those. Any formatting you implement at this point would be incorporated into your document in addition to information from the style sheet.

The next step is creating a style sheet. From the main editing menu select Gallery. The screen will clear and the Gallery menu will appear at the bottom. You use the Gallery options to create styles for each element of your document. In Gallery mode you work only on the menu line; the screen shows the current status of your style sheet.

*Select Insert.* This command presents four areas for which you supply information: key code, usage, variant, and remark.

The *key code* is a two-letter code that tells the program what style to use for a text element. To create a style for subheads, type the key code **sh**. Then tab to the next item on the menu, usage.

*With the LaserJet's fonts, you can add pizzazz by choosing the right typestyle for each element on a page.*

*Usage* defines the text level the element occupies. *Word* divides all text elements into three categories: Division, Paragraph, and Character. *Division* formats control the page layout, including placement of headers and footnotes and number of columns to a page. *Paragraph* styles specify indentation, tabs, margins, justification, and typefaces for text elements such as paragraphs, headlines, footnote text, and tables—any element ending in <Enter>. *Character* styles identify the style of single characters. Select Paragraph as the usage for subheads. Then tab to the next item, variant.

The *variant* is the number *Word* assigns a style to distinguish between different elements that have the same usage, such as page headings and subheads, which are both paragraphs. In Figure 2, the variant is the number following the usage on the first line of each style. For example, Page Heading is variant 6 of the Paragraph usage category. *Word* will suggest a variant number; to accept the suggested number, just tab to the next item, remark.

The *remark* is strictly for your use, identifying different styles on the style sheet. It's helpful to capitalize remarks so they'll stand out. Type **SUBHEAD** and press <Enter>.

Galley Slave Instruction Manual - 6

2.2 Arriving in Port (cont'd)

and for that reason, when the ship arrives in port, all galley slaves shall remain in their seats until the galley has come to a full stop. You may then file out in an orderly fashion. At this time everyone will receive one crust of bread as payment for the previous day's work.

Table 2.2.3 shows your tasks during stays at port.

Rowing position	Task
Starboard fore	Patching holes with pitch
Starboard aft	Repainting fearsome designs
Port fore	Carrying food supplies
Port aft	Repairing pallets

table 2.2.3: tasks while in port

2.3 Ramming Phoenician Vessels

Upon the sighting of a Phoenician galley, you will increase the frequency of strokes to battle pace.<sup>12</sup> The battering ram must be driven into the enemy galley at top speed. After the ship has smashed into the Phoenician vessel, the ship's mate will unlock each slave's chains and issue you a weapon so that you can fight for your lives. At this point everyone shall commence jumping up and down and screaming: "Kill! Kill!"

Galley Slave Tip: Think positive for hand-to-hand combat. Let your pride show!

2.4 Rest Periods

All galley slaves are entitled to two rest periods per day in addition to regular meal breaks. The rest periods are from 6:15 - 6:18 a.m. and from 7:10 - 7:13 p.m.

<sup>12</sup>. Battle pace is defined as rowing like crazy.

Figure 1: During the initial entry of text that will be formatted by style sheets, you supply only the roughest formatting information, such as tabs and spaces between words. Type this page as shown.

Figure 2: The complete style sheet for the Galley Slave Instruction Manual

After you enter the remark, the style specifications will appear on the screen. Note that the second line of the style definition contains default information provided by *Word*. Your next step is to replace these defaults with a description of how this element should look. Select the Format option from the Gallery menu. *Word* will display a menu of settings that you must complete. For Paragraph usages, *Word* asks for Character, Paragraph, and Tab settings.

*Select Paragraph.* You'll use the defaults for the first three lines of options, so simply tab to 'space

before' and type **2 li**. Tab to 'space after' and type **1 li**. These commands define the space surrounding the element. Press **< Enter >**.

Now select Format Tabs Set, type **.5"**, and press **< Enter >**. This defines a 1/2-inch indent for any tabs used in subheads.

To select a typeface for this style, select Format Character. Then tab to 'font name' and use **< CursorRight >** to reveal the choices. Use a cursor control key to highlight Helvetica. Then tab to 'font size' and press **< CursorRight >** to reveal the only choice, 14 point. Press **< Enter >**.

Now the subhead style is complete. Figure 2 shows a complete style sheet used to format the document in Figure 1; the style you just created appears as style 2. Create each style on the sheet the same way. When all the styles are defined, select Transfer Save from the Gallery menu and give the style sheet a name.

## Applying Styles to Documents

Once you've created the document shown in Figure 1 and the style sheet shown in Figure 2, you can combine the two. The first step is to attach the style sheet to the document. To do this, select Format Style Sheet, press **< CursorRight >** to see the names of the style sheets on your disk, highlight your choice, and press **< Enter >**.

Next you must label each element in the document with the key code of the appropriate style. Before you do, though, select Window Options and then pick Yes for 'style bar' so that key codes will be displayed as you select them.

There are two ways to assign a style to a text element. The first is via the menu. To format a subhead, for instance, you would select Format Style Paragraph, use **< CursorRight >** to select variant 1, and press **< Enter >** to enter your choice. Alternatively, you can simply put the cursor on the subhead and type **< Alt > -sh**.

Once the subhead is labeled, *Word* knows to print it in 14-point Helvetica, flush left, preceded by two blank lines, and followed by one blank line. You can now move through the entire document, labeling each element with the appropriate style from the attached style sheet. When each part is labeled, print it on the LaserJet. The result will look like Figure 3.

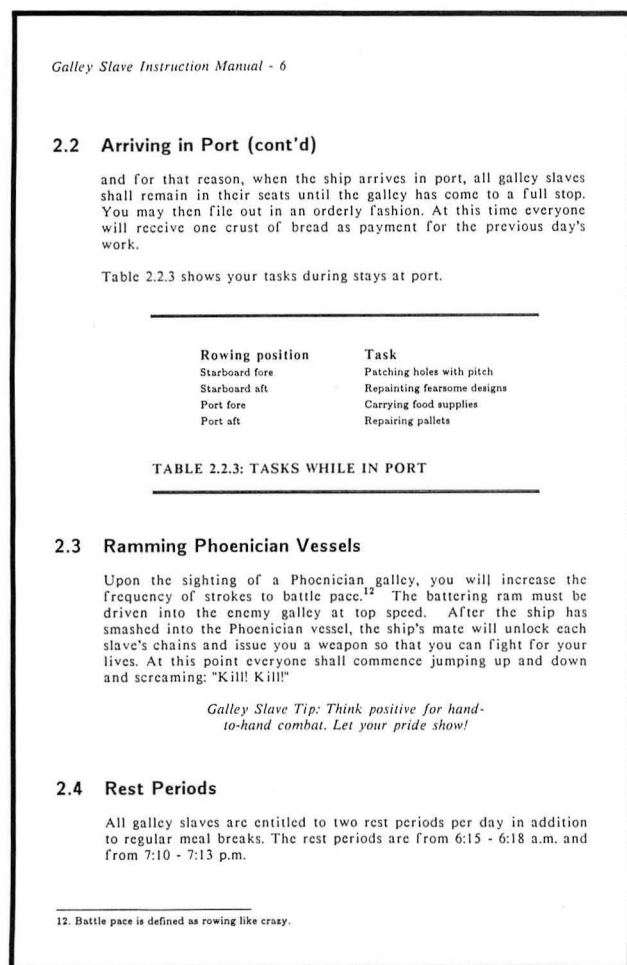

Figure 3: By applying preset formats to each text element, you can easily create complex formats.

## Practice Makes Perfect

Using style sheets may seem laborious at first, but with practice it becomes second nature. You'll soon find that creating documents is much easier when you separate the work of creating text from the job of formatting it. Most documents pass through several stages. In the first few rounds you're concerned with editing and proofreading. For this stage you can either use no style or create a very simple style, such as double-spaced Courier, for all text elements. When you finally format the document, the formats established in the style sheet will standardize elements within the document, producing a clean and professional piece. If you want to fine-tune certain elements, such as subhead indentation or table tabs, you can alter these details a single time in the style sheet rather than labor over individual elements throughout the document.

Translating the typographic power of laser printers and *Word* into professional-looking output takes some practice and creativity. But in return for your efforts, you'll gain control over the visual factors that are all too often the missing ingredient in written communications.

## Word Star à la Mode

*(continued)*

Use the new disk to make your changes. (This article assumes you're using a floppy disk system; you can also use the files on a hard disk if you have the original disks as a backup.) After you finish the modification procedure, the new disk will contain two versions of the WS.COM file—a laser printer version named LWS.COM and a regular version, RWS.COM—and three batch files: AUTOEXEC.BAT, L.BAT, and R.BAT.

When you start up, the AUTOEXEC.BAT file will ask which version of *WordStar* you want to use—the regular version or the laser version. After you type L or R, the L.BAT file or the R.BAT file will automatically configure the PC's printer port and activate either LWS.COM or WS.COM.

### Batch Recipes

You can use *WordStar* itself to create the three batch files. Type **N** from *WordStar*'s main menu to create a nondocument (unformatted) file. When *WordStar* asks for the name of the file, type **autoexec.bat**. Then type the following file contents: **ECHO Which WordStar version do you want to use? LaserJet (L) or regular (R)?**

Save the AUTOEXEC.BAT file, then create another nondocument file and name it L.BAT. Type

**mode com1:9600,n,8,1,p**

**mode lpt1: = com1:**

**lws**

These lines set the parameters required for the PC to send data to the LaserJet through the serial port and call your LaserJet-tailored version of *WordStar*.

Save the L.BAT file and open a third nondocument file. Name it R.BAT and type

**mode lpt1:**

**ws**

These lines restore the parallel port as the default printer output device and call the regular *WordStar*. Either L.BAT or R.BAT can also be used to switch versions of *WordStar* after the system has been started.

### ■ LaserStar

The laser version of *WordStar* that you create using Winstall will differ from the regular version in several respects. It will automatically send an *initialization code* to the LaserJet prior to each printing job, causing the printer to use 10-point Times Roman until it receives the code for a different font. After printing ends, the program will send a *deinitialization code*, which resets the printer to its default font, 12-point Courier.

The first five function keys on the PC will be programmed with codes allowing you to switch between the five proportionally spaced fonts on the 92286B cartridge: Times Roman in 8-point, 10-point, 10-point italic, and 10-point bold; and 14.4-point Helvetica bold. Using Helvetica for headlines or titles, 10-point Times Roman for body text, and 8-point Times Roman for footnotes and tables produces professional-looking, readable documents.

### ■ Winstallation

The Winstall utility on the *WordStar* disk lets you customize the program. Codes and other information that you plug into Winstall to create “LaserStar”—the LaserJet version of *WordStar*—are summarized in Figure 1. To use Winstall, type **winstall ws**.

Winstall will ask what drive your *WordStar* files are located on. Type **A:**. When Winstall asks the name of the file to install, type **ws.com**. When you’re asked for the name of the file for the installed version, type **lws.com**.

From the main Installation menu, select **D**, Custom Installation of Printers. This takes you to the Printer Installation menu. Select **C** (Printer Name), and type **HP LaserJet**.

When Winstall returns you to the Printer Installation menu, select **D**, Initialization. When prompted, enter the initialization code shown in Figure 1. Since the code is a sequence of hexadecimal

numbers, precede each entry by a comma to distinguish it as hexadecimal. After the last number is entered, type a period and press **<Enter>** to finalize the change. Then enter the deinitialization code in the same manner.

Again at the Printer Installation menu, select **G** to display the Protocol menu and choose option **A**, Protocols Handled Outside WordStar.

From the Printer Installation menu select **O**, User-Defined Functions. *WordStar* allows you to define four printer functions according to your needs. Enter the hexadecimal codes shown in Figure 1 for **^PQ**, **^PW**, and **^PE**. You can leave **^PR** empty.

After returning to the Printer Installation menu, select **X** to return to the main Installation menu. Then select **E**, Menu of WordStar Features. From this menu select **S**, Function Keys.

You’ll need to enter codes for five function keys and provide the names you want to appear on the menu. Figure 1 shows the codes, which can be entered as ASCII characters, and suggests function key labels.

Why insert the user-defined functions (**^PQ**, **^PW**, and **^PE**) into the function key codes instead of assigning the codes directly to the function keys? This seemingly roundabout method is necessary for two reasons. First, *WordStar* routinely discards any **<Esc>** (1B hex) characters it encounters unless they are “hidden” in the user-defined functions. Second, function keys can contain only six characters—too few to accommodate the lengthy codes required for switching between fonts.

After coding the function keys, type **X** to leave the Function Key menu, **X** to leave the Installation menu, and **X** again to leave Winstall. Finally, at the Exit Options menu press **A** to save your changes.

### ■ New Challenges

That’s it. You now have a version of *WordStar* that lets you change fonts merely by pressing a single function key. Unfortunately, this new flexibility in changing typefaces leads to complications elsewhere, especially in setting margins.

Two types of margin problems can surface. The first is caused by the codes inserted in your text for switching fonts. Although the codes are not printed, they affect your margins because *WordStar* counts them as text characters.

The best solution to this problem is to make any font changes after the document is formatted. Once you establish the margins, turn off word wrap

Figure 1: A summary of WordStar modifications to create "LaserStar"

Printer Installation Menu		
C Printer name	HP LaserJet	
D Initialization		
Initialization code	1B 28 30 55 1B 28 73 31 70 31 30 76 73 42	
Deinitialization code	1B 28 38 55	
G Protocol	A (none—handled outside WordStar)	
O User-defined functions		
^PQ	1B 28 73	
^PW	73 37 42	
^PE	31 30 76	

Menu of WordStar Features		
S Function keys	Code	Description
A <F1>	^PQ^PEsB	TR10
B <F2>	^PQ8V	TR8
C <F3>	^PQ^PE1S	TR10it
D <F4>	^PQ^PE^PW	TR10bo
E <F5>	^PQ14V	Helv

( < Ctrl > -O W) and insert the printer codes with the newly programmed function keys. The lines containing code will look too long on the screen but will print out correctly.

The other problem is the irregular left margin that may result when you use several typefaces in one document. This happens because font selection affects not only characters but also the width of spaces and margins. The width of the left margin is determined by the last font used. For example, if most of the text is in 10-point Times Roman but one line ends with a word in 8-point Times Roman, the next line will have too narrow a left margin since the margin is set for a smaller font. To prevent this problem, make sure that all lines end in the same font. If most of your text is in 10-point Times Roman, for example, press <F1> at the end of any lines that end in other fonts.

Because the LaserJet does not print in a small margin around the edges of the paper, you need to adjust the number of lines per page using three of WordStar's dot commands: page length (.pl), bottom

margin (.mb), and top margin (.mt). WordStar's defaults for these three parameters are 65, 8, and 3, respectively. To achieve the same dimensions on the LaserJet, change the settings by typing the following dot commands at the beginning of each document, making sure that each dot is in the first column:

```
.pl 62
.mb 4
.mt 5
```

Experiment with varying margins and fonts to determine the best effects for each occasion. By tapping the power of the LaserJet, your WordStar documents can step out in style. You'll find the effect warrants the extra effort. ●

# A New Way to Frame Projects

Having trouble keeping it all together? You could buy an expensive project management package, but for simple projects you can set up a scheduling system on Framework that's easily modified to suit your needs.

*Arthur English and Richard Katz*

■■■■ For a business manager, project scheduling requires a great deal of patience and ingenuity. As a result, scheduling may be used only sporadically or applied in idiosyncratic ways. Yet project scheduling is often critical for realistic goal setting, effective teamwork, departmental coordination, and accurate budgeting.

A project schedule outlines the steps that must be accomplished to achieve a specific goal. In preparing such a schedule, you identify

and represent work assignments as a series of separate work steps called *tasks* or *activities*. You then estimate each task's duration and beginning and ending dates.

Although project scheduling can be accomplished by rearranging pieces of paper on a bulletin board or marking a flowchart with a colored pen, the advent of project management programs for the PC makes it easy to change plans and recalculate dates and values quickly. For the first time, you can explore several different scenarios with a minimum of effort. However, not all projects require the bells and whistles offered by expensive project management programs. If you use Framework you will find that the FRED programming language, coupled with Framework's spreadsheets, can provide a more than adequate project scheduler.

The Scheduler program in this article assists in planning the construction of a house but can be adapted to almost any project.

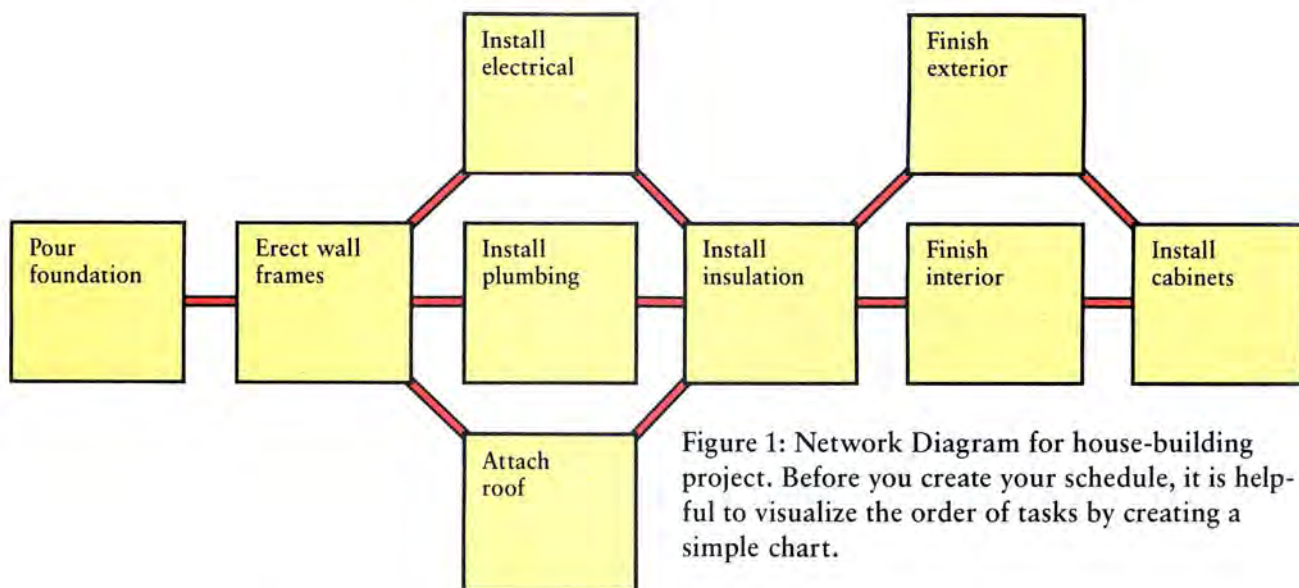

The program consists of several FRED functions that control four linked Framework spreadsheets. The sample schedule in this article handles ten tasks and encompasses 150 total project days. This example requires about 70K of disk space and will run on an IBM PC or compatible with 384K of RAM. Some familiarity with Framework will be helpful for setting up the program.

## ■ Scheduling for Control

The primary function of a project scheduler is to list the tasks to be accomplished and the projected end dates for each task. Such a list, called a *task list* or *activity list*, is generally sufficient for managing a small project. However, for a project involving several people or several critical resources, a summary of tasks and end dates alone may not be sufficient as a control device.

A common tool for managing larger projects is a diagram called a *Gantt chart*, such as the one shown in Figure 5. With a Gantt chart you can see which tasks occur simultaneously, compare the

duration of various project segments, and flag resource bottlenecks. The Scheduler produces both an activity list and a Gantt chart much like those generated by

building a house, the task of constructing wall frames might be described as Erect Wall Frames. Avoid task names like Woodworking or Carpentry, which are less

portray actual project time or resource usage, but it does help clarify task dependencies before you begin.

The time a task consumes on a schedule is called the task *duration*. Its most important component is usually direct labor, the amount of time that project workers spend on a task. But the estimate may also include other activities such as transportation, delivery and installation of equipment, chemical processes, and preparation of materials. These may have significant impact on a project's duration even though they require little or no direct labor.

*The FRED programming language, coupled with Framework's spreadsheets, can provide a more than adequate project scheduler.*

commercial project management programs.

Properly identifying and describing tasks is an important part of successful scheduling. This is especially true when new projects vary considerably from previous ones or when new workers or other resources are added to the equation. A rule of thumb is to focus on what a task is going to produce or achieve. In describing a task, use a simple imperative sentence—a single verb that describes the nature of the work, followed by the goal. For example, in

specific and do not focus on what the task is supposed to accomplish.

When you create a schedule, be aware of which tasks depend on the completion of other tasks—you can't build the roof without first putting up walls. In scheduling parlance, when one task must be finished before another can begin, the first task is a *predecessor* of the second. To identify such dependencies, it is helpful to lay out the tasks of the project in a network diagram, as shown in Figure 1.

You can create a diagram on paper or enter it in a separate *Framework* word frame using character graphics. A network diagram can't

### Building the Outline

To begin creating the Scheduler program, press **<Ctrl> -C O** and set up an outline frame called Scheduler. Create the four spreadsheet frames in the Scheduler outline shown in Figure 2. In the first spreadsheet, Project Scheduling Parameters, you enter information that provides a start date for the

Activity List, defines the Calendar, and formats the Gantt Diagram. The second spreadsheet, the Activity List, is where you enter and change the start dates, durations, and dependencies of project tasks. Calculations initiated on the Activity List use data from the Calendar spreadsheet and return new values to the Activity List. As the final output of the program, the Gantt chart merely duplicates the data in the Activity List in graphic form.

Delete all the empty subheadings in the outline using the **< Del >** key. Set all calculations to manual ( **< Ctrl > - N O M** ) and set calculation order to natural ( **< Ctrl > - N O N** ). Use **< Ctrl > - C H** and **< Ctrl > - C W** to set the number of rows and columns. The Project Scheduling Parameters spreadsheet should be set up as 6 rows by 3 columns; the Activity List should be 30 rows by 8 columns; the Calendar should be 149 rows by one column; and the Gantt Diagram should be 31 rows by 3 columns.

The remaining frames in Figure 2 are functions written in FRED. Create a text frame with **< Ctrl > - C E** within the Scheduler outline for each function, and label them as shown in Figure 2. No hierarchy is required within the master Scheduler frame. Its only purpose is to keep the frames conveniently together.

When you are finished, move inside CalcCalendar, the first text frame. Press **< F2 >** and **< F9 >** to zoom to the area where formulas are entered. Then type in the formulas shown in Listing 1. Press **< GrayMinus >** to close the frame, open the CalcGanttHeads frame, and enter the FRED formulas in Listing 2. Continue to each

```
1 Project Scheduling Parameters (S)
2 Activity List (S)
3 Calendar (S)
4 Gantt Diagram (S)
CalcCalendar (W)
CalcGanttHeads (W)
Dlookup (W)
DrawGantt (W)
GanttHeading1 (W)
GanttHeading2 (W)
Weekdaynum (W)
```

Figure 2: Scheduler Outline. The Scheduler program combines four Framework spreadsheets and seven FRED functions.

```
Scheduler.CalcGanttHeads:
Gantt Diagram.B1:=@GanttHeading1(1),
Gantt Diagram.B2:=@GanttHeading2(1),
Gantt Diagram.C1:=@GanttHeading1(2),
Gantt Diagram.C2:=@GanttHeading2(2)
```

Listing 2: CalcGanttHeads FRED formula

```
Scheduler.Dlookup:
; @DLOOKUP (@ITEM1) - Returns the day number of date
@Local(I,Found,Thisdate),
@reset(Calendar.A1:Calendar.A149),
I:=0,
@while(@AND(I<149,Found=0),I:=I+1,
Thisdate:=@Get(Calendar.A1:Calendar.A149),
@IF(@ITEM1=Thisdate,Found:=I),
@Next(Calendar.A1:Calendar.A149)
),
Found
```

Listing 3: Dlookup FRED formula

remaining text frame, entering the formulas in Listings 3 through 7, respectively. Then press **< Ctrl > - D S** to save the Scheduler outline to disk.

## Defining Scheduling Parameters

Move up to the border of the first spreadsheet frame, Project Scheduling Parameters, and press **< F2 >** and **< F9 >** to zoom to the formula section. Enter the following printer code:

**@kp,@pa(0),@11(132),@st("{ESC}[015]")**

Then open the frame and enter the headings and data shown in columns A and B of Figure 3. In the first four rows of column C enter the four formula strings that are grouped together in Listing 8. For the formulas that are several lines long, expand the spreadsheet cell by pressing **< F2 >** and then **< F9 >**.

```

Scheduler.CalcCalendar:
; Calculate the workday calendar
@local(thisday, thisdate, addin, i, weekend),
Calendar.a1:=Project Scheduling Parameters.C1,
@if( Project Scheduling Parameters.B6<>"yes",weekend:=0, weekend:=1),
i:=0,
@reset(Calendar.A1:Calendar.A149),
@while(I<149, I:=I+1,
    Thisdate:=@get(Calendar.A1:Calendar.A149),
    Thisday:=@Weekdaynum(thisdate),
    @IF( @and(weekend=0,Thisday>4),addin:=3,addin:=1),
    Thisdate:=@sumdate(thisdate,addin),
    @NEXT(Calendar.A1:Calendar.A149),
    @PUT(Calendar.A1:Calendar.A149,Thisdate),
)

```

Listing 1: CalcCalendar FRED formula

A	B	C
1 Project Start Date .....	3/5/85	Mar 3, 1985
2 Maximum Number of Weeks for Gantt Chart.....	16	28.....5.....
3 Alternate Character to Highlight Tasks.....	*	Mar 5, 1985
4 Regular Character to for Tasks.....	=	3
5 Character to Use for Milestone.....	^	
6 Should weekends be counted as duration days?.....	no	262496

Figure 3: Project Scheduling Parameters. In this spreadsheet you list the start date, calendar guidelines, and formatting information for the Gantt chart.

The Project Scheduling Parameters frame defines the project start date and the days of the week to be included in the schedule. It also creates the headings for the Gantt chart and specifies the characters to be displayed. Cell B6 on the Parameters frame indicates whether the work schedule will include or exclude weekends. To exclude the weekends, type **no** in cell B6.

After you finish with the Parameters frame, save the outline and calculate it by pressing **< F5 >**. The date in cell C2 should then match the date in B1. To further verify that the code has been

correctly entered, move to the Gantt Diagram and check that the start date on the upper left of the heading matches the date entered in the Parameters frame.

#### Setting the Calendar

The Scheduler uses a calendar of work days, contained in the spreadsheet frame labeled Calendar. To generate the calendar, exit the Parameters frame, move to the CalcCalendar frame, and press **< F5 >**. It should take about 2 or 3 minutes for the calendar to calculate. After the calculation has finished, move up to the Calendar

frame and open it. A single-column list of consecutive dates should appear. If you want, you can scroll through the Calendar frame and eliminate the rows that contain holidays by pressing **< Ctrl > -E R**.

#### Creating the Activity List

The Activity List frame shows all the tasks to be done, time estimates in days, and start and completion dates. Open the frame and enter the headings for row 1, as shown in Figure 4. Type in the task names and time estimates for each task in columns A and B, rows 2 through 11, as they appear in Figure 4. Next enter the following formulas in cells C2 through H2:

```
Scheduler.DrawGantt:
;This Fred function draws the Gantt lines in the Gantt Chart for each
;activity in the Activity List frame.

;Define and initialize local variables
@local(gantt_string, col_no, activity_name, start_date, end_date,
       critical_path, duration, print_char, offset_days, days_till_end,
       days_until_start, days_diff),
col_no := @item1,
activity_name := @item2,
duration := @item3,
start_date := @item4,
end_date := @item5,
critical_path := @item6,
offset_days := (col_no - 1) * (7 * 8),

;If this is not a valid line in the activity list, get out!
@if(@not(@isalpha(activity_name)), @return(" ")),

;Figure out which character to use for drawing Gantt line based on
;Gantt parameters, duration, and critical path specifications.
print_char := @mid(Project Scheduling Parameters.$B$4, 1, 1),
@if(@isalpha(critical_path),
    @if(@mid(critical_path, 1, 1) = "y",
        print_char := @mid(Project Scheduling Parameters.$B$3, 1, 1))),
@if(duration = 0,
    print_char := @mid(Project Scheduling Parameters.$B$5, 1, 1)),

;Construct Gantt line.
days_till_end := @diffdate(end_date,
    @sumdate(Project Scheduling Parameters.$C$1, offset_days)),
@if(days_till_end <= 0, @return(" ")),
days_until_start := @diffdate(start_date,
    @sumdate(Project Scheduling Parameters.$C$1, offset_days)),
@if(days_until_start > 0,
    days_diff := days_till_end - days_until_start + 1,
;else
    days_diff := days_till_end + 1),
@if(days_until_start > 0,
    gantt_string := @rept(" ", days_until_start),
;else
    gantt_string := ""),

@if(days_diff > 0,
    @return(gantt_string & @rept(print_char, days_diff))),
@return(" ")
```

Listing 4: DrawGantt FRED formula

C2: @Choose(G2,Calendar.\$A\$1:  
Calendar.\$A\$149)  
D2: @Choose(H2,Calendar.\$A\$1:  
Calendar.\$A\$149)  
E2: + Project Scheduling  
Parameters.\$C\$3  
G2: + E2  
H2: + F2 + B2

Now you need to copy these formulas into every row of the spreadsheet. Mark the row of cells from C2 to H2 with <F6>, and then copy it into the block C3:H11 with the <F8> key.

The task data for schedule calculations is entered in columns E, G, and H of the Activity List. Column G contains the start day, and column H contains the end day.

The numbers in Column E (labeled Predecessors for predecessors) identifies the order in which tasks are to be done. When you want a task to follow one or more prior tasks, you enter the end day (from column H) of the prior task or tasks. For instance, the task called

```

Scheduler.GanttHeading1:
;This Fred function prints the top heading in the Gantt Chart frame.
;This heading shows the months for the period covered by the Gantt chart.

;Define local variables
@local(str1,str2,start_date,difftime,offset_weeks,max_weeks,number_weeks),

;Determine column number from @item1, and calculate offset weeks.
;Eight weeks are printed for each column.
offset_weeks := ((@item1 * 8) - 1) - 7,
max_weeks := Project Scheduling Parameters.$B$2,
start_date := @sumdate(Project Scheduling Parameters.$C$1, 7 * offset_weeks),
@if(offset_weeks > max_weeks, @return),
number_weeks := 0,
str2 := "",

;Setup the heading line and put into str2.
@while(@and(number_weeks < 8,
(number_weeks + offset_weeks) <= max_weeks),
@if(@and(@len(@date3(start_date)) = 5, @mid(@date3(start_date), 5, 1) < "8"),
@list(
str1 := @mid(@date1(start_date), 1, 3) & " "
& @mid(@date2(start_date), 7, 2) & " ",
number_weeks := number_weeks + 1,
start_date := @sumdate(start_date, 7),
),
;else
@if(@or(@mid(@date3(start_date), 5, 2) < "15", @mid(@date3(start_date), 5, 1) > "7"),
str1 := @mid(@date2(@sumdate(start_date, -7)), 8, 1) & " - ",
;else
str1 := " ")),
str2 := str2 & str1,
start_date := @sumdate(start_date, 7),
number_weeks := number_weeks + 1
),
@return(str2)

```

Listing 5: GanttHeading1 FRED formula

Figure 4: The Activity List displays task duration, start and end dates, and dependencies (which tasks must precede other tasks).

```
Scheduler.GanttHeading2:
;This Fred function prints the second heading in the Gantt Chart frame.
;This heading shows the days for the period covered by the Gantt chart.

;Define local variables
@local(str1,str2,start_date,difftime,offset_weeks,max_weeks,number_weeks),

:Determine column number from @item1, and calculate offset weeks.
:Eight weeks are printed for each column.
offset_weeks := ((@item1 * 8) - 1) - 7,
max_weeks := Project Scheduling Parameters.$B$2,
start_date := @sumdate(Project Scheduling Parameters.$C$1, 7 * offset_weeks),
@if(offset_weeks > max_weeks, @return(" ")),
number_weeks := 0,
str2 := "",

:Setup the heading line and put into str2.
@while(@and(number_weeks < 8,
    (number_weeks + offset_weeks) <= max_weeks),
    @if(@len(@date3(start_date)) = 5,
        str1 := @mid(@date3(start_date), 5, 1) & ".....",
    ;else
        str1 := @mid(@date3(start_date),5,2) & "....."),
    str2 := str2 & str1,
    start_date := @sumdate(start_date, 7),
    number_weeks := number_weeks + 1
),
@return(str2)
```

```
Scheduler.Weekdaynum:
; @weekdaynum[(@item1)] => daynumber

; @weekday will return the current day number if no parameters are
; passed.
; Otherwise @weekday takes one item which must be a date value and returns
; the day number      hal 7/84 R. Katz 1/85

@local (checkdate, diffdate),
checkdate := @if (@itemcount <> 0, @item1, @today),

diffdate := @mod(@diffdate(checkdate, @date(1984,1,1)),7),
@if (diffdate < 0, diffdate := diffdate + 7),
weekdaynum:=diffdate
```

Listing 7: Weekdaynum FRED formula

Figure 5: The Gantt chart is the final output of the Scheduler program. It shows the information listed on the Activity List in graphic form.

Erect Wall Frames on row 3 cannot start until the task called Pour Foundation on row 2 is complete. To define this relationship for the Scheduler, type **+H2** into cell E3. To calculate the schedule press **<F5>**. The start date for Erect Wall Frames should be the same as the end date for Pour Foundation.

The tasks in rows 4, 5, and 6 can start only when the task on row 2 is complete, so enter **+H3** in cells E4, E5 and E6, and press **<F5>** to calculate. The task on row 7 cannot start until both of the tasks on rows 4 and 5 have been completed. In this case both rows 4 and 5 are predecessors for row 7. In cell E7 enter the formula **@MAX(H4, H5)**. This tells the Scheduler to always use the latest of the two end days. The entries to complete the predecessors for the tasks on rows 8 through 11 are E8: **+H7**, E9: **+H7**, E10: **@MAX(E8,E9)**, and E11: **+H10**. When you're finished, press **<F5>**.

### Setting Up the Gantt Chart

Open the Gantt Diagram spreadsheet frame and lock column A in place with **<Ctrl> -E L**. Press **<F4>** and set the width of column A to 20 characters. Then set column B to 56 characters. This width will make column B fill the rest of the screen. Set column C likewise. Then enter the following formulas in the spreadsheet cells in row 3.

A3: **@IF(@ISALPHA(Activity List.A2,Activity List.A2,@return(" "))**

B3: **@Drawgantt(1, Activity List.\$A2, Activity List.\$B2,Activity List.\$C2, Activity List.\$D2, Activity List.\$F2)**

C3: **@Drawgantt(2, Activity List.\$A2, Activity List.\$B2,Activity List.\$C2, Activity List.\$D2, Activity List.\$F2)**

Mark cells A3 through C3 with **<F6>** and use **<F8>** to copy the row to A4:C12. Save the outline and press **<F5>** to calculate. The Gantt chart will begin to fill out on the screen starting from row 3. You can use the right and left cursor keys to switch the view between the first and second halves of the schedule in columns B and C. When you print the chart, it should look like Figure 5.

Notice that most task durations are represented by a series of equal signs. Any task that has a duration of 0 (such as Project Complete) is considered by the Scheduler to be a *milestone*, and appears in the Gantt chart as a caret (^).

If you like, you can use an alternate symbol to highlight a particularly critical task, to indicate completed tasks, or to reveal other information. In Figure 5 a string of asterisks is used to highlight tasks that are related to the interior of the house. To designate an alternate symbol, go back to the Activity List frame and enter **yes** in column F (labeled CP for *Critical Path*) for any task you want to highlight. Then reopen the Gantt Diagram and press **<F5>**. Tasks designated yes will appear as a string of asterisks.

```
Scheduler.Project Scheduling Parameters.C1:
@local(start_date, offset, index, date_index, yr, mo, day),
@if(@not(@isalpha(B1)),@return ("No Start Date!")),
index := 1,

Listing 8: Four FRED formulas for Project Scheduling Parameters

## Printing the Schedule

You can print any spreadsheet or text frame by highlighting the frame border and pressing

**< Ctrl > -P B**. If you have a dot matrix printer, it is a good idea to print the Gantt Diagram with the column widths set to 132 using compressed mode. To do this, highlight the border of the Gantt Diagram frame and open it with **< F2 >**. If you have an IBM or Epson printer, type in the formula **@kp,@po(0),@LL(132),@st("015")** and press **< Enter >**, followed by **< Ctrl > -P B**. The 015 code sets up compressed mode on any Epson-compatible printer. For other printers check your printer manual for the appropriate code.

## Modifying the Scheduler

You now have a project scheduler that tracks the construction of a house. However, you can adapt this application to almost any project you have in mind. To set up your own project, enter *Framework* and load the file called *SCHEDULE.FW* onto the desktop. Open the Project Scheduling Parameters frame, and set the start date of your project in cell C1, using the MM/DD/YY format. Then press **< F5 >**.

Next, open the Activity List frame and enter the new task names and estimates in columns A and B. Enter the predecessors in column E, and press **< F5 >**. Then open the Gantt Diagram frame and press **< F5 >**.

The calendar is currently set up for 149 work days, but you can extend it to any length. First, add

rows with **< Ctrl > -C R** at the bottom of the Calendar frame. Second, change 149 everywhere it occurs in the Dlookup and the CalcCalendar frames to the number of days you want reflected in the calendar. For example, to change the calendar days to 250, open up the Dlookup frame, and search and replace the numbers by typing **< Ctrl > -L R 149 < Enter > 250 < Enter >**. Then repeat this procedure on the CalcCalendar frame. After you make these changes, exit to the CalcCalendar frame and press **< F5 >**.

The Activity List frame currently contains ten tasks in rows 2 through 11. You can include additional task rows by copying the formulas from row 11 to the rows below. Remember to change the Gantt Diagram in the same way. You can also insert task rows in the middle of the Activity List, copying the formulas from the row above the new row. Then enter a predecessor in column E for the new rows you create.

It is a good idea to assign only tasks located on rows above as predecessors. If you assign tasks below as predecessors, be careful not to create a circular reference as this will cause errors in the calculations. Fortunately, if you have a circular reference, *Framework* will display the warning message 'CIRCULAR REFS:' and will show the name of the cell where

the error occurred. If this happens, you need to change the cell references in column E, the predecessor column, and eliminate the references that occur in a loop.

The beauty of computerized scheduling is that you can modify the schedule at any time during the planning or even the implementation phase and quickly generate a new one to reflect changes. Sometimes after entering the initial dates and dependencies and calculating them, you can print out your Gantt chart and activity list and never have to run the program again. Yet, the best-laid plans are often bombarded with last-minute changes. If nothing else, when your brilliant plan turns into a hopeless disaster, with a project scheduler you can at least make it appear that you know what you're doing. ●

# MULTI-USER SOLUTION for IBM PC, XT, AT

## Compare the Solution!

The Multi-User Solution of the future is now available.

Convert your IBM PC, XT, AT or Compatibles to a true multi-user system while maintaining display, keyboard and software compatibility.

Since the KT-7/PC display is the same as your PC monochrome monitor, with its look-alike keyboard, operators will feel they're using an IBM PC and can also use the same software manual. Kimtron's multi-user solution includes file and record locking, shared data access, and communication between users. It is **the** intelligent alternative.

The KT-7/PC supports Time Sharing, Enhanced Time Sharing

and Multi-Processor implementation under PC DOS, MS DOS, UNIX, XENIX, CPM 86, Multilink, Concurrent PC DOS, and other compatible multi-user operating systems.

Kimtron's multi-user solution may be tailored for cost effectiveness; as low as \$1095 for an additional user, and for speeds more than ten times faster than LAN. You can add one or as many as 31 additional users per PC. Kimtron delivers the future now by allowing an ever-widening network of multi-user PC's.

The KT-7/PC may be complemented with one (or more) I/O Card, Memory Card, 8086 Speed

Enhancer Card, 80286 AT Card, 8088 Multi-Processor Card, 80186 Speed Enhancer Card, 68000 Card, and related software.

For more information about Kimtron's Multi-User Solution, or general video data terminals for other mini or micro multi-user systems, call your local computer dealers, distributors or Kimtron Corporation Today!

# Only NRI teaches you to service and repair all computers as you build your own 16-bit IBM-compatible micro

As computers move into offices and homes by the millions, the demand for trained computer service technicians surges forward. The Department of Labor estimates that computer service jobs will actually *double* in the next ten years—a faster growth than any other occupation.

## Total System Training

As an NRI student, you'll get total hands-on training as you actually build your own Sanyo MBC-550 series computer from the keyboard up. Only a person who knows *all* the underlying fundamentals can cope with *all* the significant brands of computers. And as an NRI graduate, you'll possess the up-to-the-minute combination of theory and practical experience that will lead you to success on the job.

You learn at your own convenience, in your own home, at your own comfortable pace. Without classroom pressures, without rigid night-school schedules, without wasted time. Your own personal NRI instructor and NRI's complete technical staff will answer your questions, give you guidance and special help whenever you may need it.

## The Exciting Sanyo 16-bit IBM-compatible Computer—Yours To Keep

Critics hail the new Sanyo as the "most intriguing" of all the IBM-PC compatible computers. It uses the same 8088 microprocessor as the IBM-PC and the MS/DOS operating system. So, you'll be able to choose thousands of off-the-shelf software programs to run on your completed Sanyo.

As you build the Sanyo from the keyboard up, you'll perform demonstrations and experiments that will give you a total mastery of computer operations and servicing techniques. You'll do programming in BASIC language. You'll prepare interfaces for peripherals such as printers and joysticks. Using utility programs, you'll check out 8088 functioning. NRI's easy step-by-step directions will guide you all the way right into one of today's fastest growing fields as a computer service technician. And the entire system, including all the bundled software and extensive data manuals, is yours to keep as part of your training.

NRI is the only home study school that trains you as you assemble a top-brand micro-computer. You'll install and check keyboard, power supply, disk drive and monitor, following step-by-step directions.

## 100-Page Free Catalog Tells More

Send the coupon today for NRI's big 100-page color catalog, which gives you all the facts about NRI training in Microcomputers, Robotics, Data Communications, TV/Video/

Your NRI course includes a Sanyo 16-bit micro computer with 128K RAM, monitor, with double-density/double-sided disk drive, and "Intelligent" Keyboard; The NRI Discovery Lab®, Teaching Circuit Design and Operations; a Digital Multimeter; Bundled Spread Sheet and Word Processing Software Worth over \$1000 at Retail—and More.

Audio Servicing, and other growing high-tech career fields. If the coupon is missing write to NRI, 3939 Wisconsin Ave., Washington, D.C. 20016.

# The Project Scheduler NETWORK™

**A**s a manager, you know the key to a successful project is good planning. You can't afford to overlook critical costs and deadlines.

## COMPREHENSIVE PROJECT MANAGEMENT

The Project Scheduler Network will help you meet deadlines and beat cost targets using effective project scheduling, resource planning, costing, and status tracking.

**Advanced screen graphics.** Produce Network diagrams, Gantt charts, and color graphs to provide the concise information you need for timely decision making.

**Work Breakdown Structure (WBS).** Organize project activities to produce summary level schedules and reports. Multiple projects can be integrated to present project level schedules and total resource utilization.

**Baseline schedules.** Save them to compare with current schedules for schedule tracking. Actual, original plan, and current plan costs can be graphically compared for cost tracking.

## Comprehensive report generator.

Simplify communications with management by synthesizing project information into presentation-quality hardcopy reports and graphs.

## SCHEDULE WITH THE CLICK OF A BUTTON

The Project Scheduler Network provides the most advanced software technology available. Start with our mouse-controlled menus to select spreadsheet-style input templates to enter your project data.

Graphically build your dependency Network with only a "click of a button." Zoom to view the Network at selectable resolution levels. Now use the mouse to edit the Network to your satisfaction.

Select a Gantt chart and obtain schedules at any WBS level with a single click. Window resource graphs with the schedule to analyze resource allocations. And finally, select our integrated graphics to view color histograms, bar charts, and line plots of project resources and costs.

## FEATURES

- Critical Path Method
- Network Analysis
- Gantt Chart
- Work Breakdown Structure (subtasks)
- Multiple Project Integration
- Tracking with Baseline Schedule and Complete Status
- Resource Scheduling
- Financial Planning and Tracking
- Presentation-quality Graphics

## REQUIREMENTS

- IBM® PC, XT, or AT
- PC-DOS 2.0, 2.1, or 3.0
- Monitor plus IBM graphics adaptor
- IBM or Epson graphics printer
- 320K RAM (minimum)
- Mouse (Microsoft compatible)
- Two disk drives (one double-sided)
- IBM or HP plotter optional

*Gould... Innovation and Quality in Hard Copy Color Graphics*

# You need a plotter that's compatible with your hardware, software and, especially, you.

More and more companies are discovering that color graphics help them communicate faster and more persuasively.

When you make this discovery, you'll want a Colorwriter™ pen plotter from Gould. Because Colorwriters are easy to use, and can meet all of your business and technical graphic needs. They'll work with virtually any computer and the most popular software packages available.

Whether you want simple bar charts or complicated CAD/CAM drawings in 8½" x 11" or 11" x 17" formats,

we've got a plotter to suit your needs and your budget. Plus, we've got a unique automatic chart advance option for volume graphics applications.

When you buy a Gould Colorwriter plotter you're getting 45 years of proven experience in hard copy graphics technology. That's why you also get one of the best warranties in the business.

For more information and the name of the Colorwriter dealer nearest you, call toll free **800-447-4700**, operator 99. Or write Gould Inc., Recording Systems Division, 3631 Perkins Ave., Cleveland, Ohio 44114.

# From the Software Shelf

*PC World offers first impressions of recent software releases*

The born-again Idea Processor, a DOS forget-me-not, communications made easy, and getting your foot in the door, PC-style

*Edited by Robert Luhn*

## Executive Writer/ Executive Filer

Amidst all the me-too word processors of the last few years, Idea Ware's *The Idea Processor* stood out as an innovator. Without sacrificing the standard word processing features required for serious office use, *The Idea Processor* did something new with words—it managed them. This unique ability was embodied in the program's Cardfile, a text data management system (TDMS) that allowed you to organize text files by assigning keywords, which could later be searched for using AND, OR, and NOT operators (see "A New Idea in Word Processing," PCW, Vol. 2, No. 11, and "Due Processing," PCW, January, 1985).

The bad news is that Idea Ware no longer markets *The Idea Processor*. The good news is that you can buy essentially the same package from Adam Osborne's Paperback Software International—and for \$175 less.

Eric Mintz and the other crafty programmers at Idea Ware refined their program and split it into two modules, *Executive Writer* (the word processor) and *Executive Filer* (the Cardfile). The company licensed both programs to Paperback Software and then retreated to the countryside to do what it does best—programming.

*Executive Writer* and *Executive Filer* operate almost identically to

*The Idea Processor*, with a few improvements. The programs now scroll horizontally to take advantage of the new 240-character spread. This greater margin enables you to capture and organize spreadsheets from 1-2-3, *SuperCalc* 3, and other programs. Combining both *Executive Writer* and *Executive Filer* on one disk activates MailPrint—a utility not unlike *MailMerge*. *Executive Writer* and *Executive Filer* have also inherited *The Idea Processor*'s ability to import graphics from other programs (including PSI's *Draw-It*) and insert them into text.

Other improvements include *Executive Filer* help screens (conspicuously absent in *The Idea Processor*'s Cardfile) and on-screen display of justified right margins. Some command keystrokes have been changed, and both programs are measurably faster.

Like its predecessor, *Executive Writer* separates text editing from print formatting. Consequently, what you see is not necessarily what you get. Documents are always displayed single-spaced, the cursor's column-and-row location is not posted, and page breaks are not visible. But *Executive Writer*'s spartan on-screen environment should be weighed against the program's customizable printing formats and solid word processing functions, in particular footnoting and an undo command.

On its own, *Executive Filer* performs like an electronic card file system, handling simple data management tasks such as storing addresses. But *Executive Filer* also inherits the text data management features of *The Idea Processor*,

which are useful in brainstorming or in organizing a project. The keyword system retrieves related material (one screen at a time) stored in a document, spreadsheet, graphic, or even a program. But the TDMS seems a little lonely after its divorce from the word processor. You can type in, edit, and print text file information, but since *Executive Filer* lacks print formatting talents, you must use *Executive Writer* to construct the document. However, combine *Executive Filer* and *Executive Writer* on a single disk and you've got a team that can take full advantage of the TDMS to produce professional looking documents.

Although Paperback Software International is marketing *Executive Writer* and *Executive Filer* separately, it's the combination and the \$120 price tag that pay off. —Eric Brown and Wes Nihei

## The Art of Negotiating

I snatched *The Art of Negotiating* off the Software Shelf as soon as I spotted it. Although I'm a wily, even fierce combatant in everyday skirmishes, confront me with a higher authority who controls my paycheck and I turn to cornmeal mush. As I started *The Art of Negotiating*, I hoped it would be the chain mail I'd been looking for.

In using *The Art of Negotiating*, you anticipate future interactions, plotting your position while divining your opponent's stance. The program is naturally targeted at the business user; few consumers are likely to plunk down \$495 solely to hash out amatory disputes, though no doubt many business users will secretly tinker away on personal relationships at the office.

I prepared for one business and one personal negotiation and found that the program worked equally well for both. My business scenario was modeled after a frustrating job interview I had experienced, in which negotiations over salary and working conditions quickly stalemated. I wondered if *The Art of Negotiating* could prevent such a deadlock, yielding more fruitful results. My personal negotiation centered around resolving a series of petty squabbles with my boyfriend.

I found *The Art of Negotiating* extremely easy to use. A cursory review of the program's clear, well-organized user manual shows you how to install the program and get started. On-line help screens explain program operations further. Particularly useful as you progress are optional printed summaries of

SEEING IS BELIEVING

# YOUR TOTAL GRAPHICS SOFTWARE

**Presentation Business Graphics**  
EnerGraphics delivers pie charts, flowcharts, bar charts, line graphs and more with easy interface to Lotus 1-2-3, MultiPlan and other spread sheets. You'll learn it quickly because we're menu-driven.

**3-D Object & Surface Drawings**  
EnerGraphics gives you entry-level 3-D CAD features such as zoom, rotate and hidden line removal.

**Drawing Capability With EnerGraphics**, simple keystroke commands enable you to create text, flow, gantt, pert and organization charts with the capability to enlarge, reduce, rotate, draw, modify, duplicate and overlay.

**Statistics** EnerGraphics enables you to analyze data using linear and log scales to do linear and polynomial regression. Statistical information can be represented in scatter graphs.

**Mainframe Link** Our new EnerConnect program allows you to combine PC-based graphics with mainframe graphics such as GDDM, ISSCO'S Tel-A-Graf® Disspla® and IGES data files.

**PC Compatibility** EnerGraphics can give you an almost unlimited number of graphics applications on Wang, TI, IBM PC/XT/AT, 3270/PC and compatibles.

**Slide Show** Any of our attractive graphics can be converted into color or b&w slides, or overhead or on-screen presentations using the Polaroid Palette.

## FORTUNE 500

**Corporate Use** You'll find EnerGraphics is the graphics software choice of over 100 leading corporations with more being added all of the time.

**Price** At a retail price of just \$350 (\$450 with plotter) EnerGraphics actually costs less than many packages that offer only a few of these features.

EnerGraphics. Brought to you by the specialists in graphics application software.

Find out why users rate us at the top among stand alone business graphic packages. Just check with your local EnerGraphics dealer today.

work done with individual program modules or of the entire process. These reports list identified issues, terms, and your responses to the program.

The program is divided into eight sequential modules, which you are urged to use in order. The Subject Matter, Issues, and Fact Finding modules guide you in setting up the tedious underpinnings of the negotiation. The Subject Matter module asks you to define who is involved, what is being negotiated, each side's objectives (and their relative importance), and conflicting objectives. In the Issues module, you identify the issues at stake for both sides, restate them in

more neutral terms at the program's nudging, and rate their importance. In the third module, you tag issues that involve disputed "facts," and attempt to discern their underlying assumptions.

Up to this point *The Art of Negotiating* seems dry and uninspired. But things quickly pick up when you grapple with Needs/Gambits, Climates, Strategies, and Agenda. In Needs/Gambits, you select each side's compelling basic human needs from a list; the program then prompts you to work for or against these needs with various schemes, or gambits, that you devise. In my job interview negotiation, I focused on my opponent's need for self-esteem using two gambits: one was to make him feel that he was clever in getting me to do some-

thing I didn't want to do; the other was to concede, with seeming reluctance, issues of little import while quietly pressing key demands.

In Climates, you list your feelings about the negotiation, then describe the climate (or environment) you desire, and speculate on the same for your opponent. The Strategies module gives you a varied general list of possible strategies, which the program will further define upon request. For example, you can try "bracketing"—posing unexpected demands that unmask your opponent's hidden position. In Agenda, you structure the negotiation according to a known agenda, a hidden one, or both.

# “We need Bob’s spreadsheet in our report. NOW!”

Though using *The Art of Negotiating* may sound relatively simple, be prepared to ground yourself thoroughly in negotiation basics before you even load the program. Luckily the program includes famed negotiator Gerard Nierenberg's *Fundamentals of Negotiation*, a book that engagingly illuminates essential techniques—though unfortunately, it assumes that all of its readers are men. Nierenberg believes that in a good negotiation both sides benefit. However, that doesn't stop him from suggesting some cunning tricks and manipulations. The book is accompanied by a work text that contains exercises and hypothetical situations. Both

books are vital to using the program effectively.

Even with proper preparation, the program's advice can sometimes seem facile or simply obscure. For example, the program at one point tersely suggested I 'use humor' to alter my opponent's perspective, but didn't explain how or why. It would help if such comments were not only fleshed out but more in touch with the tenor of the negotiation.

After sifting through my negotiation scenarios, I was ready to take on real life. I discovered that my attitude toward the business negotiation was considerably more flexible and my presentation much better planned. I was also thoroughly prepared for an upcoming personal

negotiation. These PC-simulated negotiations took about 4 hours apiece to complete, not counting the hours spent reading both books. But being primed for crucial interactions is worth the cost in time and money. Machiavelli never had it so good. —Peggy Nauts

# EINSTEIN'S THEORY ON JUKI® PRINTERS.

If you've seen "Einstein on Computers" on television, you know that Jeff Einstein knows a thing or two about computer printers. Author of **EINSTEIN'S COMPUTER GUIDES**, a best-selling series of computer books, and a nationally recognized computer authority, he knows quality printing when he sees it. So when Jeff Einstein says, "**JUKI® letter-quality printers are the ones I chose for my own office printing needs,**" take note!

For home or office use, Jeff recommends the **JUKI 6100**. Fast, letter-quality printing for under \$600! Prints 18 cps, performs all the word processing functions you need most, and has a 2K buffer memory (expandable to 8K). Even handles your graphics! No wonder it's becoming an industry standard.

For business use, you can't do better than the **JUKI 6300**. This one is even wide enough to handle your spreadsheets—along with graphics and all the requisite word-processing functions, at a zippy speed of 40 cps. Cost? Under \$995! You also get a 3K buffer memory (expandable to 15K) in a high-tech machine that's built for many years of reliable printing. And like the 6100, it fits almost any p.c.

Unless you're prepared to attack Einstein's theory, shouldn't you be looking into a new JUKI letter-quality printer for *your* office?

**New! One-Year Warranty!**

**JUKI®**

**The workers.**

## TallScreen

"Those who cannot remember the past are condemned to repeat it," said philosopher George Santayana, perhaps contemplating Zsa Zsa Gabor. Wise words—not only in human affairs but in computing. (Think of all the actions—the history, if you will—that the average PC user must repeat over and over

again.) The creators of *TallScreen* must be ardent students of history, for they have created a memory-resident DOS "session manager," a program that records a history of issued DOS commands and responses and plays them back at the touch of a key. If you frequently use DOS commands, particularly complicated sequences for configuring hard disk systems, *TallScreen* can be a welcome helpmate.

You use the <PgUp> and <PgDn> keys to review a session history and edit it, much as you would use a text editor for a large

file. <F10> recalls all DOS commands, not just the last one entered, while <F9> similarly keeps track of the drives and subdirectories used. Text captured by *TallScreen* can be used as further DOS input or saved to disk. If you mistakenly store the wrong DOS command in a sequence, you simply edit the erroneous command and execute the corrected string again. To edit a batch file, display the file

# MULTIPLE HARD DISC BACK-UP? HANDLE IT WITH BP-10™!

BP-10 —the totally portable system that combines the advantages of high speed tape back-up with the flexibility of 10 megabytes of random access storage.

Survival™ software gives BP-10 the flexibility to either stream data on command, or store and retrieve data on a file by file basis. You can avoid copying bad or non-essential disk sectors—a perfect way to handle archiving, sensitive files, or infrequently used data.

A complete BP-10 is smaller than the cartridges other tape back-up systems use, and simply plugs into the external floppy disk expansion port of your IBM PC, XT, or AT\*. There's no need to open your computer (and risk your warranty in the process!) or waste a valuable internal expansion slot.

At the easy-to-handle price of \$895, BP-10 puts the best features of mainframe tape drives—self-threading, single spool simplicity, a tape transport system that never touches the data surface, and fixed head design—well within your reach.

Additional 10 MB tape spools are available at a fraction of the cost of cartridges.

\*AT models require an additional internal board.

IBM PC, XT, and AT are registered trademarks of International Business Machines.

More than one PC to handle? Compact, rugged and lightweight, BP-10 moves easily from one computer to another, lowering your back-up costs as it goes.

Get a handle on your hard disk back-up needs. Get a BP-10 —  
the leader in totally portable tape back-up systems.

To order your BP-10 , call 1-800-252-5255, ext. 823.  
In Texas, call 1-800-252-9146, ext. 823.

F-18 Carrier Approach

F-16 Night Flight

F-16 from Control Tower

*Jet*

From the author of Microsoft Flight Simulator comes a new dimension in flight simulation. Jet simulates two fast and maneuverable supersonic jet fighters, a land-based F-16 or a carrier-based F-18. The Jet simulation includes modern electronic flight instrumentation and the most advanced weaponry available. Jet's combination of simulation sophistication, excellent visual attitude references, and fast animation speed makes it truly enjoyable to fly.

Excellent aircraft control plus ballistic thrust gives you the kind of aerobatic maneuverability only a modern jet fighter can provide. The attitude indicator is easy to read no matter what your orientation. This indicator, combined with a full-screen out-the-window view, helps you get the most out of Jet's excellent flight controls. An important consideration when traveling at speeds in excess of 1300 MPH.

With Jet you can fly through either structured or non-structured environments. Engage in a deadly variety of combat missions. Explore the wargame territory, or relax by practicing precision aerobatic maneuvers. Load in scenery from optional United States Scenery Disks. You can even load in scenery off the Microsoft Flight Simulator disk.

Jet's technology incorporates our newest high-speed graphic drivers, and introduces new scenery concepts for improved viewing on non-color and RGB monitors.

Jet requires an IBM™ PC, PC jr, PC AT, Compaq™, or Tandy™ 1000-series computer, with 128K minimum memory and the Color/Graphics Monitor Adapter, Hercules™ Graphics Card, IBM Enhanced Graphics Adapter, or Sublogic High-Speed Graphics Card.

# BEST FRIEND

## Makes PC-DOS Easy To Use!

Best Friend™ rescues you from cryptic DOS commands with easy to use menu selections for disk and file operations, printer output redirection, "pop-back" features and more.

### Disk and File Services

- Copy, Delete, and Rename Files
- Find, View, and Print Files
- Change File Attributes (Make hidden files)
- Sort files and directories using up to two keys
- Tag files for group copy and delete operations
- Format and Copy Disks
- Make and Remove Sub-directories
- Change Disk Volume Label Names

### Scientific/Business Calculator

- Over 40 math and business functions
- Printable on-screen tape display

### Electronic Typewriter

- Straight type-thru and line edit modes
- Automatic word wrap and margin controls

### Printer Output Redirection

Capture the printer output (even "Print Screen" data) from any program into a disk file.

### Pop-Back Feature

Use Best Friend even while running another program. "Pop-Back" to Best Friend from all your favorite programs.

### System Requirements (Not copy protected)

Best Friend can be obtained as one memory efficient program (uses 126K) or any one function may be obtained as a stand alone program. Best Friend and family will operate on an IBM-PC, XT, AT or true PC compatible. In addition, the File Services and Printer Output Redirection functions are available for most computers using CP/M-80™, CP/M-86™, and MS-DOS™.

Best Friend is a TM of Elite Software Development, Inc. IBM and PC-DOS are registered TM's of International Business Machines Corp. CP/M-80 and CP/M-86 are TM's of Digital Research, Inc. MS-DOS is a TM of Microsoft Corp.

From the Software Shelf

with the TYPE command, press <PgUp>, edit the file, and save it back to disk. Of course, this brief sampling merely hints at *TallScreen*'s possibilities.

With *TallScreen*, you can enter multiple DOS commands on a single line, set screen attributes, and assign a repertoire of editing functions to keys of your choice. You can also set a half dozen program defaults—buffer sizes, help screens, and other values that customize a program's interface and functioning.

*TallScreen*'s 44-page user manual is densely detailed but somewhat obscure about what *TallScreen* does and how it works. Fortunately, a thorough on-line tutorial (constructed entirely of batch files and *TallScreen* commands) shows you how the program works and some of the feats it can accomplish.

If you're a veteran DOS wrangler with memory to spare—*TallScreen* soaks up 64K—the program can provide some nifty solutions and shortcuts. Happily, *TallScreen* coexists with *SideKick* and *ProKey*, and the three make great partners. At \$49.95, it's an excellent value.

# The world's best selling monochrome graphics card for the IBM PC.

There are more Hercules<sup>™</sup> Graphics Cards in more IBM<sup>®</sup> PCs, XT<sup>™</sup>s and AT<sup>™</sup>s than any other monochrome graphics card in the world.

Over a quarter of a million demanding users around the world use a Hercules Graphics Card to improve the performance of their software.

## **The Lotus<sup>®</sup> 1-2-3<sup>®</sup> Booster.**

Consider Lotus 1-2-3. Hercules gives an off-the-shelf copy of 1-2-3 the highest resolution possible on an IBM PC, XT or AT. More 1-2-3 users choose the Hercules Graphics Card to get crisper text and sharper graphics than any other monochrome graphics card.

And we bring the same performance to other integrated programs like Symphony<sup>™</sup>, Framework<sup>™</sup>, and SuperCalc<sup>®</sup> 3.

But we don't stop there. The Hercules Graphics Card

improves all kinds of software.

Like Microsoft<sup>®</sup> Word, a word processor that enables you to display text with subscripts, superscripts and italics.

Or pfs:Graph, an easy-to-use business graphics program that converts your data into presentation quality graphs.

Or Microsoft<sup>®</sup> Flight Simulator, the high flying game for the overworked executive.

Or our own Graph X<sup>™</sup>, a library of graphics subroutines that eases graphics programming.

Or AutoCAD<sup>™</sup>, a computer aided design program that offers features normally associated with expensive CAD systems.

And we supply free software with each card to do hi-res graphics using the PC's BASIC interpreter.

## **State-Of-The-Art Hardware.**

The Hercules Graphics Card gives you graphics resolution of 720h x 348v and a

parallel printer port. Our unique static RAM buffer provides sharp 9 x 14 characters and flicker-free scrolling. Our exclusive safety features help

prevent damage to your monitor.

State-of-the-art custom IC technology delivers unsurpassed reliability. Ordinary graphics cards use up to 30 ICs to do what one Hercules IC does. By using fewer parts, we reduce the possibility of component failure.

Which is one reason we warranty the Hercules Graphics Card for two years.

Unbeatable reliability. Advanced technology. Proven by over a quarter of a million users. Why settle for anything less than Hercules?

Call 1-800-532-0600 Ext 401 for the name of a Hercules dealer nearest you and we'll rush you our free info kit.

**Hercules.**  
We're strong on graphics.

# WordPerfect 4.0.

A perfect report card. It wasn't necessarily our goal when we added the most recent enhancements to WordPerfect. We were more interested in responding to the suggestions of our users and dealers.

But a perfect report card is like icing on the cake. And it makes us more confident than ever that WordPerfect 4.0 is the most perfect WordPerfect, yet.

### Easier.

Most WordPerfect 4.0 functions require only one keystroke, a simple press of a finger. And new comprehensive documentation makes learning a breeze.

### Faster.

Document orientation means WordPerfect 4.0 never makes you

wait between pages. No matter how fast you type, WordPerfect won't slow you down.

### Better.

WordPerfect 4.0 includes several features not found on many word processors. Like a 100,000-word phonetic dictionary; multi-page footnoting capability; table of contents and index generation; automatic outlining and paragraph numbering;

and a 4.0 network version. Get the word processor that lives up to its name (and its report card): WordPerfect 4.0. For more

information, see your dealer. Or call or write:

## BARR/HASP: POWERFUL, VERSATILE, EASY TO USE for the IBM PC, XT, AT and compatibles includes software, synchronous adapter board and manual

The BARR/HASP Intelligent Communications package provides more than just a connection—it's powerful enough to drive multiple high-speed printers for volume printing, yet versatile enough to print checks and invoices on any size printer. With the menu-driven software, you can perform all program functions accurately, easily, and without lengthy training.

BARR/HASP emulates a full function IBM 3777-2 and HASP on the 360/20. Print speeds on single and multiple printers range from 30 cps to beyond 2,400 lpm (7,000 lpm on the PCAT). Line speeds range from 1,200 to 9,600 Baud on dial-up and to 19,200 Baud on a dedicated line. With the PCAT, you can achieve a new speed record for a micro-computer—56,000 Baud—and drive even the fastest laser printers at maximum efficiency.

All tasks—printing, plotting, sending jobs, and using the console—operate simultaneously from a single PC. Such high performance translates into instant savings. BARR/HASP now replaces expensive, cumbersome Remote Job Entry workstations—and does it for a fraction of the cost.

You'll find the BARR/HASP manual complete and refreshingly intelligible. But should you have a question, BARR's technical experts are just a toll-free phone call away.

### FREE 30-DAY TRIAL

## PROJECT MANAGEMENT CONTROL

Larry Tanner  
Construction Manager  
TCM, San Diego

### PMS-II® MEANS BUSINESS!

Track even the largest projects to the dollar... and to the day.

Only PMS-II offers such a complete set of project management tools.

Perform "What IF" studies at any stage of a project. Add cross project resource loading for 190 resource types with RMS-II® and manage material deliveries with MMS-II®.

Even printer graphics with near plotter quality make you look good using GPS-II™.

Formatted for PC-DOS, MS-DOS, CP/M 80 & 86

#### Virtually Unlimited

- Super and Subnetwork file linking (2750 activities per file)
- "Clone" old networks into an existing or new network and renumber
- Allows upload or download to any program like Lotus 1-2-3, dBase II, etc.

#### Exceptional Planning and Tracking

- Menu driven, easy new documentation
- Rapid calculations
  - Critical path
  - Early and late start/finish dates
  - Percent complete, days remaining

#### Versatile Reporting

- Multi-level sort
- Extensive data selection
  - Network diagram
  - Gantt/bar charts
  - Earned value analysis and graph
  - Funding schedule and graph

Project management technology is our only business. Send for our newsletter and free literature.

PMS-II — \$1295; Demo — \$50.

## pfs:access

Most communications initiatives have good reason for traveling cautiously up and down the nation's data highways. Wending your way through the myriad of on-line services and data bases is not always informative or inexpensive. Just getting on line, either with a service or another PC, has its share of frustrations. Luckily, Software Publishing makes the trip easier with its latest version of *pfs:access*, a nearly effortless program aimed at those who are new to communications or have modest communications requirements.

If you have used other Software Publishing programs, you'll be comfortable with *access's* look and its command conventions. Menus clearly list function key assignments; as with *pfs:write* and *pfs:file*, <Esc> always returns you to the last menu, while <Tab> always moves the cursor to the next line. If you're new to the *pfs:* family, you'll surely appreciate the program's simple installation, concise menus, clear prompts, thorough on-line help, and logical and consistent command structure.

*access* first presents the user with a no-nonsense main menu listing eight options. The first five options, also available in the previous version of the program, provide automated access to The Source,

# THE SHOCKING TRUTH ABOUT STATIC ELECTRICITY AND YOUR COMPUTER.

## FACT : MANY COMPUTER MALFUNCTIONS ARE RELATED TO STATIC ELECTRICITY.

Static electricity is an invisible enemy that can be caused by normal everyday activities. Like walking across a carpet. Picking up a Styrofoam™ cup. Or just crossing your legs. These actions can generate a static charge of up to 30,000 volts, while it takes only a few hundred volts to damage your computer's microchip. Even you wouldn't feel the charge until it reached over 5,000 volts.

## HOW STATIC ELECTRICITY CAN ZAP YOUR COMPUTER.

Static charge can cause glitches and blips. Lost data. Memory loss. Or even permanent chip damage that may not be determined until months later. The result could mean expensive downtime and unnecessary aggravation. In the past, these problems have been blamed on equipment malfunction or operator error when the real culprit was static electricity.

## INTRODUCING STATIC-MASTER™ MATS BY FORMICA CORPORATION.

Anti-static laminate mats offer a durable, dependable, solid laminate solution to static electricity. STATIC-MASTER mats are 1/8" thick with the anti-static properties built right in. They won't bend, tear or curl, and can be easily cleaned. The edges are rounded for a safe, handsome and finished look. They're also ideal for just about all electronic equipment.

Just connect the ground cord and touch the mat before you touch your equipment. All static electricity will be instantly and safely dissipated. Neither you nor your equipment will feel any shock.

So get STATIC-MASTER anti-static laminate mats now. And zap static electricity before it zaps your computer.

Call toll free 1-800-367-6628. In Ohio 1-800-443-7945

## We make it simple.

**An Interface disk or tape subsystem is simple to install and simple to use for IBM PC, XT, AT, and most PC-compatibles**

### For the PC and compatibles we give you:

- External DiskSystems® from 10 to 119MB.
- Internal with 10 to 55MB.
- 10MB removable cartridge Winchester.
- 10MB TapeSystem®.
- DualStor® with 10, 22, or 33MB of fixed storage plus 10MB tape or 10MB removable Winchester.

### For the PC-XT, we give you:

10-megabyte TapeSystem

- Internal 10 to 55MB.
- DoubleBarrel® is an internal combination with 10, 22, or 33MB fixed storage combined with 10MB of tape back-up.
- External 10MB tape cartridge drive.
- External ExtraDrive® is a 10MB removable cartridge Winchester.
- External DiskSystem with 10 to 55MB of additional storage.

### For the PC-AT, we give you:

- Internally mounted hard disk drives with 21 to 117MB.
- Internal 10MB removable cartridge Winchester.

AT up-grade kit

Since 1978, Interface has been providing quality storage subsystems at affordable prices for the personal computer market.

DiskSystems, TapeSystems, DualStor, DoubleBarrel and ExtraDrive are copyrights of Interface, Inc. IBM is a registered trademark of IBM Corporation.

# Investment decisions just got easier.

Complimentary  
Tax Preparer

HowardSoft's Real Estate Analyzer™ has been helping knowledgeable investors make tough decisions since it was introduced in 1980.

Now, the Third Edition makes the process even easier.

The new version runs faster and more automatically. Entering data and formatting reports are now even more flexible. We've added more loan, depreciation, and expense models to an already impressive list. More return-on-investment variations. Expanded tax analysis capabilities, including the effects of the Tax Reform Act of 1984, and proposed 1985 rulings. The Third Edition even handles up to 30-year analyses, instead of just ten.

At \$295 (\$350 for the IBM version) the new Real Estate Analyzer is a superb investment by itself. But there's more.

## A very special offer.

To celebrate the new release, we're including a companion copy of the Number One selling tax software, Tax Preparer™ at no additional charge.\* You save over \$250.

Tax Preparer lets you enter data all year long to plan the tax effects of *all* your investments. Then, at tax time, the inexpensive update will let you apply that data to the 1985 tax forms in a matter of minutes. Finally, at the touch of a key, Tax Preparer will deliver error-free printouts, ready to sign and drop in the mail.

Both programs work with either the Apple II series, the IBM-PC, or a broad range of PC compatibles.

## He who hesitates is lost.

Needless to say, we can't keep this offer up indefinitely. It's good only while supplies last.

But the wise investor will make his decision now. So he can make the rest of his decisions easier than ever.

**HowardSoft.™**  
The software investment  
you can count on.

\*The complimentary package included in this offer is the 1985 Edition for tax planning throughout the year. It generates 1984 returns. To produce IRS-accepted 1985 returns, you will have to purchase an update at the start of next tax season. The update will be available directly from HowardSoft for under \$100.

8008 Girard Avenue, Suite 310,  
La Jolla, CA 92037 • (619) 454-0121

CompuServe, MCI Mail, Dow Jones, and EasyLink. This release of *access* adds AT&T Mail (a long-distance network not yet introduced commercially) plus the functions 'Call another PC' and 'Allow remote access'.

'Allow remote access', easily the most significant addition, permits an unattended host PC using *access* to receive files and, in some cases, to be operated by a PC using *access* at the other end. *access* boils this complex process down into a few

prompt-driven commands while simultaneously standing guard over your files. Two levels of password protection permit either limited or full file access. With the former, a remote PC calling up your system can read certain files; with the latter, files can be read, copied, and in some cases edited or deleted.

Like most PC communications programs, *access* uses the XMODEM error-checking protocol. Keep in mind that the program's default setting in this case is *off*; you must invoke XMODEM before you transmit to or receive

files from a remote system. *access* will at least remind you to perform this task, but the requirement is nonetheless an inconvenience the program need not have inflicted.

*access* simplifies the logon process by automating the entry of phone numbers, user IDs, passwords, and obtuse security procedures. To set up an automatic logon sequence for MCI Mail, for example, you would select the MCI Mail option from the main menu,

# Create screens like this in minutes . . .

## and Screen Sculptor™ writes the program!

**In Basic and Turbo Pascal**

It's that easy! The same Screen Sculptor package generates programs in IBM Basic, Turbo Pascal, and IBM Pascal.

Now, anyone can have attractive, intelligent input screens and sophisticated data entry routines in minutes.

Move pieces of the screen around, select colors from a menu, draw lines and boxes, point, repeat last character in any direction.

And more!—Specify variable names, data types, acceptable data ranges, pictures for editing, etc.

Screen Sculptor then generates actual program source code based on your screen design. Use it as is or modify it.

**And it's only \$125**

Requires an IBM PC, XT, PCjr, PC AT or 100% compatible, 128K, DOS, one 320K disk drive and any 80 column display.

# NO RISK DEMO OFFER!

Try it FREE for 30 days! Here's a no-risk offer. Order now and you'll also get a full demo disk. Use the demo and the manual for 30 days. If you don't love it, return the package for a full refund! # Give us \$5<sup>00</sup> and we'll put the world on your PC!

Quick, what's the capital of Sri Lanka? What countries do you pass through traveling from Copenhagen to Rome? For learning, explaining, or just plain daydreaming, there's nothing like an atlas. Now, with **CONCEPTS COMPUTERIZED ATLAS**, the world enters the computer age. You can too. In your own home and for only \$5. Thanks to our unique Phoenix Plan.

## What Is a Computerized Atlas?

You can forget the bulky volume with the endless index. We put a full-color, three-dimensional globe on your screen. Turn it east, west, north, or south. Select an area that interests you and enlarge it.

Visit any state in the United States, any province in Canada. Visit any country in the world! Simply type the name, and the **Atlas** brings it to the center of the screen. A closer look? Magnify it twice, three times, five times! Call up the Fact Sheet to find the population, the size, the capital, the monetary unit and more.

Our **Atlas** can give you information on more than 2,500 cities. Just type the name, the **Atlas** shows you where it is. And tells you the city's latitude and longitude, its population, and facts about the country it's part of. Big cities, historical cities, vacation spots, places in the news.

With our **Atlas**, you can even find the distance between two places in the world, a feature no bulky volume can duplicate. And the **Atlas** can calculate it in land miles, nautical miles, or kilometers. How far is it from London to Moscow in kilometers? Iceland to the Virgin Islands in nautical miles? It's easy with our **Atlas**.

Our **Atlas** was compiled from a number of sources, including a CIA satellite. Over three years of research have gone into our **Atlas** to make sure that it has the latest, most up-to-date information available.

*System requirements:* IBM PC, PCjr, or 100% compatible, and 128K of memory, a color graphics board, a color monitor, or a Hercules monochromatic board.

Of course, you have to try our **Atlas** to appreciate it. We know that. So we have devised the Phoenix Plan to let you do just that—and for little more than the cost of a blank disk.

CONCEPTS COMPUTERIZED

# Atlas™

Circle 378 on reader service card

## The Phoenix Plan

The Plan is simple. Try our **Atlas** before you buy it. For only \$5 you get the complete **Atlas** software and with it our easy-to-follow instruction booklet. This is *not* a demonstration disk—you have all the capabilities of the **Atlas** at your fingertips.

You can load the program three times and use it each time for as long as you like. After the third time, the program locks. If you decide not to keep the **Atlas**, simply format the disk, and you have a blank Verbatim® DataLife® disk. The blank disk alone is a \$4 value.

But if you want to keep **Atlas** (and we think you will), simply dial the toll-free number in the instruction booklet and charge it to your American Express, MasterCard, or VISA. The operator will take your order and give you the unlocking code over the phone. Our **Atlas** costs only \$69.95.

Our patented Phoenix Plan has been successfully used to market our business software by Lanier, Philips and Xerox—to name a few. Now, for the first time we are making the Phoenix Plan available to the PC marketplace. So why don't you try it? Fill out the order form below and send it with your \$5 today. You've got nothing to lose and the world to gain. Available at participating Software Concepts dealers (inquiries invited).

**YES, put the world on my PC. I enclose my \$5.00. Please send the **Atlas** to:**

# If you're tired of waiting, you're using the wrong file manager.

## Be fast. Btrieve.™

If batch jobs and reports turn waiting time to nighttime, then wake up! You're using the wrong file manager.

Btrieve™ file management hates waiting as much as you do. It's written in assembly language especially for the IBM®PC. And based on b-tree file indexing, with automatic balancing for access speed that won't degrade as your database grows. With Btrieve, your applications always run fast. So you'll be out the door faster.

**The standard for networking.** When your application requires multi-user file sharing, Btrieve/N (network version) sets the standard for the industry's most popular LANs: IBM's PC Network, Netware™, Davong MultiLink™, Omninet™, PC Net™, Ether Series™, Nestar™, and NetOne™. Btrieve/N offers *safe* network file management that coordinates simultaneous updates and prevents lost data.

**Automatic file recovery.** Btrieve provides automatic file recovery after a

system crash, so accidents and power failures don't turn into database disasters. Your Btrieve data always comes back intact.

### Fully-relational data management.

Using SoftCraft's entire family of products gives you a complete, fully-relational database management system. Rtrieve™ adds report writing capabilities for generating the reports you need. Xtrieve™ speeds users through database queries with interactive, on-screen menus—no command language or special syntax.

### For professional programmers.

Btrieve is the fast, reliable answer for all your application development. In any development language—BASIC, Pascal, COBOL, C, FORTRAN, and APL. With multikey access to records. Unlimited records per file. Duplicate, modifiable, and segmented keys. With Btrieve, you can develop better applications faster. And know they'll run—*fast*.

*Suggested retail prices: Btrieve, \$245; Btrieve/N, \$595; Xtrieve, \$195; Xtrieve/N, \$395; Rtrieve, \$85; Rtrieve/N, \$175. Requires PC-DOS or MS™-DOS 1.X, 2.X, or 3.X.*

# Lightning strikes twice!

## TURBO 20<sup>®</sup> AND TURBO 30<sup>®</sup>

### We've Got it at **ALPHA OMEGA** COMPUTER PRODUCTS

- TURBO 20<sup>®</sup> and TURBO 30<sup>®</sup> are designed for the IBM PC<sup>®</sup>, PC/XT<sup>®</sup>, PC/AT<sup>®</sup> and compatibles. Both available internally or externally.
- Incredibly low power consumption requiring only 16 watts of continuous power.
- More Bytes for the Buck giving you 22 megabytes on the TURBO 20<sup>®</sup> and 33 megabytes on the TURBO 30<sup>®</sup>.
- With an interleave factor that is 300% faster than the standard PC/XT<sup>®</sup>, your programs will, in real time, run faster than you've ever thought possible.
- Ease and speed of installation and use. Documentation was written for the non-technical end user. Install and format in less than 45 minutes.
- 13 month defective warranty (exchange only).
- Speed, convenience, affordability, and reliability all in one package from ALPHA OMEGA COMPUTER PRODUCTS.

**Call us now and get your TURBO 20<sup>®</sup> for \$799  
and TURBO 30<sup>®</sup> for \$1049.**

(818) **345-4422**

18612 Ventura Blvd., Tarzana, CA 91356

All products are pre-tested before delivery, and are guaranteed for 13 months. Within this period, defective returns must accompany an RMA number. All other returns subject to a 10% restocking fee. Please include \$6 for shipping and handling. There will be an additional \$4 surcharge on COD orders. Calif. residents include 6.5% sales tax.

**Circle 930 on reader service card**

tab to the third line in the option menu, type Y, then dial the MCI number and enter your ID and password. Press <F4>, and *access* saves the entire sequence of key-strokes. The next time you want to check your mailbox, merely select the MCI Mail option from the main menu—the rest will happen automatically.

One recurring irritant is *access*'s erratic disconnect function. Pressing <F3> easily breaks an on-line connection but does not immediately cut the modem carrier. If you need to call another service or PC quickly, you must flick your modem off and then back on; otherwise, be prepared to wait 60 seconds for the modem to "time out."

Software Publishing's reputation rests on unpretentious, graceful programs that are designed to get the job done while inflicting minimal user distress. *access* makes the grade on both counts. —Mark Hall

## Avocado Computer To Merge With Parallax Technologies

HOUSTON — The financially troubled Avocado Computer Corporation of San Jose, California, has agreed to merge with Parallax Technologies of Houston, Texas, to form a new company. The deal is expected to help Avocado solve a number of recent debt problems that have threatened to drive the company into bankruptcy.

Under the agreement, Avocado will become a division of Parallax Technologies, and will concentrate on bolstering that company's present share in the small business segment of the office computer market.

## Industrial productivity up. White collar productivity down.

WASHINGTON, D.C. — U.S. industry appears to be regaining its steady, missed productivity. Long the world leader in industrial productivity, American business took a nose dive in the measure during the past few decades.

Recent figures show healthy gains in overall industrial productivity, an over 3% gain in 1984.

White collar productivity, however, is down. The second growth year in a row. While industry-wide productivity is up, white collar productivity is down. The second growth year in a row.

White collar productivity is down. The second growth year in a row. While industry-wide productivity is up, white collar productivity is down. The second growth year in a row.

White collar productivity is down. The second growth year in a row. While industry-wide productivity is up, white collar productivity is down. The second growth year in a row.

# Metro project delayed 6 months.

## Management errors cited in multi-million dollar postponement.

DETROIT — At a press conference held late yesterday, James Arthur LeMay, senior vice president of the Wagner-Davis Construction Company, announced that completion of the \$205 million Metro Center has been delayed for at least six months.

Sources within the company say that the hold-up on the project could result in losses of up to \$15 million depending on whether or not any further setbacks can be avoided.

While Wagner-Davis officials refused to comment on the Metro Center, a former project manager for the firm put the blame on a lack of proper planning.

"We made some huge miscalculations all across the board. There should have been a lot more control and there wasn't. It's a real mess down there and it could have been avoided."

In 1982, Wagner-Davis was awarded the Metro project in competition with seven other construction companies. The firm, which has since been at the center of two other deadline squabbles, now faces several possible lawsuits.

Drew Brown, whose financing syndicate selected Wagner-Davis for the Metro Center job, says that he intends to hold the company liable for any lost revenue in a row.

While Wagner-Davis officials refused to comment on the Metro Center, a former project manager for the firm put the blame on a lack of proper planning.

"We made some huge miscalculations all across the board. There should have been a lot more control and there wasn't. It's a real mess down there and it could have been avoided."

In 1982, Wagner-Davis was awarded the Metro project in competition with seven other construction companies. The firm, which has since been at the center of two other deadline squabbles, now faces several possible lawsuits.

group intends to sue Wagner-Davis for "breach of contract and for deceit and misrepresentation and will ask for more than \$17 million in punitive damages."

While rumors of a possible labor strike threaten to further disrupt progress on the Metro project, there are no indications at the present time that workers union leaders say such an action could take place within the next several weeks.

Union officials add that several cranes and a number of trucks that should have been started for the Metro job were erroneously diverted to another Wagner-Davis construction site in Illinois.

The company would neither confirm or deny the allegation.

Investors waited for the government's latest economic indicators due out late this week.

The Treasury's 10-year bond, due out late this week, was up 1/8 point to close at 9 1/8.

NEW YORK — The Dow Jones Industrial Average, after dropping nearly 12 points by noon today, ended the day at 2,722.25, down 11.75 points from Tuesday's close.

Short term interest rates bounced back up yesterday, while bond prices staged an early recovery.

Treasury bill yields inched slightly higher with long term bonds outpacing Tuesday's close by as much as a half point.

Investors waited for the government's latest economic indicators due out late this week.

The Treasury's 10-year bond, due out late this week, was up 1/8 point to close at 9 1/8.

## Networking Raised to a Greater Power

Advanced Technology. With it, IBM tripled the speed of the PC and increased its memory capacity five-fold. Nowhere is this increase in computing power more important than in networking situations. If the AT's technological advances have prompted you to look into a multi-user network, you owe it to yourself to take a closer look at MultiLink Advanced™ . . . a unique multi-tasking, multi-user networking system that runs programs under PC-DOS 3.0.

**Eight Workstations for the Price of an AT.** MultiLink Advanced™ represents the next generation in networking systems for IBM microcomputers. The system enables terminals, connected to a single AT, to emulate IBM-PC's having up to 448K of RAM (The PC-Shadow™ terminal, shown above, even has a PC look-alike, as well as work-alike keyboard and display).

This means that instead of spending \$3,000 per workstation for a PC with a Kilobuck "Network Interface Board," you can use inexpensive terminals . . . eight of which cost less than an IBM AT. Even if you need only one workstation connected to your AT, you'll realize significant savings.

**MultiLink Advanced™ . . . Instant Access to All of Your Resources.** Central to most multi-user situations is the need to coordinate a variety of printers. With what's been described by *PC-Tech Journal* as ". . . by far, the best print spooler for the IBM PC," MultiLink Advanced™ gives users the option to print either at their workstations, or at a central location. In addition, programs and files can be shared by multiple users locally or through use of a modem. Just think of it . . . having remote access to an AT with a lightweight terminal/modem.

Although designed to take advantage of the AT, MultiLink Advanced™ runs on all versions of PC-DOS, except 1.0, and certain implementations of MS-DOS. A wide range of leading programs are supported which include WordStar, dBASE III, Multimate, and Lotus 1-2-3.

**Get the Advanced Story Today.** Call The Software Link Today for complete details and the dealer nearest you. MultiLink Advanced™ is immediately available at the suggested retail price of \$495 and comes with a money-back guarantee. VISA, MC, AMEX accepted.

### This month: On-line query quarrels, Brits get bits, and the Great Bulletin Board Showdown

*Edited by Robert Luhn*

## Trends

### *What You Know Won't Hurt You*

Computer-induced traumas are typically minimized by careful preparation, cool headedness, and a willingness to admit defeat when the forces of entropy gang up on you. Delving into the on-line world, while not nearly so enervating, does call for a measure of preparation.

In the not-too-distant past, information professionals were resigned to hefting thick volumes of documentation and navigating the digital labyrinths created by Dialog Information Services, Mead Data Central, and other purveyors of on-line wisdom. Today, programs like *In-Search* and *Sci-Mate* and gateway computer systems like EasyNet help both professional and neophyte data base researchers obtain information quickly and cheaply. But which does a better job—software or computer gateways? The debate, if not actually raging, at least simmers under the banner of “user-friendliness.”

Dr. Roger Summit, president of Dialog Information Services, thinks the knocks accorded Dialog's user interface are unwarranted. Not surprisingly, Summit contends that using Dialog, one of the premier data base services, is relatively simple. According to Summit, searches on Dialog require only four simple commands—Begin, Select, Display, and

End. Boasts Summit, “A high school in Montgomery County, Maryland, found Dialog easy enough for students to use in researching their papers.”

While duly noting Summit's defense, William T. Van Orden, director of marketing for NewsNet, maintains, “Effectively using systems like Dialog requires a training course.” NewsNet, which provides on-line access to 275 industry newsletters, was expressly designed to be used without classroom instruction. Naturally, Van Orden believes that NewsNet's combination of simple commands, on-line help, and documentation “makes the system easier to use than most.” Simplicity has its penalties, however—Van Orden admits that distilling a user interface to its essentials limits both the number and depth of services a data base can offer.

Summit suggests that the hardest part of using an information service is finding the right data base. Luckily, software aimed at simplifying and abbreviating this quest is appearing on the market. *In-Search*, a program designed for Dialog users, sifts data bases by class and category. Once the data bases are collated, an electronic card catalog displays the appropriate data bases to search. *In-Search* also provides automatic logon, off-screen composition of data base searches, clearly written documentation, and on-screen help (see “Gateways to On-Line Services,” *PCW*, May 1985).

# To err is human; to backup with Irwin, divine.

Let's face it—people make mistakes. And even when people are near-perfect, accidents do happen. Hard disks fail and software bombs. Power fluctuates and files disappear.

There isn't anything you can do to prevent the loss of information... except be prepared for the inevitable.

That's why we developed the Irwin BACKUP™ Tape Subsystem. It provides a fast, inexpensive way to copy data. So easy you'll use it every day.

Whether you own a PC-XT or the new PC-AT; whether you need to store 10, 20, even 40 megabytes of information, we have the backup for you.

The Irwin BACKUP is the perfect companion to your IBM PC-XT or PC-AT. It's color coordinated to match your PC beautifully. Small enough to fit conveniently on your desk, it comes with a self-contained power supply, and 30 times the storage capacity of a

floppy. The tape cartridges are rugged, built to last.

Now there's no more crying over spilled milk (or short circuits). No more swapping floppies. No more costly mistakes. Because now the Irwin BACKUP Tape Subsystem backs you up with a heavenly combination: the reliability you need... for only \$995.\*

Irwin Magnetix has installed over 30,000 drives worldwide. We back you up with integrity.

For the dealer nearest you, call 1-800-421-2879 or write:

### Look into the new Princeton HX-9 Series

See high-resolution RGB color with the Princeton HX-9 and HX-9E Color Monitors.

Observe exceptionally sharp high resolution graphics and text created by color phosphor dots which are within a mere .28mm of one another.

Enjoy Princeton performance on a 9-inch screen in less desk space than most any other monitor on the market today.

### Display images of clearly superior quality

Flicker-free technology enables you to view colorful images with clear, sharp definition. Dark-glass, non-glare screens further enhance viewing clarity.

A built-in green/amber switch allows you to switch from multi-color to either a green or amber mode. It's like owning both a color and a monochrome monitor.

The Princeton HX-9 Color Monitor is perfect for viewing up to 16 vivid colors with the IBM Color/Graphics Monitor Adapter (or equivalent).

And, the enhanced member of the HX-9 Series, the Princeton HX-9E Color Monitor, offers one big extra: It also allows you to use the IBM Enhanced Graphics Adapter (or equivalent) to view up to 64 brilliant colors.

What's more, they tilt. They swivel. Both have a built-in base to adjust your monitor to a comfortable viewing angle.

### Princeton quality is built in

Both monitors in the Princeton HX-9 Series are manufactured to provide years of reliable use. Verified by tough quality-control procedures. And backed by a full one-year warranty.

### Visit your local computer store today

See the HX-9 Series and all other products bearing the world-respected Princeton name. To find the Princeton dealer nearest you, call: **800-221-1490 (Extension 406)**, 609-683-1660 (NJ only), Telex: 821402 PGS PRIN.

---

Dick Kollin, president of Telebase, provider of the EasyNet gateway, believes that in the mercurial world of on-line information *In-Search* users can quickly find themselves out in the cold. "Vendors, data bases, and services change their protocols constantly," says Kollin. Barbara Newlin, a consultant involved in the development of *In-Search*, counters that owners can easily revise their software through a free on-line update service.

EasyNet offers a consistent interface and a single set of commands for using the many services

and data bases huddled under the EasyNet umbrella. You don't need to learn each service's unique command set or even worry about varying communications protocols. EasyNet queries the searcher about the information sought and, based on the answers given, suggests data bases that best fill the bill.

Their respective claims notwithstanding, the aforementioned professionals admit that effective on-line research requires time and experience. "The only thing that will help people in choosing a data base is familiarity with the data bases in question. And that comes from using them over a period of

time," says Newlin. For Summit, "There's no real substitute for experience and practice. Searching will remain foreign until you do it." Even Kollin admits, "If you don't understand at least some fundamentals, because you haven't read the help screens or whatever, all we can do is turn you over to a 24-hour telephone operator."

Once again, the simple truism that knowledge is power is affirmed, though, in this case, knowing *how* to get to that knowledge is equally powerful.  
—Art Wilcox

## Last year the experts tested the top-of-the-line Toshiba 3-in-One™ printer. Here's what they said.

“When Toshiba America called to see if there were problems testing their printers, I responded, 'You bet—I can't get the P1351 off Bill Machrone's desk long enough to get its picture taken!' It's that good.”

(Bill Machrone is the editor of PC Magazine.)

PC Magazine  
November 27, 1984

“It is setting new standards for quality and performance in the dot matrix arena.”

Computers & Electronics Magazine  
November 1984

## On-Line

### *Use a Modem, Go to Jail (Part 3)*

PC-based telecommunications has opened up a vast new frontier. As in the Wild West, a state of virtual lawlessness has prevailed. But for system-busting hackers and other computerized miscreants (viewed by some as today's equivalent of pistol-packing outlaws), as well as for more benign bulletin board enthusiasts, a regulatory high noon may be close at hand.

The case *People vs. Tcimpidis* helped trigger the showdown, as faithful *PC World* readers may recall. When Pacific Bell security detected a stolen telephone-credit-card number on Tom Tcimpidis's bulletin board system (BBS) last fall, the Los Angeles system operator (SYSOP) was charged with a criminal misdemeanor. In addition, police carted off Tcimpidis's XT, modem, and related BBS paraphernalia. The incident marked the first-ever legal action involving a SYSOP and loosed a swarm of constitutional questions and ethical issues surrounding BBS activities.

The case was eventually dropped when the city attorney

couldn't prove that Tcimpidis knew the source of the credit card number, believed to have been posted by an anonymous caller. But the incident let every user within dialing distance of a BBS know that the era of unbridled modems was over. In state legislatures and courts throughout the nation, the password these days is restraint.

The Tcimpidis case raised serious questions about First Amendment freedom-of-speech guarantees and Fourth Amendment safeguards against illegal search and seizure—issues with which legislators attempting to

*(continues)*

# “ Imagine what they will say about its successor.”

**The New Toshiba P351 3-in-One printer.** They could say that inside the sleek new Toshiba P351 you'll find the ultimate 3-in-One printer. Because it offers a combination of:

Letter-quality printing. Perfectly translated graphics. And speed. (100 cps letter. And draft speed improved to 288 cps.)

They could say you'll appreciate the 24-pin dot matrix head that gives the P351 its exemplary letter and graphic quality.

They could say the new P351 gives you an almost unlimited number of ways to express yourself. With both downloadable software fonts and new plug-in font cartridges.

And they could say the new P351 is not only the best looking printer in the \$1,000 to \$2,000 range. But also the most reliable.

Of course, we're not putting words in their mouths. Just the ultimate 3-in-One printer in their hands. And yours.

## PRODUCE STUDIO-QUALITY TRUE-COLOR PICTURES ON YOUR PC

Now you can create and edit studio-quality pictures on your IBM\* PC or compatible computer with the IMiGIT PLUS™ color system.

Anything a video camera can see — people, products, scenery and artwork — can be computerized in 256 colors using the IMiGIT PLUS color system. Pictures are captured and displayed in their original "true color" so you do not have to spend hours recoloring to attain a "real-life look". Images can be enhanced with text, line art and other graphics for business presentations, art studio, education, engineering, architecture and television applications.

### Professional Quality — Special Effects

Pictures are captured at a resolution of 512 x 512 x 256 colors selectable from a 16 million color palette. Captured images can be modified with editing tools such as: multi-font annotation, line and freehand drawing, filled and unfilled boxes and

circles, texturing, color fill, curve fitting and rubberstamping. A cut and paste feature allows "cut art", previously saved to disk as picture sections, to be recalled and overlaid on the display. This editing sophistication lets you create complex graphics as well as dramatic and illusionary special effects.

### Designed for the User

The IMiGIT PLUS color system is easy-to-use and versatile. Completely icon-driven, you can quickly learn to master the powerful editing tools. Also, you can select the various editing commands using the keyboard, popular mouse devices or digitizing tablets. Captured color pictures can be displayed for editing, saved and retrieved from disk, printed, and recorded on 35mm slides for professional presentations.

IMiGIT PLUS is available as a hardware/software combination, an add-on system, and as a complete IBM AT graphic workstation. The software and PC-EYE color capture board are priced at \$1,295. The IMiGIT PLUS system includes a color camera, RGB monitor, graphics adapter, software/hardware package with expansion chassis priced at \$9,500. The workstation is priced at \$18,000 and includes an IBM AT with 20MB disk, IMiGIT PLUS software, PC-EYE™ capture board, Colorverter™, graphics display card, digitizing tablet, color camera/accessories, and a high resolution RGB analog monitor.

**For more information** on IMiGIT PLUS or our other imaging products for applications in data base management, communications and image capture, **please write or call 1-800-OCHORUS or 603-424-2900.**

# YOUR STROKE OF GENIUS

Let our On-Line Reference series increase your productivity...  
Just a keystroke away!

**OLÉ™**, our new On-Line Encyclopedia series for IBM PC's and compatibles is organized by subjects and alphabetically by keywords ... for quick specific reference or indepth study. OLÉ uses pictures, animation, text, and understandable annotations to help you get up to speed quickly on any covered topic.

OLÉ is just a keystroke away because it sits co-resident in memory allowing you to access one or more of our encyclopedia series.

OLÉs will increase your computer proficiency and enhance your productivity. Using OLÉ will be a stroke of genius on your part!

The first six volumes currently available are:

**OLÉ DOS** Makes all the complex DOS commands easy to understand and implement. Suggested retail price, only **\$69.95**.

**OLÉ UNIX** A clear, concise and unambiguous introduction to the UNIX multi-user operating system. Suggested retail price, only **\$69.95**.

**OLÉ Data Communications** Clarifies complex concepts with more than 75 key terms presented. Suggested retail price, only **\$69.95**.

**OLÉ BASIC** An excellent guide for learning to program using BASIC. Quick on-line reference of key terms. Suggested retail price, only **\$69.95**.

**OLÉ Computer Literacy Vols. 1 & 2** Volume 1 is a keyword based tutorial of fundamental terms. Volume 2 provides an easy intro to databases, spreadsheets, word processors, accounting and graphics. Suggested retail price, each volume, only **\$39.95**.

Requirements: IBM Color Graphics Adaptor Card required. 256K RAM.

## Goodness-of-Fit<sup>™</sup>

**A Full-Featured regression package that WORKS!**

Goodness-of-Fit is a complete command driven interactive regression package for professional researchers, scientists and economists.

A complete tool kit with:

- ▷ Simple linear and non-linear regression
- ▷ Stepwise multiple regression
- ▷ Probit regression
- ▷ Principal components analysis
- ▷ Multicollinearity diagnostics
- ▷ Full algebraic transformations

Goodness-of-Fit is easy to learn, simple to use, fast, accurate and versatile. Output is clear, concise and comprehensive. Includes a well-written instruction manual. Files are compatible with Lotus 1-2-3, dBase and most other programs.

Plus... Goodness-of-Fit contains a bonus data management system for entering, editing, printing, merging and reformatting data files.

regulate the freewheeling electronic medium continue to grapple.

In trendy California, which last gave the world fire-walking, the BBS crackdown is gathering momentum. Republican State Senator John Doolittle has introduced a bill to outlaw the placement of personal or private data on computer bulletin boards without the authorization of the individual or entity that "owns" the data. Doolittle opted for that proposed remedy after learning that *Newsweek* reporter Richard Sandza's credit rating had been ruined by hackers ticked off at a Sandza article on underground bulletin boards. The team broke into a TRW computer, obtained Sandza's credit card and Social Security numbers, and published them on bulletin boards nationwide. According to the Doolittle bill, SYS-OPs who knowingly allow such information to be posted would be liable for prosecution.

Ted Blanchard, a Doolittle staffer who doubles as senior consultant to the Senate Rules Committee, says his boss is acting "to protect individual privacy," a right Doolittle feels is imperiled by "the magnitude of exposure that bulletin board systems represent."

## Feel right at home with the stock market.

Now you can use your personal computer and modem to help make investment decisions with confidence. Right in your own home.

Dow Jones News/Retrieval® is the surprisingly affordable, online financial news resource with exclusive electronic access to *The Wall Street Journal*. The combination of News/Retrieval and Dow Jones™ Software makes personal investment decisions easier by giving you a clear, organized picture of the facts.

Use News/Retrieval to check on your stocks or read up on companies and industries that interest you. Get tomorrow's business news today—90 seconds after it appears on the Dow Jones News Service® (the broadcast). See what impact government or world news is having on the marketplace.

Measure stock performance—past and present—with Dow Jones Quotes. And to round out the picture, review economic and earnings forecasts or SEC, Merrill Lynch and Standard & Poor's reports. It's all here in one place.

Then use Dow Jones Software to display trends, organize your portfolio and give you the entire picture in clear graphics.

After you've checked your investments, the whole family can use News/Retrieval to get hot sports news, shop at home, look up articles in the encyclopedia and much, much more.

For more information on how Dow Jones News/Retrieval can help *you* feel at home with the stock market, call **800-345-8500 Ext. 144\***.

**Dow Jones News/Retrieval & Software**  
*Keeping you a step ahead.*

\*Alaska, Hawaii and foreign, call 1-215-789-7008 Ext. 144.

# YOU FORCED US TO MOVE!

...and We Love You  
For It!

Because of the tremendous response you've given to our FREE OVERNIGHT DELIVERY and \*10 OFF policies, our growth has been phenomenal! Even we did not project how rapidly we would expand. Quite honestly there were times when it seemed like the whole country was trying to place an order...at the same time!

We realize that some of you have had problems getting through (our phones simply could not handle the volume) and, yes, some have even gotten their shipments late (our shipping department has been on a 12 hour schedule)...to those of you, WE APOLOGIZE for the inconvenience and would like to say THANK YOU for your patience.

A one million dollar investment has allowed us to solve these problems...we've just moved into our new World Headquarters, beefed up our sales department, added a spanking new phone system and built a fully automated warehouse.

Oh, sorry, we almost forgot "Harold" (who's extremely fast, but very sensitive) our new 100 terminal computer system. He's designed to speed up order processing to get your shipments out the door...fast. Sorry Harold.

## INTERNATIONAL ORDERS

### EUROPE Announcing Logicsoft Europe!

Our European friends may now order directly through our Amsterdam Distribution Center, which carries the latest factory fresh versions of the most sought after IBM PC software and hardware. Now you can receive your order fast and still take advantage of the incredible savings that only mail order can offer. Please call or telex to confirm pricing & policies. Telex: 10759 Logic NL

Call 020-83.48.64 or mail orders to:  
LOGICSOFT EUROPE BV  
pb 9460, 1006 AL  
AMSTERDAM, HOLLAND

### CANADA

For our Canadian customers we've installed a special local number, 416-283-2354. Now you can get the biggest savings in mail-order for the cost of a local call. Or, if you wish, Telex 286905 Soft UR.

### FAR EAST AND AUSTRALIA

Call 516-249-8440 and ask for our International Department. They're experts on export and you get to take advantage of our great mail order prices. Telex 286905 Soft UR. Please call or telex to confirm pricing & policies.

See Our Card for Details

**EVERYTHING YOU ALWAYS  
WANTED TO KNOW ABOUT  
BEATING A PRICE BUT WERE  
AFRAID TO ASK...**

**or How I Learned To Save Money  
Without Really Trying.**

We know there are still a few of you who have shied away from ordering from us (you know who you are) perhaps thinking our \$10.00 off and FREE overnight policies were a "gimmick" or a "come-on" to pressure you into something.

We'd like to tell you how simple it really is. Just pick up the phone and dial 1-800-645-3491, then tell your sales agent you'd like to beat a price (don't be embarrassed; he's not), the name and date of the publication and who you want us to beat. No gimmick, no come-on, it's that easy.

## CONFUSED OVER ACCOUNTING SYSTEMS?

We don't blame you, that's why we invite you to give us a call. We've evaluated over 50 of them and just because you can save a lot of money buying mail order shouldn't mean you have to sacrifice service...We want to take the time to assist you before you buy. We realize that an accounting system can add up to a sizeable investment and helping you end up with the right package for your money is what doing business is all about.

TEAR AND COMPARE! TEAR AND COMPARE! TEAR AND COMPARE! TEAR AND COMPARE!

On the other side of the aisle, Democratic assemblywoman Gwen Moore is taking a wholly different approach, one that suggests that constitutional rights may be in the eye of the beholder. Moore has introduced a state constitutional amendment that she claims will bring California into the computer age. The amendment extends to electronic communications, information systems, and data bases the same constitutional freedoms and privacy protections as those governing speech and press. It also gives computer data the same insulation against unlawful search and seizure accorded private homes and property. "In the future," she says, "all our information systems will be electronic, and they should have at least the same protections as personal papers in a file cabinet."

In Washington, Congress is endeavoring to control hacker intrusion into corporate and institutional data bases, but progress on protecting individual rights has lagged. For now, most of the legislative action remains on the periphery of the BBS world.

Representative Don Edwards (D-California), chairman of the House Judiciary Subcommittee on Constitutional Rights, has convened hearings to determine what

categories of personal information the FBI can include in its National Crime Information Center (NCIC) network. Similarly, Representative Charles Schumer (D-New York) has drafted legislation to help states improve the accuracy of computerized criminal justice information fed to and extracted from the NCIC. Schumer is also sponsoring a bill to control the personal rental history data bases that landlords use to screen prospective tenants.

Hearings held under the aegis of Senator William Cohen (R-Maine) have probed the computer matching of records, a means that some state and federal agencies use to cross-check information in cases of suspected fraud. Last year, Cohen won passage of a measure that prohibits federal agencies from acting on such information without a hearing.

The might of the modem is only beginning to arouse politicians. Even as the debate over legal guidelines for PC-based telecommunications takes shape, there's no doubt that the sheriff is in town. —Wes Nihei

# WHY BUY A MODEM WHEN YOU CAN HAVE A WATSON?

At \$698, Watson,<sup>™</sup> the integrated/voice data modem, obsoletes all other modems. Because now, with Watson, your computer can talk to people as well as other computers.

In fact, Watson will do everything a smart 1200 baud modem with communications software will do. Plus, it will turn your computer into an integrated voice and data workstation at the lowest possible cost and with the least amount of hassle to you.

With Watson, your IBM PC<sup>®</sup> or compatible will have a sophisticated voice mail and voice messaging system that will handle your phone calls even while your PC is running other programs.

Watson's programmable TI-TMS 320 microprocessor lets you

record, edit, playback, and transmit speech directly to and from your computer disk.

Watson will answer your phone, leave messages for important callers, and provide you with these timesaving applications: auto dialing from a 500 name and number telephone database, a voice calendar that can call and remind you of important appointments, and software that allows you to record and edit dictation at your desk or remotely from any Touch Tone<sup>®</sup> phone.

So, before you put your money into the outmoded technology of an ordinary modem, hear what the same money will get you in a Watson.

Call 1-800-6-WATSON, or in Massachusetts 617-651-2186, for a complete demonstration of Watson's voice capability. Watson will also tell you the nearest location of your Watson dealer.

Or, to order by phone call 1-800-6-WATSON. MasterCard, Visa and American Express accepted.

## Start Bit

### Hayes Crosses the Big Pond

*While American manufacturers and users alternately praise and damn the so-called Hayes "standard," let us consider a PC communications world without standards, such as now exists in Great Britain. British PC owners have found that although superior*

*products abound, communications chaos prevails in the absence of electronic rules, however informal. But England's Tower of Babel is about to fall: The venerable Hayes Smartmodem 1200 has emigrated. Jonathan Angel, staff writer for London-based PC Business World, reports:*

Most people involved with PC communications here will admit, if they're honest, that Britain lags far behind the United States. On-line services cry out for subscribers; communications software written for one company's modem won't work on another's; and to

top it off, many retail computer outlets don't even stock modems. Several elements contribute to this sad state of affairs, but the paramount factor is the lack of standards among British modem manufacturers.

After years of delay, this situation has radically changed in one fell swoop with the arrival of the Hayes Smartmodem 1200 in Brit-

*(continues)*

# Can your editor work with 16,000,000 bytes of memory? SPF/PC™ 1.8 from CTC can!

The best full screen editor for the IBM PC is now even better than ever. It looks and works like IBM's large system SPF editor, but SPF/PC executes faster and handles larger files than its mainframe cousin.

#### AT EXTENDED MEMORY

SPF/PC can use up to 15,850 KB of memory.

#### TOP VIEW COMPATIBLE

SPF/PC supports windowing and background execution.

#### COMMUNICATIONS FEATURE

Easy to use communications software.

**\$195**

UPGRADES only \$50  
(\$10 if communications upgrade)

Add \$5 for shipping  
Canada \$10 Foreign \$15

# PreCursor<sup>TM</sup> Makes The Hard Disk Easy.

Only  
\$69.00

PreCursor<sup>TM</sup> is an amazingly compact and sophisticated indexing system for your hard disk. It runs just ahead of your other applications and makes some very user-friendly arrangements. And at a very businesslike price.

Without PreCursor<sup>TM</sup>, it takes a whole manual of commands to find and execute programs from your hard disk. In a business setting, where novice users must access your system, this is aggravating and expensive.

Tailoring PreCursor<sup>TM</sup> to your system is an easy operation. On-line help is available at the touch of a function key. A triple level of password protection is built right in. You don't need to know paths or subdirectories or other complicated syntax. You can even change the color of PreCursor<sup>TM</sup>.

After PreCursor<sup>TM</sup> is setup on your hard disk, it greets you each time the machine is turned on with a list of available programs. You can make simple index choices of even the most complex DOS commands. And set up your printer with the speed and ease of an old pro.

If you're a sophisticated user, you'll love the convenience of full interaction with batch files, passable parameters and user prompts. Home users will appreciate the sure ease of operation.

If you depend on your hard disk for businesslike performance, you can rely on PreCursor<sup>TM</sup> for instant access.

Thanks to PreCursor<sup>TM</sup>, The Hard Disk isn't so hard anymore.

Dealer Inquiries Welcome  
PreCursor<sup>TM</sup> will run on IBM compatible MS-DOS systems.  
IBM is a registered trademark of International Business Machines Corporation.

# When you're under the gun to get the job done, where can you turn?

## ***pac micro***™

### **When you need it on time and on the money**

The pressure's always on to get the job done, whether you're building a bridge or getting out the company newsletter. There's only so much time and just so many people to do the work. And nobody wants to hear that it can't be done.

Enter PAC MICRO, a project management software tool from AGS Management Systems. It was created for the IBM® PC (and compatibles) to help you know how to do the job, how long it will take, and what it will cost.

### **Easy to use— but powerful**

All you have to do is tell PAC MICRO what you want to do and in what sequence. PAC MICRO does the rest. And it's all done in simple, uncomplicated English. It lets a manager plan and schedule resources (people, equipment, dollars), as well as let you constantly track progress so you always know what's happening. PAC

MICRO's scheduler uses the critical path method, allows an unlimited number of projects and up to 400 tasks per project. It shows you the critical aspects of a job which could cause delays. You'll know in plenty of time where problems could occur, and you'll also know how to deal with them. Although project management specialists find PAC MICRO to be an extremely convenient desk-top management aid, even those with little or no computer experience have no trouble using it.

### **Manage any job, large or small**

PAC MICRO has everything you need to manage any size project, including

scheduling, budgeting, "what if" simulations, easy-to-read reports, and color graphics. It complements any existing business system, there are no intimidating volumes of documentation to wade through, and it can interface with our mainframe project management systems. It's already being used by Fortune 500 companies, small businesses, government agencies, and the military. The cost is \$990. A demo disk is available for \$100, which is applied toward purchase.

Write or call for more information. PAC MICRO is brought to you by the company that for almost two decades has made project management its one and only business.

## This will renew your trust in the phone company.

**A**nybody who's ever sent data over phone lines knows the problems it can present.

Information gets mumble-jumbled. \$4,000 invoices become \$40,000 invoices. And soon your company's lost a pretty penny over some modem foul-up.

Well, now you can say good-bye to all that.

Because Codex just came out with a modem that overcomes the inadequacies of phone line performance.

(Codex, as your friends in data processing will tell you, is the industry's acknowledged leader in state-of-the-art products, in service, in just about everything that has to do with networking.)

The Codex error-correcting pc modem is a serious business modem.

It gives you data transmissions more than 10,000 times more reliable than most other modems. Over anybody's phone lines.

A sophisticated error-correction system called MNP™ detects breakdowns in phone line performance and retransmits data. And the beauty is all this happens without you ever knowing it.

Just think. Data you can trust.

Now don't you feel better about those crazy phone lines?

If you're a data

communications manager responsible for purchasing modems, call **800-426-1212. Extension 225.**

## THE VERSATILE ARK 24K Everything You Want in a Dial Modem

With a flash of its front panel control, the ARK 24K can make simultaneous transition from low-speed applications to 2400 bps. And it's the only full-duplex dial modem on the market with *separate* Synchronous and Asynchronous connectors.\* It's fast, versatile, easy to install, and very easy to use. ARK engineers designed the 24K to bridge the gap between yesterday's terminal requirements and the PC requirements of the future. The ARK 24K...we've got you covered coming and going!

- Complete front-panel operation with help commands, continuous visual and audible monitoring of call progress, command, and on-line modes of operation as well as complete terminal and front-panel monitoring of both local and remote modem status.

- Full menu of automated dial services including auto dial from front panel or terminal, telephone directory, and tandem dialing.
  - ARQ error-free transmission based on MNP\*\*.
  - Hayes™ "AT" Mode Compatible.
  - Universal Compatibility.
  - Stand alone or rack mount.
- Nationwide on-site service available.

### THE FIRST FAMILY OF DIAL MODEMS

Circle 594 on reader service card

ain. The Hayes standard consists of nothing more than the characters used for commands, plus rules for interpreting those commands. Because Hayes modems have sold so well in the States, almost every American communications vendor has adopted (sometimes grudgingly) the Hayes command set.

British modems, such as those sold by British Telecom and Racal, work roughly like Hayes modems but for some inexplicable reason use proprietary command sets. This communications separatism not only makes them incompatible with their Colonial cousins but makes PC-to-PC communication in Great Britain maddeningly frustrating. For years, queries about Hayes compatibility have met primarily with indifference on the part of companies and dealers that should have known better. The lack of foreign competition has helped foster this head-in-the-sand attitude among UK companies.

But this market Maginot Line has now been breached. The Smartmodem 1200—modified by Hayes to meet British electrical and telephone network standards—works with most popular British and American PC communications software. English modem manufacturers are already queuing up: Steebek Systems has adopted the Hayes command set for its entire modem line; Interlekt, another big player in this

country, is selling the Hayes-compatible Berkeley modem. Other modem makers are expected to follow suit within a few months.

Internal Hayes-compatible modems are also likely to appear soon, but there is one snag: Britain's equivalent of the FCC licenses a PC and its modem as a single unit. Swap a modem from a PC to a Compaq and you're operating illegally. But legalities are the least of users' problems. Hayes's entry has made communications easier for all of us—and it has given British modem companies a good reason for pulling their heads out of the sand.

# "THE DAY I STOLE THE ACCOUNTANT'S COMPUTER"

by Suzanne Falter, copywriter

I'd been sitting at my typewriter for five years—writing, rewriting, and rewriting. One day, I'd finally had it. So I walked over to the accountant's desk, and stole his computer.

I plugged it in, and switched it on. It started to hum. The computer asked if I wanted to talk words or numbers. I opted for words. Then it offered me the choice of English, French, Spanish, or maybe Italian.

I chose English to save time. This program seemed to understand me, though I'd never spoken to a computer before. "Move paragraph" I'd say, and it would. We were talking like two adults, in nouns and verbs. And so, I wrote.

I edited. I deleted. I even switched paragraphs around. Then I hit the wrong button. Suddenly, the accountant's projected budget for '86 filled the screen with pie charts. Clearly, this was not just some little word processing program.

Within fifteen minutes I had learned all the basics. And I knew I was through with typewriters forever. Tomorrow, the program is going to teach me how to do mailing lists. And next week we'll get into spreadsheets. But first, I have to get rid of the accountant.

WORD RESULT handles all word processing functions. CALC RESULT handles all math functions. Both programs can be used simultaneously. Software usable on IBM PC and compatible or Victor computers. Word Result, Calc Result, \$295 each; \$495 when purchased together.

Please send me a sample program of Word Result and Calc Result. Enclosed is \$5.00. (Money back guarantee.)

standard of quality.**

Not all floppy disks are created alike. Some are better than others. To find what's best for you, look for the Gold Standard seal. It's your assurance that Maxell disks meet or exceed every definition of quality. For every computer and that specifically includes yours. Each is backed by a lifetime warranty. **Maxell. Accepted everywhere, without reservation.**

What separates us from our competition? Simply a combination of the best service in the industry, highly competitive pricing, and an ever widening range of products. Above all we care about our reputation and are willing to work on a lower margin while delivering what others only claim—and we do it all on a day-in day-out basis.

This fall 1/4 million subscribers to **PC World** will be receiving our catalog with a special discount offer on the cover. We strongly feel that if you try us just once you'll join our list of satisfied confident customers. Lyben Computer Systems wants to be your source for computer supplies and accessories.

# HACKERS

**Wizards of the Electronic Age**

With Steve Wozniak, Andy Hertzfeld, Lee Felsenstein, Cap'n Crunch, Bill Budge, Bill Atkinson, and exclusive footage of the Hackers Conference.

"The most interesting and effective body of intellectuals since the framers of the U.S. Constitution." —Stewart Brand, *Whole Earth Review*

Watch the local San Francisco area broadcast of "Hackers" on Wednesday, September 4, at 7:30 p.m. on KQED-TV, channel 9.

## Now Available on Video!

Order your own copy of "Hackers." Send \$49.95 (check or money order) to FABCO, P.O. Box 410125, San Francisco, CA 94141. Be sure to specify VHS or Beta format. Allow three weeks for delivery. California residents add 6.5% sales tax.

Check local listings for broadcast times in other areas. Production funding for "Hackers" was provided by Computer Faire, Inc., Apple Computer, Broderbund Software, *PC World* and *Macworld*, and Steve Wozniak.

# Mark Williams

Now the biggest name  
in C compilers comes in a size  
everybody can afford.  
**Let's C.<sup>TM</sup>**

**Introducing Mark Williams' \$75 C compiler.** Want to explore C programming for the first time? Or just on your own time? Now you can do it in a big way without spending that way. With Let's C.

This is no little beginner's model. Let's C is a powerful programming tool, packed with all the essentials of the famous Mark Williams C Programming System. The one chosen by Intel, DEC, Wang and thousands of professional programmers. The one that wins the benchmarks and the reviewers' praise:

*"(This compiler) has the most professional feel of any package we tested..."—BYTE*  
*"Of all the compilers reviewed, (it) would be my first choice for product development."—David Wilson, PC WORLD*

And now for more big news. Get our revolutionary csd C Source

Debugger for just \$75, too. You can breeze through debugging at the C source level ignoring clunky assembler code.

Affordable, powerful, debuggable. Mark Williams Let's C is the big name C compiler at a price you can handle. Get your hands on it now.

#### Mark Williams Let's C

- For the IBM-PC and MS-DOS
- Fast compact code plus register variables
- Full Kernighan & Ritchie C and extensions
- Full UNIX compatibility and complete libraries
- Small memory model
- Many powerful utilities including linker, assembler, archiver, cc one-step compiling, egrep, pr, tail, wc
- MicroEMACS full screen editor with source
- Supported by dozens of third party libraries
- Upgradeable to C Programming System for large scale applications development

**Let's C Benchmark Done on an IBM-PC/XT, no 8087.**  
Program: Floating Point  
from BYTE, August, 1983.

# IF ANY 3M, MAXELL, OR DYSAN FLOPPY DISK FAILS, WE'LL REPLACE IT WITH A NEW VERBATIM® DISK. FREE.

**M**ost floppy disks come with a guarantee; if they ever fail, the manufacturer will send you a brand new one. But let's face it; if a particular brand of floppy disk ever loses your data, you might not want another one of theirs.

That's why Verbatim is offering a very special guarantee: If you buy a 3M, Maxell, or Dysan floppy disk — and it fails — we will replace it with a brand new Verbatim disk. Free. Why are we making this offer? Because we think it's time you use a floppy disk you can always count on. Verbatim.

© 1985 Verbatim Corporation

## VERBATIM. YOU CAN COUNT ON US.

Mail your failed 8", 5 1/4", or 3 1/2" disk in its original envelope, along with your name and address, and the brand and model of your computer system, to: Verbatim Offer, P.O. Box 7306, Clinton, IA 52736. Limit one refund per name and address. Offer limited to the first 100,000 3M, Maxell, or Dysan failed disks received. Offer expires October 1, 1985. Void where prohibited by law. Offer rights are not assignable or transferable.

## Star-Dot-Star

*A global exchange of  
personal computer  
discoveries*

This month's tips and techniques cover dBASE II and dBASE III, 1-2-3, Symphony, Volkswriter, TopView, a batch file for back-ups, and more.

*Edited by Steven Cook*

### dBASE III Function Keys

I was pleased to see that dBASE III has a SET FUNCTION command for defining the characters sent by function keys <F2> through <F10>. (Changing the value of function key <F1> is not allowed.) I use this facility to install menu selections via the function keys as demonstrated by the program DKEYS.

The first section of the program sets the values of function keys <F2> through <F7> to the letters A through F, representing the six functions presented by the menu. The value of function key <F8> is set to Z so that the program can recognize the <F8> key and indicate an error if it is pressed. <F9> and <F10> are set to quit and exit, respectively. After setting the function key values, the program displays the menu and waits for a keystroke. A CASE statement executes the selected function, then returns control to the menu.

*Lyle Rich  
San Diego, California*

### More dBASE II Color

The dBASE II color chart offered by Fritz Lang is helpful [\*,\*, PCW, June 1985], but I have an easier way to remember colors within dBASE II. The two parameters in the SET COLOR statement are for the GET text and the SAY text, respectively, and each may have any value from 0 to 255. The program DCOLORS displays all color combinations and the associated color values for the SET COLOR statement. Simply run the program whenever you need to determine a color combination.

*John L. O'Boyle  
West Hartford, Connecticut*

### Quick One-Liner

The following one-line batch file, CPY.BAT, copies files from the default disk drive to another drive, copying only those files that don't exist on the second drive.

```
for %%F in (%) do if not exist %2%%F  
copy %%F %2
```

I use this batch file to back up newly created files from my hard disk. The batch file is invoked with the format CPY *filespec d:*. For example, the command CPY \*.DOC A: copies all files with the extension .DOC from the default drive to drive A:.

Keep two points in mind when using this batch file. First, path names will not work with it unless the corresponding directories exist on both disks. Second, the source drive must be the default disk drive. Otherwise, the file works fine.

*Amy Goebel  
Alexandria, Virginia*

### Spreadsheet Audit

Many people do not realize that both 1-2-3 and Symphony can produce cell-by-cell printouts of worksheet formulas and data in the familiar row-and-column worksheet format. The effect is similar to that produced by commercial "spreadsheet auditing" programs.

In 1-2-3, use the /Range Format Text command and highlight the entire worksheet. You can then use normal print commands to generate a printed copy. You may wish to adjust the column widths to accommodate the formulas, which are generally longer than their computed results.

# PC NETWORK

## ... WITH THESE 15 UNIQUE BENEFITS

**1 COST + 8% PRICING**—The NETWORK purchases millions of dollars in merchandise each month. You benefit in receiving the lowest price available and all at just 8% above published dealer wholesale price.

**2 OUR 600 PAGE WHOLESALE CATALOG**—Members receive our 600 page wholesale catalog containing over 20,000 hardware and software products for the IBM PC, APPLE and over 50 other popular computer systems. THE NETWORK'S CATALOG IS THE LARGEST SINGLE COMPILATION OF PERSONAL COMPUTER PRODUCTS AVAILABLE TODAY. **NOW UPDATED QUARTERLY!**

**3 IN-STOCK INSURED FAST HOME DELIVERY**—The NETWORK maintains a giant multi-million dollar inventory of most popular products, allowing us to ship many orders from stock. Non-stock items are typically maintained in local warehouses just days away from The NETWORK and YOU. We pay all insurance expenses on your shipment. **EMERGENCY OVERNIGHT SERVICE IS AVAILABLE ON REQUEST.**

**4 10 DAY RETURN POLICY**—If you are not satisfied, for any reason with any hardware component purchased from The NETWORK within 10 days of receipt, we will refund your entire purchase (less shipping) with no questions asked.

**5 MEMBERSHIP SATISFACTION GUARANTEE**—If for any reason you are not satisfied with your membership within 30 days, we will refund your dues IN FULL.

**6 EXPERIENCED CONSULTANTS**—The NETWORK hires consultants, not order takers, to aid you in product selection. Our consulting staff possesses in excess of 150 man years of personal computer product experience. **We back our consultants with our money back guarantee: IF ANY PRODUCT RECOMMENDED BY OUR CONSULTING STAFF FAILS TO PERFORM AS PROMISED—WE WILL TAKE IT BACK AT OUR EXPENSE FOR A 100% REFUND.**

**7 FREE TECHNICAL SUPPORT**—The NETWORK supports every product it sells. Our qualified TECH-SUPPORT staff will help you assemble your system, interpret vendor documentation and get your software and hardware to work. **WE WILL GIVE YOU ALL THE HELP YOU NEED, WHEN YOU NEED IT—FREE!**

**8 OPTIONAL BUSINESS RENTAL LIBRARY**—All members can join our BUSINESS RENTAL LIBRARY featuring over 1000 available titles for just \$25 PER YEAR above the base membership fee. This entitles you to rent business software AT JUST 20% OF THE DISCOUNT PRICE FOR A 14 DAY PERIOD. If you decide to keep the software, the entire rental fee is deducted from the purchase price. **VIP MEMBERS GET A FULL 30 DAYS for just \$30 above the V.I.P. base fee.** This also includes the game library privileges for a \$5 combination savings.

**9 OPTIONAL GAME SOFTWARE RENTAL LIBRARY**—The Game Rental library is available to members for just \$10 PER YEAR and permits evaluation (or just enjoyment) of any game or educational software product as above.

**10 SPECIAL SAVINGS BULLETINS—THE PRINTOUT**—Issued Quarterly at no charge to Network members only! The Printout contains all the New Product listings and price changes you need to keep your Catalog up to date. Also, we buy excess dealer inventories, and store bankruptcy closeouts, which we turn around and make available to our members at fantastic savings via THE PRINTOUT.

**11 DISCOUNT BOOK LIBRARY**—Working with numerous publishers and distributors, The NETWORK has assembled a library of over 1000 computer related books and manuals at savings of up to 75% from the normal store price.

**12 MEMBERSHIP REFERRAL BONUS**—Our most valuable source of new members is you! To date almost 40% of our members have been referred by word of mouth from other satisfied members. For those of you who refer new members, The NETWORK will credit a cash bonus to your account applicable to any future purchase.

**13 CORPORATE ACCOUNT PROGRAM**—Almost 50% of The NETWORK's members are corporate buyers and users (see opposite page left). The NETWORK can establish open account status and assign designated account managers to expedite orders, and coordinate multiple location shipments.

**14 QUANTITY DISCOUNTS**—For large corporations, clubs, and repeat or quantity buyers The NETWORK can extend additional single order discounts, when available to us from our manufacturers and distributors.

**15 PRICE PROTECTION**—The PC Industry is crazy!! Prices change not yearly or monthly or even weekly but often day by day! These changes are sometimes up but are mostly down!!! **THE NETWORK GUARANTEES THAT IN THE EVENT OF A PRODUCT PRICE REDUCTION, BETWEEN THE TIME YOU PLACE YOUR ORDER AND THE TIME THE PRODUCT SHIPS YOU WILL ONLY PAY THE LOWER AMOUNT!!**

\*Members pay 8% above this wholesale price plus shipping.

(continues)

Actually, we give you two things free.  
Our source code. And your freedom.

Just buy part or all of our excellent integrated business accounting system, the SBT Accounting Software Library.

We'll give you our source code absolutely free.

Which, in turn, gives you the freedom to customize our software to fit your business needs.

Say, for instance, you want to change the way a management report is formatted. Our free source code enables you to change it.

What's more, the change will be quick and simple because our software is written in easy-to-use dBASE.

In fact, the SBT entire Accounting Software Library runs with dBASE III or dBASE II\*, so you get the power and flexibility of those best-selling programs. Plus the freedom to use any computer that runs dBASE.

The SBT Accounting Software Library. Great software and freedom. All in the same box.

Call today for our demo disk and free brochure.  
(415) 331-9900.

# Our "Back to Basics" Solution To Your Accounting Needs.

Back to Basics Accounting System by Peachtree Software® is an uncomplicated, easy-to-learn accounting system for small businesses.

You don't need any accounting experience and barely need any computing experience. The straightforward manual teaches both accounting and computing at the same time.

But make no mistake. This is a full-featured, interactive system including General Ledger, Accounts Payable and Accounts Receivable. And it's available for IBM®, Apple®, Atari® and Commodore microcomputers.

Uncomplicated—easy-to-learn—yet full featured. That's Back to Basics.

For more information, contact your local dealer or Peachtree Software, 1-800-554-8900.

You cut and paste easily, moving back and forth between Instant Recall and your "underlying" program. Move, resize and hide the windows as you choose.

## AN INFORMATION BASE NOT UNLIKE THE BRAIN

Making decisions. Designing proposals. Reporting results. All made easier when you can quickly pull together the ideas and pieces of data that crossed your mind.

Like the brain, Instant Recall stores and retrieves facts, ideas and concepts naturally, without a fixed structure, using your own words. Instant Recall is immediately available with one key-stroke. Is always in memory. Runs with your other programs simultaneously.

## DCOLORS: dBASE II program to display screen color combinations

*Symphony* performs the same feat with the Menu Format Other Literal commands. Ranges, page numbers, and grid coordinates will not be printed but can easily be inserted with a text editor by directing the printout to a disk file.

Kelly Witsberger  
Fort Lauderdale, Florida

### Volkswriter Video

If you are using *Volkswriter Deluxe* with a color display, you can choose the screen colors for normal characters, page break line, underlined text, and so on, but not for subscript, superscript,

boldface, shadow print, or the four font selections. I have found a way to sidestep this limitation by using the *DEBUG* program, which comes with DOS.

First, select the option you wish to change from the list shown in *VOLKSDATA*. Next to each option is the hexadecimal offset value you will need when making changes. Now select the color you would like for that option from *COLORLIST*. Each color has been assigned a number or letter, which you will need in addition to the offset value.

Place a copy of the *Volkswriter Deluxe* disk in drive B: and a copy of the *DEBUG* program in drive A:. At the A> prompt type the

# NEC PRINTERS. THEY ONLY STOP WHEN YOU WANT THEM TO.

Color Pinwriter CP2  
dot matrix printer.

Spinwriter 8800  
letter-quality printer.

Pinwriter P3  
dot matrix printer.

NEC printers are incredibly reliable.

In fact, with normal use, an NEC printer can run an average of 5 years before it needs a repair. And chances are, that repair will take only about 15 minutes.

To become that reliable, an NEC printer has to go through some of the most demanding tests in the industry.

First, we test every single part before it goes into the printer. Then we test the printer itself. Nothing is forgotten. Nothing is left to chance.

But reliability is only part of the story. There's much more. Our printers work with every popular PC. With more leading software programs. And with more forms handlers to make paperwork a snap.

So no matter what your printing needs—and no matter what size your budget—NEC has a printer for you. Our full line of Spinwriter® printers, for low to high speed letter quality printing. And our versatile Pinwriter™ and Color Pinwriter printers, for high resolution dot matrix printing.

To find out more about NEC printers, call 1-800-343-4418 (in Mass. 617-264-8635).

Or write: NEC Information Systems, Department 1610,  
1414 Massachusetts Ave., Boxborough, MA 01719.

# *Low power* Complete hard disk kit \$395

Comes complete with virtually the identical controller that's in the IBM® XT, and Xerox® warranties the hard disk for one year

## Guaranteed 100 percent IBM PC compatible

How can we offer this fantastic price? Simple. We buy in such volume that even the most avaricious hard disk businessmen understand they have to give us the best price possible. We could pocket the difference, but we don't.

Instead, we put the extra profit into our testing facilities. That's why Xerox guarantees our \$395 10 megabyte hard disk for one year.

Xerox knows, as our customers know, that we have an extensive testing program. Here is what we contribute toward giving you the maximum hard disk performance.

### Best Drives Available

First, we buy the best drives available. Sounds trite, doesn't it? I mean, a drive's a drive—right? Hardly. You should see some of the junk we get in our labs. Some have such high failure rates that we even questioned our own \$10,000 hard disk tester. But when we tested other manufacturers' drives we were assured that our equipment was fine, which just confirmed that the bad hard disks were not only bad—they were real bad.

But that's just the weeding out process. We then take each drive that we've put through our tester and test it again with the controller you've requested. We call this a "tested pair."

### DOS Doesn't Do It

In case you're thinking that all

this is an unnecessary duplication of what DOS does for you, let me explain the disk facts of life.

If DOS did what you may think it is supposed to do when you format the disk, DOS would map around these bad areas. Unfortunately, DOS doesn't do this.

DOS 2.0 and 2.1 can't enter the bad tracks. DOS 3.0 can, but only on the IBM AT. Unfortunately, as the press has so well documented, the AT's hard disk develops bad tracks later on.

### We do what DOS can't

We believe the problem is so bad, we use a software program that performs a powerful test of your disk drive on all of the IBM or IBM compatible computers—PCs,XTs, and ATs. Our format takes hours to analyze the disk. But when we finish, you know that the bad tracks are really mapped out so you won't write good data that will disappear into a black hole. We even send you a printed statement of our test results.

Our software allows you to type in the bad track locations from the list supplied by the manufacturers, so you'll never write good data to them—even if DOS didn't identify them as bad. The software even lets you save the location of these bad sections to a file, so that you can reformat your disk without spending hours retesting.

We even include a program that will give you continuous comments on the status of your hard disk. No more waiting for that catastrophic failure.

### Average Access Time

As you might suspect, some hard disks are faster than others in their ability to move from one track of data to another. The time it takes the hard disk to move one-half way between the beginning of the disk to the end is called the "average access time."

The first generation of 10 megabyte hard disks had average access times of 80-85 milliseconds (msec). But computer users love speed, and guess what—the average access time for the new 20 megabyte hard disk in the IBM AT is only 40 msec. (We sell an AT equivalent with only 30 msec access time!)

There are some legitimate reasons for the shorter access time. It's particularly helpful when there are multiple users on the same hard disk. It's also important when running a compiler. But remember, before you get too wrapped up in the access speed, there's always that ST 506 interface which won't let data transfer from the hard disk to the computer any faster than 5 megabits/second. We've bypassed that choke hole, too. If you want the functional equivalent of a Ferrari with a turbocharger, order our 10 Mbit per second 100

megabyte hard disk with 18 msec of average access speed.

### Compatibility

To be sure that your hard disk is 100 percent compatible with the IBM XT you don't need to buy the same hard disk that's in the XT. You can't even be sure what brand hard disk it is because IBM, like Express Systems, goes into the marketplace and buys hard disks from several vendors. However, they buy their XT hard disk controller from only one vendor—the same one we do.

You can buy the IBM XT controller from IBM for \$495 or you can buy from us, the functional equivalent, manufactured by the same company that makes it for IBM for only \$195. Is it the exactly identical IBM XT controller? No, it's better. First, it takes less power, and secondly, it can control from 5 to 32 megabytes—the IBM controller can work with only 10 megabytes. It is 100 percent IBM XT compatible, and 100 percent is 100 percent. If you want to save a slot, we carry a version that lets you operate two hard disks and two floppy disk drives.

### More than 32 Megabytes

You can operate with more than 32 megabytes (the limit of DOS) through the use of "device drivers." Express Systems can supply you with device drivers for our hard disks for over 32 megabytes formatted. But, if you don't have individual files, or databases that are large, you might want to consider one of our controllers that can divide our 65 megabyte (formatted) hard disk into two equal volumes of 32 megabytes each.

### Reliability

We offer you a choice between iron oxide and plated media—the stuff that covers the hard disk and gives it its magnetic properties. Iron oxide is, well, it's rust. If you inadvertently joust your disk, you may cause the low flying head to dig out some iron oxide. A little rust flake can ruin your whole day. Plated media is more resistant to damage, and if it happens, less data is lost.

We offer both types of hard disks. The iron oxide is older

technology, and quite frankly, manufacturers understand it better. Their better understanding, combined with some of the special head locking mechanisms, gives us peace of mind when we sell you one.

### Power

Hard disks consume power. Our small, half-high hard disks consume so little power that you can use them with your existing IBM PC power supply. If you plan to use lots of slots, you'll want to increase your power supply to be safe. We offer the same amount of power for your PC that comes in the XT.

### Our Customers

Some folks just never feel comfortable buying mail order. They forget that Sears began as a mail order house or that IBM is now into mail order. But, if it helps, here is a *partial* list of customers who have felt comfortable to buy from us.

IBM	Sears
American Express	Honeywell
U.S. Army	MIT
AT&T (Bell Labs)	RCA
Bausch & Lomb	Lockheed
Xerox	Sperdy

### Easy to Install

If you're like most of us, raised on the boob tube rather than the Great Books, you'd rather see the movie than read the book. Well, now you can choose to read our installation manual or for only \$9.95 more, you can get a VHS or Beta video cassette showing the simple steps for installation.

### Warranty

We offer you a one year warranty on our hard disks—the same as IBM on the AT and 90 days on the tape drives. (It's all the manufacturer gives us.) If

### More questions?

Because we spend so much attention on the front end with ensuring that our disks will arrive in working order, we have a customer service department that, unlike many of our competitors, has little to do. When you need us, you won't get a constant busy signal.

Call our friendly, knowledgeable customer service staff to get answers to your questions—before or after the sale. Our people, who know the PC, can talk you through the sticky parts, and they'll respond to you quickly. Just call us.

### How to order

Pick up the telephone and call 1-800-341-7549, to order. We accept Master Card, VISA, American Express and Diners Club. Or send a cashier's check or

money order (We'll take a check, but you'll have to wait for it to clear) and tell us if you want one of our recommended configurations or you want to mix and match yourself. Corporations with a DUNS number may send purchase orders for quantities over five.

# EXPRESS SYSTEMS

**Call Toll Free 1-800-341-7549 Ext. 1500**  
**In Illinois call (312) 882-7733 Ext. 1500**

Express Systems, Inc., 1254 Remington, Schaumburg, IL 60195

anything goes wrong with your tape or disk drive or hard disk, send it back in the box it came in. However, we have found that we can usually solve the problem over the phone. So call first for a return authorization number because we can't accept any returns without it.

### Comes complete

All Express Systems products come complete with the appropriate software, tape and/or hard disk controllers, and cables where required. Hard disks are formatted and tested with the PC DOS of your choice. All drive sizes are formatted capacities.

If your application requires a stacking kit, power splitter cables, daisy chain cable, or some other variation, we'll supply these items at a nominal charge. We even ship our hard disks with Command Assist™ an on-line DOS-like manual to give you help with your DOS commands.

## New Release 4.1

We've continually improved Microstat since it was introduced in 1978, and the latest release includes many new features you've wanted.

Interactive and Batch Processing  
Expanded Data Management  
Subsystem with New Data  
Transforms  
Reading data files created by other  
programs  
3 types of Analysis of Variance  
Time Series  
Crosstabs and Chi-Square  
Factorials, Permutations, and  
Combinations  
Hypothesis Tests

Data sets that can exceed memory  
Multiple Regression (including  
Stepwise)  
Scatterplots (including best fit  
regression)  
Correlation Analysis  
12 Nonparametric tests  
8 Probability Distributions  
Descriptive Statistics  
Easy Installation

Microstat's algorithms have been designed to prevent numeric overflow errors and yield unsurpassed accuracy. Microstat's price is \$375.00 including the user's manual and is available for the Z80, 8086, 8088 CPU's and CP/M80, CP/M86, MS-DOS, and PC-DOS. To order, call or write.

6413 N. College Ave. • Indianapolis, IN 46220

# All of a sudden, you're an accountant!

CPA+™ menu-driven accounting software works with Lotus™ 1-2-3™ to put you in command of all your company's vital financial recordkeeping.

With a single keystroke, CPA+ lets you switch between General Ledger, Accounts Receivable, Accounts Payable, and Payroll—plus graphs and forecasts.

## Instantly. Without swapping disks.

CPA+ automatically integrates and updates data between applications, and utilizes the vast spread-sheet capabilities of Lotus™ 1-2-3™.

Simply put Lotus 1-2-3 in drive A and CPA+ in B or hard disk, and you're on your way. CPA+ handles as many as 700 accounts and 48 employees, depending on your computer memory (256K to 640K).

Automatic prompting steers you through data entry. You can view, edit, and change any entry before printing. Scroll through your records—instantly. Order customized reports. See your numbers converted into charts. Then:

When you decide what to print, even an order such as "Print Checks—All" is as easy as typing PCA.

## Our \$10 special offer.

Get our demo-and-interactive tutorial disk for just \$10. Call toll-free 1-800-TEAM-GNP (from California, 1-800-MEET-GNP) and give us your credit card number.

Quicker yet, try CPA+ at your software store. You'll find it's so easy to use, you'll want to buy it on the spot. Good. The suggested price of only \$695 puts CPA+ on your payroll.

All of a sudden, all you need to know to keep your company's books is one name. CPA+.

# The Magnum MCS-A. Finally your PC can talk with just about anybody.

**LIKE DEC VT-52 AND VT-100,  
IBM 3101-MOD 10/20, DG  
DASHER 210/211 AND MORE.**

The Magnum MCS-A (Multi-functional Communications System-Asynchronous) gives your IBM PC or compatible something quite unheard of.

Unlimited terminal emulation capability. And total application flexibility.

So, not only are you able to talk with the popular terminals we've just mentioned, you're able to implement those additional emulations you need now. Or may need later on, even if they don't exist yet.

That's more than unlimited terminal emulation, come to think of it. That's the end of upgrade costs and reaction times, too.

The MCS-A incorporates TurboCom™, our innovative software package with proprietary translation mechanism. And it's TurboCom that delivers MCS-A's unlimited emulation capability and allows you enhanced file transfer control.

## **SPEAKING OF UNLIMITED EMULATION.**

Let's take one example. With the MCS-A, your PC is now able to emulate a VT-100 standard terminal and receive a data file. Then, thanks to TurboCom, you can immediately change your emulation to another type terminal—say a 3101—and send the received file locally or via the phone system.

## **AND A WORD OR TWO ABOUT FILE TRANSFER APPLICATIONS.**

Now, with the MCS-A on board, you'll be able to update a central, unattended PC's "old" data files with "new" data from either a local or remote user without jeopardizing other files on the unattended PC. On the flip side, you can transmit a predetermined file from an unattended PC to a designated remote or local user. The MCS-A's asynchronous system also allows you to exit TurboCom while maintaining a telephone line connection, locally process a just-received file, then reenter TurboCom and transmit that processed file back to the source computer.

## **WHO'D BELIEVE ALL THIS IN ONE EXPANSION SLOT?**

Our talk of the MCS-A's asynchronous telecommunications features (Bell 212-A modem standard) has just begun. You'll have support of COM 1/COM 2, *plus* COM 3. 200-number telephone directory with built-in editor and a library of enhancements such as on-screen call status reporting and single stroke adaptive dialing. There's a user applied "macro" control language. Error-free data exchange using XMODEM protocol. Optional touch-tone reception for database query and data entry. And it all comes with extensive help screens and messages, documentation, factory support and local servicing.

Enhancements include standard multifunction features (I/O ports, memory expansion, clock), plus TurboRam™ electronic diskette emulation and TurboSpool™ print spool program.

Yet, with all this exceptional enhancement to your PC, the MCS-A requires only one expansion slot. That's right, one!

## **WE'VE ALREADY SAID A MOUTHFUL.**

But there are many more good reasons and some helpful data to consider about the MCS-A. Con-

tact us now. Call 800-824-2748. (In Texas, call 800-833-8391). Or send us the coupon; attach your card if you prefer. Let's talk about how your PC can talk with just about anybody.

Magnum MCS-A, TurboCom, TurboRam and TurboSpool are Trademarks of American High-Tech Industries. VT-52 and VT-100 are Trademarks of Digital Equipment Corp. 3101-MOD 10/20 is a Trademark of International Business Machines. DASHER 210/211 is a Trademark of Data General.

## File Moves in BASIC

Though not explicitly documented, the BASIC command `NAME ... AS ...` can be used to move files from one subdirectory to another. This technique replaces the commonly used two-step process of copying a file from the old directory to its new location, then deleting the original file. For example, the BASIC command `NAME "\WP\FILES\SMITH.LTR" AS "\LETTERS\AUG\SMITH.LTR"` moves the file SMITH.LTR from the subdirectory \WP\FILES to the \LETTERS\AUG subdirectory.

*Michael Cox*

*Huntington Beach, California*

*Editor's note: Although BASIC does not allow wild-card characters in the NAME AS command, you can write a BASIC program using this technique to move groups of files between subdirectories.*

## Quiet, Please!

IBM's *TopView* in a mouseless configuration must break all records for variety and sheer quantity of audible feedback. Each press of a cursor key causes an undercurrent of rumbling reminiscent of *BattleZone*, a video game classic.

# PC AT PERFORMANCE FOR A FRACTION OF THE COST. GUARANTEED.

*10MHz 8086  
processor with  
full 16-bit  
data path*

*10MHz 8087 math  
co-processor  
(optional)*

*Print spooling,  
RAM disk and disk  
caching software included*

*Normal IBM speed  
emulation switch*

*Comes standard  
with 512K RAM,  
expandable to 640K*

*300% performance  
increase*

*Compatible with  
IBM Basica programs*

That's right, guaranteed performance. The Univation Turbocharger will triple the processing speed of your IBM PC, PC/XT, or 100% compatible.

Just think, the data processing speed and performance of a PC/AT without the expense. Plug it in, and your PC will do everything it did before, only 300% faster.

Best of all, the Univation Turbocharger works with all

your existing PC software automatically. Nothing to learn, nothing to change. Speed spreadsheets, databases, graphics, even IBM Basica programs. The Turbocharger will spark each and every program you use.

To ensure complete reliability, our Turbocharger is extensively tested. It's available for immediate delivery. And, best of all, it's guaranteed. Guaranteed to work exactly as promised

and to provide all the processing power you'll ever need.

So why not make your life a little easier and do your work a lot quicker with the Univation Turbocharger.

# The Expert Series.™

## Instructional Information Management™ and Embedded Training.™

Cdex•Intelligence Corporation, the leading developer of computer-based training (CBT) systems, has introduced the next generation of CBT systems — The Expert Series.

### Instructional Information Management

Business and government organizations are continually faced with the problem of communicating information to managers and professionals in the form of procedures, analyses, reporting requirements, product characteristics and applications, computer software operating procedures, etc. This information must be communicated in a *clear instructional* manner in order to allow the recipients to understand and utilize the information to efficiently perform their functions.

**The Expert Series is designed to function as an "Information Expert" by providing organizations with the ability to store and retrieve textual, graphical and numerical information in a variety of formats, e.g., instructional, reference, report, simulation, etc.**

**The Expert Series can also interface and *execute concurrently* with end-user developed programs or with the popular productivity software programs, e.g., Lotus 1-2-3, dBASE, IBM Data Edition, Symphony, Multiplan, WordStar, etc. Therefore, users can easily switch between the application programs or spreadsheet templates and the instructional information system without having to restart or reload the applications or the Expert Series system. This capability allows users to quickly move from understanding analy-**

**ses, practices, procedures, and reporting requirements to actually implementing them.**

### Embedded Training

The Expert Series' unique capability of interfacing with and *executing concurrently* with other application programs allows it to provide computer-based training to users and operators of application programs, operating systems, programming languages, etc. The user can easily switch between the application program, as an example, and the CBT on how to operate the application program, without having to reload or restart either program. The CBT can cover any number of subjects, e.g., hardware and software operating procedures, data input requirements, etc.

Additionally, the Expert Series can operate with personal computer, minicomputer, or mainframe applications and the application programs themselves do not have to be modified to allow the Expert Series to run concurrently with them.

**The Expert Series can *execute concurrently* with end-user developed programs, the popular productivity programs, e.g.,**

**Lotus 1-2-3, Symphony, IBM Data Edition, dBASE, Multiplan, WordStar, etc., or as a stand-alone program, and can function in these different modes automatically without any modification to itself or to the application programs.**

### Product or Service

The Expert Series is both a product and a service. Cdex•Intelligence will customize the Expert Series to conform to your organization's requirements in terms of operating procedures, subject matter content, relevant skills, business analysis methods, management functions, etc., or we will license you the development system to allow you to do it yourself.

Now you can see why the Expert Series is truly the next generation of CBT systems and it's available today from Cdex•Intelligence.

### Sudden Knowledge™ Computer-Based Training Programs

Cdex also provides a library of over thirty "off-the-shelf" training products that train personal computer users in how to use the IBM PC, PC/XT, PC/AT, PC DOS, Lotus 1-2-3, Symphony, dBASE, WordStar, etc.

# MICROWAY'S 8087 RUNS 1-2-3™!

MicroWay is the world's leading retailer of 8087s and high performance PC upgrades. We stock a complete selection of 8087s that run at 5 and 8mhz. All of our coprocessors are shipped with a diagnostic disk and the best warranty in the business - one year! We also offer daughterboards for socketless computers such as the NEC PC and PCjr, and a board which increases the clock speed of the 80287 from 4 to 6 mhz. Our NUMBER SMASHER™ includes 512K ram. It will run the IBM PC at clock speeds up to 10mhz and achieves a throughput of .1 megaflops

with 87BASIC/INLINE, Intel Fortran, or Microsoft Fortran. Software reviewers consistently cite MicroWay software as the best in the industry! Our customers frequently write to thank us for recommending the correct software and hardware to meet their specific needs. They also thank us for our same day shipping! In addition to our own products which support the 8087 and 80287, we stock the largest supply of specialized software available anywhere. For information call us at

**617-746-7341**

## FASTBREAK™

MicroWay's software turns on your 8087 during 1-2-3™ execution. Recalculations run up to 36 times faster. When used with the NUMBER SMASHER™ it can provide a total increase in 1-2-3™ execution speed of up to 79 to 1. FASTBREAK provides you with the unique capability for running other programs on top of 1-2-3. These programs can be written in BASIC, PASCAL, Fortran or C and can access the current values in your 1-2-3 worksheet. .... \$79.

## MicroWay® 8087 Support

For the IBM PC, PC XT, PC AT and Compatibles.

**NUMBER SMASHER™** The World's Fastest Accelerator Card for the IBM PC, XT, and Compatibles! Includes an 8086 and 8087 pair tested to 10mhz, and 512K bytes of high speed ram. Compatible with all software, operating systems and hardware! Your program speed is increased by a factor of 2.5 to 4.0. Floating point programs run up to 2.8 times faster on the PC than on an 80287 equipped PC AT ..... \$1590

**MATRIXPAK™** manages a MEGABYTE! Written in assembly language, our runtime package accurately manipulates large matrices at very fast speeds. Includes matrix inversion and the solution of simultaneous linear equations. Callable from MS Fortran 3.3, 87MACRO, and 87BASIC/INLINE ..... each \$150

**87FFT™** Written in assembly language, performs Forward and Inverse FFTs on real and complex arrays which occupy up to 512K bytes of RAM. Also does convolutions, auto correlations, hamming, complex vector multiplication, and complex to radial conversions. Callable from MS Fortran, 87MACRO, C, TURBO PASCAL or 87BASIC/INLINE ..... \$200

**87FFT-2™** performs two-dimensional FFTs. Ideal for image processing. Requires 87FFT \$100

### GRAPHICS PACKAGES

Grafmatic for MS Fortran or Pascal ..... \$125  
Plotmatic for Grafmatic ..... \$125  
MultiHalo (one language) ..... \$189

**DFixer™** - Eliminates the AT hard disk problem! A disk which thoroughly checks PC or AT hard disks for bad sectors and updates the MS DOS file allocation table accordingly ..... \$149

**87DEBUG™** - a professional debugger with 8087 support, a sophisticated screen-oriented macro command processor, and trace features which include the ability to skip tracing through branches to calls and software and hardware interrupts. Breakpoints can be set in code or on guarded addresses in RAM ..... \$150

**87BASIC/INLINE™** converts the output of the IBM Basic Compiler into optimized 8087 inline code which executes up to seven times faster than 87BASIC. Supports separately compiled inline subroutines which are located in their own segments and can contain up to 64K bytes of code. This allows programs greater than 128K! Requires the IBM Basic Compiler and Macro Assembler. Includes 87BASIC ..... \$200

**87BASIC™** includes patches to the IBM Basic Compiler and both runtime libraries for USER TRANSPARENT 8087 support. Provides super fast performance for all numeric operations including trigonometrics, transcendental, addition, subtraction, multiplication, and division. .... \$150

**87MACRO™** - our complete 8087 software development package. It contains an object library of numeric functions including transcendental, trigonometrics, hyperbolics, encoding, decoding and conversions which take full advantage of the 8087's capabilities. 87MACRO will save you man years in development time! For the IBM or MS Macro Assembler, Version 1.0, 2.0, or 3.0 ..... \$150

**OBJ-ASM™** - a multipass object module translator and disassembler. Produces assembly language listings which include public symbols, external symbols, and labels commented with cross references. Ideal for understanding and patching object modules and libraries for which source is not available ..... \$200

### RTOS - REAL TIME OPERATING SYSTEM

RTOS is a multi-user, multi-tasking real time operating system. It includes a configured version of Intel's iRMX-86, LINK-86, LOC-86, LIB-86, OH-86, and MicroWay's 87DEBUG. Runs on the IBM-PC, XT, PC-AT and COMPAQ ..... \$400

**THE PALANTIR OFFICE SERIES**  
**NO-NONSENSE SOFTWARE**  
**AT A NO-NONSENSE PRICE ..... NO BULL!**

**The Palantir Office Series...**  
valuable no-nonsense software tools,  
for most popular microcomputers.

**THE Word Processor** is designed for  
microcomputers but gives you the feel  
and features of a dedicated word  
processor. It includes MailOut, the  
most powerful file merge feature on  
the market today.

**THE Librarian** is like having your own  
personal library in your computer.  
It scans your disks and instantly  
displays all occurrences of a name, a

phrase, or anything else you need to  
find without having to wade through  
directories or print-outs.

**THE Speller** is a fast and easy  
spelling checker supplied with a  
60,000 word dictionary. THE Speller's  
ability to "guess" the spelling of a  
suspect word is uncanny.

**THE Filer** is an amazingly clever  
data management program that is the  
perfect companion to THE Word  
Processor for storing and retrieving  
any kind of information you need.

**The Palantir Office Series does  
what it's supposed to do and does  
it well.**

Ask your sales person to show you the  
Palantir advanced  
demonstration. The  
no-nonsense Office  
Series is available  
here now.

# "...ABOUT AS EASY AS BOOKKEEPING WILL EVER GET."

Ricardo Birmele, LOTUS MAGAZINE

## TURN LOTUS 1-2-3 OR SYMPHONY INTO A PROFESSIONAL ACCOUNTING SYSTEM

Alfred's *Ready to Run Accounting* is a powerful, automated accounting software package that runs on either Lotus 1-2-3 or Symphony. It is designed for any sort of small or medium-sized business that writes 500 or fewer checks per month. It is easy enough for a complete computer novice to use, but allows experienced Lotus user the flexibility to expand and change.

## INTRODUCING TWO NEW MODULES THAT INTEGRATE WITH THE GENERAL LEDGER, OR STAND ALONE

### GENERAL LEDGER

The core of the Ready to Run system, this module allows you to keep track of cash receipts, cash disbursements, accounts receivable, accounts payable, and journal entries. It provides 7 different reports: chart of accounts, trial balance, journals, billing statements, detailed general ledger, balance sheets, and profit/loss statements.

- Fully-adjustable chart of accounts
- Over 1500 possible accounts
- Over 1000 transactions per month
- Accrual or cash based
- 13 periods
- Audit trail
- Double-entry, menu-driven input
- Allows multiple-postings per month

### ACCOUNTS PAYABLE (with check writing)

This professional AP system lets you create and update a vendor file (with addresses, phone numbers, key contacts, and account histories); input invoices; create an AP journal; and select items for automatic check printing. Used with the general ledger module, all transactions are automatically updated to the general ledger at your request.

- Over 1000 possible vendors
- Two-part check printing allows multiple-postings for each check
- Allows multiple checking accounts
- Detailed payables and check journals
- Custom checks available separately

### ACCOUNTS RECEIVABLE (with invoice writing)

This complete AR system greatly expands the power of the general ledger or can run by itself. It enables you to create and maintain a customer master file (with addresses, phone numbers, key contacts, and sales histories); create and print invoices; print monthly statements; and post payments.

- Over 1000 possible customers
- Customer aging reports
- Detailed journal reports
- Either open item or running balance systems
- Prints invoices and statements
- Custom forms available separately

**... only \$49.95 each**

REQUIRES: Lotus 1-2-3 (version 1A) or Symphony; any IBM PC, PCjr, XT, AT, or any MS-DOS or PC-DOS computer (please specify model and disk type); two disk drives (floppy or hard); printer; 256K RAM for 1-2-3, 448K for Symphony.

### ORDER TOLL-FREE!

For Visa & MasterCard orders, call toll-free Monday-Friday, 8 AM - 5 PM (Pacific Time).

800 - 292 - 6122 (Continental USA) 800 - 821 - 6083 (California)

Available at many computer and book stores nationwide. Dealer & Distributor inquiries welcome: 818-995-8811

## READY-TO-RUN ACCOUNTING

We'll support, service and warranty everything we sell and stand behind it 100%. We won't charge you for shipping or handling, nor will we penalize you for using a credit card.

William F. Gollan  
President, BCP

Even when the rumbling is toggled off by pressing the 5 on the numeric keypad, toggling into or out of *TopView* mode with the <Ctrl> key sets off more yammering. To silence *TopView* once and for all, put a copy of TV.COM into drive B: and a disk containing the DOS program DE-BUG.COM into drive A:, then follow the steps shown in TOPGAG.

Wilson Smith

New York, New York

Editor's note: Please do not modify your only copy of *TopView*.

## Format Finish

I've found that using the *FORMAT* program can waste a great deal of time, especially when I want to format an entire box of disks. Either I sit and stare at the screen while the disk drive whirs, or I turn my attention to something else, only to notice later that *FORMAT* has finished and is waiting for my response.

With a little modification, however, *FORMAT* can be made to beep each time it finishes formatting a disk. This frees you to do other things while *FORMAT* is running, yet attracts your attention when necessary so you don't lose any time between disks.

# The Switch Is On To *brown* *disc*<sup>®</sup>

## **We would like to extend our thanks — and our rebate.**

We expected "The Switch Is On Sweepstakes" to be popular, but we couldn't help noticing the dramatic response to the opportunity to win a Chrysler Le Baron plus instant rebates, free diskettes and other prizes totalling over \$1,000,000.

To show our gratitude to everyone who made the switch to Brown Disc diskettes (and to those of you who soon will), we would like to extend your chance to receive an instant rebate worth up to \$15.00 or 6 free diskettes through the end of the year (Sorry, the sweepstakes drawing deadline for the Le Baron was August 31.). Look for your "Switch Is On" game card in specially marked packages of Brown Disc diskettes.

The switch is on to Brown Disc! We manufacture a complete line of the highest quality diskettes, including 3.5," 5.25" and 8" diskettes.

**Call 1-800-654-4871 for the Brown Disc dealer nearest you!**

Extended rebate/free diskette offer expires 12/31/85.

## FMATBEEP: Steps to cause FORMAT.COM to beep when finished

I call the modified program FMATBEEP.COM. To create it, copy FORMAT.COM and DEBUG.COM onto a blank disk, put it into drive A:, and type in the steps as shown in FMATBEEP. This will replace the prompt 'Format another (Y/N)?' with the word 'Another?' and a beep.

Stephen Berg  
Kailua, Hawaii

*Editor's note: Be careful to type in the lines exactly as shown; pay special attention to uppercase and lowercase letters.*

## Turbo Screen Print

The program PRTSC.PAS demonstrates how to invoke the Print Screen function from within a Turbo Pascal program. The rou-

```
PROCEDURE Print_Screen;
TYPE
    Registers = record
        AX,BX,CX,DX,BP,SI,DI,DS,ES,Flags:INTEGER
    end;

VAR
    Result: Registers;

BEGIN
    INTR (5,Result);
END;
```

## PRTSC.PAS: Turbo Pascal program to print the contents of the screen

time is very simple because it makes use of Turbo's INTR instruction. Note that in this case the argument RESULT is a dummy variable since the program doesn't need the contents of the CPU registers.

D. Emilio Grimaldo T.  
Mobile, Alabama

# Don't buy a disk/tape system that can't grow with you.

## Get the Sysgen<sup>TM</sup> XL<sup>TM</sup> *expandable* hard disk and tape back-up system.

Most popular disk/tape systems offer 20 Megabytes of hard disk, plus a 20-Megabyte tape back-up.

That may seem ample now, but do you know whether, a year down the road, 20 Megabytes will give you enough storage?

You don't. So it makes sense to get the *only* disk/tape system that gives you room for expansion later on.

And that doesn't cost you any more now.

The new Sysgen XL comes with 20 Megabytes of fast, reliable hard disk storage, a built-in 60-Megabyte tape for fast, reliable back-up, *plus* room for an additional hard disk drive.

### ***What happens if you later need more hard disk storage?***

With the XL, you simply add a second 5¼" disk drive. It fits inside the cabinet, and plugs right into the XL controller.

You can add an additional 20 Megabytes, and back-up with a single pass of the 60-Megabyte tape.

Or add up to 100, and back-up with two tapes.

With the low cost of hard disk drives, expansion is *much*

more economical than buying a whole new \$3,000 system. Plus, you save desktop space by expanding *inside* the cabinet.

***The XL sells for \$3,295, including cabling, host adaptor, and utility software. You get everything you need.***

(Watch out. Some companies charge extra for cabling and the host adaptor.)

Installation? Just snap in the controller, plug in the system, install the system software, and you're running.

### ***Compare before you buy.***

You'll find the XL to be the outstanding disk/tape system for your PC, XT, AT<sup>TM</sup>, or compatible today. And the only system that can expand for your needs for tomorrow.

Trademarks: Sysgen, XL—Sysgen, Inc.; AT—International Business Machines, Inc.

Votrax Announces

## VOTALKER IB & AP

New Industry Standards For Talking  
Personal Computers. Exclusively  
for IBM PC and XT, Apple II, and  
Compatibles. From Votrax, The  
Pioneer in Synthetic Speech Systems.

**Give your IBM PC and XT  
and Apple II the  
Power of Speech**

Until Votalker IB and AP, synthetic speech systems for personal computers were like a piano with 50 keys, an eagle with a broken wing, and a singer with a two-octave range. When Votrax developed the SCO2 speech synthesis chip, it was the classic case of advanced technology in need of support systems to unlock its dormant powers. Now, Votalker introduces a revolutionary family of text-to-speech translators — the key to the lock. First members of the family are the Votalker IB for IBM PC and XT and the Votalker AP for Apple II, Apple IIe, and Apple Plus. With Votalker these units play the piano with all 88 keys. Soar through unlimited vocabulary, using 32 inflections and 4,100 pitch settings. Sing in five octaves, and generate sound effects in 16 amplitudes.

**A Newly Designed Circuit Board includes:**

- SCO2 chip • speaker • audio amplifier
- volume control • external speaker jack.

The board operates in the host computer slot, eliminating the need for serial ports and cable hookups. Internal editing and smoothing ensure clarity and integrity of speech.

**The Text-To-Speech Translator** sets Votalker above all other synthetic voice products.

Text is generated through programs or keyboard and translated directly into spoken language. The sophisticated software on a diskette offers: • unlimited vocabulary • little use of system memory • exception table that stores and accurately pronounces difficult words.

**Other Votrax Products** — the stand-alone Personal Speech System and Type 'N Talk — are currently used in thousands of applications.

**Votalker Prices Begin at \$179**

**Call Votrax at (800) 521-1350\***

# What the world really needs is a 99 cent Double Sided, Double Density Diskette with a LIFETIME WARRANTY!

## And DISK WORLD! has it.

### Introducing Super Star Diskettes: the high quality diskette with the lowest price and the best LIFETIME WARRANTY!

In the course of selling more than a million diskettes every month, we've learned something: higher prices don't necessarily mean higher quality.

In fact, we've found that a good diskette manufacturer simply manufactures a good diskette...no matter what they charge for it. (By way of example, consider that none of the brands that we carry has a return rate of greater than 1/1,000th of 1 percent!)

In other words, when people buy a more expensive diskette, they aren't necessarily buying higher quality.

The extra money might be going toward flashier advertising, snazzier packaging or simply higher profits.

But the extra money in a higher price isn't buying better quality.

All of the good manufacturers put out a good diskette. Period.

#### How to cut diskette prices ...without cutting quality.

Now this discovery posed a dilemma: how to cut the price of diskettes without lowering the quality.

There are about 85 companies claiming to be "diskette" manufacturers.

Trouble is, most of them aren't manufacturers.

Rather they are fabricators or marketers, taking other company's components, possibly doing one or more steps of the processing themselves and pasting their labels on the finished product.

The new Eastman Kodak diskettes, for example, are one of these. So are IBM 5 1/4" diskettes. Same for DYSAN, Polaroid and many, many other familiar diskette brand names. Each of these diskettes is manufactured in whole or in part by another company!

So, we decided to act just like the big guys. That's how we would cut diskette prices...without lowering the quality.

We would go out and find smaller companies to manufacture a diskette to our specifications...specifications which are higher than most...and simply create our own "name brand" diskette.

Name brand diskettes that offered high quality at low prices.

Super Star diskettes are sold in multiples of 50 only. Diskettes are shipped with white Tyvec sleeves, reinforced hubs, user ID labels and write-protect tabs.

**Boy, did we get lucky. Our Super Star Diskettes are the same ones you've been using for years...without knowing it.**

In our search for the low priced, high quality diskette of our dreams, we found something even more interesting.

We found that there are several manufacturers who don't give a hoot about the consumer market for their diskettes. They don't spend millions of dollars in advertising trying to get you, the computer user, to use their diskettes.

Instead, they concentrate their efforts on turning out the highest quality diskettes they can...because they sell them to the software publishers, computer manufacturers and other folks who (in turn) put their name on them...and sell them for much higher prices to you!

After all, when a software publisher or computer manufacturer or diskette marketer puts their name on a diskette, they want it to work time after time, everytime. (Especially software publishers who have the nasty habit of copy-protecting their originals!)

**Super Star Diskettes. You already know how good they are. Now you can buy them...cheap.**

Well, that's the story.

Super Star diskettes don't roll off the boat from Pago-Pago or emerge from a basement plant just east of Nowhere.

Super Star diskettes have been around for years...and you've used them for years as copy-protected software originals, unprotected originals. Sometimes, depending on which computer you own, the system master may have been on a Super Star diskette. And maybe more than once, you've bought a box or two or more of Super Star diskettes without knowing it. They just had some "big" company's name on them.

Super Star Diskettes are good. So good that a lot of major software publishers, computer manufacturers and other diskette marketers buy them in the tens or hundreds of thousands.

We buy them in the millions.

And then we sell them to you.

Cheap.

**When every little bit counts,  
it's Super Star Diskettes.**

You've used them a hundred times...under different names.

Now, you can buy the real McCoy, the same diskette that major software publishers, computer manufacturers and diskette marketers buy...and call their own.

We simply charge less.

#### Super Special!

Order 50 Super Star Diskettes and we'll be happy to sell you an Amaray Media-Mate 50 for only \$8.75, shipping included...a lot less than the suggested retail price of \$15.95.

Regular DISK WORLD! price: \$9.69 ea.  
+ \$2.00 Shpng.

#### DISKETTE STORAGE CASES

##### DISK CADDIES

The original flip-up holder for 10 5 1/4" diskettes. Beige or Grey only.

**\$1.65 ea. + .20 Shpng.**

##### DISKETTE 70 STORAGE

Dust-free storage for 70 5 1/4" diskettes. Six dividers included. An excellent value.

**\$11.95 ea. + \$3.00 Shpng.**

#### HOW TO ORDER:

##### ORDERS ONLY:

1-800-621-6827  
(In Illinois: 1-312-256-7140)

##### INQUIRIES:

1-312-256-7140

FOR FASTEST SERVICE, USE NO-COST MCI MAIL: Our address is DISK WORLD!. It's a FREE MCI MAIL letter. No charge to you. (Situation permitting, we'll ship these orders in 24 hours or less.)

**SHIPPING:** 5 1/4" & 3 1/2" DISKETTES—Add \$3.00 per each 100 or fewer diskettes. **OTHER ITEMS:** Add shipping charges as shown in addition to other shipping charges. **PAYMENT:** VISA, MASTERCARD and Prepaid orders accepted. **COD ORDERS:** Add additional \$3.00 special handling charge. **APO, FPO, AK, HI & PR ORDERS:** Include shipping charges as shown and additional 5% of total order amount to cover PAL and insurance. We ship only to United States addresses, except for those listed above. **TAXES:** Illinois residents, add 8% sales tax.

**MINIMUM ORDER:** \$35.00 or 20 diskettes.

#### The Super Star LIFETIME WARRANTY!

Super Star Diskettes are unconditionally warranted against defects in original material and workmanship so long as owned by the original purchaser. Returns are simple: just send the defective diskettes with proof of purchase, postage-paid by you with a short explanation of the problem, and we'll send you the replacements. (Incidentally, coffee stained diskettes and diskettes with staples driven through them don't qualify as "defective".)

**WE WILL MEET OR BEAT ANY NATIONALLY  
ADVERTISED PRICE  
ON THE SAME PRODUCTS AND QUANTITIES  
SUBJECT TO THE SAME TERMS AND CONDITIONS.**

# PC World Directory

PC World Directory is a comprehensive listing, by category, of products and services for the IBM PC, look-alikes, and compatibles. It provides rapid access to the burgeoning PC marketplace for both readers and advertisers.

**FORMAT:** The standard format includes a product ID, a 300-character descriptive ad, and company name, address, and telephone number.

Advertisers may choose among categories already in use, or they may create their own. Display advertisers can cross-reference their current ad to the PC World Directory for increased exposure at low cost.

**RATES:** Listings are accepted for three-time consecutive insertions at a rate of \$891 (\$297 per issue). We offer a six-time insertion, 15 percent discount contract for a total of \$1500 (\$250 per issue). Listings must be prepaid (except for established display advertisers) upon submission of ad copy. Checks, money orders, VISA, and MasterCard are acceptable.

**DEADLINE:** For copy deadlines, contact a PC World Directory sales representative at 415/861-3861 or 800/872-7808 (CA), 800/872-7800 (nat'l). Please send copy and prepayment to PC World Directory, 555 De Haro St., San Francisco, CA 94107.

## Data Entry

### RODE/PC Data Entry

RODE/PC is unmatched for power & ease of use. Menu-driven; pop-up help; heads-down speed; extensive input validation; automatic reformatting; conditional processing; operator stats; user exits; 029 keyboard & barcode options, much more. \$40 demo. \$595 first license, \$395 each additional. Volume discounts. *DPX Inc.*, 20823 Stevens Creek Blvd., P.O. Box 656, Cupertino, CA 95015, 408/973-9292, TELEX 701111

## Data Entry System

Heads-down data entry for PCs will allow fast & accurate preparation of batch data files. Features: auto-dup, two-pass verification, constants, format chaining, table lookups, range checks, batch totals, & much more. Easy format generation. 30 day trial period. Only \$395. *Computer Keyes*, 6519-193 SW, Lynnwood, WA 98036, 206/776-6443

### SIDES/PC

Replace your 029, 129, 3741/3742, 5280, etc. Versions: Extended keypunch to comprehensive, full function for high volume, heavy editing. Features include standard keypunch + verify, table lookup, search, insert/delete, format chain/select, balance, stats & much more. Prices start at \$195—30 day trial. *Software Consulting Service, Inc.*, 8930 Fourwinds Dr. #231, San Antonio, TX 78239, 512/656-6484

### Entrypoint

Most widely installed data entry system for PC/XT/AT. Heads-down speed, sophisticated multi-screen applications. Features: paint the screen form design, data validation, table & file lookups, Help keys, logic processing, reformatting, batch totals, verification, 029 KB remapping & more. Demo \$24, Operator \$545, Developer \$845. Volume pricing. *Datalex*, 650 5th St., San Francisco, CA 94107, 800/962-8888, 415/541-0780

## Data Management

### PC-FILE III™

New for 1985, version 3.00 is faster than ever. Enhancements: 32767 record capacity, field size up to 1665 bytes, instant "snapshot" mailing labels, much more. Exchange data with 1-2-3, Word, WordStar, etc. Over 100,000 copies of PC-File in use. Printed manual. \$49 chk/MC/Visa. Toll free 24 hour order line: 800/JBUTTON. *ButtonWare*, P.O. Box 5786, Bellevue, WA 98006, 206/746-4296

**TRAK I DBMS**

New for 1985, for IBM PC/XT/AT, 128K, compatibles. Easy to use, on-line help everywhere. Hardly any documentation. Prints all types & sizes of labels. High speed 10 level search & sort, 100,000 record capacity, 100 fields/record, 1676 char./field. Up to 5 report formats per file, stat. fcns., import/export capability. Many other signif. features. \$129. Visa/MC/chk/MO. AIQR, Computer Software Div., 1494 Hamilton Ave., #104, San Jose, CA 95125, 800/621-0854 Ext. 290

**Development Tools****For COBOL Programmers**

Assembler routines! Open windows, scroll/up/down, draw boxes, keyboard input with bracketing, menu pointer routine, log screens to disk, control caps—lock, beep, clock & timer, full printer control. You get source, object, demonstration program. Price \$99. Joseph Leonard Associates, Inc., P.O. Box 1925, Edmond, OK 73083, 405/340-0545

**Edit****KEDIT**

KEDIT is an XEDIT-like full screen editor for the PC. Split-screen editing of multiple files, targets, ARBCHAR, SCHARGE, GETFILE, SORT, wordwrap, prefix commands, block operations, key redefinition. Requires 80 column display, 192K. \$125 + \$3 shipping. Demo version \$10. MC/Visa. Mansfield Software Group, Box 532, Storrs, CT 06268, 203/429-8402

**PQEDIT**

Full-screen editor, the EDLIN alternative. Includes: 4-way cursor, char. insert/delete/replace, 4-way scroll, split/join lines, add/copy/move/delete lines, search/replace strings, get/put to disk, help screens. Edit multiple files at same time. Needs 80 column display, 128K, DOS. \$45 + \$2 shipping. ADAM Systems Corp., 5919 Munson Court, Dept. 101, Falls Church, VA 22041, 703/379-0669

**Super Screen Editor**

(SSE) is a full-featured screen editor including split-screens, 4 way scrolling, definable keyboard, macros copy/move/delete blocks of data (by line or column), file backup, line numbering, search/replace/undo, print utility, help screens: \$99 + shipping. Binary Corporation, 4091 126 Dr. N, Royal Palm Beach, FL 33411, 305/798-3100

**Educational****PC/Pilot**

Language for education & training. Now offered also by IBM as IBM Pilot. Support for color, graphics, fonts, windows, files, video control. We offer upgrades, advanced feature library (\$300), tutorial (\$125), authoring prompter. Single use license (\$200) & unlimited campus/site license (\$2000). 20% ed. discount. Washington Computer Services, 3028 Silvern Lane, Bellingham, WA 98226, 206/734-8248

**Hebrew/English/Greek**

Type any language combination on your PC, Compatible, or jr. Highest quality letters—80 column. Works right to left and/or left to right (with or without vowels). Insert/delete, word-wrap, etc. Requires: 128K, DOS, graphics, Okidata, IBM, Epson, C. Itoh printer. Price, \$149.95 (\$15 for Demo). To order/for info call: Gamma Productions, 817 10th St., Santa Monica, CA 90403, 213/451-9507.

**Teacher Turned Author!**

Create great instructional courseware in minutes. No programming! Mix text, color graphics & questions on any page. Built-in drawing system or optional graphics tablet. Student recordkeeping, instant editing, & page playback. No royalties—produce unlimited courseware. PC, XT, & all compatibles; Color: \$699; Mono: \$399; Both \$850. Demo disk, \$15. Raster Technology, Inc., P.O. Box 3477, Longwood, FL 32779, 305/862-2859

**Engineering****Structural Design**

NEW—Fast, efficient, versatile structural analysis & design programs in spreadsheet format—BEAMS, COLUMNS & FRAMES of any material. Friendly input & output with data storage & COLOR graphics. Specify PC, XT or AT & send \$25 for demonstration diskette to: C-Squared B-Squared Software Design, Inc., 763 27th Ave., San Francisco, CA 94121, 800/621-0851, ext. 330, 415/751-1337

**Mech./Elec. Design**

Programs for HVAC Loads, Building Energy Analysis, Faser Energy Acctng., Duct Sizing, Lighting, Short Circuit, Voltage Drop, Pipe Sizing, Critical Path Analysis, Life Cycle Costing, & more avail. for CP/M, CP/M-86, & MS-DOS computers. All disk formats supported. Demo disks avail. on each program for \$33. Send/call for literature. Elite Software, P.O. Drawer 1194, Bryan, TX 77806, Bus.: 409/846-2340, By Modem: 409/775-0760

**smARTWORK®**

Printed-circuit artwork editor for double-sided boards up to 10" by 16"; runs on an IBM PC. Color display allows complete interactive control over the placement & routing process. 2X artwork can be made on a dot-matrix printer or pen-and-ink plotter. \$895. Write or call for a brochure. WINTERK Corp., 1801 South St., Lafayette, IN 47904-2993, 317/742-8428

**Simulation**

GPSS/PC is a full-power version of GPSS, the most popular mainframe simulation language. Using GPSS/PC it is possible to predict the effects of managerial or engineering decisions on complex real-world systems. More than just a language, it is a simulation environment specifically designed for interactive use on today's high-speed microprocessors. Minuteman Software, P.O. Box 171/W, Stow, MA 01775-0171, 800/343-0664, ext. 4800 (U.S.), 800/322-1238, ext. 4800 (MA)

**Eng./Sci. Graphics**

Engineering/scientific graphics. OMNILOT [S] (screen graphics) & OMNILOT [P] (plotter driver) provide integrated eng./sci. 2D & 3D graphics w/NO PROGRAMMING! Menu-driven, flexible, professional. Choice of formats: tabular/line, contour, 3-D wire frame & more! \$195 each. Both \$295. Microcompatibles, 301 Prelude Dr., Silver Spring, MD 20901, 301/593-0683

**Thermal & Flow Analysis**

For the power & process engineer, 8 complete, rigorous, interactive programs to analyze Exchangers, Combustion, Pressure Drop, Cogeneration, Condensers, Pipe Networks, Cooling Towers, Steam Heaters. Set of 8, \$189. IBM PC-DOS. Industrial Power Plant Heat Balance Program, \$349. Thermal Analysis Systems, 725 Parkview Circle, Elk Grove, IL 60007, 312/439-5429

**Estate Planning****Will-Planner™**

Use your PC to write a personalized will! Educational, easy to use program; powerful dictionary function; info on probate & using lawyers. Create typed will/trust document, asset inventory & estate tax estimate. Save money! Written by lawyers for non-lawyers. For IBM PC & compatibles. Price: \$79.95. Will-Planner™ by Noetic Technologies Corp., P.O. Box 3085, Englewood, CO 80155, 303/770-2380

**Financial****Business Library**

A collection of fifteen valuable programs. Library includes Mortgages, Loans, Depreciation, Rule of 78, True Interest, Accelerated Cost Recovery, alternate ACRS, Present Values, Annuities, Rate of Return, & Auditing. Flexible & easy to use. Excellent documentation. \$495 all fifteen programs. Write or call for brochure & license. Advanced Management Systems, 2432 W. Peoria #1280, Phoenix, AZ 85029, 602/944-5594

## Bookkeeping Made Easy

Fast, single-entry checkbook accounting system in "C". Allows multiple checkbooks, charge cards, & departments. Option to print checks, bank reconciliation, flexible sorting & reporting. Exports to Lotus format or dBASE format. MICRO-ONE-WRITE demo \$10, complete program \$95. Lotus tax template \$75. *Perrin & Associates, 1125 Sunnyside Rd. Dept. W, Oakland, CA 94610, 800/443-0100, ext. 644*

## Run LAPP Around Loans

LAPP is a completely flexible Loan Amortization Printout Program. Payments may be periodic or irregular for fixed or varying amounts. Wide variety of interest compounding intervals. Excellent documentation. Satisfaction guaranteed or full refund. Order now! Send \$95. MC/Visa. Dealers welcome. *Mountain Software Inc., 1104 Fennell Ave. E., P.O. Box 4364, Hamilton, Ontario L8V 4L8, Canada, collect: 416/385-3214*

## Forecasting

### 1,2,3 FORECAST!

Menu-driven template programmed in Lotus 1-2-3 macros. Forecasts time series data in existing 1-2-3 files. Fast & easy with little Lotus or forecasting experience. Linear & non-linear trends, regression, smoothing, decomposition, seasonal indices, diagnostics, more. 50 page manual includes tutorial & documentation. \$75 chk/MO ppd. USA, more info: 1,2,3 FORECAST!, P.O. Box 12582, Salem, OR 97309, 503/585-8314

## Gambling

### GRIDSTAR 85™

Beat your bookie or office pool with world's most sophisticated NFL analysis package. Verifiable 10-yr. track record 64% vs. spread. Exciting, easy to use, 7-10 picks, 20 report pages weekly. \$150. We'll rush demo disk with Gridstar manual \$10. NBA Strategist™ inquire. Visa/MC. Call 7-11 EST. *Summit Research, 65 High Park Ave. #806, Toronto, Ontario M6P 2R7 Canada, 416/767-7798*

## Games

### Star Fleet 1

"The world's most elaborate star battles game," (J. Pour-nelle-Byte-Sept. '84). Features color animation of battles, music, promotions. Capture ships, lay mines, launch probes, rescue bases, repair damage, eliminate intruders, more! 98 pg. manual. PC/PCjr/AT. Req. 128K, 1 drive, 80 cols. \$49.95 + \$2 s/h. Also TI PC. CYGNUS, P.O. Box 57825, Webster, TX 77598, 800/622-4070 (Nat.), 800/942-7317 (IL)

### Icon: Quest for The Ring

Electronic Literature—Unique Graphics—Real Time Action. ICON alone lets your IBM PC display 16 colors at 320 x 200 on a standard color card. An adventure based on Wagner's operatic epic *The Ring*. Monsters, dwarves, Rhine maidens, dragons, an authentic plot & more. All in 16 colors! Visa/MC/COD \$49.95. Demo \$5. *Macrocom Inc., 151 Sixth St. NW #127, Atlanta, GA 30313, 800/622-8086 or 404/874-6448*

### Cribbage Master

The best card game graphics you have seen! Color or IBM mono. For experienced cribbage players & beginners. Five play options, three games plus two to improve your discarding strategy: Solitaire, Duplicate, Discard Master, Discard Query, Game Challenge. Any DOS, 128K. \$34.95. 7-day return privilege. *Silversoft, 2150 Spruceway Ln., Ann Arbor, MI 48103, 313/994-5398*

### Mc\$OFTWARE

12 classic games... Blackjack, Moonbase Alpha, Startrek, Chess, Othello, Alien, Maxit, Yahtzee & more. Some developed on mainframes, updated to use color, sound & graphics on your IBM PC. On-screen documentation, menu-driven. Action, strategy, adventure. All for only \$24.95. Visa/MC. *Mc\$OFTWARE, Ltd. Division, M.B.A. Communications, 2055 North Druid Hills Rd. #201, Atlanta, GA 30329, 404/373-3770*

## Genealogy

### Family Reunion III

For home or professional use for beginning level to advanced genealogists. Keeps track of living relatives as well as genealogical research. Prints address labels, pedigree charts, family group sheets, descendant charts, text data & more! PC-DOS 1.1 or above, 128K, PC, PCjr, PC XT, PC AT. \$159.95 + \$5 s/h. *Personal Software Company, 1580 East Dawn Dr., Salt Lake City, UT 84121, 801/943-6908*

### ROOTS II™

Powerful organizer for family historical info. Lightning fast searches & sorts. Print camera-ready paginated books with pedigree, descendant & annen-tafel charts, family group sheets, text & index. Display maps w/graph adapter. Any PC or compatible. Satisfaction guaranteed. \$195 (+ tax in CA). *COMMSOFT, 2452 Embarcadero Way, Ste. B, Palo Alto, CA 94303, 415/493-2184*

## Graphics

### Grafmatic/Plotmatic

*Grafmatic* (screen graphics): 70 MS FORTRAN/Pascal (3.10, 3.20) IBM 2.00; ss, Prof. FORT callable graphics routines. 100 page user manual. General utility, 2D interactive, total 2D plot support, 3D plots & solid models. \$135. HP, HI plotter? Try *Plotmatic* for complete plotter capabilities. Use with *Grafmatic*. \$135. Both, \$240. *Microcompatibles, 301 Prelude Dr., Silver Spring, MD 20901, 301/593-0683*

### HALO

The most powerful library of subroutines under MS-DOS. Extensive functions include point, line, arc, circle, ellipse, hatch styles, pattern fills, clipping, dithering, world coordinates, image compression, multiple viewports, rubberband mode, etc. Compatible with multiple devices & languages. *Media Cybernetics, Inc., 7050 Carroll Ave., Takoma Park, MD 20912, 301/270-0240*

## PLOTGRAPHY™

Now PLOT your graphic drawings on paper or transparencies. Great for overhead presentations. Make them any size anywhere on the page, either direction. Will PLOT drawings from most graphic editors. Requires IBM PC, XT or PCjr. 128K, color board, floppy or hard disk, PC-DOS. Call to see if we support your plotter. Only \$49.95. *Cactus Software Inc., P.O. Box 880, Peoria, AZ 85345, 602/242-7953*

## MetaWINDOW™

Advanced graphics toolkit provides Xerox Star/Apple Macintosh style graphics on your IBM PC. Supports most popular graphics cards. Create pop-up menus, windows & icons; use proportionally spaced fonts; rubberband & drag lines, text or bitmap images; supports mouse/cursor tracking. Tightly optimized for use w/Turbo Pascal, IBM Pascal, C, Fortran & BASIC. *Metagraphics Software Corp., 444 Castro St. #400, Mountain View, CA 94041, 415/964-1334, Telex: 4998586 METAGRAF*

## Fast, Free-form Graphics

**MONOGRAF™** FOR PCs WITH OR WITHOUT GRAPHICS BOARDS! Quickly draw forms, org/bar/flow/Gantt charts, block diagrams & much more. Freely mix text & graphics on 11 x 14 page. 3 type sizes. **PULL-DOWN MENUS. UNDO. FULL-SCREEN EDITOR.** Supports over 50 printers. **RAVE REVIEWS.** \$69.95. Money-back guarantee! MC/Visa. *Analytics International Inc., 1365 Massachusetts Ave., Arlington, MA 02174, 800/992-0085, 617/641-0400*

### Plot 90

3 Dimensional vector graphic program capable of drawing any 3 dimensional object. Isometric & perspective views, any angle or viewpoint. On screen tilt, rotate & zoom. Mirror image for symmetrical objects. Supports screen, printer & plotter. For IBM PC or Tandy 2000. \$99 PPD. Demo \$15. Architects, engineers & yacht designers. Full yacht design software available. Write for free brochure. *CoastDesign, Box F110-201, Blaine, WA 98230, 604/584-6118*

## SOFTPLOT/BGL

GRAPHICS BASIC, the only advanced 2D & 3D graphics library for interp. & comp. BASICA. Adds WINDOW, VIEWPORT, CLIP, ROTATE, LABEL, PLOT3 & more for screen AND plotters, printers. 3D hidden surface too. Works like GKS, HP AGL BASIC. The easiest way to create advanced graphics programs. Programs for science/engineering/education, etc. \$99 + \$5/ship. Mosaic Software, Inc., 1972 Massachusetts Ave., Cambridge, MA 02140, 617/491-2434

## EGA Paint

Take full advantage of IBM's Enhanced Graphics Adapter. This paint program, designed specifically for the EGA, provides all of the normal paint program features in a 640x350 window with 4 or 16 colors. Requires EGA (128K option for 16 colors) & Enhanced Display. A mouse is recommended. \$79. Visa/MC. RIX Softworks, Inc., 17971 Skypark Circle, Ste. F, Irvine, CA 92714, 714/261-0440

## Home Use

### Shop Cheap—Eat Smart

- COUPONOMIZER—Save more money with your discount coupons & rebates. 64K.
- DIET ANALYZER—Lose those extra pounds! Tracks calories + 23 nutrients. Ideal for menu planning. 128K. Immediate shipment, 2 week money back trial. \$49.95 ea. + \$2.50 s/h. AmEx/MC/Visa. Call for free brochure. Natural Software Ltd., 7 Lake St. #7E, White Plains, NY 10603, 800/626-2511, 914/761-9329

## Inventory Control

### Mr. QuarterMaster

Features: receipts & issues updating; inventory, reorder, usage and other reports; file maintenance; issue slips/invoices; reorder points adjusted automatically or manually. Price: \$123. Manual alone: \$23.

Free brochure. Also available: Sales reporting, pricing, and purchase order systems. RJL Systems, 106 New Haven Avenue, Milford, CT 06460, 203/878-0376

## Inventory Manager II

Ideal stand-alone program perfect for retailers, wholesalers or any business involved with merchandise sales. Up to 9999 items. Generates numerous reports including ave. cost & ave. sale, gross profit, margins, stock on hand, on order, sug. & actual P.O.s & more. Sort utility. Floppy (vers.) \$199. XT \$299. Satori Software, 5507 Woodlawn N., Seattle, WA 98103, 206/633-1469

## dFeller Inventory

A business inventory program written in dBASE II source code, so you can modify the program to fit your particular needs. The menu-driven program lets you locate items by inventory name or number. It keeps track of reorder points, vendors, average cost, & other information. List price, \$150. Requires dBASE II or dBASE III. Feller Associates, 550 CR PPA, Route 3, Ishpeming, MI 49849, 906/486-6024

## Languages

### muLISP-83

An integrated environment for AI software development. Includes a high performance, pseudo-code LISP compiler; a resident, screen-oriented editor & debugging system; interactive LISP programming lessons; & a detailed reference manual. \$250. Also available, the muMATH Symbolic Math System, \$300. Soft Warehouse, Inc., P.O. Box 11174, Honolulu, HI 96828

## Legal

### Legal Billing

Complete time billing package for firms with up to 18 lawyers. Features exclusive "video time-slip" for "magic quick" entry. Prints detailed client statements, lawyer time & client aging reports plus more. Large record capacity. Trust accounts & automatic interest. Very friendly. \$450. Satori Software, 5507 Woodlawn N., Seattle, WA 98103, 206/633-1469

## Lotus

### 1-2-3 Statistics

Complete Statistical Package designed to process data from 1-2-3; Menu-driven; T-Tests, Correlations, Cross-tabulation, Powerful Multiple Regression routine, ANOVA/ANCOVA (with Repeated Measures), Nonparametric Statistics, Bar graphs, Scatterplots; Super fast (8087 Support); for 256K PC; \$99. StatSoft, 2831 East 10th St. #3, Tulsa, OK 74104, 918/583-4149

### End NumLock Madness

Kursor software eliminates switching back & forth with the <NumLock> key. Kursor moves the cursor keys on your IBM PC, XT or AT to the function keys. Function keys are accessed by shift + function key. Speeds data entry & reduces errors. Regain control of your ten keypad for only \$35. Kursor Software Company, 1340 West Irving Park #126, Chicago, IL 60613

### Lotus Without Floppies

THE FIX lets you run both 1-2-3 & Symphony on your XT, AT, or compatible hard disk system without using the Lotus "System" disk in the A: drive (not an alteration or slow dance). Any version DOS. FREE SHIPPING! The original, THE FIX, \$24.95! MC/Visa/chk. Blue Heron Publishing Co., R.R. 1, Box 128E, Maple Park, IL 60151, 815/895-5602

## Mail List Programs

### Pony Express XL

For commercial & large lists. Fast machine code multisort. Prints labels 1-5 across, single line or user-defined format. Also CHESHIRE FORMAT. Multi file merge. Records can be selected by user-defined codes, zips or zip ranges. Auto repeat for ease of record entry, corrections & deletions. Phone list option. \$238. Computech, 975 Forest Ave., Lakewood, NJ 08701, 201/364-3005

## Bulk Mailer

This is the most sophisticated mail list program available, & the only one to offer these features: Duplication elimination, up to 32,000 name capacity, coding capability, multi-label formats, zip & alpha sorts, easy to use plus much more. Floppy version (\$400 names) \$99. XT version (32,000 names) \$350. Satori Software, 5507 Woodlawn N., Seattle, WA 98103, 206/633-1469

## Label Master

A complete mailing list management program for the IBM PC, XT, AT & IBM compatibles. 65,000 record capacity. Sorts by last name, zip code, & user-defined criteria. Prints labels (1-4 across), continuous feed envelopes, hard-copy directories, etc. Many powerful features. \$49 (YES!). Free fact sheet. RKS Associates, 3820 N. Dittmar Rd., Arlington, VA 22207, 703/532-1877

## FlowMail

Special Offer! — \$49 Add, Update, Delete records. Create/name multiple files. Merge files. List a file to screen or printer. Sort by company name or zip code. Eliminate duplicates. Menu & prompt driven. We also do customized programming. Call or Write TODAY for more info. FLOWSOFT custom programming, 875 Franklin Rd. #1635, Marietta, GA 30067, 404/433-3590

## MY - T - MAILER™ \$30

Our users love this sturdy menu-driven worker. Secretaries say "Terrific!" Print labels, 3 × 5 cards, envelopes, any format. Customize labels with line-by-line printer fonts. Sort, Search & Select with powerful, flexible, easy user-interface. EZ Browse, Edit & Delete. Print up to 5000 copies of one label. PCjr too! Requires 128K. \$30. Johnson Software Company, P.O. Box 16507, Dept. 6, Seattle, WA 98116, 206/935-4861

## MAILMATE®

The only true mailing system for IBM PC compatibles • True bulk mail sorts for 2nd & 3rd class mail. Sorts to bundles & prints separator label between bundles • Creates word processing merge files for most popular word processing programs • User defined profile fields allows end user to define up to 16 additional fields of info • Features: sorts, selection on any field, lists, directories, 3x5 cards, rolodex cards, more. \$199.95. *Computer Specialists, Inc.*, 2224 Main St., Little Rock, AR 72206, 800/527-1818, 501/376-1300

## Auto-Zip Your List!

48,000+ zip codes w/cities, states & counties on floppy disk set. Table allows your programs to automatically lookup city, state & county info based on zip. Reduce errors by up to 35%; keystroking by 20%. Requires hard disk. DOS 2.0 & other popular formats \$149. Write or call for free brochure. *DCC Data Service*, 1990 M Street NW #610, Washington, DC 20036, 202/452-1419

## Manufacturing

### Manufacturing Inventory

Integrated Inventory Control, Bills of Material, & Purchase Orders with direct accounting interface. Designed for small & medium-sized manufacturing firms. IBM PC/XT/AT version costs only \$995. Special money-back guarantee. Explore MISys yourself & print sample reports using our demo (\$5 ppd). *Microcomputer Specialists, Inc.*, 18 Lyman St., Westboro, MA 01581, 800/833-1500, 617/366-1200

### MFG. Control System

A comprehensive system for repetitive or job shop type manufacturers consisting of: B/M, Inventory, Order Processing, Purchasing, Mat. Req. Planning MRP, MPS, Shop Floor Ctrl. & CRP, Cost dev., Job & W/O Costing, Accounting. 1 yr. warranty included. Train & consult avail. Compare our system & prices for best value. *Production Systems Inc.*, 410 Macklyn Ave., Santa Rosa, CA 95405, 707/526-1294

## Twin Oaks mrp2

• Bills/Material • 22 Modules  
• Inv Control • 128K PC or XT  
• Purchasing • DOS 1.10, 2.00  
• MRP & CRP • Hard/Soft Disk  
• Master Sched'g • Online-Real Time  
• Phys Inventory • Multiuser  
• Std Costing • Acctg Interface  
*Twin Oaks Inc.*, Box 136, Cottage Grove, MN 55016, 612/458-1604

## CONCEPT Software

CONCEPT is an on-line, integrated system with mainframe capabilities. CONCEPT, written in RM/COBOL, runs on such micros as the IBM AT, Altos & AT&T systems; & mini's including the NCR 8200 series & IBM 36. The system includes: Bill of Material, Inventory Control, Order Entry, Purchasing/Receiving, Product Cost, Capacity Planning, Shop Floor Control. *Neuport Technology, Inc.*, P.O. Box 356, Newport, RI 02840, 401/846-5806

## Mathematics

### Mega Math II

A library of over 40 assembly language subroutines for fast numeric calculations on IBM PC/XT/AT & compatibles. Includes matrix & vector routines, Fast Fourier Transform, convolution, solution of linear equations. Links to Microsoft Fortran, BASIC, C & Pascal compilers. Also IBM professional Fortran or Macro Assemblers. \$299 (U.S.). *Visa/MC/AmEx. Micray Electronics Ltd.*, Bay 1, 4001A-19th St. N.E., Calgary, Alberta T2E 6X8 Canada, 403/250-1437

## Medical

### Threshold

Medical office management. Features automatic insurance claim preparation, teleprocessing to Blue Shield and Medicare, unattended statement processing, total security, statistical reports, inquiry management reports & on-line help. FREE REMOTE DEMONSTRATIONS AVAILABLE. List \$3,995. *Physicians Practice Management, Inc.*, 1810 S. Lynhurst Dr., Ste. Q, Indianapolis, IN 46241, (Nat) 800/428-3515, (IN) 800/792-3525

Physicians' office insurance claim filing with printed insurance forms & paperless claims processing. Overnight electronic claims submission. Speeds Blue Shield, Medicare, private insurance settlement. 23 programs, 3 diskettes, user manual, DOS/128K/modem/2 floppies or hard disk \$229.95. \$-back guarantee. *Physicians Practice Management, Inc.*, 1810 S. Lynhurst, Suite Q, Indianapolis, IN 46241, 317/246-0357, 800/792-3525 (IN), 800/428-3515 (Nat.)

## Threshold\*™

Basic accounts receivable, patient billing, insurance preparation/electronic claims to Blue Shield & Medicare. Add-on modules available. Completely upgradable from PC\*Claim. IBM PC/XT. \$1995. *Physicians Practice Management*, 1810 S. Lynhurst, Ste. Q, Indianapolis, IN 46241, 800/428-3515 (Nat), 800/792-3525 (IN), 317/246-0357

## Menu Systems

### Menu System Manager

Professional system management via USER CREATED MENUS. Invoke any DOS command or file (.EXE .COM .BAT) with PASSWORD SECURITY. AUTOMATIC LOG for any menu entry stores Date, Time, User ID, Command Invoked, Purpose of Access. Menus contain no commercial information (makes YOU look good). \$129. MC/Visa/chk. *Gurdak Software Development*, 158-B Merline Ave., West Paterson, NJ 07424, 201/785-2498

## Mutual Funds

### FUNDGRAF®

GRAPH & find best performing mutual funds or stocks with IBM PC, PCjr, & compatibles, 128K min. Graph PRICE and/or MOVING AVERAGE (any span). Superimpose graphs for comparison. Calculate relative strength RATINGS. Generate buy & sell SIGNALS when trend changes. FREE brochure. DEMO disk \$10. FUNDGRAF Disk \$100. MC/Visa/chk. *Parsons Software*, Dept. C, 118 Woodshire Dr., Parkersburg, WV 26101

## Nutrition

### Nutrition Manager

Professional nutrition analysis program. Used by hospitals, universities, & food firms. • Menu-driven • USDA data base with string search • Calculates nutrition & cost analysis for recipes, meals & daily feeding. Basic program w/720 food items only \$149.95 • Add \$59.95 for a larger data base w/1600 items. P & B Computer Services, Inc., 13701 Bel-Red Rd., Bellevue, WA 98005, 206/641-7390

## Organization Charts

### Organization Map

ORGANIZATION MAP automatically creates organization charts for up to 1500 people at a time, graphically displays work force demographics & much more. Working demo with complete documentation \$99.50 (\$85 pre-paid). *Pacesetter Software*, P.O. Box 5270, Dept. T, Princeton, NJ 08540, 609/737-8351

## Printers

### PrinScil

PrinScil is a user-friendly, menu-driven system which enables users to quickly tailor the appearance of their output on IBM, Epson, & other dot matrix printers without knowledge of printer codes. User selections can be saved for later use without having to go back into the menu system. \$29.95 for single printer version. Visa/MC. *SofScil™*, P.O. Box 5712, Kent, WA 98064-5712, 206/631-4212

## Protection

### Software Sentinel

A hardware key that prohibits unauthorized execution. Its benefits: Unlimited backup copies; longer product/revenue life cycle because it's unbreakable; controlled site licensing & rentals/trials; no floppy required

with hard disk; transportable; transparent, pocket-size. Evaluation kit available. *Rainbow Technologies, Inc.*, 17971 Sky-park Circle, Ste. E, Irvine, CA 92714, 714/261-0228

## Real Estate

### Property Management +

A new easy-to-use system for single or MultiFamily properties. Print checks, rent statements & receipts reports—late rents, expired leases, vacancies, income/expenses & operating statements. Includes a bank reconciliation feature & graphics capabilities. Up to 70% reduction in management time. \$675. *Realty Software Co.*, 1926 S. Pacific Coast Hwy. #229 Redondo Beach, CA 90277, 213/372-9419

### Management & Analysis

"Real Property Management" \$395 to \$595, for apts., offices ... Records and budgets in-come/expenses by month/account/unit. No retying of re-curring monthly data. "Real Analyzer" \$195, is 5 programs in 1 for analysis of Income Property and the Residence. Easy WHAT IF. PC/XT/jr. 30 day money back guarantee. Visa/MC. *Real-Comp Inc.*, P.O. Box 1263, Cupertino, CA 95015, 408/996-1160

### EZ-RE Investor Templates

Real Estate Investor Templates. Equity Share, Houses, Apartments, Warehouses, Office Bldgs. 10 year projection of cash flow, deduction, tax at sell, after tax IRR. Expenses, int., rent & apprec. adjustable annually. Mortgage types—ARM, FHA 245, amort, deferred int., int. only. Professional report. Req. 1-2-3. \$ back guar. \$50 ppd. Visa/MC. *LB Associates*, 8817 Skokie Lane, Vienna, VA 22180, 703/938-9093

## Sales/Marketing

### Sales Forecasting Software

*CompuCast* is a common sense, graphically oriented 1-2-3 template designed to aid in making sales forecasts & tracking sales results. An extensive background in statistics or mathematics is not required! Standard version: \$49.95. Enhanced version: \$89.95. *CompuCast Software*, 5328 Fulton St., San Francisco, CA 94121, 415/386-6153

### Personal Sales Manager

A MUST for every Salesperson! Manages prospect/customer data. Keeps over 60 data fields per prospect. Rolodex & Tele-marketing features. Tickler Reports. Communication log. Does Sales Forecasts. Makes labels, *MailMerge* files. Design your own reports. Onscreen Help at every data field. Only \$90. MC/Visa. *Computer Software Corp.*, 19102 Detroit Rd., Cleveland, OH 44116, 216/333-9080

### Sales Prospecting

Give yourself a raise. Organize your leads & customers with an easy to learn program that generates ticker & prospect reports, letters, labels, market analysis reports, etc. You can customize it to suit your sales style. \$195, 30-day money back guarantee. ## Scientific

### Matrix Computation

PC-MATLAB is the world's leading program for matrix computation. Blazingly fast with the 8087, carefully integrated with graphics, jam-packed with hundreds of analytical commands, painstakingly accurate with stable algorithms, & extensible to your needs. Used at most major universities. \$695. *The Math-Works, Inc.*, 124 Foxwood Rd., Portola Valley, CA 94025, 415/851-7217

## Sort

### Opt-Tech Sort/Merge

Extremely fast Sort/Merge program for the IBM PC. Can sort or merge multiple files containing fixed or variable length records. Run as a DOS command or call as a subroutine, plus many other features. Now also sorts dBASE II files! Compare before you buy any other. Write or call for more info. \$99. *Opt-Tech Data Processing*, P.O. Box 2167, Humble, TX 77347, 713/454-7428

## Spreadsheet

### The Spreadsheet Auditor

The most powerful checking tool you can buy. Works w/1-2-3, *Symphony* & *Super-Calc*. All new version offers:

- Named/Special Ranges Listing
- Cell Cross Referencing
- Circular Referencing
- Formulas Displayed
- Macro Analysis
- Worksheet Map
- Sideprint™

\$149. Visa/MC/chk. *Consumers Software Inc.*, 8315 Monterey St., Gilroy, CA 95020. TO ORDER: 800/645-5501; INFO: 408/848-3385

## Statistics

### Statistician's Mace 2.00

A full-feature program. Calculate multiple regression, correlations, several ANOVAs, non-parametric tests, descriptive stats, data transformations & much more. Read data from keyboard or files created by spreadsheet, data base, WPs, etc. For IBM PC, XT, AT, PCjr & compatibles. Buy direct or from dealers. \$255. *The Matrix Calculating Engine (MACE) Inc.*, 2313 Center Ave., Madison, WI 53704, 608/244-3331

### BMDPC Stat. Software

BMDPC is the most comprehensive statistics package, supported by experts with 20 years experience developing statistical software. 29 programs to choose from, starting at \$450 for 6. Featuring data description, ANOVA, regression, time series, multivariate, non-parametric, cluster & survival analyses. *BMDP Statistical Software*, 1964 Westwood Blvd. #202, Los Angeles, CA 90025, 213/475-5700

### RATS!

RATS is a fast, accurate & comprehensive regression package with unsurpassed POWER. Has both time-series & cross section analysis. Includes Box-Jenkins, logit, & probit. Spectral analysis & graphics available as options. Requires 256K

RAM, IBM PC or compatible. Base program: \$200. MC/Visa. *VAR Econometrics, Inc.*, 134 Prospect Ave. S, Minneapolis, MN 55419, 612/822-9690

## Survey

### Do Surveys With Your PC

People Facts: *The Opinion Processor*. Find out what people think about your company, products, services. Create survey questionnaires, process results. Easy to use, all essential statistics. \$395. Full-feature preview \$25. Call or write for details. *Shamrock Press, Division of Karl Albrecht & Assoc.*, 1277 Garnet Ave. #206-P, San Diego, CA 92109, 619/272-3880

## Systems

### Multiuser PC-DOS

MultiLink Advanced turns PC-DOS into an efficient multi-user multi-tasking operating system. Additional users are supported by attaching inexpensive CRT terminals or modems to serial ports on the PC, and can run normal applications designed for PC-DOS. Includes host communications software for public dial-in. *Software Link, Inc.*, 8601 Dunwoody Place #632, Atlanta, GA, 30338, 404/998-0700

## Taxes

### TAXTIME for 1-2-3

IRS & State approved. Used by many CPAs. Detailed catalog. Individ. 1040 (320K) \$95/\$45  
Calif. 540 (256K) \$95/\$45

## \$6 Software

How could it be any good for only \$6? Many capable programmers have written high quality programs with complete documentation on disk and request a donation from satisfied users. Other program authors just want people to use the programs they have built and found useful. PC-SIG provides a single source of IBM-PC programs for \$6 per disk. Listed below are sets of some of the more popular disks from the library of over 350 disks.

- |   |  |
|---|--|
| <input type="checkbox"/> <b>350+page printed Directory</b> <b>\$8.95</b>  | <input type="checkbox"/> <b>Set of 3 Utility Disks</b> <b>\$18</b><br>(Disk cataloging program, file modify and restore utilities)                                     |
| <input type="checkbox"/> <b>Set of 5 Introductory Disks and Directory</b> <b>\$36</b><br>(Includes word processing, filing system, utilities, games, and printed directory) | <input type="checkbox"/> <b>Set of 4 Top Game Disks</b> <b>\$24</b><br>(Arcade quality games, several on each disk)  |
| <input type="checkbox"/> <b>Set of 3 Financial Disks</b> <b>\$18</b><br>(Personal general ledger, spreadsheet, stock trading)   | <input type="checkbox"/> <b>Set of Two Genealogy Disks</b> <b>\$12</b>   |
| <input type="checkbox"/> <b>Set of 6 Lotus/Symphony Worksheet Disks</b> <b>\$36</b><br>(Templates, Tech notes, utilities, macro library)                                    | <input type="checkbox"/> <b>How to Unprotect Popular Software (2 disks)</b> <b>\$12</b>  |
| <input type="checkbox"/> <b>Set of 5 Language Disks</b> <b>\$30</b><br>(Assembler with tutorial, Logo, XLISP, Forth)  | <input type="checkbox"/> <b>PC-SIG Directory on Disk (2 disk set)</b> <b>\$12</b>  |
| <input type="checkbox"/> <b>Set of 4 Educational Disks</b> <b>\$24</b><br>(Typing tutor, history, BASIC tutorial, math tutor)   | <input type="checkbox"/> <b>1 year PC-SIG membership</b> <b>\$15</b><br>(Receive all PC-SIG publications including printed directory, newsletters, and disk discounts) |

Please add \$4 postage and handling to all disk orders, add \$1.50 postage and handling for the Directory only. California residents add state sales tax.

WITHOUT STAMP.)

# PC WORLD

Product Information Service  
P.O. Box 92843  
Rochester, NY 14692

**Get more data on products  
you're interested in—  
simply return this card today.  
There's no cost.  
And no obligation.**

**It's easy to get more information on products advertised in PC World. Here's how:**

- Print or type your name and address in the spaces provided, and answer the questions that apply to you or your company. (These questions help us to better meet your needs and the needs of our advertisers.)
- Circle the number(s) on the card that correspond(s) to the reader service number(s) for the product(s) in which you're interested. For your convenience, the reader service number appears in the ad and in the Advertisers Index.
- Detach the card from the magazine, fold, seal with tape (please do not staple), apply first-class postage, and mail. Literature on the products you're interested in will be mailed to you directly from the manufacturer, free of charge.

## Free Reader Information Service

Please print or type all information.

Name \_\_\_\_\_

Company \_\_\_\_\_

Address \_\_\_\_\_

City, State, Zip (Zip code needed to ensure delivery)

Phone: Area code/Number

PLEASE NOTE: This card is for your convenience in obtaining information on products advertised in PC World. Please send editorial comments or inquiries to: The Editor, PC World, 555 De Haro St., San Francisco, CA 94107. Thank you.

### 1. Your primary job function:

- ☐ (A) Corporate or general management  
☐ (B) Department manager  
☐ (C) MIS manager  
☐ (D) Professional  
☐ (E) Other \_\_\_\_\_

### 2. Number of employees in your company:

- ☐ (1) 25 or less ☐ (4) 500-999  
☐ (2) 26-99 ☐ (5) 1000 or more  
☐ (3) 100-499

### 3. Information requested for:

- ☐ (A) Business applications  
☐ (B) Home applications

### 4. Reason for inquiring:

- ☐ (1) Plan to buy—next 3 months  
☐ (2) Plan to buy—4-6 months  
☐ (3) Plan to buy—7-12 months  
☐ (4) Plan to buy—beyond 12 months  
☐ (5) Reference only

### 5. For how many IBM PCs and compatibles do you buy products? (Include both company and personal units, please.)

- ☐ (A) 1 ☐ (C) 5-9  
☐ (B) 2-4 ☐ (D) 10 or more

# HOW TO LOAD

## PC SYSTEMS

<b>IBM PC</b>	
256K, 2 drive monochrome system	\$2195
256K, 2 drive color system	\$2495
256K, 2 drives & 10MB	\$2695
<b>IBM PC/XT</b>	
256K, 2 drive monochrome system	\$2295
256K, 2 drive color system	\$2595
256K, 2 drives & 10MB	\$2595
<b>IBM PC/AT</b>	
256K, 1.2MB floppy	\$3395
512K, 1.2MB & 360K floppies, 20MB	\$4795
<b>AT&amp;T PC 6300</b>	
256K, 2 drive monochrome system	\$1995
256K, 2 drive color system	\$2495
256K, 1 drive, 10MB, monochrome system	\$2595

These systems are brand new, shipped fully tested and burned in, fully warranted for 90 days **AND ARE ALWAYS IN STOCK!**

Ask about our full line of system accessories to keep your system up and running indefinitely and trouble free. Choose from names like Kensington Microwave, Tripplite and Curtis.

## PRINTERS

<b>EPSON</b>	
FX-80+ (160 cps narrow carriage dot matrix)	\$395
FX-185 (160 cps, wide carriage, near LQ, dot matrix)	\$525
LX-80 (100 cps, near LQ, select type controls)	\$275
RX-100 (100 cps wide carriage dot matrix)	\$425
JX-80 (160 cps narrow carriage color dot matrix)	\$575
LQ-1500 (LQ dot matrix w/ parallel interface)	\$995
<b>OKIDATA</b>	
ML 192 (NEW 160 cps narrow carriage dot matrix)	\$409
ML 193 (NEW 160 cps wide carriage dot matrix)	\$519
ML 84 (200 cps wide carriage dot matrix)	\$725
PACEMARK 2410 (350 cps wide carriage dot matrix)	\$1995
<b>DATAPRODUCTS</b>	
8010, 8020, 8050, 8070 (with or without color)	*
<b>TOSHIBA</b>	
P-1340 (120 cps narrow carriage LQ dot matrix)	\$595
P-351 (Toshiba's new three-in-one printer)	\$1295
<b>TEXAS INSTRUMENTS</b>	
TI-855 (150 cps narrow carriage LQ dot matrix)	\$699
<b>BROTHER</b>	
HR-15+ (17 cps narrow carriage letter quality)	\$395
HR-25 (23 cps wide carriage letter quality)	\$650
HR-35 (32 cps wide carriage letter quality)	\$895
2024L (New high speed dot matrix)	*
<b>C.I.TOH</b>	
Starwriter (40 cps letter quality)	*
Printmaster (55 cps letter quality)	*
Ask about C. ITOH's Hot New Line at New Prices!	
<b>DIABLO</b>	
630 API & ECS	\$1695/*
<b>NEC</b>	
Pinwriter P-2 & P-3	*
Spinwriter 2050, 3550, 8850	*

## PRINTER ACCESSORIES

LQ Cut Sheet Feeders for NEC, DIABLO, C. ITOH	from \$395
Quadram Microfazer Printer Buffer (P/P, P/S, S/P, S/S, 8K & up)	from \$135
2 Way & 4 Way Switch Boxes (serial or parallel)	from \$59
IBM Parallel Printer Cable	\$25
Ring King Printer Stands	*
Special Make Printer Cables	\$35
Ribbons & Printwheels for most printers	*

## PLOTTERS

<b>AMDEK</b>	
Amplot II (6 pen Lotus compatible plotter)	\$595
<b>HEWLETT-PACKARD</b>	
HP-7470 & 7475 (2 pens/6 pens)	*
<b>HOUSTON INSTRUMENTS</b>	
DMP 29, 40, 40-2, 41, 42, 51, 52 in stock	*

## FLOPPY DISK DRIVES

TANDON TM 100-2 (Double sided/double density 360K)	\$149
CONTROL DATA (Double sided/double density 360K)	\$149
HALF-HEIGHT (PC/XT/AT/PORTABLE compatible double sided/double density)	
CHOOSE FROM NAMES LIKE SHUGART, TEAC, PANASONIC	from \$119

## HARD DISK DRIVES

<b>PEACHTREE PERIPHERALS</b>	
P-101/e (10MB internal/external hard disk with auto boot)	from \$595
P-201/e/AT (20MB internal/external hard disk with auto boot)	from \$795
P-30 AT (30MB internal AT compatible hard disk)	from \$995
10 MB internal & external removable Winchester systems	*
45 MB tape back-up	\$1095

<b>INTERDYNE</b>	
Microreel tape back-up	\$549

<b>EMERALD SYSTEMS</b>	
PC & AT compatible, up to 280MB, with or without tape back-up	*

<b>SYSGEN</b>	
Quickfile 60MB Streaming Tape Back-Up	*
Image XT cassette tape back-up	\$745
XL (External 20 MB hard disk w/60MB tape back-up)	*

<b>BERNOULLI TECHNOLOGY</b>	
20MB removable media subsystems	\$2595

<b>CIPHER DATA</b>	
XT tape backs up off FDC	\$895

## DISKETTES

<b>VERBATIM</b>	
Single sided/Single density:	10/\$24 100/\$199
Double sided/Double density:	10/\$29 100/\$249
<b>DYSAN</b>	
Double sided/double density:	10/\$29 100/\$249
High-density AT diskettes	10/\$59
<b>MAXELL</b>	
High-density AT diskettes	10/\$59

## MULTIFUNCTION BOARDS

<b>AST RESEARCH</b>	
Advantage (AT compatible memory expansion with options)	*
Six Pak w/64K (64-384K, serial, parallel, C/C, opt. game)	\$259
MegaPlus w/64K (64-512K*, parallel, C/C, opt. p.s.g)	from \$269
I/O Plus II (Serial, C/C, opt. serial, parallel, game)	from \$135

<b>ORCHID TECHNOLOGY</b>	
Blossom w/64K (64-384K, serial, parallel, C/C, opt. PC Net)	\$259
Orchid PC Turbo (adds 8 mhz processor, multitasking to PC)	\$825

<b>QUADRAM</b>	
Quadboard w/64K (64-384K, serial, parallel, game, C/C, bracket)	\$259
QuadMeg (AT memory expansion up to 4MB)	\$349
QuadPort (AT serial and parallel, opt. 4 more serial)	\$125

<b>MICROLOG</b>	
Baby Blue II w/64K (64-256K, Z80, 2 serial, parallel, C/C)	\$449
Little Red Ram (256K memory expansion)	\$195

<b>TALLTREE J-RAM II &amp; III Multifunction Boards</b>	*
---	---

## CHIPS

64K (nine chips)	\$10	128K (AT RAM)	*
8087 (coprocessor)	\$125	256K (jr & AT boards)	*

## OUR POLICY

1. WE ACCEPT VISA, MC, AMEX; No surcharge for VISA or MC.
2. COD requires cash or certified check; Company check when approved.
3. Allow 1 week for personal and company checks to clear.
4. Wiring information available upon request.
5. Corporate, Government and Institutional volume purchase agreements available.
6. Call for exact shipping charges; air shipments take priority.
7. If we must split shipment, you incur no additional shipping charges.
8. All orders shipped insured — No additional charge.
9. All products fully warranted; Some up to 5 years.
10. All items subject to availability; Prices subject to change without notice.

## GRAPHICS CARDS

### SIGMA DESIGNS

Color 400 (high res color card for PGS SR-12) ..... \$549

### TSENG LABS

UltraPAK (132 col. mono graphics, serial, parallel, C/C) ..... \$439

UltraRAM, UltraDISK, UltraSERIAL (options for UltraPAK) ..... \*

ColorPAK (Ultra hi res color graphics) ..... \*

### PERSYST

BoB Board (beautifully clear text on a color monitor) ..... \*

### HERCULES

Graphics Card (Lotus compatible monochrome graphics) ..... \$319

Color Graphics Card (Short-slot color card w/parallel) ..... \$179

### PARADISE

Modular Graphics Card & Multi-Display Card ..... from \$299

### AST

Preview & MonoGraphPlus (Monochrome Lotus graphs, parallel, C/C) ..... \*

### STB

MonoPlus (monochrome w/parallel port) ..... \$169

Graphics Plus II (Monochrome & color w/ parallel, software) ..... \$299

### QUADRAM

Quadcolor I & II (Upgradeable color cards) ..... from \$189

### TECMAR

Graphics Master (Hi res Lotus compatible color & mono) ..... \*

### POLAROID

Palette (makes color slides from your PC's screen) ..... \$1395

## PROTOCOL CONVERSION

### AST RESEARCH

PCOX, 5251, 3780, BSC, SNA ..... \*

### DCA

Irma (3278 Terminal Emulation) ..... \$895

IrmaLine, Irmalette, IrmaPrint, IrmaCom ..... \*

Call our experts for all your Micro-to-Mainframe needs!

## MONITORS

### AMDEK

300G & 300A (Green or Amber, composite video monitors) ..... \$129/139

310A (Amber TTL input, non-glare tube) ..... \$169

COLOR 600 (13" 640 X 240 RGB w/text button, audio) ..... \$425

COLOR 700 (13" 720 X 480 RGB w/.31mm dot) ..... \$475

COLOR 710 (13" 720 X 480 RGB, non-glare, non-flicker) ..... \$575

### QUADRAM

Amberchrome (Amber TTL input, non-glare tube) ..... \*

Quadchrome HX-12 (690 X 480 RGB w/.31mm dot) ..... \*

### PRINCETON GRAPHICS

PGS MAX-12 (Amber TTL input, non-glare tube) ..... \$189

PGS HX-12 (690 X 480 RGB w/.31mm dot) ..... \$449

PGS SR-12 (690 X 480 non-interlaced RGB w/.31mm dot) ..... \*

### TAXAN

RGBvision 425 & 440 ..... \*

Ask us to find the right monitor/graphics card combo for your application!

## MODEMS

### HAYES

Hayes Smartmodem 300 (external 300 baud, auto answer/dial) ..... \$199

Hayes Smartmodem 1200 (external 300/1200, auto answer/dial) ..... \$419

Hayes Smartmodem 1200B (internal 300/1200, w/Smartcom II) ..... \$379

Hayes Smartmodem 2400 (external 2400 baud) ..... \$675

### ANCHOR AUTOMATION

Signalman Mark XII (300/1200 baud at 300 baud price) ..... \$259

### AST

Reach (Short-slot 300/1200 baud w/CROSSTALK, self-test) ..... \$369

### POPCOM

(internal & external) ..... \*

RIXON 300/1200, 2400, and 4800 baud modems ..... \*

## NETWORKING

We carry all the best names including AST RESEARCH and ORCHID TECHNOLOGIES. Call our Networking Applications experts to design a cost-effective device-sharing networked layout for your office!

## SOFTWARE

### INTEGRATED AND RELATED PACKAGES

ENABLE (Reviewed as "the Package Symphony should have been") ..... \*

ASHTON-TATE Framework ..... \$369

LOTUS Symphony ..... \$429

SOFTWARE PUBLISHING Pts Write, File, Graph, Report ..... from \$79

### WORD PROCESSING

SAMNA WORD III & PLUS ..... \*

MULTIMATE comes w/spelling checker and tutorial ..... \$269

MICROPRO WordStar 2000 & 2000 plus ..... \$245/295

MICROSOFT Word Version 2.0 ..... \*

LIFETREE Volkswriter Deluxe w/Textmerge ..... \$169

WORDPERFECT 4.0 ..... \$259

LEADING EDGE Word Processor ..... \$65

### SPREADSHEETS

LOTUS 1-2-3 ..... \$309

SORCIM/IUS Supercalc 3 ..... \$195

MICROSOFT Multiplan w/templates ..... \$139

### DATABASE MANAGERS

ASHTON-TATE dBase II & III ..... \$295/375

MICROIM RBase 5000 ..... \$369

GMS SYSTEMS Power-base ..... \$259

DAYFLO (Free-form database with opt Reportflo) ..... \*

CIP Concentric Information Processor ..... \*

MICROSTUF Infoscope ..... \*

LEADING EDGE Nutshell ..... \$95

### COMMUNICATIONS PACKAGES

MICROSTUF Crosstalk XVI ..... \$99

PERSOFT SmartTerm 100, 125, 400 ..... \*

HAYES SmartCom II ..... \$95

SOURCE The Source ..... \*

DOW JONES All products ..... \*

### ACCOUNTING PACKAGES

STATE OF THE ART (G/L, A/R, A/P, INV, Others) ..... \*

SORCIM/IUS Complete accounting modules ..... from \$289

BPI ACCOUNTING Complete accounting modules ..... \*

REAL WORLD Accounting ..... \*

OPEN SYSTEMS Accounting ..... \*

MONOGRAM Dollars and Sense w/Forecasting ..... \$139

5.25" DSDD with FREE Flip n' File 15 — **\$1.74** ea.

**100% LIFETIME WARRANTY**

This is a Super Special promotion. It was supposed to end around the end of May.

But we decided to buy more than 1,000,000 3M diskettes packed in the FREE Flip n' File 15's...and give you the benefits of this terrific value.

One word of warning: this offer is limited only to supplies on hand. Once these supplies are used up, the prices stay the same...but there's no free Flip n' File.

The last time we ran an offer like this, everything was sold out in about six weeks.

**So don't wait. Order now.**

### Other 3M diskettes:

(Flip n' File offer does not apply.)

5.25" SSDD-96TPI . . . . . \$2.06 ea.

## Prevent Computer Theft!

### Käblit Systems

Unique Käblit fasteners attach to equipment without drilling, using existing screws. Cable passes through fasteners preventing removal. Cable is then locked. When ordering multiples, specify locks keyed differently or alike. Installs in 10 min. Over 80 college installations.

Heavy duty  
10" steel cable  
secures computer,  
other equipment,  
up to 6 units.

Käblit works with: •Computers  
•Printers •Disk Drives •Typewriters •Stereos  
•Monitors •Lab Equip •Televisions •Other

\$54.95 postage paid. Quantity pricing also avail. for schools, institutions, businesses, etc. Send P.O. Money back if returned in 30 days.

Based on multiples of 100 each.  
 Boxed in 10's with heavy-duty cardboard sleeves, user ID labels,  
 reinforced hubs (where appropriate) and write-protect tabs.

### Introducing Wabash Pinnacle Series Diskettes.

Two years ago, if you'd told me I'd be writing this ad, I would have laughed.

At that time, Wabash diskettes were synonymous with "s---t".

Just saying that quality control was poor would be charitable.

So much was wrong that DISK WORLD! wouldn't sell them.

### That was yesterday.

Kearney-National Inc., a \$202-million division of a much larger company, came into Wabash.

Out went the old management, the old methods, the old production techniques...and in went a lot of new people, ideas, production lines and some really imaginative thinking.

### The end result.

Today, I'm proud to offer you the Wabash Pinnacle Series of diskettes at the prices shown.

This isn't evolution in diskette manufacturing: it's revolution.

### Here's what you get.

Wabash Pinnacle diskettes are

...certified 100% Error Free

...are covered by a LIFETIME WARRANTY

...meet or exceed all industry specifications (by quite some distance)

...and are simply the best value in diskettes available today.

### The torture test.

Considering Wabash's earlier dubious reputation, I wasn't exactly a true believer when their Director of Marketing came into my office with samples.

So I took a box at random, selected a disk, bent the thing every which way and slipped it into my IBM-PC.

It formatted. It booted. It stored and retrieved data.

### That wasn't enough.

I gave samples of the diskettes to Curt Rostenbach and, in turn, to Tom Streit, both hackers of long experience and members of the Waukegan (Illinois) Apple Users Group.

Tom really went at it.

He took a quartz-halogen lamp, aimed it at the diskette until it started to smoke (and melt)...and then formatted, booted the diskette and stored and retrieved data!

The same terribly (and intentionally) mutilated diskette ran on an ITT, Corona and IBM.

Curt was nicer.

He simply bent the diskette every which way...and it still formatted, booted and ran on his Apple.

### The best buy I've ever seen.

DISK WORLD!, Inc. sells more flexible magnetic media by mail-order than anyone else in the world.

I, as President of the corporation, won't tolerate a product with a failure rate of more than 1/1000th of 1 percent.

I also don't like companies who try to milk a "quality" or "premium" image for a higher price like Dysan and Verbatim did...until they failed.

As President of DISK WORLD!, Inc., my motto is simple: "the best diskette for the least amount of money."

### Wabash is it.

Right now, there is no better value than the Wabash Pinnacle Series of diskettes.

Granted, you have to buy a hundred at a time, but so what? Split the order with friends, relatives, co-workers or even your worst enemies.

The key thing is to get the most diskette for the money.

And this is it.

(Incidentally, as a corporation, we put our money where our

mouth is. Our first order for Wabash Pinnacle Diskettes was 1.5-million units.)

That's an awful lot of faith and confidence.

But, then again, I have the diskette that Tom Streit literally melted...and kept on running.

### The truth about \$1.00 or less diskettes.

More and more ads are popping up offering diskettes for \$1.00 or less.

By the same token, more and more people who were selling used cars a few months ago are now selling diskettes by mail.

We did a little survey of current ads for diskettes advertised for a dollar or less and did some analysis of the market and here's what we found as it applies to 5.25" DSDD diskettes "supposedly" selling for a dollar or less.

VENDOR:	ADVERTISED LOW PRICE:	ACTUAL PRICE PER 100:	ACTUAL MFRG.:

### The real truth about \$1.00 or less diskettes.

It costs all diskette manufacturers about the same to produce a diskette. Some may charge more because they want to project a "premium quality" image, ala the late, lamented Dysan who bought their basic media from 3M.

Some charge less because they sell a sub-standard product...and we're not foolish enough to name names here.

But here's the truth about the \$1.00 or less diskette market.

It falls into four categories:

1. The DISK WORLD's of the universe who simply are so big that they can buy first quality product in massive quantities and choose to pass on the savings to you. (Precision Data and Diskette Connection on **BRAND NAME** products also fall into this category.)

2. The people who buy "cosmos"...stuff from major manufacturers that usually hits quality control standards, but is cosmetically blemished and thus can't be packaged and sold under the manufacturer's own name.

3. "Duplicate Quality". Uncertified media, usually below manufacturer's own standards and frequently below ANSI and IBM standards. Sold on an "as-is" basis with the understanding that the manufacturer's name will never be divulged. Usually about a 20% reject rate...as compared to DISK WORLD's standard of less than 1/1000th of 1% reject/return rate. Next to garbage, this is the source of most diskettes advertised at a dollar or less.

They may work...and then again they may not. (Frankly, the odds at the Blackjack table in Las Vegas are more in your favor.)

4. Garbage. Stuff that shouldn't be sold at all. But some manufacturers are hurting for cash, so they sell it anyway. (After all, they want to meet their payroll. Look what happens when you don't: you become a Dysan or Verbatim. Lots of history, but no money.) More and more garbage is being dumped into the market as manufacturers become pressed for cash and are motivated into selling anything and everything that can manufacture. (Read the article in FORBES about Verbatim and its "Bonus" brand.)

Finally, the Taiwanese counterfeiters are moving into the act. Perfect duplicates of the packaging of major manufacturers with one exception: the quality isn't there.

### The Critical Factor.

Only DISK WORLD!, Inc. offers fully brand-identified, LIFETIME-WARRANTY product for less than a dollar.

Every one else offering 5.25" product for less than a buck doesn't tell you who makes it.

We do.

And that ought to tell you a lot right there.

## Ordering & Shipping Instructions

**SHIPPING:** Wabash Pinnacle Diskettes are sold in multiples of 100 only. Shipping charges are \$3.00 per 100, regardless of type or size.

**PAYMENT:** VISA, MASTERCARD and PREPAID orders accepted. Corporations rated 3A2 or better and government and quasi-government open accounts are accepted on a NET 15 basis.

C.O.D. orders are subject to a \$5.00 special handling charge. (Sorry for the increase, but too many people have been refusing C.O.D. orders or using bad checks. It's a classic example of a few "bad eggs" making life more expensive for everyone else.)

**APD, FPO, AK, HI & PR ORDERS:** Include shipping as shown and an additional 5% of the total amount of the order to cover PAL and insurance.

No other non-continental U.S. orders are accepted.

**TAXES:** Illinois residents only, add 7%.

All orders subject to acceptance.  
 Not responsible for typographical errors.

**ORDERS ONLY:**

# LOW COST ENHANCEMENTS

## IBM\* PC & XT HARD DISC

- 10, 20, 30, 70, 120 Megabyte, Internal & External
- 10, 35, 60 Megabyte tape back-up
- Economical, fast, reliable.
- Removable hard disk 10 Megabyte.

## RUN XENIX 120 MEGABYTE IN IBM AT OR COMPAQ 286

## IBM PC AT

- 20, 30, 70, 120 Megabyte hard disk.
- Optional 2nd hard disk or removable hard disk for back-up.
- 20, 40, 60 Megabyte 1/2 Height tape back-up. Very fast, efficient & reliable.

## HARD DISK PC PORTABLE

- Low power consumption
- 10, 20 Megabyte. Fully shock mounted.
- 100% compatible
- Tape back-up 10, 25, 35, 60 Megabyte

## XT & PORTABLE

### LOGIC CHIP

- 640K expansion on board using 256K chips
- Expand system to 384K or 640K without using a slot

## AT — RAMBO

- 128K expansion, 3.5 Megabyte using 256K chips
- Serial Port
- Parallel Port
- Fully IBM AT compatible
- Most Superior Quality

## COMPAQ 286 PORTABLE

- 20 Megabyte H.D.
- 10 Megabyte Tape Back-up
- RAM Expansion

## SPECIAL! 4x4 I/O Game, Clock

Plus Serial & Parallel  
Uses Short Slot in XT  
FOR AT&T 6300, COMPAQ 286 PORTABLE,  
COMPAQ 286 DESK PRO, IBM PORTABLE,  
XT, PC & AT

## COMPAQ 286 DESK PRO

- 20, 40, 70, 120 Megabyte Hard Disk with 16 bit controllers
- 10M tape back-up
- Ram expansion

## AT&T 6300

### 10, 20, 30 INTERNAL & EXTERNAL UNITS

#### HARD DISK

- Low power consumption
- 100% compatible

#### TAPE

- External tape back-up in Power Center
- 10, 35, Megabyte

## AT&T 7300

- HARD DISK
- 20 MEGABYTE
- 30 MEGABYTE

- TAPE BACK-UP
- RAM EXPANSION

AVAILABLE  
SOON

**"WHAT WOULD YOU DO WITH ALL THE MONEY YOU SAVE?"**

Circle 580 on reader service card

***I'm Adam Osborne.  
I want you to know that  
you no longer have to  
pay ridiculous prices  
for top quality software.***

**Y**es, you can get full-featured word processing for under seventy dollars. So don't be fooled. The next time a sales person tells you an advanced word processor costs \$400, he's either ignorant or putting his commission before your pocketbook.

Most software companies believe in "perceived value pricing". If a software package saves you thousands of dollars, they argue, why shouldn't you pay hundreds for it—even though the program costs just a few dollars to produce. Based on that logic, a telephone should cost \$500! After all, it saves you thousands in travel costs.

High software prices are currently maintained by a shaky coalition of software companies and some computer stores. **You've had no choice but to pay exorbitant prices whenever you bought software for your personal computer.**

**I founded Paperback Software International to give you an alternative—Quality Software at Affordable Prices!**

Ask for the Paperback Software alternative at your local bookshop, computer store, or software store. Or use the order form below.

#### NUMBER WORKS

The spreadsheet for budgeting, financial planning, expense reports, homework. Do "what if?" calculations, spot trends. 40 built-in math and finance functions. Spreadsheets can be as large as disk, not limited by memory like other programs. IBM PC w/128K, PCjr w/256K.

#### EXECUTIVE WRITER

Advanced word processing with word wrap, global search and replace, horizontal scrolling, centering and right justification, on-screen bold and underlining, headers, footers, footnotes, indices and tables of contents, macros, graphics. IBM PC w/128K, PCjr w/256K.

#### EXECUTIVE FILER

An electronic file cabinet. Keep anything you write organized and available at a keystroke. Combine with *Executive Writer* to switch between documents and filecards at a keystroke. Look up references. Do document assembly. Use *MailPrint* to generate form letters. IBM PC w/192K, PCjr w/256K.

#### DRAW-IT

Turns your computer into a full color electronic drawing board. Make pictures and illustrations, pie, bar, and line graphs, or just have fun! Easy-access help screens, simple commands, ready-to-use pictures and patterns. IBM PC w/128K, PCjr w/256K, color graphics card.

#### PAPERBACK WRITER

The affordable high-value word processor for everyday use. Easy-to-read instruction book makes you productive in minutes. Block operations, horizontal scrolling, word wrap, on-screen bold and underlining, search and replace. IBM PC w/128K, PCjr w/256K.

#### MY ABC'S

Six educational games that are simple to learn and fun to play for preschoolers. They teach your child to recognize letters, count, and develop concentration skills. IBM PC/PCjr w/128K, color graphics card.

# MACROTECH

THE PRICE PERFORMANCE LEADER  
IN PC-AT MEMORY  
EXPANSION

NOW — The absolute best value in PC-AT memory expansion is available from MacroTech, a leader in memory products for nearly four years. With 120 nanosecond ram chips and low power consumption, MacroTech's **MSR-AT** sets a new performance standard. The **MSR-AT** is available in up to 3 megabytes at the lowest price in the industry.

#### Features:

- Addressing flexibility; XENIX users can address up to 3 megabytes on any 128k boundary. DOS users can add system memory up to 640k and also create ram disks of up to 2.5 megabytes.
- High quality multi-layer PC board is fully assembled and tested. Fully soldered construction provides highest possible reliability.
- Low power consumption and single card design provide optimal cooling even when more than one MSR-AT is installed.
- 120 nanosecond ram chips assure optimal performance even with clock speeds above 6mhz.
- Full one year warranty.

ONLY \$1450 for full 3 megabytes. Check our low price on other configurations.

Dealer and OEM inquiries welcome.

## PCjr LIVES

**Now! Special prices on all Racore products.**

- 360 KB floppy drive
- 128/384 KB memory expansion

Now you and your PCjr can run almost every IBM PC and XT program there is — with disk drive and memory enhancements from Racore.

#### Drive Two™ 360KB Floppy Drive

This dual sided, double density, 5 1/4" drive snaps on top of your PCjr to make it, essentially, a dual drive IBM PC. The package includes Racore's unique PC mode switch. It allows your jr to run sophisticated PC graphics packages, like those in Lotus 1-2-3™ and Symphony™. You can't do that with any other system.

#### 128/384KB Memory Expansion

• **128KB Memory**  
Low cost expansion board comes with a fully tested and certified 128KB of memory.

• **Expansion Sockets for 256KB**  
Plug sockets are provided for an additional 256KB of memory in chip form.

#### PC Keyboard Adapter Cable

Plugs directly into your jr, and lets you use any IBM PC or PCjr compatible keyboard with your jr.

Mail order with certified check or money order. No COD's. Add \$15.00 UPS & Insurance. GA residents add 4% tax. Price subject to change and product availability.

#### Drive Two Enhancement Features

- Parallel Printer Port
- Clock Calendar
- Separate Power Supply
- Memory Expansion Slot
- Software Diskette
- Side Expansion Accessibility

ORDERS ONLY

# 1-800-241-8149. TWO NUMBERS YOU

Locally or across the nation, you're only a phone call away from the best advice, information, sales and service for all your computer needs.

At Micro Mart. A name you can trust.

We're proud to offer the widest range of computer products anywhere. At very competitive prices. With innovative financing options like the Micro Mart Blue Chip Credit Card.

When we say a product is available today, we mean today. Our Micro-to-Main-frame inventory system keeps our products current. And our customers satisfied. We deliver quickly because we're geared to ship hundreds of products daily to customers all over the world.

But we don't stop there. Micro Mart offers a comprehensive range of Technical Support and Customer Service after-the-sale. We're on-site with hundreds of service locations nationwide. And our National Service Center is one of the fastest depot services in the USA.

Call Micro Mart today. You'll meet people who back up price, availability and service with performance. You can count on it.

# Pure power.

QIC-60 streaming tape backup is more than just fast and simple to operate. It's also the leader in powerful processing.

For example, our unique five-head tape deck offers immediate read-after-write verification. No rewinding necessary. And no re-recording of the entire backup after an error.

Another powerful advantage is automatic adjustment of the head mechanisms to seek the best track alignment every time a tape is inserted. Plus our exclusive power sensor is designed to alert and freeze the write head if PC power is reduced, which eliminates the chance of disk damage. We're so confident in the technical excellence of QIC-60 that we offer an aggressive one-year limited warranty on the entire line, compared to the 90-day warranty provided by other manufacturers.

Best of all are a pair of backup bonuses that turn QIC-60 into a sophisticated data management tool. When you select mirror-image restore, QIC-60 sees bad disk sectors and automatically reroutes data to safe locations for improved data reliability.

Tecmar offers AT owners a special enhancement with an internally-mounted QIC-60 tape drive that costs even less than external systems. And when you add our internal AT Hard Disk to the package, you have a fully upgraded system ready to use today.

Pure speed. Pure power. Pure innovation from Tecmar.

For a free demonstration of the new standard in tape backup, see your Tecmar dealer or call us at 216/349-1009 for the location of the dealer nearest you.

# Ven-Tel's Half Card™ modem is in all the best computers. Here's why...

Ven-Tel gives you lots of reasons to buy our Half Card™ modem for your IBM PC or compatible. The Half Card™ is a complete system that lets you communicate with other PCs, mainframes, and databases effortlessly. It includes Crosstalk-XVI® software. It's reliable. It's got all of the features you want. And it's a good value.

## Do You Own One of These Computers?

Chances are you do. And if you're thinking of buying a modem, consider the Half Card™. Because of its small size, the Half Card™ fits in more computers, including all of the models we've listed here. The Half Card™ is small, so it fits in short slots or long. That means you can save your long slots for other expansion uses.

## Effortless Communication

Each Half Card™ comes with Crosstalk-XVI® communications software, by Microstuf. It's the easiest to use, whether you're a beginner or an old hand, and the most powerful. A full on-line help menu makes using Crosstalk® for the first time a snap. It can turn your PC into a terminal on a mainframe computer with its powerful terminal emulation feature. It will even operate your PC when you're not there. You can call into an information service such as The Source or Dow Jones News Retrieval, or transfer files and electronic mail, all at the touch of a button. The Half Card™ connects your computer to the world. Effortlessly.

## More Modem for Your Money

When you buy the Half Card™, you don't need anything else. The Half Card™ is a complete communications package that includes a full-featured modem and the best known software on the market. Complete easy-to-understand instructions with full technical support on installation and use. And a very competitive price. The Half Card™, with Crosstalk-XVI® software, retails for only \$549.

## Features

- 1200/300 baud auto-dial, auto-answer.
- Uses the industry standard "AT" command set.
- Runs with virtually all communications software, including Smartcom II and PC Talk III and integrated packages such as Symphony and Framework.
- Includes Crosstalk-XVI® software.
- On-board speaker and extra phone jack for easy switching from voice to data mode.
- Selective tone or pulse dialing; full or half duplex.
- Automatic answer on any ring.
- True ring or busy signal detection.

## Reliability

Ven-Tel has been making modems for 10 years. Our experience shows. Ven-Tel's Half Card™ only has about 70 parts, compared to almost 300 on other modems. We reduced the parts by building the first LSI modem chip using advanced switched capacitor technology. What that means to you is greater reliability and lower power consumption, so you can load up your PC with expansion boards and not worry about heat or power problems. And we back the Half Card™ with a full two-year warranty on parts and labor.

## You Can Buy the Half Card™ Anywhere

You can get the Half Card™ at ComputerLand, Businessland, the Genra Group, Entré Computer Centers, Macy's Computer Stores and other fine dealers nationwide. Also from Ven-Tel: the 1200 Plus™, an external modem and the PC Modem 1200™, an IBM internal with V.22 international capability.
