

Microsoft Office, Leading applications designed for Windows 95.

With Microsoft Office for Windows 95, your ideas flow seamlessly, intuitively, and work moves exactly the way you want. Microsoft Excel, Word, PowerPoint, Microsoft Access, and Schedule+ were designed to work together in more ways, in faster ways. Manage your key contacts in Schedule+ and drop addresses into Word when you write them letters. Convert a list in Microsoft Excel into a relational database in Microsoft Access. You sit down to work and, now more than ever, the software conforms to the task.

The programs also get out of your way by revealing their capabilities intuitively. IntelliSense™ technology inside Microsoft Office means each program can sense what you are trying to do and actually execute many formatting and repetitive data entry tasks automatically. Not in a "mind of its own" sort of way, but in ways that accelerate the pace of your work. (To create a numbered list in Word, you just type 1. and your thought, hit Enter, and 2. appears automatically.) If you ever have a question on how to do something, just type it in using your own words, and the Answer Wizard will walk you through the task step-by-step.

This is Microsoft Office for Windows 95. Using the power and simplicity of the Windows 95 operating system to let you focus on your work, not on your software.

To see a Microsoft Office demo and download free software, go to http://www.microsoft.com/msoffice

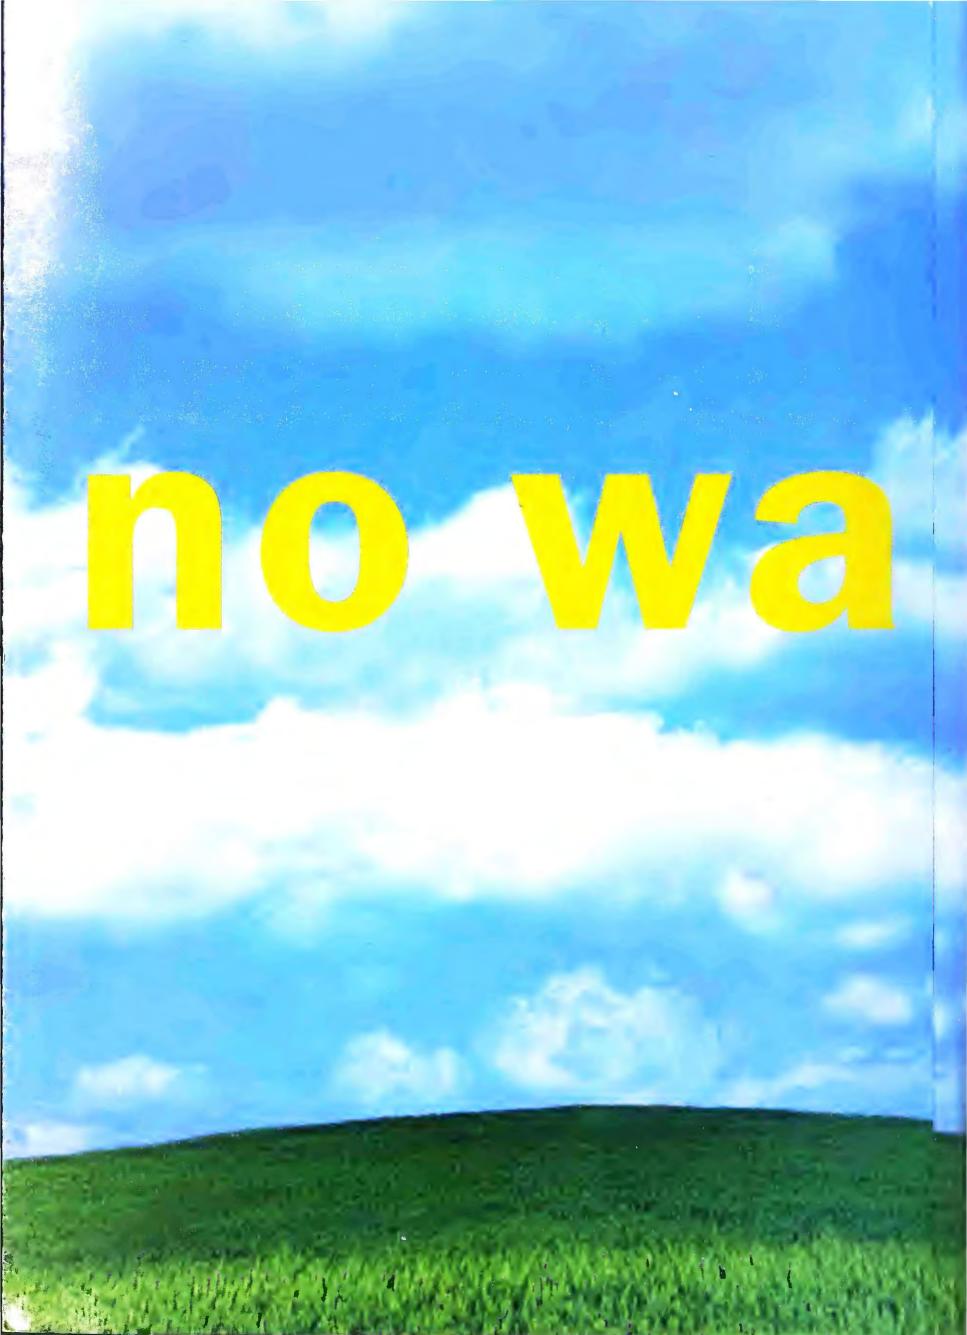

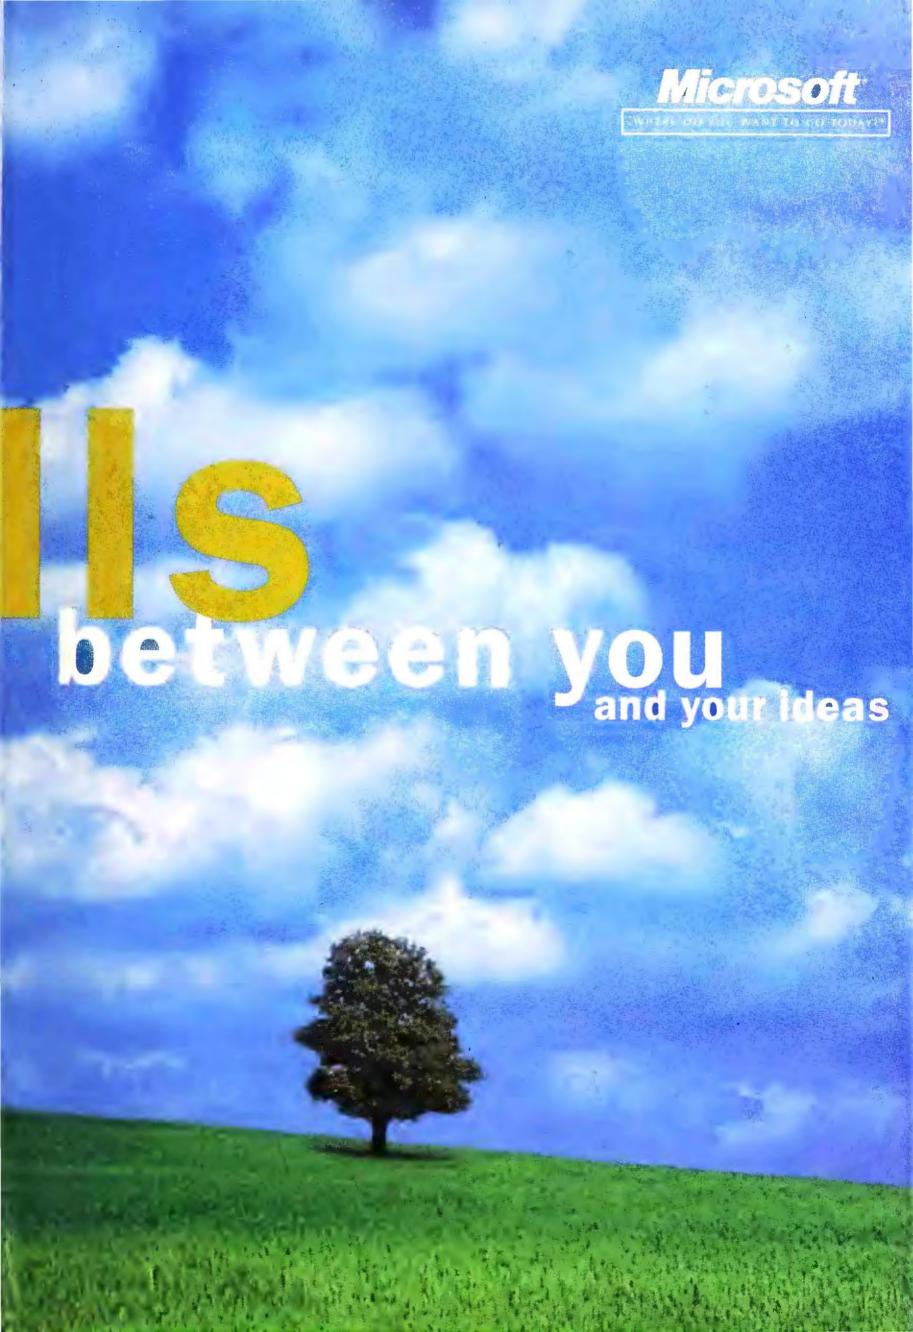

No barriera between programs.

With Microsoft Office, you don't have to make your thought process conform to your computer's process. Use the Office Binder to create a single document (a marketing report, perhaps) that uses files from several Microsoft Office programs. Combine a cover letter, financial projections, and professional-looking charts and graphs into one file. Save it and print it as one. Open it and have all the applications it uses launch at once. You spend less time going back and forth between programs. Less time working around obstacles. More time focusing on the work at hand.

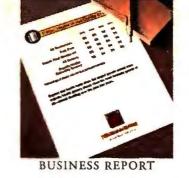

No barriers between your ideas and other people.

You can use the new Internet Assistants for Microsoft Excel, Word, and PowerPoint to create home pages on the World Wide Web. (Just download the tools from our Web site.) When you save a document, choose HTML format, and it's ready to post onto the Web. Also use Microsoft Word to communicate more clearly through e-mail or the Internet. Create your message inside Word, using its formatting options like italic, bold, indented paragraphs, and bulleted lists to emphasize your point. Then send the message without ever closing out of Word. Inside your company and out, Microsoft Office makes it easier for people to access your ideas, work together to perfect them, and collaborate on how to implement them.

The Millennia TransPort™

PC World reports in its
March 1996 issue that
"...this Pentium 120 ran
the new PC WorldBench
tests faster than any other
notebook we've measured..." The April 1996
Windows Sources says,
"The Millennia TransPort,
a bench-burner of a notebook...delivered the highest

Winstone 96 score we've ever seen on a notebook: 53.3."

Feature for feature this notebook gives you everything you need—whether you're working on the road or at your desk. According to PC World, "If you have a 75, 90, or 100MHz Pentium PC on your desk, it will fairly crawl compared to Micron's Millennia TransPort."

-PC World, March 1996

Performance that will take you where you want to
go! "Replace your desktop PC and your notebook with the
Millennia TransPort? It might just be an even trade."

—Windows Sources, April 1996

Start with blistering speed—133MHz mobile Intel Pentium® processor—add 256KB of pipelined burst cache and 16MB EDO memory and you've got all the power you need to conceive and execute the most sophisticated multimedia presentation.

Designed to work the way you do. The Millennia TransPort's unique FlexOpt™ design gives you not one but two bays for a real choice of notebook configurations. Add an extra lithium-ion battery to get more working time. Add an extra hard drive so you can store even the biggest ideas. Or drop in the quad-speed CD-ROM drive and enter the exciting world of multimedia. The choice is yours. Modular components make configuring your notebook as quick and easy as turning on your computer.

Product protection that's second to none.

Micron is so confident in the design and construction of the Millennia TransPort that it's offering an industry first—the Micron PowerSM warranty*. It includes a five-year limited warranty on the microprocessor and main memory and a three-year limited parts-only system warranty.

The March 1996 *PC World* says, "If you believe this notebook is only for engineers or lucky CEO's, think again..." Go with the notebook that outperforms the rest—the Millennia TransPort from Micron.

power of Pentium® Pro technology with speeds of up to 200-MHz, these two new systems are going to improve the forecast for your business.

Looking for the ultimate in Pentium Pro technology? The ALR EVOLUTION DUAL6 is one of the industry's first PCs to offer an immediate upgrade path to dual Pentium Pro tech-

nology. In other words, you can get the power of a high-performance RISC-based workstation for

thousands of dollars less. Its the power you need to take advantage of 32-bit operating systems such as Windows® NT, SCO® UNIX, and Novell® NetWare™ SMP.

With room for up to 512-MB of RAM and over 16-GB of storage, the EVOLUTION DUAL6 has the performance and expandability you're looking for in a small busi-

ness server. A suite of built-in Hardware Management Features prevents downtime by monitoring critical information such as CPU temperature, fan speed, and system voltage. Or just add a high performance PCI video card, and you've got the ultimate CAD, scientific or animation workstation.

Trying to fit Pentium Pro technology into a tight budget? Then check out the ALR EVOLU-TION 6. This value-packed PC offers a 150- or 200-MHz Pentium Pro chip and 16-MB of RAM for as little as \$3495 MSRP. Yet even at this low

Our engineers blew out a few pocket protectors on this one.

To say that ViewSonic's
new SonicTron™ PT810
21" (19.5" viewable) monitor has a great picture hardly does it justice. Actually, it's way better than great.
Even the most particular
CAD/CAM/CAE users
and desktop publishers
are staring in wideeyed amazement.

"How'd we do it?"

To create the latest color screen technology, our engineers went back to the drawing boards and designed the vertically flat SonicTron screen. It delivers high contrast images with heretofore unattainable clarity and chromatic color far more intense than anything close to its price range.

"Wait, it gets better."

Next, our engineers ingeniously blended an aperture grille mask and an ARAG® anti-reflection, anti-glare coating to keep the images bright, sharp and precise from center screen to corner.

Resolution is up to 1,600 x 1,200, with a refresh rate of 73 Hz. (Freely translated, that all means your graphics will look sensational.)

"It's as easy to adjust as it is to look at."

OnView[™] screen controls let

you easily make adjustments right on the screen, no guesswork.

If you've got questions, we've got answers — a live engineer with a degree, not a phone tree that leads to a prerecorded message.

We'll talk you through in plain, everyday, nontechnoid language.

Other SonicTron pluses include Plug & Play **
for automatic configuration of the graphics controller.
It's both PC and MAC® compatible and is available in a 17" (16" viewable) configuration as well as 21" (19.5" viewable). And it also comes with a limited 3 year warranty on parts, CRT and labor.

"A star among stars."

Recently, CADalyst
magazine put our PT810
SonicTron monitor
through its paces and then
told their readers what they
thought of it.

Here's what they said:
"Great image quality.
Your eyes will really
appreciate this monitor
after hours of use." And,
"It sets the standard for
image adustment and
timing storage capabilities."
As for its cons, they found
"non significant."

They concluded by giving it 5 stars, their bighest rating.

But as they say

The Best Free Stuff Online—and Then Some

A PC World editor, who will remain anonymous, is a tightwad of the finest sort—extremely frugal and equally generous. Count on him to nail the

best bargains around—whether in stores, through mail-order catalogs, or online—and to share those discoveries with all who will listen. Who better, we thought, to edit this month's cover story, "The Best Free Stuff Online"?

The result of his obsession: a bargain-lover's guide to 50 Internet sites that offer great values for the price of your time online. Included are the five best shareware libraries, plus sources of computer help, business directories and resources, the best free search tools, job-hunting and related services, and of course, a handful of sites dedicated to "freebies," the Holy Grail of die-hard bargain hunters. Among the giveaways: free Internet time, a rebate coupon for HBO, trial issues of the Wall Street Journal, and for the truly shameless, a sample tube of Rembrandt toothpaste.

For accessing the shareware, services, and yes, the toothpaste, the quickest route is through PC World Online on the World Wide Web (http://www.pcworld.com). You'll find the full article there, with hot links directly to each site to save you both time and money.

PC World Online, Version 2.0

When checking out these sites, take some time to look around the rest of *PC World*'s Web site, which has a new look, a revamped format, and some very cool interactive tools. The site now organizes all of *PC World*'s content by product category rather than by

issue, making it easier to find the information you're after. Start at *Hardware*, for instance, click next on *Hard Drives*, *Storage*, *and Backup*, and you'll pull up a list of articles in current and back issues related to the topic at hand. Even quicker is Site Search, a tool that not only retrieves a list of all *PC World* documents that meet your criteria but also ranks the documents by likely relevance to those criteria.

Other notable new features on the site include:

Daily News. The latest product developments and computer news, updated every day by *PC World* online editors Dan Miller, Richard Overton, and Sa-

mantha Parent. Look here for news stories that break after the magazine goes to press, as well as updates to stories already published.

Interactive Top 20. A customizable version of *PC* World's monthly Top 20

PC charts, one of the most popular features in the magazine. Here's how it works: First, you rank price, performance, reliability, and other PC buying criteria according to your priorities. If you like, you can also select a minimum processor speed, a particular brand, and preferences for modem rate, monitor size, CD-ROM drive, and so on. The software then generates a personalized version of the Top 20 chart, with the list of PCs ranked according to the criteria you specified. Try it—you'll be hooked.

Windows 95 Help. A collection of articles from *PC World* and *Multimedia World*, with tips and advice about the new operating system, plus links to other Windows 95 sites.

Windows 95 Tip a Day. A daily e-mail newsletter free to registered members of PC World Online.

Software Library. A collection of all

files mentioned in *PC World*, including utilities, shareware, freeware, drivers, and patches featured each month in our *Bug Watch* column.

Message Boards. Discussion forums for exchanging information, giving and getting advice, and communicating on topics of your choice with *PC World* editors and fellow PC users.

And there's more on the site and in the works, including interactive versions of the *PC World* Top 10 Printers, Monitors, Modems, and Graphics Boards charts; RealAudio columns and features; live chat; special sessions with computer industry experts and editors; and *The Annex*, an interesting new

publication that explores the intersection of technology and society. The structure of the new site will also let the online team deliver information that's targeted to your specific needs—in effect, a personal online edition of *PC World*.

So check out PC World Online on the Web, and try the RealAudio tour of the site, which should be available by the time you read this. If you like what you see, subscribe to PC World Watch, available free, for biweekly e-mail updates about new features and events at the site. AS THE COMPETITION FEVERISHLY TWEAKED AND FINE-TUNED TO GET THEIR MONITORS P TO OUR STANDARDS, WE QUIETLY WENT AND SET NEW ONES.

The New MultiSync® M Series Monitors
With Revolutionary CromaClear™ CRT Technology.

While the others have been content to merely change their monitors, we were bent on changing the entire industry. Introducing the MultiSync M Series monitors from NEC — a new generation of monitors that will forever change your expectations regarding image quality.

The MultiSync M500™ and M700™ monitors are the first to incorporate CromaClear, NEC's patented new CRT technology. Similar in design to that found in today's televisions, CromaClear lets you view text, graphics and video with enhanced focus, greater color

saturation, better contrast and increased depth and dimension. Simply put, you'll enjoy the brightest, sharpest, clearest

images in the industry – just what you've come to expect from NEC.

What's more, our Video Boost feature automatically sets the monitor screen to the optimal contrast and brightness level for viewing TV and video images. Built-in speakers allow you to customize sound for movie, music, games and voice conferencing applications. There's even a built-in microphone.

In addition to PC and Macintosh® compatibility, the MultiSync M Series monitors feature Plug and Play compatibility for Windows® 95 and are backed by a 3-year limited warranty.

The MultiSync M Series monitors from NEC. Think of them less as new monitors, more as the standard by which all others will be judged. To learn more about either the MultiSync M500 or M700 monitors, call 1-800-NEC-INFO. To have the information sent to you by fax, simply call 1-800-366-0476 and request document #157201. Or contact us on the Internet at http://www.nec.com.

THE FIRST SOFTWARE THAT HARNESSES ALPHA WAVES TO FAX DIRECTLY INTO SOMEONE'S BRAIN.

(THAT'S IN THE PIPELINE. MEANWHILE, YOU WON'T FIND A FAX PROGRAM MORE ADVANCED THAN NEW DELRINA WINFAX PRO 7.0 FOR WINDOWS 95.)

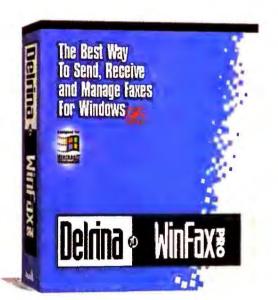

Alas, Delrina developers still haven't figured out how to fax into someone's brain after 11 P.M. (when rates are lower) without waking him or her up.

WM Fortunately, their latest release — new Delrina WinFax™ PRO 7.0 — is as easy and powerful as one would expect from the best-selling, most award-winning fax software in the world. It fully exploits new Windows® 95's 32-bit

multi-tasking, multithreading talents for true background faxing, greater speed and more. But it doesn't stop there. **WM** With the new TalkWorks™ telephony option and your voice modem, WinFax PRO 7.0 turns

your computer into an integrated in-box for faxes, e-mail and voice mail. It even takes phone messages, distinguishes

between fax and voice calls, has fax on demand and identifies callers before you pick up. **WM** And there's more. Built-in compression cuts fax transmission time (and phone bills) by up to one-third. It now supports gray-scale faxing, integrates with Microsoft® Exchange, and includes OCR, 101 ready-to-use fax cover sheets and tools to design your own.

WM You can even get WinFax PRO as part of new Delrina CommSuite™ 95, the complete, affordable, integrated communications software solution for Windows 95. WM All of which should suffice until the new alpha wave faxing program is ready. (Hmm. Perhaps if we partition your brain so that one half

can receive faxes while the other remains undisturbed...)

Choosing Your Word Carefully, Paying by the Megabyte

Word 95 Built for Speed

Thank you for "War of the Words: Lotus Word Pro vs. Microsoft Word" [March]. As an avid fan of Ami Pro, I had upgraded to Word Pro 96 and run into a brick wall. I then tried Windows 95 and Word Pro 96 for Windows 95, thinking surely Lotus would have optimized performance. The brick wall was higher and thicker. With Autosave invoked, I got to take a coffee break every 10 minutes. (I have a 486 that serves me very well for 99.9 percent of what I do.)

After reading your review, I made a quick switch to Word 95, and Word Pro is now in the trash. Word may lack a feature or two that I got used to with Ami Pro, but it runs like a charm, and both my stress level and coffee intake are back to normal.

Richard A. Chase, Corona, California

First Amendment Rights and Wrongs

n "Indecent Proposal" [Breaking News, March], you say, "While conservative leaders are trying to force an online censorship bill through Congress...." The censorship bill was introduced by the liberal Democrat Sen. James Exon, and as I recall, its most ardent supporter at introduction was the liberal Sen. Dianne Feinstein. The bill's strongest opponents included Newt Gingrich and a host of other conservatives.

While it is true that after introduction the Exon Bill picked up support on both sides of the aisle, to portray this as a conservative assault is ridiculous. Just consider that its effect is to increase government control over and intrusion into people's lives—that's certainly not a conservative concept. If you are going to place blame for the creation and adoption of this bill, directly or by innuendo, put it where it belongs.

Richard Megica, Orlando, Florida

Quest for the Best Removable Drive

n "Incredible Expanding Drives" [March], Eric Knorr rates the Sy-Quest EZ135 drive a Best Buy. His choice is based in part on "cost per megabyte." I question this cost advantage. If you look only at the cost of a single unit of the storage media, SyQuest's product does have an advantage over the Iomega Zip. Once you factor in the higher initial cost of the

SyQuest drive, however, you would have to buy many additional disks—about 1.6GB worth—before the cost per megabyte actually beat that of the Zip drive and disks. And if you foresee the need for that much storage, you might as well go for the Iomega Jaz or another such high-capacity product. Con-

sider the other disadvantages mentioned in the article, and I don't see how you can justify rating the SyQuest a Best Buy.

James B. Lenze, Roseville, Michigan

Author's response: If you factor in the cost of the interface from each company, you're right, the SyQuest EZ135 costs more. But you can actually use any SCSI-2 interface with any of these drives, including the EZ135 with the Zip interface, if you like. The article could have made that clearer.

In any event, cost was only part of the equation. The EZ135 received a Best Buy mainly due to its speed. The Zip drive is considerably slower—to the point that I wouldn't attempt running an app from it. I wouldn't hesitate to do so from the EZ135. Running apps isn't necessarily the best use of a removable, but speed is an important

factor, even if you just need to off-load your hard disk. The Zip drive's notable strengths are portability, smooth installation, and excellent software. With the EZ135, it's old-fashioned price/performance. —*Eric Knorr*

Scorching Review Revisited

read with amazement the two-paragraph diatribe by Naomi Wise regarding Betty Crocker's Cookbook CD-

ROM [HouseWare, February]. Wise is certainly entitled to her opinions, but she should at least get the few facts she purports right.

Wise asserts that the "search engine can't find recipes entered by name." In fact, there are two rather obvious ways to find a recipe by name. The first requires two mouse clicks. The main menu, and most screens thereafter, have a control panel with buttons. Pressing the Index button brings up all 1300 recipes, sorted by name. Highlight your selection, and the recipe appears. Alternatively, you can type a name or portion thereof into the Name field on the Custom Search screen. The recipe appears.

Wise also states that in the Cooking With Confidence section, "Recipe directions may start in mid-process...."

The statement is simply false. Cooking

With Confidence is an ancillary section of the CD-ROM (and the book from which it is derived) that is devoted solely to cooking techniques, such as measuring flour or using a springform pan. The section contains no recipes; how could they possibly "start in mid-process"?

Finally, Wise states that the program resizes recipes from 1 to 99 servings. In fact, it resizes from 1 to 999 servings—a minor point perhaps, but further indication of Wise's sloppy research.

Craig S. Barzso, president, Lifestyle Software Group

Author's response: Barzso is partly correct. I determined that the search engine, not the Index, was unreliable when I attempted to use Custom Search to return by name to several recipes I'd looked at previously. No luck on about half of them. As for resizing to 999 servings, not just 99—I dismissed the third 9 as a misprint, as it seems highly unlikely that somebody cooking from Betty Crocker would be catering for so vast a multitude. In any event, the "automatic" resizing is scarcely useful since its calculation is simply arithmetical, rather than culinary. Anybody can multiply 2 cups times 999, but what's important is how to adjust proportions (for example, liquids to solids), and the cooking time. -Naomi Wise

Nothing but the Truth

ordered *PC World* on a trial basis. Pretty soon I got around to reading it, and I was amazed at the difference between your magazine and the other large computer magazines I subscribe to. It's the honesty.

Most of the others are constantly telling the reader that you can trash your computer if you don't buy this or that to make it faster or more powerful. Then they fill the article so full of jargon that only a seasoned professional could understand it.

Your magazine is written with the reader in mind. I'll even tell you which article did it for me. It was "Best Upgrades for Your 486" by Eric Knorr [November]. It was easy to understand, informative, and exceptionally honest. It is refreshing to read a magazine that tells me I'm wasting my money if I buy something I don't need. Subsequent articles have said as much.

By now you should know that I am impressed enough with your magazine to subscribe. I don't need so many computer magazines—I'll quit a few of the others.

THE COMPAQ LTE 5000 CAN BE ANYTHING YOU WANT IT TO BE.

AND Now, IT CAN BE YOURS FOR JUST \$2,899.*

We figured you'd expect the Compaq[®] LTE[®] 5000 to come complete with a powerful Pentium[®] processor, 8MB RAM, a 10.4" color dual scan display and two PCMCIA slots. Standard. So what makes this notebook so exceptional?

Well, the LTE 5000 is completely modular, so you can mix and match capabilities however you like. You can add an optional QuadSpeed CD-ROM drive, an extra battery — or even an extra hard drive. Just plug your choice of interchangeable devices into the front-loading

MultiBay,™ and the LTE 5000 is as flexible as you are — no matter where you take it.

Then, whenever you need it, you can add the optional MultiBay Expansion Base, with integrated Ethernet. You'll get two more MultiBays — for additional modular devices, and the ultimate mix of power and flexibility.

You'll find that the best thing about the LTE 5000 is what you make of it. So call one of the numbers below, and make one yours today.

What Software Should We All Use?

t's the software equivalent of the Tower of Babel: Microsoft Word for Windows running in one department and Ami Pro in another, while a few holdouts somewhere down in Accounting continue to toil on WordPerfect 5.1 for DOS. And the bigger the organization, the thornier the problem—be it sharing files or getting help desk support. The solution is to establish a set of common software standards so that everyone marches to the same drummer. But how do you decide which software to go with? This month Vicki Tinsley, a microcomputer systems supervisor in the Information Systems Department of the city of Manchester, New Hampshire, shows the methods used to standardize an entire city government on a set of off-theshelf software programs. —Editor

So Many Packages, So Little Time

In 1984, the city government's computing environment was much easier to manage. We ran Burroughs B20 8086 microcomputers and used one proprietary word processor, one spreadsheet, and one database. But with the advent of 386 and 486 PCs, local area networks, Windows, and an endless sea of software choices, each of the city's 30 departments began requesting a different set of software, even for the same task. The Police Department alone used three word processors—PFS Write, WordPerfect for DOS, and Ami Pro. By 1995, our city government was running more than 15 different software packages. In my department, there were only two people to support 200 computer users all over the city. There was no way to deliver the training these users needed.

The only way we could relieve this congestion was to develop a set of software standards—a task that sounds simple enough, but one that's actually

pretty complicated to implement. If a department switched to a different application, what would it cost us to support it in time, labor, and money? And how many departments would be adversely affected?

So we set up a selection committee composed of a cross section of more advanced computer users from various city departments. We wanted to find out what kinds of applications users ran, and how much time they spent using them. What kind of documents did they pro-

duce and what features did they want? To find out, we distributed questionnaires to the departments and collected them at the end of a week.

The survey told us that the majority of users didn't have a great deal of experience with PCs. Most wanted a quick and easy-to-use word processor for basic document editing; some needed more sophisticated publishing features. The few spreadsheet users spent a lot of time creating worksheets, so we knew that getting them to switch would be tough. Most users favored a suite of applications but had no preference as to which one.

And the Survey Says...

Next, we phoned managers of business and government data processing centers to see if their organizations had a standardization policy, how it came about, what standard was selected, and why. Almost all had standardized on Microsoft Office, citing ease of support and training, Microsoft's market share, and the need to share data between departments as their primary reasons.

By that time, we had our objective more clearly in focus. Purchasing separate word processing, spreadsheet, database, graphics, and email programs was prohibitively expensive, so we decided to go with either the Microsoft Of-

fice suite or Lotus SmartSuite. (We eliminated Novell PerfectOffice because we'd had problems running WordPerfect 6.0 over our networks.)

After seeing demonstrations of each, most of us agreed that the word processor in each suite—Ami Pro (since renamed Word Pro) and Word for Windows—had comparable features and addressed our users' most common needs. We were impressed by the similarity in look and feel between Excel and 1-2-3 for Windows.

Since document exchange was our users' biggest issue, we began testing to see how easily our existing WordPerfect documents translated into Ami Pro and Word; similarly, we tried importing

REAL PROBLEMS REAL SOLUTIONS

our Lotus 1-2-3 spreadsheets into Excel.

WordPerfect documents were more difficult to transfer into Ami Pro than into Word—outlines and tables lost their formatting. Ami Pro had trouble translating tables even though Lotus provides a filter that slightly improves the translation. 1-2-3 spreadsheets over six pages long hung the computers when imported into Excel, but we had more success when we saved 1-2-3 version 4.0 spreadsheets in 5.0 or 3.1 formats and then converted them to Excel. Even so, some macros and complex formulas still didn't come through.

And the Winner Is...

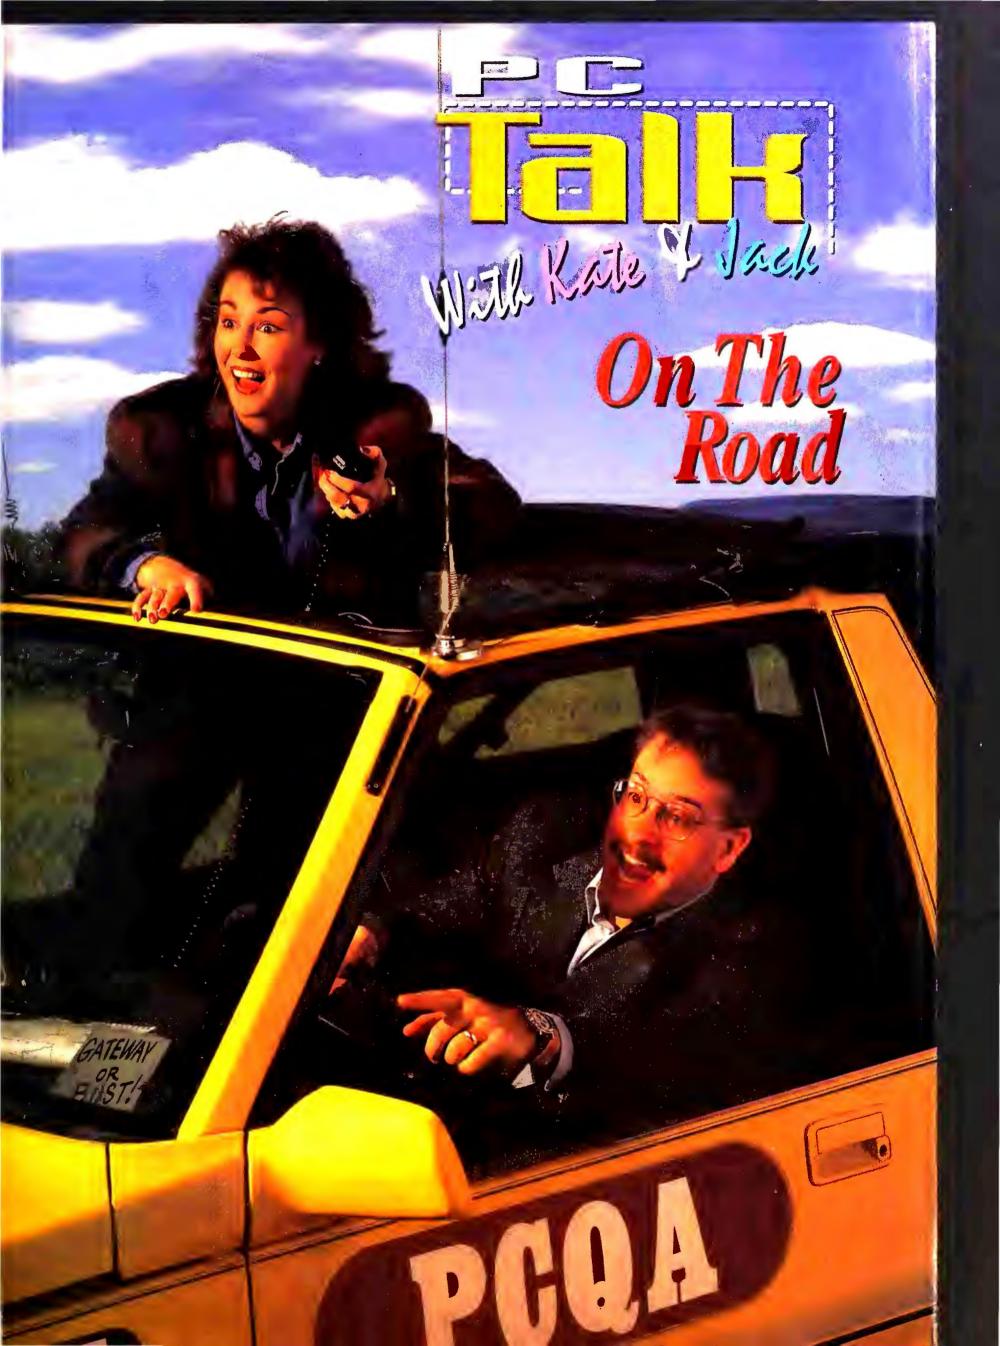

After reviewing the evidence, the selection committee decided that neither suite was a clear winner. By a narrow vote, we decided that Microsoft Office should be the standard applications set. To avoid a painful transition, our committee decided that 1-2-3 could coexist with the Microsoft suite and get phased out as more users warmed up to Excel.

We still weren't out of the woods, however. When we presented our recommendations to the city's Steering and Advisory committees, users in departments with a major investment in 1-2-3 and Ami Pro disagreed vociferously. Ultimately, everyone came around, but with the stipulation that 1-2-3 would be upgraded and supported in those departments that chose to use it.

In the end, we spent two difficult months working on setting these standards. But we predict that future software installations will proceed more smoothly, and that we'll deliver better support. My department will finally be able to do things that have been put on hold for too long, such as organizing the software library. And with an expanding PC network to support, we feel that taking the time to devise a standardization strategy will save a lot of time, effort, and headache in the long run.

Kate: Good morning and mega power from South Dakota!

This is "PC Talk with Kate and Jack — On the Road" broadcasting live from Gateway 2000® headquarters in North Sioux City, South Dakota.

Mack: When we heard Gateway had developed a whole new computer category for the entire family, we decided to jump in the PCQA mobile and check it out for ourselves. All this fresh Midwestern air has us perkier than a double espresso. Aren't you glad I scored that invite from Ted?

Kate: Yeah, yeah, whatever. You see, Jack is convinced that he's the reason we're here. Because after Gateway 2000 Chairman and CEO Ted Waitt called our show one day, Jack kept him on the line — schmoozing and hinting around that we wanted to come

up and see Gateway. We were flabbergasted when we got an e-mail later that day with Ted's personal invitation for us to visit.

And man, are we impressed!

When we pulled up to Gateway's cow-spotted mega building bright and early this morning, even Kate was speechless. We were basking in the

golden glow of the South Dakota sunrise when we were greeted by a friendly woman named Jessica. She's a sales rep

who came in early to get a jump on her paperwork, but she graciously agreed to give us a tour.

Kate: We were literally in awe as we watched thousands of energetic, excited employees begin their day.

Kate: Be patient — I'm getting to it. Amidst the hustle and bustle, we couldn't help but hear this incredible booming stereo sound. It sounded like a movie theater, and it was

coming from a

dark secluded area. Jessica let us check it out, and lo and behold, there was one of those honkin' Destination31 monitors (31-inch viewable) — just like the one delivered to the station the day we talked to Ted.

Yeah, but this was more than just the monitor, it was the whole Destination Big Screen PC including the fabulous wireless keyboard and Field Mouse™ remote! The Gateway crew had put it in an entertainment center and built a family room setting in their test lab. When we got there, at least a dozen people were lounging on the sofa and playing the sports car game The Need For Speed™

Kate: Jeff from

Jersey City is dying to get through on the phone. Fire away, Jeff!

Jeff: You've seen the Destination Big Screen PC? I've been wild to get one for my family ever since I heard Gateway was coming out with it.

Kate: Now's your chance, Jeff. The Destination Big Screen PC has blown the PC market open with a totally new category of computer. Gateway's Destination Big Screen PC is the result of the

convergence of the PC and the TV

— it will revolutionize computer use in the home. The Destination system is designed for the family room, and it is perfect for anyone who wants to share their computing experience

with others — even if it's just one other person. And it really made some cool sounds when Jack crashed into the wall with his cyber sports car!

I had just got 'er over 160 mph when a computercontrolled car in back of me took me out. The end-overend rumble was intense. Mary from Miami, you're on!

Mary: What's the deal with the "wireless devices?"

Kate: They function exactly like your standard keyboard and mouse but without the wires. That means you can use them while lounging on

the couch, walking around the room or standing in back of a group of people. Because they use radio frequency technology, these wireless devices have more range than an allstar shortstop.

Mary: Sounds like they are just as convenient as my TV remote.

Field Mouse remote, you don't have to point them at the monitor like you do with a traditional remote. Why I could even point and click through my Uncle Jake's big head!

Kate: The keyboard and mouse have all the buttons you need to control every function of your Destination® Big Screen PC. On top of that, the mouse has a button for novices and young children so they can automatically go back to the TV. And we can't forget the Destination Big Screen PC's television capabilities.

Jack That's right. Anything you can do with a TV, you can do with a Destination system — run cable TV to it, connect your satellite dish or VCR, even your laser disc system or game machine. Plus the Destination Big Screen PC is designed to work specifically with your stereo system, so you'll experience the quality sound you're accustomed to receiving from your stereo.

Mary: Can the Destination system still function as a basic computer system?

Kate: Absolutely. It has all the horses of a high-performance Pentium® processor with plenty of RAM and a huge hard drive. Plus it's all chained to a fast CD-ROM drive. Happy computing!

Jack. Tom from Tampa, you're on the air!

Tom: Mega power, Jack. I had planned to purchase a

Gateway P5-166XL multimedia system in a couple of weeks. But now I'm considering the Destination Big Screen PC. What options do I have?

Jack: Gateway had its valued customers, like you, in mind while they were designing this new product, so they came up with the Destination Big Screen PC package. It's very simple to convert a Gateway Multimedia system into a Destination Big Screen PC.

Tom: What comes with the Destination Big Screen PC package?

Jack: You get the Destination31 monitor (31-inch viewable), Destination 2MB VRAM graphics accelerator with cable-ready TV tuner, hi-fi wavetable audio card, four-channel wireless keyboard with integrated EZ Pad™ pointing device and wireless Field Mouse™ remote, and the Destination Software Collection.

Kate: Your sales rep can fill you in on the rest of the details. Thanks for the call, Tom!

We got the scoop on this hot new product, plus a ton of other stuff, when we were in the sales area this morning. The action was so intense, it sounded like the pit at the stock exchange. Hundreds of sales reps were on the phone helping customers custom-configure systems for their individual needs. If someone wanted a bigger hard drive on their system, bingo. The change was made, and the order was shot off to manufacturing. Hey, Mike from Memphis wants to talk about the burly power of Gateway's G6 machines.

Mike: Sounds like Gateway is moving into the family room big time with its Destination Big Screen PC. But don't forget their workstations. That Gateway G6-150 is one of the best workstation values in the industry — I just ordered another one for my accounting business today.

Jack: Wow! Tell us more!

Mike: I need an ultra-high performance PC with Microsoft® Windows® NT™ 3.51 to squeeze every speck of performance out of 32-bit software applications like those in MS Office 95, Professional Edition. The G6-150 was the perfect solution for my intensive computing needs — the price was the clincher at only \$3,199.

Kate: Amazing. Gateway has come out with a ton of cool stuff on their Solo portable PCs like the modular 4X CD-ROM drive, the EZ Pad[™] pointing device and now this humongous new screen. What will they come up with next? Bert from Boston, you're on!

Yow, that's an intense value, Mike! I bet the accounting crew at the station is drooling at the thought of a 32-bit screamer for such an amazing price. And don't Gateway customers now have a choice of MS Windows NT 3.51 or Windows 95 on their G6 systems?

Mike: That's right. And MS Windows NT 3.51 is available as an upgrade for only \$99 on all desktop Pentium processor-based PCs, and Windows for Workgroups 3.11 is also available on Gateway's Intel® Pentium processorbased desktop and portable systems.

You're a walking Gateway encyclopedia, Mike. You better watch out — they might recruit you for an ad. Thanks for the call!

Kate: Jack! Do you see the guy in that office over there?

What about him? He's using a Gateway Solo™ portable PC.

Kate: Yeah, but look at that

screen. The colors are vibrant, and the screen image looks extra big. Let's check it out.

Kate: Hi, we're from PCQA radio, and we couldn't help but notice the screen on your Gateway Solo portable PC.

Greg: Nice to meet you. I'm Greg from engineering. We've upped the ante in high-quality portable PCs by offering an even bigger screen. All Gateway Solo portable PCs are now available with 11.3-inch active matrix SVGA color screens — a 17% increase in viewable screen area

compared to the 10.4-inch screen.

The Gateway Solo™ S5-120XL Best Buy portable PC features an 11.3" SVGA color display, 40MB RAM, 1.2GB hard drive, modular 4X CD-ROM drive, 28.8 PCMCIA fax/modem,16-bit sound, speakers & MS Office 95 for \$5,599.

Bert: Hi Kate! I'm really excited about the larger screen size on the Gateway Solo portable PC. I'm an archeologist, and I've been looking for a portable PC I can use on my expeditions. A bigger screen will help me read my maps and diagrams while I'm out in the field. I think I'll give Gateway a call right now and order a

Gateway Solo PC.

Kate: Good choice, Bert. Tory from Tulsa, you're on!

Tory: I've had my Gateway Solo S5-75XL PC for just a couple of weeks, but I'm already nuts about it. It has all the capabilities of a desktop PC in a portable package — a powerful Pentium processor, 8MB RAM, 256K pipelined burst cache, plus 16-bit sound and speakers. And like all Gateway Solo portable PCs, it has a modular 4X CD-ROM drive that whips through multimedia apps in no time, and when I want to kick back, I can just drop in my favorite CD. All that for only \$2,899.

Kate: That's a hot price for a multimedia portable PC. And that 4X CD-ROM drive is a screamer — it's one of the

fastest CD-ROM drives available in a portable PC. Thanks for the call, Tory!

Greg: Hey, it was great to meet you, but I have to get to a meeting. If you guys want to see even more action, go over to manufacturing. That place is always hopping.

Sounds good. We're heading down there right now!

Kate: Greg was right — manufacturing is really rockin.' As we speak, I'm holding the packing slip in my hand for a PC ordered by Kay from Kansas City. She's getting a P5-166XL multimedia

system complete with an 8X EIDE CD-ROM drive and a 2.5GB

EIDE hard drive. I didn't think this stuff was even on the market yet.

Gateway just stormed the market with a whole slew of innovative new products, in addition to the Destina-

tion® Big Screen PC. And they're offering them at an incredible value to customers out there like Kay.

Kate: Let's get a word with Stan, one of the assembly technicians putting the final touches on Kay's mean multimedia machine. So Stan, what's it like to work for the nation's leading direct marketer of PCs?

Stan: I absolutely love it! It's great to be part of a company that cares about both its customers and its employees. Gateway 2000 has an unbelievable team spirit. We have a good time, but we know that our first priority is to send only quality, high-performance PCs out the door every day. We're really into quality assurance — in fact, our manufacturing facility here in North Sioux City is ISO 9002 certified.

Kate: Keep up the great work, Stan. Hey, speaking of Kansas City, Kevin from KC is on the phone. You're on the air, Kevin!

Kevin: Mega power, Kate! I listen to your show all the time. I'm a freelance writer, and I'm thinking about getting a Gateway PC. I could really use it to do research with applications like Microsoft® Encarta® and MS Bookshelf.® And I hear that new 8X EIDE CD-ROM has a data transfer rate of 1200Kb/second — twice as fast as the 4X CD-ROM drive.

You'll always get the latest technology from Gateway 2000 — stuff so new that it won't be obsolete in a few months.

Kevin: So they just build whatever I want right there at North Sioux City?

Kate: You bet, Kevin. We've seen it with our own eyes.

Kevin: Radical! I know some people who work at the Gateway facility here in Kansas City. They sound just like that guy Stan—always talking about the great team spirit.

You can't beat Gateway's great computers, built and supported by dedicated employees — you'd better give them a call today, and get your own Gateway PC!

Kate: Speaking of mega power, look who's over there by the assembly line! It's Ted Waitt.

Mo way. Ted's hanging out in manufacturing? I love it.

Kate: Ted! It's us —
Kate and Jack from PCQA's
"PC Talk."

Ted: Sure, I talked to you guys the other day on the phone. You sure didn't waste any time heading out here.

This is where all the hot news in the PC industry is,
Ted. You'll never have to ask us

twice to come visit.

Ted: Hey, you're always welcome. You guys probably help us sell a lot of PCs.

The P5-166XL mulitimedia PC features 16MB EDO DRAM, 2.5GB hard drive, 16-bit sound, speakers w/ subwoofer & TelePath[®] 28.8 fax/modem for \$3,599.

Jacks So Ted, I noticed that your office is just right upstairs, do you get down to manufacturing often?

Ted: It's my roots, Jack. I started out in manufacturing — along with sales and technical support, plus I've done a little engineering, a little advertising, a little shipping — you name it — I've done it. We all work as a team here to provide our customers with the latest technology at a great price.

Kate: You know, before we came here we knew you guys had the best PCs at the best values in the industry, and that you were a little funky — what with the cow spots and all. But after seeing the phenomenal energy of the Gateway team, now I know how you do it.

Ted: You hit the nail on the head, Kate. It's the people at Gateway that set us apart from other PC companies. They take pride in what they do, and have a lot of great ideas on how we can make our products even better. That's part of the reason I like to hang out down here whenever I can. We're all dedicated to making sure every PC that goes out the door is a quality machine. Every Gateway employee worldwide takes this responsibility very seriously.

Jack: Whoa! That's quite a concept. It's not hard to figure out why Gateway 2000 is the best.

Ted: I hope you guys have had a good time here today. Stay as long as you like, but you might want to check out the PCQA mobile.

Kate: Why's that, Ted?

Ted: Well, the folks out there painting cow spots on the building seem to have gotten a little carried away. Your PCQA mobile is now cow spotted. Hope you like black and white!

Jack: Cool! Now we're really part of the Gateway family. C'mon, Kate — let's cruise!

Desktop Movies: Build Your Own Blockbusters

"Poor Manes," my editors keep clucking behind my back. "The dope has fallen in love with a program designed to help kids create cartoons!"

True. Guilty as charged. But where they see kids and cartoons, I see would-be Shakespeares and personal Globe Theatres. Where they see mindless entertainment, I see a software tool, the kind of great equalizer the best programs always are. Think of the software genres that made the PC industry what it is: spreadsheet, word processor, desktop publisher, presentation package. What these applications have in common is that they make it possible for mere mortals to produce results-documents, financial scenarios, slides—previously achievable almost exclusively by professionals.

And that's just what a program called Hollywood (Theatrix Interactive, about \$40, 800/955-8749) does for animated cartoons. Yes, it uses funny animal characters with computer-generated voices. Yes, it's intentionally pitched at kids. And yes, it bears the same name as an unlamented, long-discontinued presentation package from IBM. But playing with it for half an hour ought to convince almost anyone that this just might be the foam on a heretofore unseen wave of the future.

By now the editors no doubt think I am foaming at the mouth. But I hold steadfast to my claim: Hollywood is something new, different, and important, nothing less than a what-if tool for audiovisual communications.

Try the program and judge for yourself. First you pick a setting and char-

acters. They appear in a window in the top half of the screen. You can drag an actor around with the mouse, and with a click or three you can change its expression, action, direction, or tone of voice. The stage directions appear on the bottom half of the screen in a "drama processor" that also lets you type in any dialogue you'd like the characters to say.

Now comes the magic. Click Play, and the characters not only enact the gestures you gave them, but speak

your dialogue in the computer-synthesized voices you chose. All of a sudden you can hear and see how dialogue and action work on the screen instead of just in your mind's eye.

Consider this: There is virtually no limit on what you can have the characters say. Write your speech for next week's presentation in your word processor, and you can copy it to the Windows clipboard and paste it into Hollywood. Now, a cartoon character in a palm-frond hat reads it at least as expressively as you would. Suddenly you realize that your jokes don't work, your explanations would put caffeine addicts to sleep, and your speech runs about three times as long as it ought to.

Palm Man Lays Egg

The Palm Man has laid an egg so you don't have to. You set about punching up the laugh lines and cutting out the deadwood. The next time Palm Man reads it, the speech seems a whole lot snappier. So is this just for kids? The interface is amazingly easy to get the hang of, and once you fool around with Hollywood, you'll probably come up with all sorts of ideas even the program's creators never imagined.

The abstraction of using cartoon characters—rather than pseudorealistic

humans that fool no one—makes it easier to have them stand in for anyone you wish, from janitors to software moguls. Though you have only ten characters to choose from, just giving one a friend's name (or an enemy's) and a halfway fitting voice helps make your production resonate with recognition and meaning. Is your boss an aardvark, an alligator, or a pig? I bet you know already.

I'm not mad, I tell you! People are going to use programs like this to cre-

ate drama and comedy in all sorts of creative ways that were simply impossible when it required rounding up actors and stagehands and key grips. Run-time versions will let you send your productions to dazzle poor souls who don't own the program. Character customization and presentation interface modules will let your on-screen persona (or Cindy Crawford's) narrate your PowerPoint slides. Someday you may even buy Star Packs featuring Glenn Close, Tom Cruise, or Big Bird. And in the not-too-distant future, when some animation software production wins an Oscar, I will magnanimously greet my editors with "Nyah, nyah. Told you so."

Hey, in Hollywood, stranger things have happened.

CONNECTING AT

The quick cure for sluggish Internet surfing and remote access is an

ISDN modem. Prices have fallen and service is easier to obtain. But pitfalls remain.

t's the end of the line for your modem. With the limits of analog phone technology, you won't see speeds much faster than today's 28.8 kilobits per second—aside from one last push by some vendors up to 33.6 kbps. If you want zippier performance from online services, the Internet, or remote LAN access, your only real option now is a 128-kbps digital modem.

"Digital modem" is a sly way of saying ISDN. You know—the Integrated Services Digital Network that's notorious for being hard to get and impossible to install. ISDN is suddenly hot because the explosion of Internet surfing and remote computing is driving up demand for faster data communications. Prices for digital modems have fallen, and when you call your local phone company to order service, it's now much

less likely to ask "ISD-what?" Even Microsoft is getting into the act, with a marketing effort to promote the use of ISDN with Windows 95 and the Internet.

To check on ISDN's viability, we examined new products from 3Com, IBM, and U.S. Robotics that start at about \$500 and can be installed by a PC user—albeit one

not afraid of challenges. Our experiences were largely more positive than in the past.

Though ISDN faces competition from other technologies, it offers one big advantage: The hardware and service are available now. Rivals, including cable modems and an alternative phone-line tech-

nology called ADSL, will not become widely available for two years (see "Cable Links, Faster Phones—Someday").

Realistic Expectations

We took four digital modems for a spin on the Internet—and they flew! In informal tests under Windows 3.1, the devices

downloaded a 359K file from a Web site in as little as 32 seconds, about one-quarter the time of a 28.8-kbps analog modem. They also loaded Web pages noticeably faster. But caveat surfer: Web connections are only as fast as their slowest link. Connect to a Web site with a slow server or a

slow modem, and your digital rig could offer all the zip of a 14.4-kbps modem.

Installation can be tricky, but it's manageable. The process consists of four steps: Ordering an ISDN line from the local phone company (a pain), connecting the modem to your PC (simple), configuring the modem with its own software (difficulty depends on modem), and configuring your software to recognize the modem (agony depends on application).

First, you call the phone company and request a service called ISDN basic rate interface, or BRI, which provides two 64-kbps channels that can behave as a single 128-kbps data pipe. Though BRI doesn't

require any special wiring, the phone company must configure switching equipment to support your hardware. This is more difficult than it sounds: We had to badger Nynex every day for a week before a line installed in our Boston office ran properly. Once your line is properly configured, expect to spend a few hours installing the modem and consulting tech support.

We recommend using digital modems for tapping into online and Internet services. Implementing high-speed remote access is more complex: Your network administrator will need to add ISDN hardware to the LAN, which can cost \$5000 to \$10,000 and must be compatible with your

Breaking News

INTEL MULTIMEDIA: A new technology from Intel adds more support for video, audio, graphics, and communications functions to the CPU. Systems with the MMX technology will rely less on third-party video and audio boards and more on the CPU, which means you'll get more PC for your peso. You may also see improved performance. Microsoft's on board, but Intel needs to convince other software and hardware vendors to adopt MMX, which should appear in Pentiums by the end of 1996, the company says. —R. O.

120MB FLOPPY: A new kind of floppy drive from Panasonic and 3M uses disks that hold about 80 times more data than today's 1.44MB disks. The drive can also read from and write to 1.44MB floppies. It'll add at least \$200 to the price of a PC, so it's not going to show up in entry-level systems, says Phil Devin, a Dataquest analyst. Compaq says some of its new DeskPros, shipping in April, will be the first to market with 120MB drives. Expect the drives in other vendors' higher-end PCs by June, Devin says. Third parties will probably start to sell addon kits this summer. The disks should retail for about \$20 each. -L. M.

digital modem. However, ISDN modems understand AT commands, the lingua franca of comm software, so they should work with—and significantly improve the performance of—communications applications, such as terminal emulation, remote control, and white-boarding programs.

In general, off-the-shelf digital modems do not support videoconferencing. Even though many videoconferencing products run over ISDN, they typically employ proprietary hardware that can't also be used for Internet and remote access applications.

Latest Digital Modems

The newest digital modems are simpler to use than earlier-generation ISDN terminal adapters, which require a special device called an NT-1 to connect to the ISDN phone network. The two external products previewed here both have the NT-1 built in. Many ISDN modems also include ports for attaching analog modems, fax machines, or phones. This is ideal for small or home offices because you can use one 64kbps channel for data and the other for phone and fax, instead of obtaining two or more separate phone lines, an inconvenient and often costlier option. Each channel can even have its own phone number.

Of the devices we examined, the 3Com Impact ISDN External Digital Modem was the easiest to install and use. To set it up, you enter on a single screen four ISDN

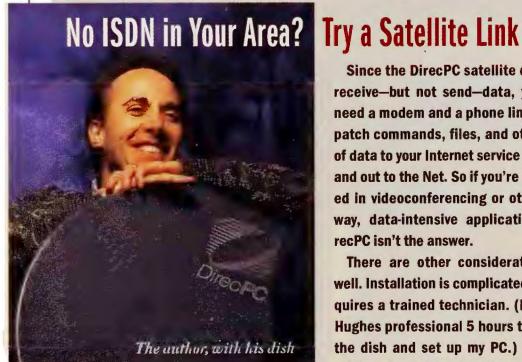

SERVICE TO THE SUBURBS: Analyst Sanjay Mewada expects ISDN to become widely available this year, except in rural areas.

configuration settings provided by the phone company. Click the Configure icon, and the Impact tests your ISDN line. Another nicety: Once the modem is configured, you shouldn't need to revisit the setup screen. Some other products require you to load different protocols when you change applications.

The \$449 Impact determines the correct protocol for you and invokes it automatically. (Many PC apps and CompuServe require V.120; Internet access requires PPP, which now tops out at 64 kbps; and the new Multilink PPP supports a full 128 kbps.) A \$749 model includes a built-in 14.4 analog fax-modem that lets you connect to non-ISDN users.

U.S. Robotics' external Courier I-modem was also easy to set up. The manual is the simplest we saw, and as with the 3Com Impact, configuration occurs on a single screen. The \$895 product also emulates a 33.6-kbps modem, which means it would be a good choice for anyone who wants to both upgrade their modem and add ISDN capabilities in one shot. Currently the Imodem doesn't support the Multilink PPP protocol, so Internet performance is limited to 64-kbps speeds. (The vendor expects to offer a downloadable software upgrade for Multilink PPP in April.)

The only internal card we looked at, the IBM WaveRunner Digital Modem ISA Adapter, offers various trade-offs. On the upside, internal devices tend to be less expensive than external units. They also can be faster, although we didn't observe this in our informal tests. (External devices are limited by serial port speed, which typical-

f your local phone company doesn't offer ISDN-or if you're looking for an even faster Internet connection-DirecPC is one option. Priced at \$1149 including installation, Hughes Network Systems' DirecPC consists of a 24-inch satellite dish, an ISA bus board for the PC, and Windows software.

Since it lets you download files and Web pages at speeds of up to 400 kbps, DirecPC makes an ISDN modem seem downright poky by comparison. But that ultrafast pipeline from the Net won't help you when a Web site is jammed.

Since the DirecPC satellite dish can receive-but not send-data, you still need a modem and a phone line to dispatch commands, files, and other bits of data to your Internet service provider and out to the Net. So if you're interested in videoconferencing or other twoway, data-intensive applications, DirecPC isn't the answer.

There are other considerations as well. Installation is complicated and requires a trained technician. (It took a Hughes professional 5 hours to install the dish and set up my PC.) And the pricing plan is based on the amount of data downloaded, not on the number of hours spent online, so you pay either \$15.95 a month for 30MB of "activity" (downloaded data) or \$39.95 a month for 130MB-fairly pricey either way. Both options provide added services, such as CNN Headline News (sent via the Hughes satellite to your PC) and a stock ticker service from Data Broadcasting Corporation. -Jeff Bertolucci

ly tops out at 115 kbps; internal devices bypass the serial port for full 128-kbps performance.) The product uses IBM's Mwave digital signal processor (DSP) technology so it can either act as a digital modem or emulate a 14.4-kbps analog modem.

However, setup is a challenge that should be attempted by only the hardiest of souls. As with other non–Plug and Play internal modems, you may have to set IRQs and DIP switches; the WaveRunner's procedures for setup and testing do little to simplify the process. The software comes on three disks and requires you to enter data on multiple screens. The manual is obtuse and riddled with jargon. And IBM's support was weak: When we called the company after NetManage Chameleon failed to recognize the WaveRunner, a tech

support representative said we'd have to fork over \$35 for assistance with software problems—or call NetManage. The \$511 WaveRunner requires an external NT-1 interface, which adds another \$150 to the price. It doesn't work with Win 95 yet.

IBM also sells a PC Card version of the WaveRunner. By using the same DSP as the ISA card product, it too can emulate a 14.4-kbps modem, and it also includes a true 28.8-kbps analog modem. Thus, when you're in the office, you plug the \$558 card into an NT-1 and you have 128-kbps performance. When you travel, bring only the card and you've got a 28.8 fax-modem.

Down the Line

ISDN service is becoming more widely available. It's now an option for virtually all city dwellers in the United States and 70 percent of those who live or work in suburban areas, says Sanjay Mewada, an analyst at Yankee Group Research. He estimates that by next year, service will be available to anyone in suburbs who wants it. However, availability in rural areas is spotty and is expected to stay that way for some time.

Increased access means that more Internet service providers and online services will offer ISDN connections. Currently Internet ISDN service is widely available

PENTIUM PRO BUG: The Orion chip set used in early Pentium Pro PCs has a bug that causes systems to slow down during processing. Unlike the math flaw discovered last year in the Pentium chip, this defect does not affect data integrity. Intel has released a revised Orion that fixes the problem, says spokesperson Howard High, and most systems using the Orion chip set already include a work-around that makes the bug invisible to users. But customers who purchased Pentium Pros from small vendors should ask if the work-around is included. —G. M.

Tips to Avoid Aggravation

- **1 Do your homework.** Before buying a digital modem, call your local phone company to determine if ISDN service is available in your area, and check costs. Then, verify that the applications and online services you want to use support ISDN.
- 2 Check under your PC's hood. External digital modems require a serial port with a 16550A or faster UART chip and appropriate driver software, which is typically bundled with the modem. (High-speed serial port cards cost about \$50.)
- **3 Be prepared.** Have your PC, modem, serial port, and serial port driver and application software installed before the phone technician shows up—and test the line before the technician leaves.
- 4 Cry uncle. Don't waste a lot of time trying to figure things out. Once you're stuck, call for help. Try your modem vendor first, then your Internet provider.

from both national and regional Internet providers. Among major online services, the Microsoft Network and CompuServe are the leading supporters of ISDN. Prodigy is testing ISDN connections, but they're not widespread. AOL doesn't offer ISDN but may add it sometime in the future.

As for pricing, expect ISDN service to remain in the range of \$34 to \$200 for installation, with monthly charges from \$20 to \$80. (Prices vary depending on myriad factors.) ISDN modems should continue to drop in price: For instance, Cardinal Technologies has announced an internal modem with built-in NT-1 for only \$199.

Perhaps the best way to get started with ISDN is a package that offers one-stop shopping for hardware and ISDN services. For instance, you can walk into a Fry's Electronics in California, purchase a 3Com digital modem, and order both an ISDN

line from Pacific Bell (\$34 for installation and \$24.50 per month, plus per-minute charges) and ISDN Internet service from

InterNex Information Systems (\$14.95 for 15 hours). Expect to see more such ordering arrangements offered elsewhere this year.

ISDN is more viable than ever before. If you do a lot of Net surfing and are willing to endure some hassles getting set up, it's definitely worth the money. But hang on to your trusty old analog modem—or buy an ISDN modem with analog support—to reach people and services that can't or won't upgrade to ISDN.

he cable and phone companies are working on technologies that are five or six times faster than ISDN. But don't hold your breath: Ultrafast phone service and cable modems won't be widely available for at least two years.

Cable modems will also offer blazing speed-but with limita-

tions. These devices, which connect PCs to cable TV wiring, now support data rates of up to 10 mbps, with 30-mbps speeds planned in the future. One hitch is that you have to share that bandwidth with your neighbors, which could result in actual performance closer to 500 kbps. Also, data you send from your home travels at only about 128 kbps. A dozen cable modem trials are under way in the United States and Canada. But studies show that fewer than 10 percent of American homes are now served by cable systems capable of handling two-way communication. —Owen Linderholm

Cheaper Flat Panels on the Way

quality color notebook screen never fails to elicit oohs and aahs. With vibrant colors, crisp lines, no flicker, and virtually no potentially harmful emissions, flat panels might be more commonly packaged and sold for desktops if not for their sky-high prices.

Now monitor giant NEC is starting to

bring the cost of desktop liquid crystal displays closer to earth. The new 12-inch NEC MultiSync LCD200 sells for \$3999 and supports resolutions of up to 1024 by 768; the 13-inch MultiSync LCD300 costs \$5999 and tops out at 1280 by 1024. These displays may sound small, but in fact a 12-inch LCD has very near the screen area of a 14-inch CRT monitor, and the LCD300 comes similarly close to a 15-inch CRT.

Meanwhile, Sceptre, a small vendor of notebooks and monitors, has unveiled a 12-inch display with 800 by 600 resolution priced at only \$1999—incredibly low for a flat panel. The company also plans to release 13- and 15-inch models by summer.

Still, \$2000 is more than eight times what you'd spend for an ordinary 14-inch CRT. The expense is inherent in the technology: The NEC and Sceptre displays are active-matrix LCDs, the same type used in top-of-the-line notebooks. Sceptre's less expensive CDT-1112T is little more than a 256-color laptop screen packaged for the desktop, but NEC's products incorporate a number of innovations—in particular, the ability to display 16.8 million colors.

Wayne Hinson, vice president of NEC's MultiSync division, predicts that by the year 2000, the number of active-matrix desktop displays sold will match the number of 17-inch monitors. Others are less sanguine, arguing that active-matrix LCDs won't make economic sense for main-stream desktop PCs in the near future.

THIN AND CRISP: NEC's new flat-panel desktop display has razor-sharp 1024 by 768 resolution—and costs a cool \$4000.

Virtually all Japanese monitor makers, plus Texas Instruments and Motorola, are also working on *field emission displays*, bright, flat screens that are a cross between CRTs and LCDs—and priced somewhere in between. "Flat-panel is the biggest wild card in the display business," says David Mentley, an analyst for Stanford Resources.

P-133 Notebooks Rival Desktops

True desktop performance has just become portable. Micron and Dell are now offering 133-MHz Pentium notebooks that are not only the fastest we've ever tested, but also the first that actually match the performance of their desktop counterparts. The Micron Millennia TransPort P133c and Dell Latitude XPi P133ST beat the average speed of other 133-MHz Pentium notes we've tested by around 25 percent.

Both systems sport the latest 133-MHz Pentium chip, which is designed specifically for notebooks. The chip runs cooler, draws less power, and is smaller than desktop Pentium CPUs. These systems also include new chip sets, featuring more efficient PCI implementation. This one-two punch gives the notebooks their zip. By contrast, slower 133-MHz portables we've tested use Intel's standard desktop version of the CPU and older chip sets.

The Dell and Micron systems offer beautiful 11.3-inch SVGA active-matrix screens, removable hard drives in the 1.2GB range, and infrared ports. But the similarities end there. We were most impressed with the Millennia, whose base configuration includes an array of performance-enhancing hardware and multimedia features. The \$4899 unit we tested came with 16MB of EDO RAM and 256K

of pipeline-burst cache. Its sleek, modular design boasts two expansion bays, either of which can house a floppy drive, hard drive, or quad-speed CD-ROM drive (all included), or an extra battery. Another nice touch is an S-video port, for connecting a video camera, and an NTSC output port, for hooking up to a television.

The Latitude offers the basics, such as EDO RAM and 256K of cache, but fewer extras. We did like the new optical trackball, which is larger than the norm and gives a noticeably smoother ride than the trackball in older Dell units. The lithium-

ion battery powered the notebook for a tolerable 2.5 hours in our tests. Though this battery life isn't much compared to that of slower notebooks, it's still better than what we've seen in other 133-MHz Pentium portables. One performance note: The \$5199 system we tested had 24MB of RAM, which we estimate enhanced its benchmark performance by less than 10 percent over the same system with only 16MB of RAM. Base prices start at \$2999.

More 133-MHz Pentium notebooks are on the way. By the end of March, Digital plans to ship the \$4699 HiNote Ultra II CTS 5133, which has a 10.4-inch SVGA active-matrix screen and 1.35GB hard drive. HP will follow with the Omni-Book 5500 CT 5/133 Model 1350, which features a 12.1-inch SVGA active-matrix screen, built-in 4X CD-ROM drive, 1.35GB hard drive, and S-video and NTSC output. What's Ahead for Notebooks

obile systems may be catching up to their desktop cousins, but engineers aren't resting on their laurels. Here's a sampling of new technologies set to arrive in the next year.

Brighter, less energy-hungry screens: Sharp has unveiled its Super High Aperture Ratio LCD, which is 35 percent brighter with no added battery drain. By reducing the size of the screen's transistors, Sharp lets more light shine through each pixel. The company will use these screens immediately in some of its 9000 series notebooks; other portables using them could come to market this spring.

Lighter, more powerful batteries: Keep your eyes peeled for lithium-ion batteries made of solid polymer material. This flexible medium can be shaped to fit in your notebook as unobtrusively as possible, with widths as narrow as a quarter of an inch. Lithium-ion polymer weighs 20 percent less than alternatives with comparable energy de-

livery. One of the first players in this field is Ultralife Batteries, whose first products should become widely available this year.

Faster PC Cards: One performance hurdle for notebooks is I/O speed. The 16-bit PC Card specification is a bottleneck for add-Ins such as network Interfaces and removable hard drives. But a new 32-bit Card Bus spec has been approved, and in the second half of 1996 you'll see notebooks supporting the faster standard.

Full-screen, full-motion video: The new Zoomed Video Port standard brings highquality video to notebooks while lightening the load on the CPU. ZV Port cards bypass the PCI bus, making it easier for notebooks to play back MPEG-1 and MPEG-2 digital video. —Eric Hellweg

Telecom Reform: Next Steps

ince the Telecommunications Act passed in February, the public's attention has focused on the parts of the law aimed at curbing "indecent" material on the Internet—provisions that are already being challenged in court. But what will other parts of the act, the most sweeping overhaul of telecom policy in 60 years, mean to you? Will deregulation and competition bring more choices and lower prices for phone service, cable TV, and Internet access? Or will a few giant companies dominate the market, damping incentive for innovation and price cuts?

Varying opinions are already emerging. "More people are going to have access to high bandwidth [networks] than ever before," says Marc Andreessen, vice president and cofounder of Netscape Communications. But phone and cable firms spent millions lobbying for the law. "And they didn't hire an army of lobbyists to make rates go down," says James Love, director of the Consumer Project on Technology.

The act will allow vendors to merge, invade each other's territories, and offer one-stop shopping for phone, TV, and Internet service. This could be a great convenience—or it could mean that a few companies control not only access rates, but also

online and video content. Over the next 12 months, you can expect a flurry of business and service announcements. The land rush is already under way: US West plans to buy Continental Cablevision, and AT&T has unveiled a nationwide Internet service priced at only \$20 per month for unlimited access.

Many details of the new world order haven't been finalized: Some 80 issues, such as

how much local phone companies can charge other firms to use their networks, sit before the FCC for rule making during the next two years. Also, some lawmakers are pushing for follow-up legislation to refine the telecom policy. "You can expect to see some of the unresolved issues back on the table," says Rep. Rick Boucher (D-Va.), who plans to revisit the law this summer.

Competitive Long Distance

The first effects of the legislation will likely appear on your long-distance phone bill, when the regional "Baby Bell" companies enter the long-distance market. The new

BREAKING THE MONOPOLY MIND-SET: Activist Audrie Krause doubts the new law will spur true competition.

law allows them to sell long-distance service outside their operating regions now, and within their regions after they've dismantled barriers to local competition from other firms.

The Baby Bells will have to offer low long-distance rates to lure customers, says Ken Robinson, a Washington lawyer and editor of the *Telecommunications Policy Review* newsletter. "I can't believe the long-

distance rate increases we've been seeing since 1993 will continue," he says.

The law also allows AT&T, MCI, Sprint, and cable companies to compete in the local phone market. MCI is striking fast: It has already unveiled local service in Boston, and

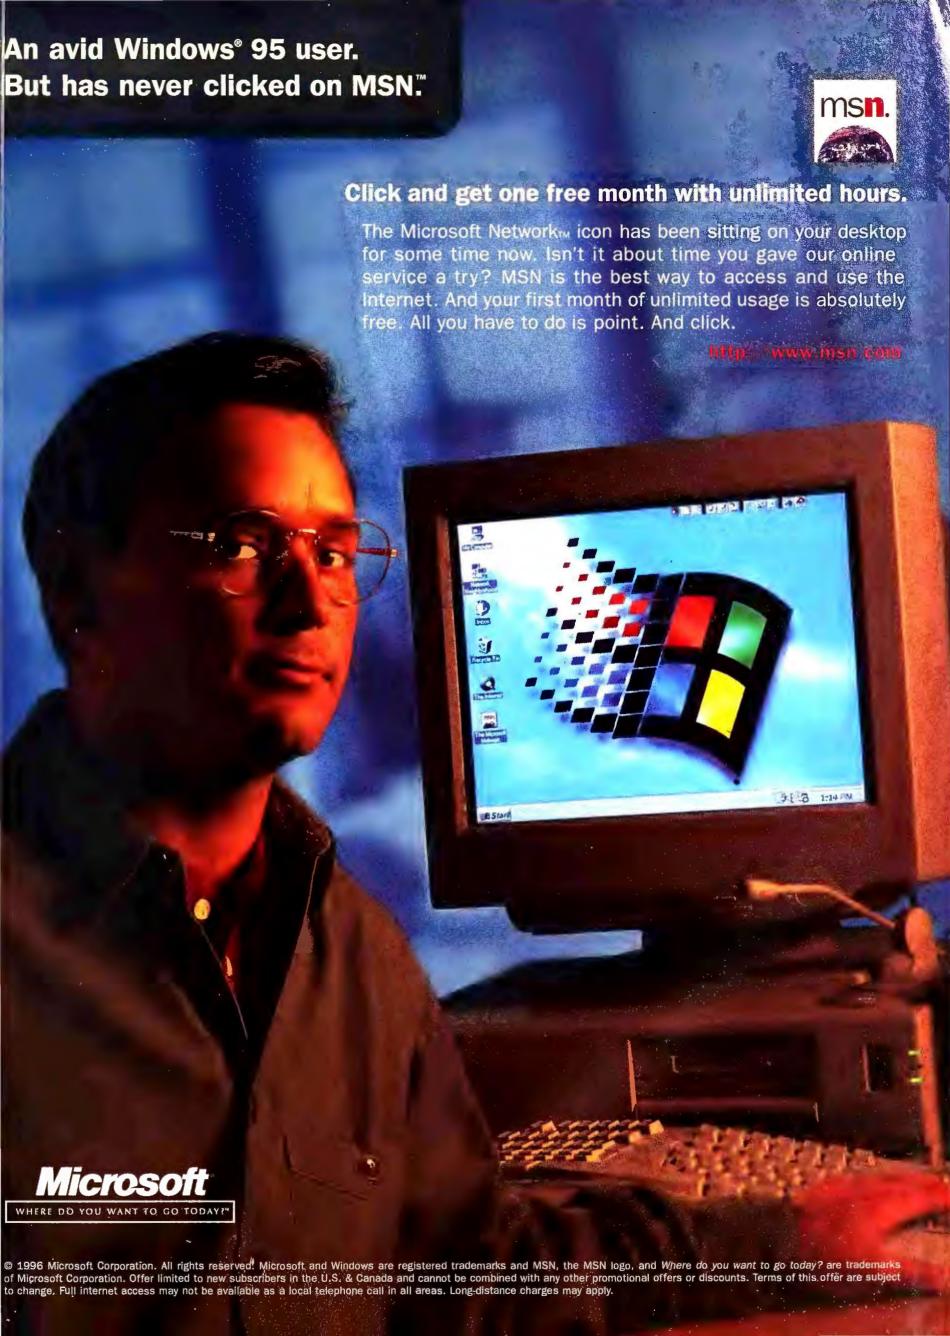

analysts expect it to set up service in 25 other cities this year. AT&T will weigh in by late summer or early fall, offering "very competitive" rates, says company spokesperson John Heath. AT&T also plans to offer bundles of local, long-distance, cellular, and satellite TV entertainment services, Heath says.

On the other hand, cautions Jeff Kagan, president of telecommunications market researcher Kagan Telecom Associates, "in the short term, the Baby Bell companies may actually raise local service prices to help pay for other services they want to start."

How the New Telecommunications Law Will Affect You

Long-distance phone service	Regional Bell operating companies can sell long-distance outside their areas now and inside their areas once local competition exists. Expect lower long-distance rates within months.		
Local phone service	Long-distance carriers and cable companies can offer local phone service. AT&T will provide a good deal of local service by fall; cable companies will start service in limited locations next year. Local rates could actually rise until competition is In place.		
Cable TV	The law eliminates cable TV rate regulation within three years. Cable companies need to make money for other ventures, so rates will probably rise, starting in small communities.		
Internet access and online content	New choices are on the way. Telephone companies will push ISDN and ADSL service; cable companies will offer cable modems in limited areas this year. You'll get faster Web surfing, but vendors could gain greater control over online content.		
Media concentration	Eases restrictions on the number of TV and radio stations a company can own. Increases the likeli hood of consolidations and mergers among phone and cable companies. Both camps want to sel you phone, multichannel video, and Internet access.		
Digital broadcast spectrum	Designates airwaves being saved for digital television as free for TV networks. Citizen groups and some legislators are pushing for this spectrum to be auctioned. Congress will likely debate the topic again this summer.		
Censorship	Requires TV manufacturers to install the "V chip" so parents can block children from violent or sex- ual programming. Prevents online services and users from posting "indecent" material that kids		

could access. The provisions face court challenges from corporate and civil liberties plaintiffs.

What about customer service? Over the next two years, communications companies will fight hard to woo customers-so you may see better service, Kagan predicts. But Audrie Krause, executive director of Computer Professionals for Social Responsibility, disagrees. "As oversight lessens, service will dramatically decline," she says. "If there were true competition, those who provide good service at a reasonable cost would succeed. But these companies have a monopoly mind-set."

GETTING INVOLVED

For more information about the telecommunications bill and groups working on this and other issues, check out the Telecom Information Resources on the Internet site (http://www .spp.umich.edu/telecom-info.html), which has a huge list of links. Start voicing your opinion regarding the kind of information superhighway that you want. "After all," says the CFA's Bradley Stillman, "you're a taxpayer, so you should be involved in the decision."

New Options for Internet Access

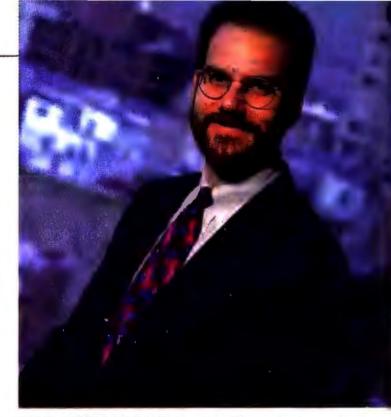

Depending on where you live, you may also see new choices for Internet access this spring. Given that analog modems are running out of steam, phone companies will heavily market ISDN—and invest in

ultrafast ADSL (asymmetric digital subscriber line) technology (see "Cable Links, Faster Phones-Someday"). Cable companies also want a piece of this market, luring customers with modems that attach to your CATV coaxial cable and offer data communication at rates of up to an ethernetlike 10 mbps—and someday 30 mbps. But nationwide, cable modems won't take off for at least 18 months. The biggest roadblock: Cable systems have to be revamped to support not just video, voice, and data sig-

nals that go into subscribers' homes but also "upstream" data from users. Less than 10 percent of the country now has such a cable infrastructure, and until the systems are upgraded, cable companies can't provide two-way services over their wires.

One troubling aspect of the new law, say observers, is its abdication of the requirement that telecom providers must be "common carriers" whose wires transmit any content. Even if the indecency provisions of the law are repealed, companies may not act like common carriers in the future. For instance, in a Time Warner cable modem trial, customers pay \$15 a month

RESTRICTIONS ON ACCESS could stifle content, worries Bradley Stillman of the Consumer Federation of America.

for basic access to selected Web sites (including those for several Time Warner magazines), but full Net access costs an extra \$10 per month. The effect of such pricing schemes could stifle content, warns Bradley Stillman, telecom policy director for the Consumer Federation of America. "The cable company would effectively be the Internet service provider, and they will want to control content," he says.

Rep. Boucher tried but failed to insert an "open platform" provision in the telecom bill to give competing programmers access to future networks. As with many details of the law, refinements are inevitable. "I'm not through with that issue," Boucher says.

The Web Browser Virtual Worlds Presage 3-D Future

hese are pioneer days for 3-D worlds, and in them we may glimpse the future of interactive computing. Why use menus and icons when you could navigate through a mockup of your office—or the local mall? The oldest cyberspace station, Worlds Inc.'s Worlds Chat (http://www.worlds.net/), attracts a crowd as blzarre and diverse as the cantina in Star Wars. The company's new AlphaWorld is a community where netizens claim land and build on it with objects; we might see banks and shops there someday...The newest entrant is Black Sun Interactive, whose PointWorld (http://www2.blacksun.com/pointworld/ index.html) renders in 3-D the Point Communications Web site reviews. To pick a site, you maneuver to a virtual building and click on it. You end up at normal Web pages, but this use of virtual reality could set the pace for fronting databases with 3-D...Utopia, from Onlive Technologies (http://www.onlive.com/), adds sound: Instead of typing what you want to say to people, you speak through a mike and your voice issues forth from your on-screen stand-in. Utopia could take group conferencing to a new level. -Richard Overton

Powerful Pentium-166s Come Out and Play

ruary issue (see "Unripe Today, Sweet Tomorrow," Top of the News), the second round of 166-MHz Pentium computers shows off the processor's power. We looked at the Dell Dimension XPS P166s—which sports Dell's new chassis design—and the AST Bravo MS 5166. Both of these systems came loaded with lots of new features and components.

Desktop's New Dimensions

The new Dell Dimension XPS P166s brings state-of-the-art technologies to the desktop. For starters, Dell says that the Dimension's combination of Intel's 430VX PCIset (formerly known as the Triton VX chip set) with SDRAM (Synchronous DRAM) is faster than the same chip set with Extended Data Out RAM.

Our tests on a preproduction model gave the system an overall PC WorldBench score of 202, which isn't bad; it's

CHASSIS FULL OF CHOICES: Dell's redesigned chassis has better on/off button placement and extra drive bays.

about twice the speed of our Dell P75t reference system. The first Dell P166 that we examined, a shipped-model Dimension P166c with 32MB of RAM, rated a WorldBench score of 208. With additional tweaking to the system, the XPS P166s machine should really fly.

The computer we looked at came with a 2.5GB EIDE hard drive, 16MB of SDRAM, and 512K of secondary cache. SDRAM is a new type of memory that's supposed to be faster than EDO RAM, which is standard in many high-end systems these days. Dell also moved to the use of DIMMs (Dual Inline Memory Modules), small memory boards that hold twice as much memory as SIMMs—you can use one 16MB DIMM module instead of two 8MB SIMM modules in your PC.

Additionally, Dell includes the Creative Labs Vibra 16 chip for built-in 16-bit FM synthesis sound, which can be upgraded to 32-bit wavetable with a Creative Labs sound card add-on (for \$50). The base model includes the Number Nine Imagine I, but if you don't mind the extra cash outlay, you can also have Number Nine's Imagine II card (\$50) onboard for high-end video graphics capabilities.

The Dimension XPS P166s will be the first Dell system to show off its redesigned chassis. Externally, you'll see niceties like a big on/off button in the center of the case and a larger reset button. These are terrific changes from the current buttons, which are so close to the 3.5-inch floppy drive that it's easy to turn off your PC when you try to pop out a disk. And the Dimension gives you room to grow: Two 5.25-inch bays and three 3.5-inch bays are stacked along the front. A 6X CD-ROM drive is standard (Dell plans to move eventually to an 8X drive).

Bravo! Speed and Sound in One

AST Computers chose to use EDO RAM, with 32MB of RAM (expandable to 192MB) in the preproduction system we tested. The new AST Bravo MS 5166 uses Intel's 430HX PCIset (formerly known as the Triton II chip set). Both the 430HX PCIset and the 430VX PCIset feature Concurrent PCI, which allows PCI and ISA buses to execute transactions simultaneously.

The Bravo includes 256K of pipeline-burst secondary cache and integrated 64-bit ATI VT graphics support. A 2GB hard drive, a 6X CD-ROM drive, three half-height 3.5-inch floppy drives, and two half-height 5.25-inch drive bays are also standard. Shipping Bravo systems will come with 16MB of EDO RAM.

Multimedia support includes 16-bit Sound Blaster—compatible sound and stereo headphones. The headphones include a built-in microphone.

The system we examined zipped through the PC World-Bench tests with an overall score of 207. With final tuning to the system's components, you can expect the AST (which should be available this month) to be faster, even with 16MB of RAM.

Choosing the Dimension or the Bravo will depend on what kind of options you're looking for in a new desktop PC. Certainly both will provide quick processing power and a lot of memory, but the AST is several hundred dollars less.

The Future of PDAs Just Got Brighter

The personal digital assistant has been the Sharon Stone of computers—fun, sexy, and not to be taken seriously. But no longer: Stone recently received her first Oscar nomination, and several new PDAs, with such features as screen backlighting and enhanced data communications and synchronization, are on their way to earning some respect, too.

Of the three new PDAs I evaluated—Apple Computer's MessagePad 130, Palm Computing's Pilot, and Sharp's Zaurus ZR-5800—the Pilot is bound to receive the lion's share of the limelight, even though it's the only one without a backlit screen. (The backlight is best described as "Ghostbuster green" for the Sharp and Apple devices.)

Pilot Flies Right

If nothing else, the Pilot gets the award for Highest Gee-Whiz Factor: Designed to be an extension to the PC, the Pilot is not much bigger than a deck of cards, runs on two AA batteries, slips easily into a coat

THE PILOT'S BUTTONS make it easy to launch applications.

THE NEW ZAURUS ZR-5800 features a backlit screen and enhanced connectivity, as well as a PC Card Type II slot for added storage.

pocket, and weighs a puny 5.7 ounces. The street price—\$299—is also blessedly small.

The Pilot includes a handful of built-in apps, including a calculator, to-do list, address book, and calendar. It also comes with a Windows-based program with which you can synchronize the PDA's data. But your PC's PIM or contact files must be converted to .csv, .tsv, or .dbf formats before downloading, a tedious process. A number of software companies, such as Starfish Software and IntelliLink, have announced programs for the Pilot that promise direct links to their Windows counterparts. The Pilot has a pen-based user interface and uses Graffiti handwriting recognition software.

Apple Discovers Backlighting

Meanwhile, Apple's 1-pound (without batteries) Message-Pad 130 gets the nod for Most Improved PDA. Among the 130's new features is a nonglare screen with much-welcome backlighting that significantly

improves your ability to see what you're writing in a darkened conference room. Conveniently, you can set the backlighting to remain on or to shut off after a preset time.

In addition, the MessagePad 130 now includes 2.5MB of RAM, which should make it easier to multitask. It also includes one PC Card Type II slot. It runs on four AA batteries for between 40 and 60 hours. Be forewarned, though: With a street price of \$799, the MessagePad 130 is one of the most expensive PDAs around.

Zaurus Connectivity Looks Sharp

Sharp's pricey Zaurus PDAs take home Best Supporting Actor. The Zaurus ZR-5800 is \$649; the ZR-5800FX, which we did not test, is \$749 and includes a 2400/9600 fax-modem.

For the latest Zaurus, which runs on two AA batteries, Sharp includes preloaded yersions of CompuServe, AT&T Mail, and pager software. Also available is the Zaurus Applications Partner (\$149), a soft-

ware/infrared adapter bundle for shuttling files between a PC and a Zaurus.

This PDA weighs less than a pound. With its miniature QWERTY-style keyboard, penbased user interface, and a host of built-in applets, the Zaurus is more like a bonsai version of a PC than a typical PDA.

Pocketful of PDAs

So which PDA is for you? Choosing a device depends on your personal needs. If a simple organizer will suffice, the Pilot is the way to go. For broad functionality, you may prefer the MessagePad. The Zaurus is the one for minor computing chores and lots of connectivity options.

HP's ScanJet 4p Scans Large and Small Color Jobs Easily

he new ScanJet 4p from Hewlett-Packard won't win any awards for breakthrough technology, but it may win the hearts of mainstream users who want a reliable yet low-cost flatbed color scanner for common office tasks.

With the ScanJet 4p, you can scan images in 24-bit color, gray scale, and black and white, or use the bundled optical character recognition software to convert scanned text into editable text. Rated as a true 300-dots-per-inch scanner, the product can also scan images up to 1200 dpi using interpolation, a software technique that inserts additional pixels to simulate a higher resolution.

The ScanJet 4p provides a much-needed alternative to HP's higher-end ScanJet 4c, a 30-bit, 600-dpi flatbed scanner that costs about twice as much as the ScanJet 4p (\$995 versus \$499). For the average business user who occasionally wants to include a color photo in a color document, presentation, screen show, or company World Wide Web site, the ScanJet 4p's color quality can fit the bill.

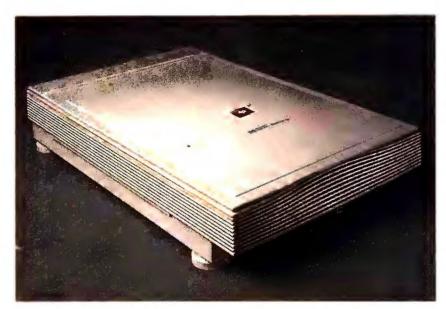

Like its higher-end cousin, the new ScanJet 4p comes with an array of 16-bit software that runs under Windows 95. HP bundled a TWAIN-compatible

After I installed the bundled SCSI add-in card and software, the unit automatically configured the proper I/O port addresses, provided simple calibration tools, and had me happily scanning within minutes. Lexmark's Compact 6-ppm Laser

t's difficult not to be impressed with Lexmark's new desktop personal laser printer, the Optra E. It not only provides true 600-dpi resolution and 6-pages-per-minute speed, but it's well priced and about the size of a toaster oven.

At \$549, the Optra E is less expensive than the comparable HP LaserJet 5p laser printer (\$899). And the Optra E occupies just a corner of your desktop—its streamlined package is 13.7 inches wide by 9.7 inches deep by 8.6 inches tall. After my informal testing with a shipping unit, I'd keep this quiet, functional printer on my desk at work or home office.

The Optra E offers 1MB of memory and PCL 5e emulation and uses Lexmark's RAM-

smart technology to increase print speed. If you're used to working with a 4-ppm laser printer with 512K of RAM, the Optra E will seem fast—it did to me. I found no problems with text quality at 300 or 600 dpi, or printing black-and-white images at 600 dpi.

If you work with mammoth desktop publishing files, you will probably want to add memory; the printer maxes out at 5MB. You can also choose a \$739 Optra E model with 1MB of flash memory that stores forms, fonts, and images in the printer to speed up throughput.

As for paper handling, the Optra E prints on nonstandard papers like index cards and heavy stock and comes with 150-sheet input and 100-sheet

Multimedia Development Tools Move Toward the Mainstream

eveloping PC-based multimedia applications has long been regarded as a complex, messy chore best left to seasoned software developers familiar with the intricacies of programming languages. But that's changing, thanks to the latest development tools from Aimtech and Macromedia.

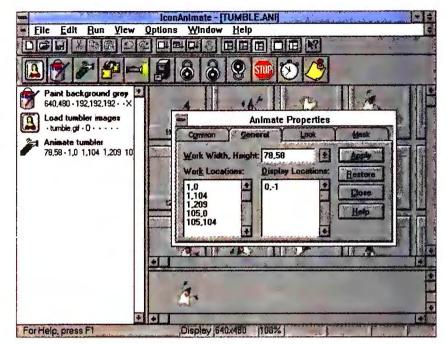

Aimtech's IconAuthor SE and Macromedia's Director 5.0 are Windows-based programs that allow you to create sophisticated multimedia applications incorporating text, graphics, animation, audio, and video.

Internet Intensive

IconAuthor is designed specifically for creating multimediaenabled Internet applications that you can store on Web servers or file servers. Your applications can incorporate audio and video clips to pitch your company's products, for example. According to Aimtech, you can also develop applets that enliven your Web pages with short animations and dropdown and pop-up menus. This

version includes a variety of enhancements, such as a new spelling checker—which is useful for making sure your Web pages don't contain any embarrassing typos. More innovative is the new Universal Media Access feature, which lets you store an IconAuthor applet's content files (for example, a video clip) across multiple locations, such as on your server's hard drive or CD-ROM, or remotely, such as on an FTP site.

Aimtech says IconAuthor SE, which is compatible with Netscape's browser software and Web server, is designed for nonprogrammers. IconAuthor's graphical environment uses a flowchartlike interface that lets you drag and drop icons to build an application. It runs on Windows 3.x and 95, with support for Windows NT expected shortly. Its list price of \$1295 isn't prohibitive, especially if you're serious about creating lively Internet applets. If you require database support as well as cross-platform capabili-

ICONAUTHOR'S ICONANIMATE TOOL features clever icons that help nonprogrammers create multimedia applications.

ties, IconAuthor version 7.0, at a list price of \$4995, would be a more suitable option.

Programmer's Delight

Macromedia's Director has long been praised for its set of powerful software authoring tools, and critiqued for an unfriendly interface that forces users to master arcane programming commands. Despite its shortcomings, Director remains popular among multimedia developers for projects such as kiosk interfaces and interactive CD-ROMs.

Version 5.0 includes enhancements such as an improved interface with shortcut menus you open by right-clicking the mouse. It also supports the popular Rich Text Format, allowing you to import RTF documents from common word processors such as Microsoft Word. Unfortunately, Director is still a command-line—driven product that's really not suited to laypeople.

If you're developing a Web

site, Macromedia's new Shock-wave for Director add-on utility lets you create interactive Web pages with multimedia features. Director 5.0 runs on several platforms—Windows 3.1, 95, and NT, plus the Macintosh and Power Macintosh—and is street-priced at \$850. The upgrade is \$399.

Weak OCR Undermines Otherwise Capable FormReader

paperless society, with electronic tax filing and other online transactions, we can't entirely escape our paperwork. But form-reading software can take the shuffle out of your workday by moving forms onto your computer, where filling them out becomes a streamlined process.

Ligature's FormReader combines optical character recognition software (CharacterEyes Pro) with form-recognition technology (FormOut). The FormOut component converts areas on a scanned form into data fields by determining which fields are fixed and which are supposed to be filled; CharacterEyes Pro converts the information into machine-readable data.

How effective is it? I used a shipping version of FormReader with a Logitech PageScan color scanner and found the OCR less than satisfactory. A few mistakes in a word-processing document is no big deal, but if you're pumping forms through a scanner and into a database or spreadsheet application, you want 100 percent accuracy. I didn't see it here. There were at least six errors on one page I scanned, which I find unacceptable.

FormReader is a 16-bit appli-

cation, but I had no problems running it under Windows 95. However, the user interface isn't as slick as Caere's Omni-Form 2.0.

At a list price of nearly \$2000, FormReader calls for a hefty investment by its target market—small office/home office users (OmniForm costs only \$199). For users with low volumes of forms, the capital outlay won't be justified. And for medium-volume users, catching up with the misread input may be more work than keying in the data manually.

MISTAKEN IDENTITY: FormReader's optical character recognition makes lots of errors when translating forms like this one.

hether you're designing a simple sales brochure or publishing a software training manual for new employees, a screen capture utility is essential. Using <Prt Sc> to dump bit maps to the Clipboard is time-consuming and has few options: You can't pick specific areas, set time delays, or number your screen captures sequentially. We looked at shipping versions of two new programs, Ulead PhotoImpact 3.0 and SnagIt/32, that make the task much easier.

It's not enough to call Photo-Impact 3.0 a screen capture program. Its capture utility is but one part of a larger—and expensive (\$199)—image-editing package, a redefined version of ImagePals that runs under Windows 95 and Windows NT 3.51. Its image-editing tools are comparable to those in stand-alone editing

packages such as Paint Shop Pro. Besides its editing component, PhotoImpact also has an organizing advantage: It lets you catalog your images as thumbnails.

If you don't need an image editor, then consider Tech-Smith's \$39.95 SnagIt/32, which includes 16- and 32-bit Windows versions in the same package. SnagIt/32 has many of the screen capture features that PhotoImpact does, including timers for delayed captures and multiformat file saves.

While PhotoImpact can send a capture to different destinations simultaneously, SnagIt/32 uses a single destination. It can also send an image as an e-mail attachment if you're using a 32-bit MAPI client (as long as the e-mail program is open).

Even if your image needs are simple, a good screen grabber is an essential Windows tool.

REVOLUTIONARY

System Utility to Optimize Windows 95 for Graphics!

Windows 95 Graphics the way it should be

revolutionizes the way you work with graphics by integrating its award-winning graphics technology into the heart of Windows 95. With HiJaak 95, working with graphics is as simple and natural as working with any other data type.

HiJaak 95 still gives you premier capture, convert, and importing capabilities, but now also gives you a choice of how to work: from the HiJaak application window or from the Windows 95 operating system. See thumbnails of virtually any image from anywhere in Windows 95. Search, find, organize, manage, capture, convert, view, print, and enhance virtually any image from anywhere in Windows 95 without ever having to run a separate utility. And much more!

HiJaak 95 makes you more productive with graphics by revolutionizing the way you work with graphics in Windows 95.

New Back-UPS® Pro® PnP itself the first time you use

Experts agree: Windows 95 and Windows NT Workstation demand APC protection

If you're using a computer, few things are more certain than power problems. If you haven't yet had a blackout, lost a

hard drive, or toasted a modem, you will. It's almost a statistical certainty.

No surprise that PCWeek showed power problems such as blackouts, brownouts, and surges accounted for almost as much data loss as all other factors combined, or that a leading accounting firm attributed the largest single cause of computer downtime to—you guessed it—bad power.

MULTI-TASKING MULTIPLIES YOUR RISK OF "THE BIG ONE"

Multi-tasking operating systems like Windows 95 and Windows NT Workstation let you open and manipulate multiple files and applications at the same time. That's why, unfortunately, as *PC Magazine* says "When Windows 95 does crash, it's a horrible mess..."

Moreover, if you are "wired" to the Internet, an on-line service, or dialing into the office, you'll discover that phone lines are common paths for surges taking the express route direct to your motherboard.

In short, if you still don't have proper protection (that \$5 surge strip doesn't count) it's time to protect yourself before you kick yourself. Experts agree: If you choose not to decide on proper protection now, the next time you see this ad may be too late.

"We've had great experience with APC," says Gordon Zellers. "The Back-UPS Pro has great features: it tells you if the battery is getting low, and they're user-replaceable with no hassle. As a small business, our computers and phones are vital to us. So is APC protection..."

"As a Fortune 500 company, we've used APC for at least 6 years," says Matt Lazar of Phelps-Dodge subsidiary Columbian Chemicals Co. "The new Back-UPS Pro PnP is easier to use than ever and is now our preferred UPS for our corporate PC's."

Where's My Staff? New Software Tells All

ow many times have you trekked to a coworker's office, only to find an empty ehair? Although in/out boards are supposed to eliminate this situation, they are useless in offices with staff spread across several floors or buildings.

We've found a product that addresses this problem: Teamaker's Office Hours for Windows. The program runs on a network and provides an easy way to track the whereabouts of other employees.

We examined a shipping copy for this article. Office Hours consists of four modules: an in/out board, an employee browser, an events ealendar, and a time card. The concept is simple. Just one click on the in/out board, and the software notifies people of your whereabouts. The browser lets you check on an individual's status. A second screen in the browser module shows people's phone information, such as extensions and pager numbers.

Overall, the product was easy enough to use, but we have a few caveats. Because Office Hours for Windows is essentially a networked database, it requires that all users have read and write privileges to the directory where the program is stored so that they can enter their whereabouts. This is im-

portant only if such network privileges pose a security problem at your organization.

Other small complaints: Like an in/out board that hangs on the wall, the product is useless if people forget to update their whereabouts. Also, the program works only with Windows 3.x and Win 95; employees on other operating systems such as the Maeintosh are left out.

Nevertheless, Office Hours should be useful, especially for people who field calls for large groups. The program comes in 50-user packs for \$149.95.

UPDATING YOUR WHEREABOUTS or locating other employees is a snap with Office Hours for Windows.

Salsa's Object Catalogs Spice Up Database Design

alsa for the Desktop steps to its own beat in the world of Windows database programs, simplifying the design process in a way not found in other relational databases.

The beta version I used was full of colorful welcoming graphics. The opening screen, "Learning Studio," had several options for getting started. The Big Picture gives an overview of Salsa, the Interviewer guides you through setting up a database, and the Idea Book provides a collection of tips. I opted for the Tour Bus (reminiscent of Microsoft's learning series, Scholastic's Magic Sehool Bus), which automates the database setup for you.

Salsa uses a drag-and-drop object metaphor to create databases. You select customizable objects that represent customers and orders from a catalog of templates that include data items like Name and Address. And, instead of setting up a separate file for line items, you create "data groups" for details that can repeat in an order, such as product, price, and quantity.

This program, which runs on Windows 3.1, 95, and NT, will likely work well for anyone needing to set up a simple database for personal use or even a small workgroup. Although Salsa is also designed for data sharing, I wasn't able to test that capability.

Salsa comes with Starter Kits, which are catalogs of objects, data items, and data groups for General Business, Customers and Contacts, and Lists and Labels. Additional Starter Kits for projects such as Time and Billing, Personal Investments, and Sales Management are also available. While I found it fun and easy to set up a new data-

base, the project became a chore when I attempted tasks like adding pick lists to a form or making a field show a calculated value. Salsa keeps its word about simplifying database setup, but I ean't say it's dramatically easier to use than Approach or FileMaker Pro, since these programs come with ready-to-use applications that also shield users from the mechanics of database design.

Accent Brings the World to the Web

he advent of e-mail and the growth of the Internet may eventually make the global village a reality, but right now the village seems more like the Tower of Babel. English is the de facto language on the Net, but millions of users (and potential users) don't speak this lingua franca, and the most popular Web browsers are of little help. Russian, Greek, Japanese, Arabie, and Hebrew are just a few languages of the growing electronic village.

Internet With an Accent, a multilingual Web viewer and publisher, solves that problem. I examined a shipping version of this four-in-one package. It includes a multilingual Web browser (a modified version of Mosaic called Multilingual Mosaie) that "debabelizes" Web sites so the words you see on screen are in the characters and language that the site was written in; a multilingual publisher that lets you write Web pages in foreign languages, a viewer that displays multilingual documents created with Accent's word processor (Accent 2, a separate product that allows you to read Web pages and email), and the MailPad, which lets you read and write e-mail messages in one of the supported languages.

Accent has a Netscape plug-in, too, that can be downloaded free from Accent's Web site. But if you have to publish multilingual Web pages or correspond in a foreign language, you'll need to purchase Internet With an Accent.

Survey Software Automates Electronic Polling

Survey fever has hit the United States, and a new product called Decisive Survey brings polling to the electronic frontier.

Companies that rely on feedback from employees, customers, or potential customers will find Decisive Technology's software useful. I examined a shipping version of Decisive Survey, which lets you create electronic surveys, distribute them via a local area network, e-mail, or the Internet, then collect and automatically collate the responses.

The program is easy to use, especially for beginning pollsters. You can create your own survey from one of the included sample surveys (there are more than a dozen) and stock questions. Decisive Survey's documentation contains a good primer on conducting a successful survey. The on-screen

help includes informative animations and graphics.

Decisive Survey sends out simple text format files only. It works best with a MAPI-compliant system such as ec:Mail or Microsoft Mail, but it will import from other systems. More important, though, is Decisive's ability to gather surveys over the Internet.

On the back end of the process, Decisive Survey automates data entry by charting results as the surveys are returned. The software also calculates statistics such as mean, median variance, and standard deviation. The results can be exported to other applications. Additionally, you can set up the software to create a list of openended questions or qualitative responses.

Decisive Survey can also create cross-tabulations to identify the correlation between re-

Netscape Navigator Gold: Easier Web Publishing for Newcomers

ith many HTML authoring tools, creating a World Wide Web page requires a constant shuffle between an editor, to mark up your text, and a browser, to see the results. Netscape Navigator Gold 2.0, for Windows 95 and NT, eliminates this shuffle. (International Data Group, the parent company of PC World, is a minority shareholder in Netscape Communications.) It's a browser—Netscape Navigator 2.0-and HTML editor. A toolbar button lets you toggle between your edits and the view, so you can track your changes. You can also split the screen to view both windows.

You won't need to learn HTML coding. Settings, tags, and formatting options let you insert elements such as headers and links. Navigator Gold also supports drag-and-drop, so you can plop images and links from your browser into the editor. Don't know where to begin? The Page Starter function offers 13 templates and a list of Navigator Gold Internet Service Providers that can put your page on the Web. The

But this product lacks some advanced authoring features. There's no tool for tables and frames, or interactive forms such as fill-in fields and choice lists. Netscape touts Navigator Gold as the first JavaScript program editor. (This will let advanced users make their pages more interactive.) Nonetheless, Navigator Gold is best suited to Net newcomers—for whom it's probably the best option.

Remote LAN Access With NetWare Mobile

herever you roam, Novell's NetWare Mobile keeps you in touch with your office's local area network. This client software lets you connect to NetWare and other types of networks with a LAN adapter when you're in the office, connect via modem when you're off site, and make copies of important files so you can access them as if you were directly connected to your LAN, even when you're not. Net-Ware Mobile is designed to run under Windows 3.1 and Windows for Workgroups 3.11. (It will work under Windows 95. but for full 32-bit capabilities, including Plug and Play support, you'll need the 32-bit NetWare Mobile client, due to ship in the second half of 1996, Novell says.)

You could reproduce some of NetWare Mobile's remote network access features with remote control packages like Remote Control from Microcom—but only NetWare Mobile gives you the same interface for all network resources no matter how you connect.

I tested a prerelease version of NetWare Mobile on a Windows 3.1 machine, connecting to a NetWare 4 LAN. You set up different locations, like "home," "office," or "the road" to define the method you'll use to connect. At home, you'd use a modem and NetWare Mobile's PPP (Point-to-Point Protocol) client. When your PC boots, you choose your location, and the software handles the links to NetWare 3.x or 4.x networks or the Internet.

Performance over a modem is slow, but acceptable for copying small to medium-size files. You can replicate needed LAN files for offline sessions, so they're copied to your PC's

Even if you haven't copied the files, the network directories look like you are linked. If you need a file that hasn't been copied, the software dials in and retrieves it. When you reconnect to the LAN, NetWare Mobile updates the originals.

Share and Create CD-ROMs on the LAN

eridian Data's two most recent programs could make it easier for networked employees to share CD-ROM devices, including CD-Recordable ones. Both programs work with Novell NetWare versions 3.12 or 4.1 and are packaged as NetWare Loadable Modules for easy installation and management.

CD Net 1.0 for NetWare lets you attach CD-ROM drives to a NetWare file server. It works with NetWare Directory Services, making it easy to locate information on the local area network. CD Net simplifies the process of accessing CD-ROMs from your PC: Just click on customizable icons your administrator has set up, and you can see the names of all the available discs. The program's management tools work from any PC with LAN administrative access, and across multiple servers. The Flexible Volume Grouping feature lets the LAN administrator map numerous CD-ROMs under one Windows drive letter (important because DOS limits your PC's number of drive letters to 26).

New Procomm Adds Netsurfing to Fax and Data

atastorm's Procomm Plus 3.0 for Windows offers smoothly integrated data, fax, and Internet capabilities that set it apart from communications packages as well as Web browsers. If you've used previous versions of Procomm for Windows, there's virtually no learning curve.

The most notable new features in Procomm Plus 3.0 are its complete Internet capabilities. Datastorm employs the Spyglass 2.0 Web browser and adds a raft of interface enhancements so it's easy to use and resembles the rest of Procomm. Right-clicking on your mouse brings up context-sensitive menus that make navigating the Web simple. Datastorm also facilitates Internet setup. Although Procomm Plus 3.0 includes a TCP/IP stack, it does not go out and blithely replace your existing winsock with its own. If you're starting from scratch on the Web, it will install everything you need and hook you up with national service providers, or you can use a local provider. There are also full e-mail, news reader, FTP, and Telnet capabilities.

Procomm Plus 3.0 doesn't scrimp on data and fax capabilities. The communications process is easier, with more onscreen help, caller ID support, more terminal emulation, and an automated CompuServe agent that lets you work offline, much like WinCIM. The fax side includes a fax manager for managing heavy traffic, support for multiple modems for fax broadcasting, and optical character recognition.

The smooth integration of all these pieces saves time. For example, you can grab a Web page and fax or send it to another person, without having to

Procomm Plus 3.0 has potential flaws. The package worked fine under both Windows 3.1 and Win 95, but its apps are 16-bit and aren't as stable as true 32-bit applications. Also, you can't use long file names with Procomm Plus 3.0. However, Datastorm plans to ship a true Windows 95 version of Procomm later this year.

We tested a shipping version of this utility, which lets you attach a small note to any document. Just click on the program's yellow Post-it icon to attach a note or open one. The notes can be embedded in a document or sent by themselves through Microsoft Mail and Microsoft Exchange or Lotus cc:Mail and Lotus Notes for Windows 95, according to 3M. To remind yourself of tasks, you can use an alarm feature. Alarms can be set on a onetime, daily, weekly, monthly, or yearly basis. mands, many PCs include hard drives with capacities of a gigabyte or more—so the ante for data backups has been raised too. Tandberg Data has met this challenge with its Panther Mini 2000 minicartridge tape drive. This SCSI-2 drive uses Sony QIC-Wide 3.5-inch minicartridges that accommodate 2GB of compressed data. The unit formats cartridges as it writes to them, a bonus since

The Net Results

come people like text, others like pictures. If you're a picture person, Clear Software's new utility is worth a look. We used a preproduction copy of Clearweb, which lets you organize all kinds of Internet information-World Wide Web URLs, e-mail addresses, FTP sites, search results-in navigable graphic maps. The utility lets you share these maps with other users, either by distributing them via e-mail or publishing them on the Web. In either case, recipients need a copy of the free Clearweb viewer, which comes with the product;

the viewer can also be downloaded from the company's Web page (http://www.clearsoft.com). This otherwise easyto-use product has one limitation: When you view a map in full, you can't read the text labels on individual cells. But when you zoom in close enough to read the text, you lose the big picture. Clear Software doesn't plan to address this problem in the shipping version of its utility. List price is \$49. Two guesses who just bought a Quantex.

To, you're not seeing double. But

you are seeing a dual reaction to getting a Quantex. It's the same reaction customers have been experiencing for years. One of confidence Excitement. And the knowledge that they've just made one of the smartest buys since computers were invented.

You see, Quantex customen compare. Really compare. Not just price, but features and technology, too. And when they do, they discover dollar for dollar, feature for feature, Quantex can't be beat. When you compare and decide on a Quantex, you'll look pretty pleased, too. Who knows, maybe you'll find your smiling face in one of our ads.

Quantex Gives You The Best

YOU AND YOUR QUANTEX PC ARE A PERFECT PAIR.

Some PEOPLE SAY that Quantex PCs seem to have a dual personality. On one hand, they're packed with cutting-edge technology, power, and features. On the other hand, they're aggressively priced to be gentle on your bank account. Which side reflects the "real Quantex?" Both of them. From our high-performance multimedia machines to our potent workstations, our customers all agree: Quantex gives you more of what you want at an unbeatable value. So shop around. Read the reviews. Compare us feature for feature and dollar for dollar with any other PC on the market. The more closely you look, the better you'll see. No one else can quite match up to Quantex.

OUR COMMITMENT WORKS TO YOUR ADVANTAGE.

At Quantex, your complete satisfaction is our number one priority. We've based our business around it. And while our company has evolved over the years, our focus has never wavered.

How do we do it? By sweating the details. We're working harder, day in and day out, to create a line of meticulously engineered, technologically advanced, fully-loaded and competitively priced

> PCs. From family multimedia systems to Pentium® Pro microprocessor workstations, we'll never compromise about putting performance into your hands. That attitude reaches into every facet of our company. You'll notice it in our people, in conveniences like our Internet homepage, and, of course, in our award-winning systems.

I'm into all the hottest features and top performance Quantex offers.

PLUG AND PLAY, THROUGH AND THROUGH.

Here's a tip from Quantex: when looking for a personal computer, you should be aware that even though a system loaded with Windows® 95 is Plug and Play capable, that doesn't mean that the components are Plug and Play. Fact is, most companies' components are not! And that can lead to difficult upgrading or even component incompatibility!

That's why, from monitors to motherboards to multimedia, every component that goes into a Quantex is Plug and Play compliant. With this assurance that everything is self-configuring, you'll never have to worry about setting jumpers or performing compatibility tests. It's just one more way Quantex makes it easier.

Help end the class struggle.

Here's your chance to train the next generation of knowledge workers before they show up for work.

Donate your unused computers, software, and peripherals directly to

your local school.

Or contact Computers for Classrooms at one of the numbers below, and we'll direct your donations for you.

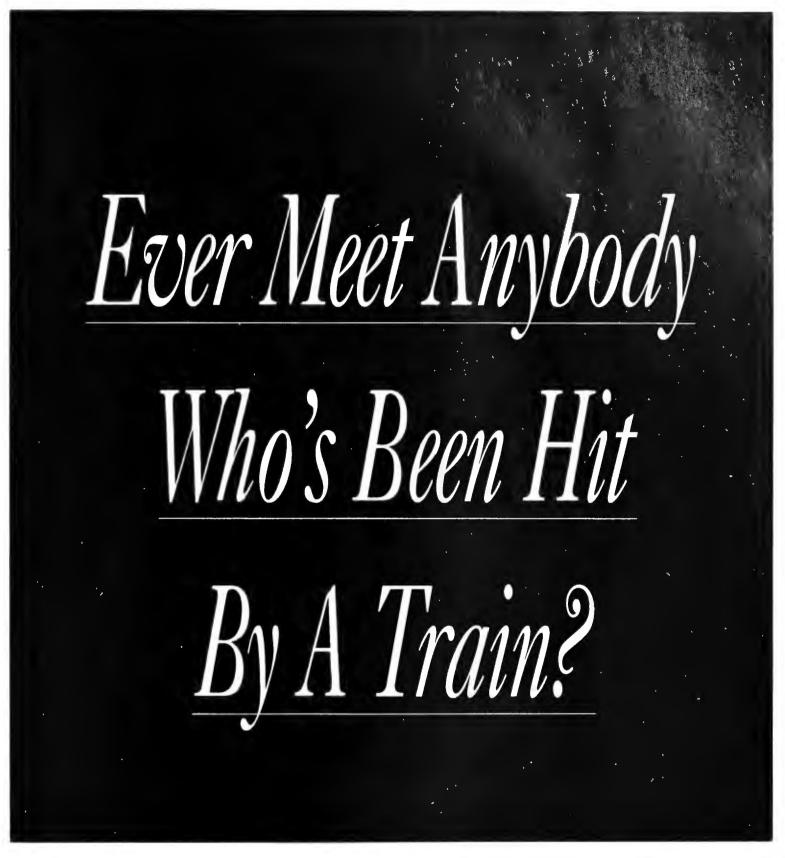

Either way, your generosity will pay off in gigabytes.

Because instead of tossing your equipment out, or selling it for a few cents on the dollar, you'll be providing our classrooms with the most powerful teaching aid since teachers.

And getting a tax deduction in the bargain.

So donate the best—and most—equipment you can afford. When you do, you'll be helping a whole new class of people to succeed.

Didn't think so.

But last year alone, over 6,000 people were hit. Some were in their cars or trucks. Others were on foot. But most of them had ignored warning signs or trespassed on train property And, as you can probably guess, the results weren't pretty—over 3,500 of those people were killed or maimed for life.

Now avoiding a train is entirely up to you. And it's actually not hard to do. If you slow down at every highway-rail crossing, you'll be able to see or hear an approaching train. And if there's any sign of a train, all you have to do is stop. Never trespass on train property or walk on the tracks. Don't try to beat the train. And never make the deadly mistake of ignoring the flashing red lights or crossing gates because you're sure they're broken. A lot of people die thinking just that.

Not you, of course. You always expect a train. You know exactly what to do when you approach the tracks. And now you know why.

INTRODUCING THE NEXT GENERATION OF "CARTRIDGE-FREE" PRINTERS FROM KYOCERA.

They're incredibly fast. Advanced. And reliable. So how come they cost 50% less to operate than HP® and Lexmark™ printers?

Because the largest printer expense isn't the cost of the printer — but the cost of all those expensive toner cartridges you have to buy.

Kyocera® printers are the first and only — laser printers with long-life imaging components, so

you never have to replace expensive cartridges.

"CARTRIDGE-FREE" TECHNOLOGY REDUCES PRINTING COSTS BY 50%.

Over time, the savings can be enormous.

One printer alone could save you \$3,700* the

first year. Depending on your network, your savings could be hundreds of thousands, even millions of dollars.

That's not all you'll save with Kyocera Our modular paper-handling options give you the flexibility to upgrade over time, as you need it. You'll even save space with our extra small footprint. So why pay more for the same speed, performance and reliability?

Netware, NT Duel for Apps

106 Which network operating system will support the client mobile tions you need

Colleged by Eric Bender

ALLY LODE *PC*

Introducing PC World's network server reviewsan exclusive series of regular lab-based roundups of PC servers.

> By Eric Bender and William L. Rinko-Gay

he typical local area network server is a jack-of-all-trades, but of very different trades than those mastered by the computer sitting on your desk. Servers deliver your mail, fetch your files, and collect documents for printing. They may also run a slew of applications, hook you up to the World Wide Web, act as gateways to massive corporate databases, or polish off a number of other, but essential, odd jobs.

You can try turning standard personal computers into network servers, but you're better off buying a system that has been designed for the job. Servers are not just PCs on steroids. They offer the kind of bulletproof operation we still don't expect from desktop PCs. And they come in a much broader range of configurations, with many highly customized features for networking needs large and small.

So how do you pick the server that will suit you and your workgroup? Look for the right mix of features, upgradability, service, support, reliability, and good performance on the kinds of jobs that you expect your server will run-plus, of course, the right price. We took all these factors into account in conducting rigorous tests at our new Network World-PC World Network Test Center in Spring, Texas.

Workgroup Wonders and Wanna-bes

We kick off our reviews with the Top 3 Workgroup Servers—the best contenders for networks with a maximum of a few dozen users. The machines in this roundup have one CPU, 32MB of memory, a single network adapter, and (usually) less than 5GB of disk storage. Ranging in price from \$5539 to \$10,738, they also offer many high-reliability and server-management options, such as the ability to page a network administrator as problems arise.

We were pleasantly surprised by how well the workgroup servers performed, particular-

ly at file service. We thought we'd max them out with 16 clientsafter all, each client was running an automated application script that loaded up the server at least 15 times as much as a normal user would. But we didn't. The current crop of servers employs fast-and-wide SCSI-2 drive technology on a PCI bus to meet the heavy demands of our benchmark.

The customized installation software and CD-ROM documentation that came with most of these products made it far easier to get them up and running, but it's still a job for a network professional.

How We Rate Service

Our server tests follow the same guidelines as *PC World*'s Top 10 and Top 20 reviews. Each product is rated on a combination of performance, features, pricing, reliability, and service and support.

In our PC WorldBench for Servers tests, we look at performance running real-world applications. We run up to 16 Windows 95 clients with servers running NetWare 4.1 and Windows NT Advanced Server 3.51 through a high-speed switch providing a single Fast Ethernet connection to the server.

For the file service tests, we modified four

of our PC WorldBench benchmarks so that both data and applications are stored on the server's hard drive (or drives).

In addition, we ran two client-server benchmarks—one with Lotus Notes 4.0, the other with Microsoft Access 7.0 for Windows 95 on the client PCs and Oracle Server7 version 7.2 on the server, with Intersolv Data Direct ODBC Driver Pack providing the glue between them. The Notes test is built on two GroupQuest Software applications that handle human resources and client tracking jobs. For the Access/Oracle test, we built a database with four tables

joined to emulate typical payroll functions.

In evaluating features, we paid particular attention to components that set these machines apart from their desktop kin, such as disk arrays and server installation tools. We judged reliability on features such as product certification, management options, and high-availability hardware options. We assessed service and support by examining vendor support policies and options.

We'll broaden our coverage to Top 5 Workgroup Servers in the August Workgroup Computing report. We will also add Top 5 Enterprise Servers—rating more powerful sys-

tems that run larger nets. And this spring, we'll publish additional data on our performance testing procedures and test results on PC World Online's Web site (http://www.pcworld.com). We will be updating our Top 5 lists monthly on the site.

HP NetServer 5/133 LH

PROS: Excellent performance, good expandability

CONS: None significant

Our Best Buy workgroup server is a top-end machine with an impressive mix of

performance, features, and software tools—and at \$8229 it's priced very reasonably for

what you get. The HP Net-Server 5/133 LH comes with a Pentium-133 CPU and no less than four 1.05GB SCSI disk drives and two disk con-

trollers. Windows NT and NetWare put these performance enhancers to excellent use, supporting data striping in drives and controllers. (Data striping boosts performance by storing individual files on multiple drives.) The results were particularly striking on the file service tests, where the NetServer beat all comers by a wide margin.

The NetServer box is large, short, and squat—about the size of an ottoman. The inside is nicely organized, very serviceable, and has little wasted space. Its hard drives are all hot-swappable, so you can replace one without bringing down the server—and without losing data, if you've configured an optional disk array to support it. It has room for six drives and lots of open slots—four EISA, three PCI, and one combined slot. (PCI slots are precious, both for performance and because most makers of server add-in cards are focusing on PCI.)

To make installations and recoveries from server crashes easier, the NetServer comes with a bootable CD-ROM, a nice touch. It's part of a CD-ROM Configuration Assistant with online documentation plus EISA configuration, drivers for network operating systems, utilities for configuring cards and a hard disk array (if you have one), installation tips, and NetServer Assistant (server management software that works with HP's OpenView network management software). Both Windows NT and NetWare were preinstalled by HP, dual-booting from the same drive array. Combine these software helpers and HP's 7-day-a-week, 24-hour phone support and renowned service and support capabilities, and you'll sleep better at night.

PROS: Good performance, well-integrated components CONS: Only one PCI slot open as tested

The Compaq ProSignia 500 is a capable, thoughtfully designed workgroup server that offers a good in-

ternal layout, superior documentation, and strong price/performance. At a street

price of \$5539, two-thirds the price of the HP NetServer, it's a good entry-level choice for workgroups that can't afford the expandability or

top performance that the NetServer, with its extra drives, offers. (The 150-MHz ProSignia 500 Model 5/150-2100 costs only about \$100 more but arrived too late for this roundup.)

The ProSignia we tested, with a 120-MHz Pentium CPU, turned in a good performance, especially in our client-server database tests with all 16 clients. This reflects an efficient bus architecture and careful tuning for server tasks; for example, on most tasks the ProSignia resoundingly beat the Dell PowerEdge, despite the latter's 133-MHz CPU and similar hard drives.

The full-size minitower is roomy enough for a few additions but is not designed for space-eating technologies like SCSI drive arrays or multiple processors. Inside is a support person's dream: a configuration sticker clearly showing component locations and upgrade options. The model we tested came with one 2.1GB SCSI drive.

The four 3.5-inch hard drive bays are easily accessible without tools. While you can purchase an optional array controller, the chassis does not support hot-swappable drives. Mounted on custom drive rails, each drive can be removed by squeezing a simple latch. All the add-in card slots are quickly available as well. You will need a tool to get at the 5.25-inch drive bays.

Compaq provides SmartStart, a CD-ROM-based installation kit that lets you install NetWare, Windows NT, or other network system software fairly easily. As with the NetServer, the first disc is bootable. Our Windows NT setup was a breeze. NctWare 4.1's installation wasn't hard, although we had to manually install NetWare Directory Services after setup was complete, and we got no warning of this. (Compaq says the next release of SmartStart will automatically install NDS.) Another bootable CD-ROM provides a good mix of support software, including EISA configuration, operating system support software, Flash ROM utilities, and diagnostics.

Compaq's on-screen hardware documentation is well integrated, and Compaq's Insight Manager lets you keep an eye on the server. In addition, there's around-the-clock toll-free technical support and a three-year on-site service warranty, plus a fee-based Advanced Network Support agreement that reduces finger-pointing among vendors. All in all, this is a very strong choice.

IBM PC Server 320

PROS: Well designed, good management software

CONS: Mediocre performance, just one PCI slot open as tested

Long famous for arcane product names, IBM stuck to the basics a year and a half ago when it named

the PC Server line. And the \$8599 PC Server 320 is a good basic workgroup server.

It also shows vividly that the speed of the CPU does not always dominate a server's performance. The PC Server 320 carved out

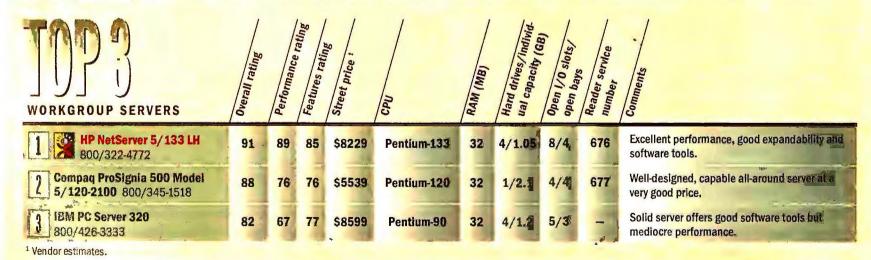

acceptable test scores despite having just a 90-MHz Pentium.

The box is tall and thin. It's easy to get to SIMM sockets, PCI and EISA slots, and processor sockets; you can add a second 90-MHz CPU. Getting to the drives is a bit more difficult, because you must slide them out the cramped back of the bay area. On the plus side, they screw directly into the bays so you don't need to bother with proprietary drive rails. The system is quiet and well cooled. Our test machine included four 1.2GB Quantum SCSI drives with 1MB of disk cache.

Our machine came with Windows NT Server installed, but that network operating system was not included in IBM's CD-ROM-based Server Guide. Unfortunately, we had to reinstall NT because of problems

THE BEST WORKGROUP NETWORK SERVERS

esigned for networks with up to a few dozen users, workgroup servers need to offer the right mix of price, performance, features, upgradability, reliability, and service and support. These Top 3 machines also offer strong installation and management aids.

Deciphering the easiest way to network your Windows-based PCs will require, among other things, a keen sense of the obvious.

WINDOWS NT SERVER IS THE SIMPLEST.

MOST PAINLESS WAY FOR SMALL BUSINESSES

TO NETWORK WINDOWS-BASED PCS.

Many business decisions require large amounts of careful analysis, research, and brain power. Others require considerably less.

Take the issue of how to network your Windows® based PCs: Windows NT™ Server operating system is the obvious choice, because it's Windows. It's so perfect for growing companies that already thousands of small businesses are using it.

Why? It provides safe central storage of your files and runs the applications that run your business. Installation can take less than an hour, and Windows NT Server is smart enough to figure out what hardware you already have. Windows NT Server also allows

employees working out of the office to connect to your network at any time, from anywhere. So they can access

information and files just like they were at their desks. And with built-in support for the Internet, your company's World Wide Web page will be up and running in no time.

In case you're thinking cost, the choice is just as clear. Windows NT Server costs one-third less than NetWare? Windows NT Server. Who says there are no easy answers in business? For store locations and seminar information, call (800) 60-SOURCE, Dept. A025.

It is human nature to want to communicate at any time, from anywhere. And in this respect, the business traveler is just a bit more human than most.

With that in mind, Megahertz presents the 28.8

PC Card Modem. It's designed to be compatible with

you and the way you work.

Our newest innovation, Cellular Direct Connect with Cable Sensor, lets you stay connected no matter where you are, without configuring bassles. The patented XJACK*connector means you'll never have to carry (or lose) another cable for the rest of your business-traveling life. And Digital Line Guard actually warns you if you're about to fry your modem by plugging into a digital PBX phone line. (We all know bow bad frying things can be.)

The end result is you'll always be in touch. Of course, first you'll need to be in touch with us. Just call 1-800-LINKING, ext. 4533. Or find us on the Net at www.megabertz.com.

Documentation is good and plentiful. Like Compaq and HP, IBM offers good service and support programs, including around-the-clock phone support, a three-year on-site warranty, and a host of added support options. In short, this is a very capable but not spectacular server.

Best of the Rest

These servers were tested and reviewed along with the others but didn't score high enough to reach the Top 3 chart.

CSS MaxPro 1500 P5-166

PROS: Top-end disk storage system, good performance
CONS: A few design glitches, no open PCI slot as tested
The MaxPro reminds us of certain radio talk
show hosts—big, heavy, loud, with plenty of

fans, and surprisingly fast on its feet.

Priced at \$8999, this is one heavyweight server—in fact, at 91 pounds, it's one of the heaviest Intel-based systems we've seen. It's also a powerful machine, with a 166-MHz Pentium (you can add a second CPU) and three 2.3GB hot-swappable SCSI hard drives. The disk controller features 4MB of disk cache and supports data striping. The MaxPro placed second to the HP NetServer on the file service tests, and third behind the NetServer and the Compaq ProSignia running our two client-server application benchmarks.

It comes with no less than 17 fans—not an elegant approach to ventilation—and some components are hard to access. And it lacks an open PCI slot, although it does have four EISA slots (and even four ISA slots), so you do get plenty of room to expand. There's a dual power supply.

The documentation is reasonably comprehensive but primarily focused on components rather than the complete system. CSS omits tailored installation software, although it will preinstall NetWare. The supplier provides 12-hour phone support five days a week plus limited fee-based service plans. CSS, 714/852-8161 Reader service no. 855

Dell PowerEdge SP 5133-2

PROS: Good upgrade path (including second CPU)

cons: Costly, mediocre performance

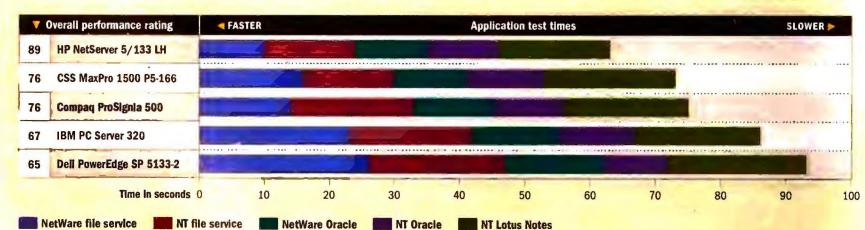

The PowerEdge is a capable server but not quite as polished as several of its rivals. It came in dead last on our file service and Lotus Notes tests, doing well only with Oracle on NT. And at \$10,738 it is by far the most expensive server in this roundup.

Our model came with a 133-MHz Pentium CPU and two 2.1GB SCSI disk drives. You can add a second CPU using a ZIF socket. The large tower configuration offers easy access to disk drives. You must remove the entire cover to get at the expansion bus, and you need to disconnect several cables before taking out the motherboard (which you must do to work with SIMMs). Two large fans keep everything way cool.

Documentation is good, although it includes some unrelated material, and there's more printed documentation than most servers provide. Dell doesn't offer a custom install tool but will preinstall NetWare 4.1. The PowerEdge includes SafeSite server management software, and Dell offers a full range of support options, including around-the-clock support. Dell, 800/289-3355 Reader service no. 856

TEST REPORT: PERFORMANCE FOR WORKGROUP SERVERS

e were pleasantly surprised by the speed of the workgroup servers in this review, which was particularly impressive on the file service benchmarks. HP's NetServer easily posted the fastest times on the file service tests and took a narrow overall lead on the application tests.

Methodology We tested each server under NetWare 4.1 and Windows NT Advanced Server 3.51. Each system was tested as supplied by the vendor; we set system parameters for application tests as recommended by the application and network operating system vendors. These results show average time among 16 client PCs to complete all tests. Each client was a 100-MHz Pentium PC with 16MB of memory, Windows 95, and a 10Base-T network adapter. Each server had a single 100Base-T network adapter. Test results were normalized and weighted for the total performance rating (60 percent for file service and 40 percent for application service). The NT and NetWare tests are not designed to be comparable. For a complete description of our testing methodology, see PC World Online's Web site (http://www.pcworld.com).

File services (NetWare and NT)

The file service benchmark is based on four applications in the PC WorldBench 1.0 suite (1-2-3 release 5 for Windows, Excel 7.0 for Windows 95, Word 7.0 for Windows 95, and

WordPerfect 6.1 for Windows) modified to push the server's storage system as hard as possible.

Microsoft Access/Oracle Server (NetWare and NT)

This client-server database application runs with Microsoft Access 7.0 for Windows 95 on the client PCs and Oracle Server7 version 7.2 on the server. It emulates common payroll tasks.

Lotus Notes (NT)

RETWARE VS. NT SERVER

NetWare, NT Duel for Apps

Which network operating system will run the programs that you need?

C

cet C. Sam Smith, chief executive of First Waco National Bank—and Novell's worst nightmare. When Smith's Waco, Texas—based bank decided to set up a 20-user network back in 1991, it chose Novell's NetWare as its network operating system.

"That was the only way to do it then," Smith says. But First Waco National has since standardized on Microsoft software, including the Windows N'I' Server network

operating system. "When Microsoft announced the development of NT, we said 'Yeah, ship it'," says Smith.

Stories like Smith's give Novell executives heartburn. The Provo, Utah, networking giant isn't in any immediate danger of losing its leading role in networks-recent estimates give NetWare about 60 percent of the network OS market. But Microsoft's Windows NT Server is rapidly gaining industry support, particularly as a platform to deliver applications rather than just the traditional file and print services. "There's a tremendous amount of interest in NT among both customers and developers," says Jamie

Lewis, president of The Burton Group, a network consulting firm in Salt Lake City.

Novell Adds Directory Assistance

Novell touts NetWare 4.1's Directory Services as a key feature for network applications. NetWare Directory Services is an

information database that organizes network resources (user names, groups of users, printers, CD-ROM drives, and other components) into a hierarchical tree structure. NDS allows network administrators and end users to access all authorized resources by logging on to the network just once instead of having to log on to each individual server, thereby saving time and money.

If a small business is running fax, e-mail, and database applications on its LAN, for example, each of these programs can be listed

as a separate resource in the NDS directory. The network administrator can then use the NDS interface to set up new users for each application.

Add NDS to NetWare's traditional network talents, Novell says, and application developers have compelling reasons to de-

velop NetWare Loadable Module programs—client/server packages running only on NetWare servers. Currently over 50 such packages support NDS, including Cheyenne Software's Faxserve network fax software, IBM's Lotus Notes, and Novell's own GroupWise groupware.

But some firms offering these NDS packages' support Windows NT Server as well. For instance, Symantec, which sells a version of Norton AntiVirus for NetWare, is developing a similar application for Windows NT Server, says Elizabeth Cundiff, senior product manager for Norton Administrator for Networks at Symantec in Santa Monica, California.

The verdict is still out on the software industry's support for NDS. "I can't find many manufacturers who are standing up and saying 'Yes, we think that's the way to go'," says Dataquest analyst Chris Le Tocq in San Jose, California.

G

Historically, Microsoft has done a far better job than Novell of providing application developers with suitable tools, support programs, and marketing assistance. Refocused on its core networking business, Novell says it plans to turn that situation around.

NetWare has also lagged far behind NT in supporting multiprocessor servers, which is becoming a crucial requirement for customers running resource-hungry client/server application packages. But the company has finally shipped a multiprocessor version of NetWare, and many application developers plan to support it by the end of the year.

At the other end of the spectrum, Novell is developing a NetWare bundle of applications designed specifically for small businesses. "It's a one-stop package," says Peter Clegg, Novell's manager of competitive marketing. While product details and pricing weren't available at press time, the bundle "will have features that are much more appealing to the low end," says Clegg.

Windows NT's Bountiful Bundle

The Microsoft camp promotes Windows NT Server's integrated utilities as essential network tools for businesses. These goodies include integrated backup software, a remote access package that lets Windows users dial in to the network, and built-in TCP/IP support for businesses that want to connect to the Internet.

Additionally, since the business world has mostly adopted Windows, many users and network administrators alike immediately feel comfortable with the NT Server 3.51 interface. (NT currently mimics Windows 3.1 and Windows for Workgroups, but NT 4.0 will present the Windows 95 interface.) "When Windows NT shows up on their desktop, a lot of the commands are already familiar," says Betsy Johnson, Windows NT Server product manager. "The fact that NT is a Windows-based product makes it easier for people to understand the network," agrees The Burton Group's Lewis.

Novell's response: NetWare also includes Windows-based utilities for LAN managers who prefer the point-and-click simplicity of a graphical interface.

In any case, Windows NT's perceived advantages plus Microsoft's towering industry presence have convinced droves of developers to create NT applications. At press time

we had counted about 200 network applications customized for Windows NT Server, with many more on the way.

Picking the Right Network OS

Not surprisingly, both Novell and Microsoft claim to offer the best networking deal in town. If you look solely at the programs' street prices, NT wins, at least for small installations: For a ten-user license, Windows NT Server costs about \$1000, while Net-Ware 4.1 comes in at around \$1500.

NetWare can counter that its enormous installed base, which The Burton Group estimates at 50 million users, is a benefit in itself. "You're much more likely to find a reseller who will instali NetWare for you" than NT, points out Dataquest's Le Tocq.

NetWare retains another important edge: customer loyalty. If a small business is satisfied with its NetWare LAN, Microsoft's promises of a better network OS may fall on deaf ears. "I've read about Novell's competition, but if I've got a good thing, why monkey with it?" asks Mike Hughes, controller

of Verandas Development, a land development company in Marco, Florida. Hughes also applauds Novell's technical support. "Whenever I've had a question, I've always gotten a quick answer," he says.

But this doesn't keep other NetWare users from having wandering eyes, and their choice will come down to which network OS supports the apps they need. Tony Vent, controller of Staffing Resources, Inc., a temporary staffing agency in Kokomo, Indiana, says that although he's pleased with his company's five-PC NetWare net, he'd be "more than happy to look around."

Introducing new Microsoft PowerPoint for Windows 95.

Now you can walk into any business meeting, both formal and informal, knowing you will make your point in a compelling way. New Microsoft® PowerPoint® helps you speak with confidence, whether it's in a one-to-one status meeting with paper handouts, a speech with 35mm slides, or a remote on-screen presentation shared simultaneously with clients and coworkers a thousand miles away. You build your case screen-byscreen, you know all the points you want to make will appear, you use all the power and flexibility of PowerPoint to add drama and impact to your message. Sentences appear on-screen by paragraph, word, or character to add emphasis where needed. Images can build in sequence. Specific points can be accompanied by sound, images, and video. With PowerPoint, you not only appear professional and prepared, you make your point in a more persuasive, a more compelling way.

Step-by-step, the software helps you build the presentation. It shows you how to use the program. It helps you communicate more persuasively.

> PowerPoint does the hard work of pulling the presentation together for you. Select from topics such as selling a product or writing a business plan, and the program will suggest an outline, design, and format for your presentation. The AutoContent Wizard will tailor your message according to how much time you have and the type of output you wish to generate (35mm slides, paper handouts, on-screen presentations). StyleChecker will help you avoid presentation mishaps by checking for readability and common mistakes in spelling or punctuation. And to add visual impact, AutoClipArt will scan for key words and suggest appropriate clips or images. If you have questions at any time, ask the Answer

Wizard for help. You type in a question, and it will walk you through the task step-by-step. When your presentation is built, you can preview and edit how it will look in black-and-white print outs, and then use the Pack and Go Wizard to automatically package it on disks so you can take it on the road.

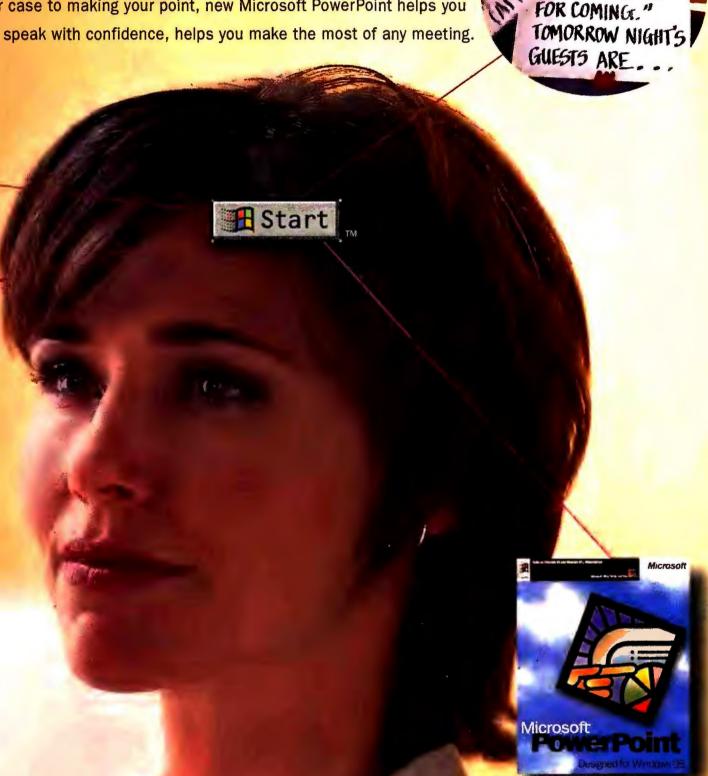

In both face-to-face meetings and remote presentations, PowerPoint puts you in command of the situation.

Even if your audience is on the other side of the world, you can still be in control. Presentation Conferencing lets you deliver and review your message with remote workgroups over a network. During the discussion stage,

you can use the Slide Navigator to select specific slides from the presentation to reinforce the points you want to make, to answer spontaneous questions. And to make sure your meetings lead to constructive action, the Meeting Minder lets you take notes, record the minutes of a meeting, and assign action items on the spot. From start to finish,

from building your case to making your point, new Microsoft PowerPoint helps you prepare, helps you speak with confidence, helps you make the most of any meeting.

Now you can take full advantage of Windows 95.

New Microsoft Power bint is designed to work hand-in-hand with new Windows 95 technology like multitasking wid multi-threading. (Now you can keep working while your presentation is printing.) It was designed to integrate seamlessly with the other programs in Microsoft Office. Together, the new programs and the simplified user interface of Windows 95 make computing fundamentally easier. They make it easier for to focus on your work, not on your software.

Microsoft Project for Windows 95.

Now you can manage projects more simply, more smoothly, by communicating project information as it occurs. With Microsoft[®] Project you can convey project status quickly and effectively so your boss, customers, and coworkers are always in the loop. From sharing task deadlines and responsibilities, to letting people know about changes and tile impact they'll have on the deadline, you have the tools to organize your projects into manageable steps and keep them moving in the right direction. Microsoft Project unlocks the doors of communication and gives you the power to navigate the most efficient route to a successful end product.

Graphical views let teammates visualize where the project is going. •

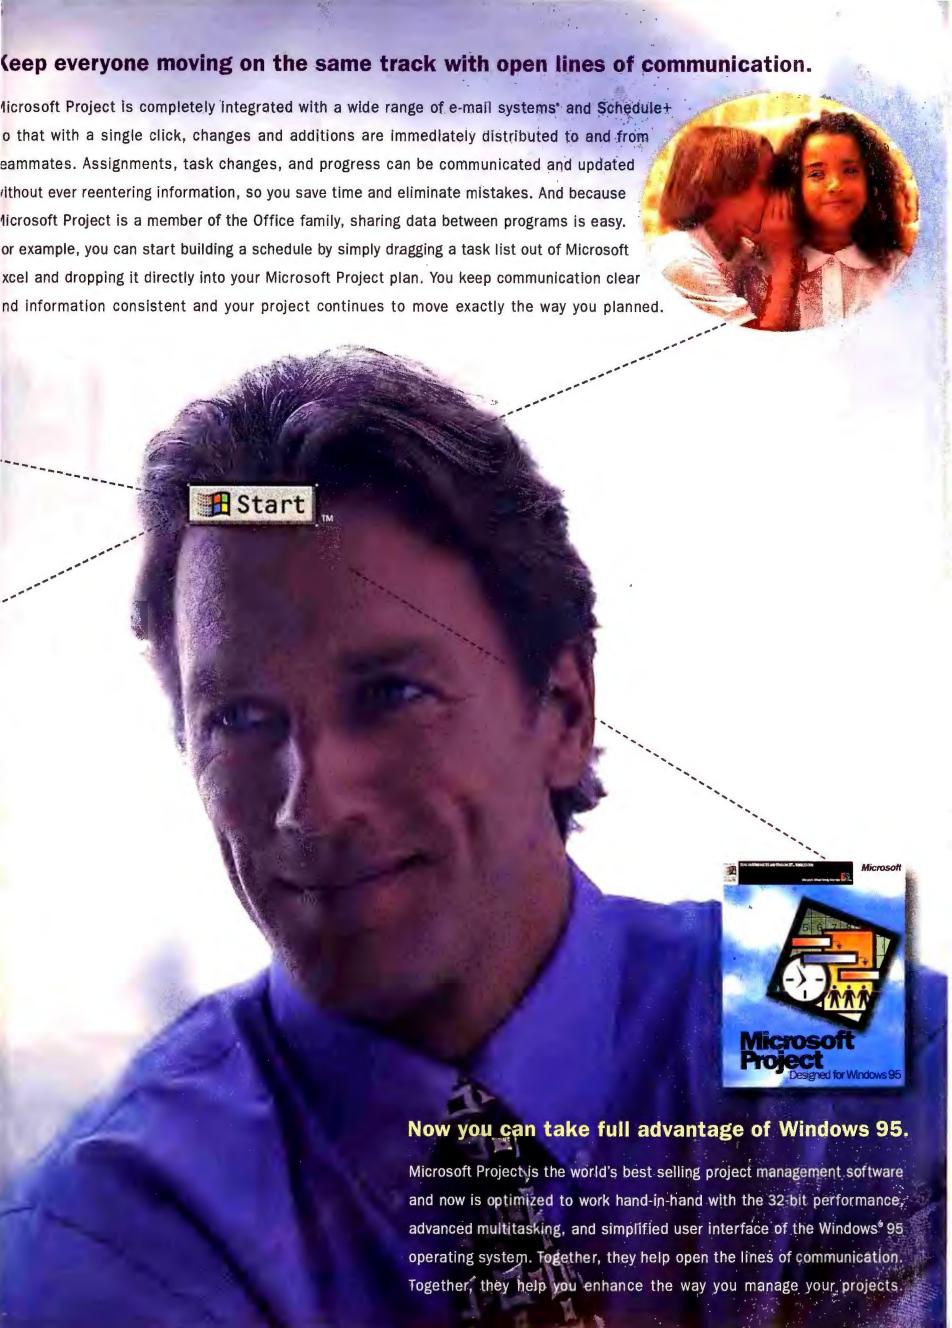

With Microsoft Project you can display project data in ways that everyone can understand. Great-looking Gantt Charts integrate text, timelines and graphical bars so everyone can see start and finish dates, inter-

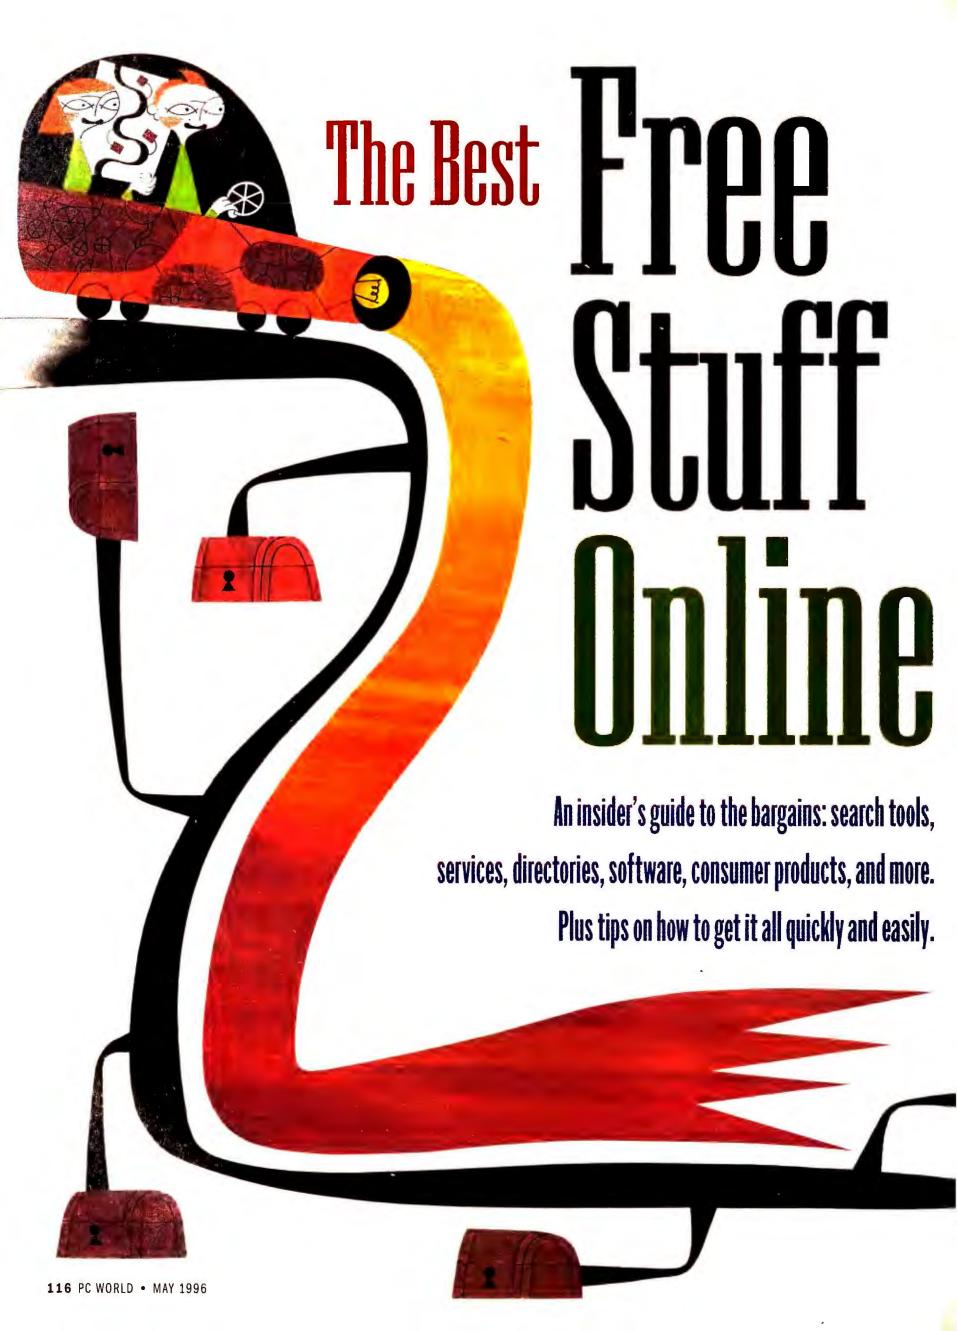

dependencies and task assignments. Throughout your project, you can also use a

Monthly Calendar report to share your plan in a format that's clear and easy to read. And since Microsoft Project shares many of the same key commands with other Office applications, it will be easy to create schedules and reports. But if at any time you need help, type in a question and the Answer Wizard gives you the information you need. Microsoft Project helps you illustrate every phase of your project so you and your team keep your goals in sight.

SEEK AND YOU SHALL FIND

Search Engines

Internet surfers can choose from multiple search directories to locate just about anything. The primary benefits of World Wide Web-based search engines are twofold: They're free, and they're faster and more timely than CD-ROM and print-based Net directories and search tools. And since Web site addresses (URLs, or Universal Resource Locators) can change without notice and hundreds of new sites sprout up every week, an Internet search engine is your best bet for finding the latest information. As for the online services, each offers its own proprietary search utilities both in subject directories as well as by keyword. While free search engines have become quite robust, fee-based search tools such as Infoseek offer extras culled from Usenet newsgroups, computer magazines, technical support databases, and press releases. Fees can be per query or by subscription.

Alta Vista

ADDRESS: http://www.altavista.digital.com/

Digital Equipment claims that its Alta Vista site has the largest index of any Web search engine: some 10 billion words in over 21 million Web pages. If you need to locate an obscure company or product, or even a long-lost relative (who has a personal Web page), Alta Vista is your best choice. For instance, a search for "Jeff Bertolucci" yielded about 13

accurate matched pages, or hits (mostly published articles written by the coauthor of this piece). By comparison, the search engines listed below vielded no accurate hits for this query. The downside with Alta Vista is that it may return far more hits than you actually need. So if you're trying to locate a specific popular Web site, such as MTV's or IBM's, you might do better with a search engine that's less comprehensive.

Excite

ADDRESS: http://www.excite.com/

Sponsored in part by Sun Microsystems, Excite stands out because it lets you narrow your search to scan only Web sites, Usenet newsgroups, types of content like classified ads, or Excite's database of Web site reviews. You can also search by concept (for example, "mutual fund") or keyword ("IBM") to obtain more accurate results.

Infoseek Net Search

ADDRESS: http://www3.infoseek.com/

Infoseek Corporation's site offers a quick way to find popular Web pages, although it's less effective than Digital's Alta Vista at locating obscure names in lesser-known Web pages. It lets you use natural-language searches such as "find information on free CD-ROMs," as well as traditional keyword searches. The company also provides a feebased subscription service, Infoseek Professional, that provides access to proprietary Net-based information, such as Hoover's Company Profiles and market research reports from Cambridge Scientific Abstracts' Worldwide Market Research Database.

Magellan

ADDRESS: http://magellan.mckinley.com/

Founded by a team of international publishers, technologists, and information specialists, The McKinley Group's Magellan site is

an online directory of business, entertainment, reference, and other sites reviewed with attitude by the company's stable of writers. You can perform a search by keyword and, if Magellan finds the site you want, it will spit out a short, critical review of the site's content. Parents will like the Magellan Green Light icon that appears next to the names of sites that *aren't* "intended for mature audiences."

SavvySearch

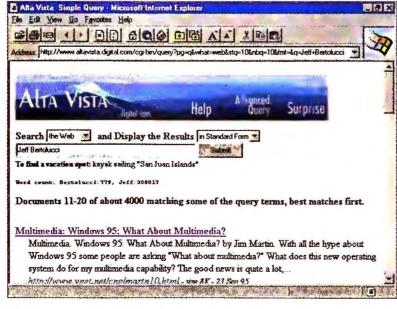

ADDRESS: http://www.cs.colostate.edu/~dreiling/smartform.html

When you want an intensive, all-points-bulletin search, Colorado State University's innovative tool lets you send a search query *simultaneously* to about two dozen Net-based search engines, including some listed here. The downside: Because SavvySearch queries a variety of engines, you may find yourself waiting minutes (rather than seconds) to read the results.

Yahoo

ADDRESS: http://www.yahoo.com

One of the best known Web search tools, Yahoo Corporation's self-named Web page, like Infoseek, is a fast way to locate the Web's most popular sites. For faster results (and fewer hits), you can narrow your search to specific subcategories, including Arts, Business and Economy, Entertainment, Government, and so on. Yahoo's Web Launch page lists the latest Web offerings. The simple, clutter-free interface is appealing to business users who want to find information quickly.

SET YOUR SITES HIGH: Alta Vista literally does just that, with 10 billion words and 21 million Web pages in its index.

West's Legal Directory

ADDRESS: http://www.wld.com

West Publishing Company is one of the leading legal publishers in the country. Its site offers numerous services to attorneys (for a fee), but its West's Legal Directory is a free, comprehensive directory of law firms, government offices, corporate law offices, and lawyers. The highly customizable search engine lets you find a lawyer in the U.S. for your exact needs. The directory offers a résumé-like profile of each lawyer.

Download Lowdown

Before you prowl the online software libraries, here are a few pointers to simplify your downloading experience:

The faster the connection, the better.

Say good-bye to that 14.4-kbps modem. If you're not cruising cyberspace at a minimum of 28.8 kbps, you're spending too much time downloading graphics and other files-which can add to those expensive hourly online charges. Another option is a high-speed digital connection such as ISDN, but 28.8-kbps modems currently offer the best price/performance ratio.

Scan new files for viruses.

Always use protection. Antivirus programs automatically scan downloaded files (see "Viruses: How to Perform Safe Computing").

"Anonymous access denied."

If you see this message when attempting to download a file from an FTP site, don't worry. It often means the site is busy, so try again later.

Strong supporting cast.

Downloading a file isn't enough. You'll need extraction utilities such as PKZip, a graphics viewer such as PaintShop Pro, and other tools to run your new software. You can find these helper programs in a major software library, such as Jumbo (http://www.jumbo.com). -J. B.

Off hours are fastest.

You can navigate cyberspace and download files quicker by logging on during the hours that traffic is the lightest: Peak time on the commercial online services is between 5 p.m. and midnight EST. Because the Internet is global, there is no such thing as a rush hour, but you can expect busy times.

Choose the closest Internet site.

Internet-based software directories often list more than one FTP (file transfer protocol) site from which you can download a specific file. For a faster download, always choose the site that's geographically closest to you.

The Time of Your Life

What are the differences in average download times using 9600-, 14,400-, and 28,800-bps modems? To find out, we downloaded an exe-

cutable file and a video clip from America Online using three modem connection speeds; each file was downloaded six times, and times were averaged. Optimum is the best time you can expect with excellent telephone lines and low network traffic. Typical is what you can more often expect in the real world.

Take advantage of the dazzling array of free databases available from the feds. With over a dozen

Federal Depository Library gateways, this site allows keyword searches on, say, the 1995 and 1996 Federal Register and Congressional Record, Government Accounting Office reports, Privacy Act Notices, and other documents. Want to see what the government has to say about software and foreign affairs? Find out with GPO Access's Government Information Locator Service, a search engine that gets data from over 20 agencies, including the Office of Management and Budget, the Federal Trade Commission, and the Federal Communications Commission, to name a few.

Working From Home COMPUSERVE: go work

If you work in a home office, you don't have to feel alone. You can talk online with established

small- and home-office veterans who have plenty of advice. Working From Home's libraries have invaluable documents such as a checklist to help evaluate whether your home-based business is meeting your personal as well as business needs. And how about a guide to marketing your homebased business on the Internet?

Freebie Central

What's free today may cost you tomorrow. Fortunately, a variety of Web pages and online service areas can direct you to sites offering freebies. For instance, if a computer company is giving away a 17-inch monitor, chances are you'll read about it at one of these sites. In fact, unless you have a specific site in mind, the directories below are the easiest places to begin window-shopping.

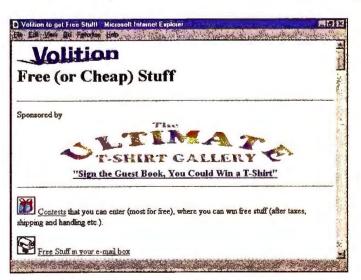

Next to Nothing

ADDRESS: http://www.winternet.com/~julie/ntn.html

Minnesota-based Julie Pederson is the ultimate freebie hound, and she likes sharing her no-cost dis-

coveries on this directory, updated weekly. She lists freebies currently offered through toll-free numbers or at Net locations. When we last checked, there were offers for free demo software, cigars, groceries, toiletries, household cleaners, over-the-counter drugs, and myriad recipe booklets.

UP FOR GRABS: From a T-shirt to a notebook computer, you can find great prizes among Volition's contest links.

Volition

ADDRESS: http://www.volition.com/

Be sure to check out the Contests page of this freebie directory site for current listings of Internet-

based sweepstakes and drawings. For instance, we found a link to Insight's home page (http://www.insight.com/web/formwin.html), where you could enter your name and mailing address for a chance to win a free IBM ThinkPad notebook. Volition also has a continuously updated list of Netbased contests where cash and other prizes are up for grabs.

Alt.Consumers.Free.Stuff: The Next Generation

ADDRESS: http://www.supernet.ab.ca/cgi-bin/freestuff

A cornucopia of freebie delights, this site provides toll-free numbers and company Web sites for a

wide range of merchandise. Many of the offers, updated regularly, are culled from magazine and newspaper advertisements and are cited accordingly. When we last looked, some of the loot you could haul away included T-shirts, pet food, Excedrin, Oil of Olay, men's ties, pens, energy bars, condoms, Post-it notes, magazines, and even tickets to the Ringling Brothers and Barnum & Bailey circus.

Savetz's Unofficial Internet Public Domain Index

ADDRESS: http://www.northcoast.com/savetz/pd/pd.html

Kevin Savetz is a technology writer based in Northern California, and his Public Domain Index

lists no-strings-attached literary, scientific, and engineering texts available for down-

loading. It also includes convenient links to other Net sites that offer free information, development tools, and other software, as well as photos and clip art—all in the public domain.

Free Offer Outlet

COMPUSERVE: go freeoutlet

In addition to the Seattle Filmworks offer listed above, at the Free Offer Outlet we found such

bonanzas as a sample tube of Rembrandt Oral Care toothpaste, a full working version of PC Planner, a desktop organizer program, and sample issues of magazines such as *Popular Science*. Search by offer, business, or in any of 28 product categories.

The Free Offer Store

PRODIGY: jump free

Prodigy's Free Offer Store includes many of the same deals you'll find in the free offer areas

of the other online services, including Seattle Filmworks' film offer, magazine issues, and a booklet for managing your budget

when you place an order with Current Checks, a check printer.

FreeRide

ADDRESS: http://www.freeride.com

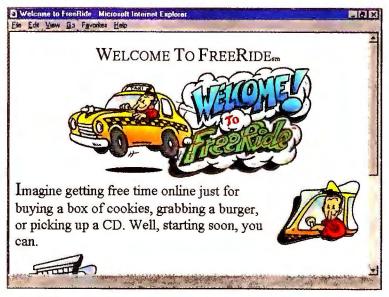

FreeRide offers the nineties version of redeemable Green Stamps with its novel concept: Get free Internet time in exchange for buying consumer products such as a box of cereal or an audio CD. Purchase any of the products on the FreeRide "menu" and you get time

credits applied to your Internet service provider or online service of your choice. You simply save the proofs of purchase from the products and send them to FreeRide, which then issues your online provider a credit statement that shows how much time you've earned. The service is free to end users, and the selection of products is extensive.

Government Giveaway Forum COMPUSERVE: go infousa

Author and freebie maven Matthew Les-

VITUSES How to Perform Safe Computing

If you're going to pick up a data-destroying computer virus, it'll probably come from a file you download from cyberspace. So you need protection before disaster strikes.

One top antivirus choice is F-Prot Professional—it's fast, accurate, and free. F-Prot runs from DOS or Windows and intercepts viruses before they wreak havoc.

Get your copy at http:// www.datafellows.fi /f-prot.htm.

McAfee's VirusScan quickly scours your files while you're busy with other computing tasks. It comes in versions for Windows 3.1, 95, and NT; OS/2; and DOS. Find it at http://www.mcafee.com and on most BBSes. Registration is \$65.

If you receive lots of e-mail, you should consider Touchstone's PC-cillin '95 (which includes a version for Windows 3.1). Not only does the \$49 PC-cillin handle routine

virus chores, it also checks for viruses as you download compressed files

onto your hard disk, and it scans files attached to e-mail messages. Look for more information on the firm's home page (http://www.antivirus .com). —S. B.

LottoWorld's sweepstakes entry form. Drawings will be held June 1 and December 1, 1996. You must be at least 18 years old to enter. The string attached to this is that they capture your name and address, which they can then sell to other marketers.

CAREERS FROM YOUR DESKTOP

Job Hunting

The Web is your best bet for free up-to-date career information and job listings—ones that might appear in newspaper classifieds and others usually only posted internally at companies. While there are dozens of career sites on the Net, here are four favorites.

The Business Job Finder

ADDRESS: http://www.cob.ohiostate.edu/dept/fin/osujobs.htm

Maintained by Ohio State University's Fisher College of Business, The Business Job Finder offers information on careers in such fields as finance, banking, real estate, accounting, and management. The commercial banking section, for instance, lists skill requirements, banking trends, salaries, and top banks in the U.S., along with relevant

contact information. And like any resourceful site, this one also conveniently includes links to other career-related Web sites.

CareerPath.com

ADDRESS: http://www.careerpath.com/

You don't need to buy a newspaper to check out the job classifieds. This site lets you search classified employment ads from six participating newspapers: the Boston Globe, Chicago Tribune, Los Angeles Times, New York Times, San Jose Mercury News, and Washington Post. Enter a job type to see listings frequently posted before the printed version reaches the streets. The service would be of limited value to anyone interested in jobs outside of the regions covered.

E-Span

ADDRESS: http://www.espan.com/

Sporting perhaps the most practical interface of all the career-oriented Web sites we looked at, E-Span guides you through an interview process to gauge your professional interests, salary requirements, years of relevant experience, and so on. It then searches its database for U.S. job openings most appropriate for you. We were able to find dozens of corporate job listings in categories such as sales, marketing, management, and engineering. You'll also find company pro-

files, salary guides, and advice on how to create both electronic and paper résumés. E-Span also has a similar forum on CompuServe (go career).

The Internet's Online Career Center

ADDRESS: http://www.occ.com/occ/

The clean, no-frills interface is perfect for career seekers who want to find the right job fast. When you log onto the Online Career Center's home page, you'll find a handy search tool for locating job openings by industry, state, and city. You can also e-mail your résumé to the OCC, which will post it in its résumé bank where it can be seen by corporate recruiters.

THE READING ROOM

Books and Pamphlets

While you probably won't find copies of the latest Anne Rice or John Grisham bestseller (well, not legally, anyway), online services and the Net are a good source of reference and public domain texts.

Barron's Booknotes

AMERICA ONLINE KEYWORD: booknotes

Okay, so maybe you've been out of school for years, but you probably know someone who will want

to check out this AOL site. Barron's lets you download its *Barron's Booknotes*, the popular crib guides to great works of literature such as *Anna Karenina*, *Hamlet*, *A Farewell to Arms*, and scores of other books you were forced to read in high school or college. This is the place to go for a condensed education.

The On-Line Books Page

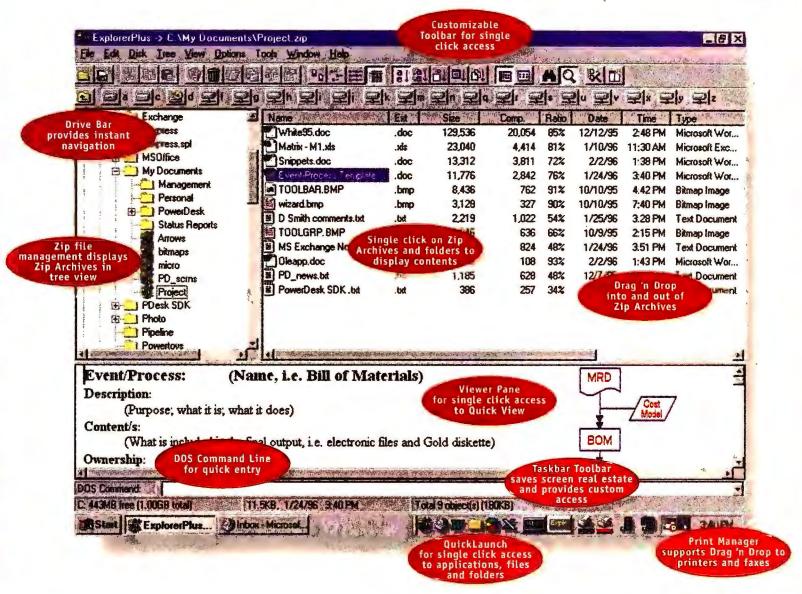

ADDRESS: http://www.cs.cmu.edu/Web/books.html

Carnegie Mellon University's Books Page provides the text of over 1300 books free for personal, noncommercial use, including literary classics such as *The Importance of Being Earnest* by Oscar Wilde. While many titles are a tad esoteric, like E.T. Jaynes' *The Physical Basis of Music*, bibliophiles everywhere will find the Books Page worth a visit.

Kerry's Restaurant World

ADDRESS: http://www.kerrymenu.com

Kerry Tracy boasts that this site features the largest selection of menus and photos from top restaurants across the country. While we can't corroborate that, we can recommend the site for dispensing information that had been available only in guidebooks, many of which are updated only once a year. Tracy adds material daily, including restaurant openings and a calendar of events. He started Kerry Publishing with the Kerry Calendar, an appointment book that includes menus for New York's top restaurants.

Gigabyte Drive

LOW, UPGRADING YOUR PC'S
STORAGE IS A NO-BRAINER.
HERE'S YOUR GUIDE TO
70 DRIVES WITH CAPACITIES
FROM 1 TO 9 GIGABYTES.

BY REX FARRANCE AND ARDEN HOFFMAN

t's hard enough keeping up with your workload without having to sit through another remake of *The Incredible Shrinking Hard Drive*. Of course, your drive only *seems* to be getting smaller—it's all those bigger programs and files that are cramping your style.

Operating systems, applications, and files haven't trimmed down any since our last comprehensive look at hard drives a little over a year ago. At that time, 1GB hard

drives were considered big—now a 1GB drive is really the minimum we can recommend. For instance, full installations of a popular combo, Microsoft's Windows 95, Plus, and Office 95 Professional, lock up about 200MB. Add to that room for today's multimedia and graphics applications (10 minutes of MPEG video can easily take 100MB or more), plus all the neat stuff you can download from the World Wide Web, and you'll be hurting for space. And Windows 95's dynamic disk-based virtual memory also needs plenty of free disk space—or you won't be able to load additional programs once your system RAM is full.

If you're in the market for a new PC, you probably don't have to worry too much about having enough storage: Hard drives of 1GB and larger are standard fare today on most of our Top 20 desktop PCs. But what if the 540MB hard drive on your two-year-old Pentium or DX4 is pinching you tighter than a new pair of shoes? You have three choices: You can replace your current hard drive, add a second hard drive, or add a removable-media drive, such as Iomega's new Jaz SCSI drive, which costs about \$500 plus \$99 for additional 1GB media (see this month's *Hardware Q&A* and "Incredible Expanding Drives" in March).

For most computer users, the best bet is to go with a conventional hard drive. Fortunately, hard disks are cheaper than ever. For example, 1275MB IDE drives are being advertised for around \$250 (about 20 cents a megabyte), approximately half of what they cost last year. The biggest hard drives are around 9100MB—more than twice the size they were 12 months ago. Even *their* prices are quite reasonable: For example, the 9090MB Seagate Elite 9 is advertised for \$2299 or about 25 cents a

STORAGE HARD DISKS

megabyte. And a new hard drive won't just expand your PC's capacity. If you hook the drive up to a PCI or VESA local bus adapter, it should also improve your computer's performance. If your PC lacks a local bus connector, you might get a speed boost, but you won't be able to take advan-

tage of your drive's fastest transfer rate.

For this guide, we gathered specifications on 70 internal hard drives ranging in size from 1080MB to 2560MB for IDE drives and from 2200MB to 9100MB for high-performance SCSI drives. Prices run from \$199 to \$2299. Almost all the drives here will fit in a 3½-inch bay, with a sprinkling of 5½-inch form factor products in the mix.

For in-depth speed tests and hands-on evaluations, we chose ten representative units from Conner, Fujitsu, Hewlett-Packard, Seagate, Quantum, and Western Digital. (Conner was acquired by Seagate while our review was in process. As a result, the two Conner drives we tested are now listed and sold as Seagate Cabo drives.) We installed each drive in our year-old Micron P90 Millennia, hooking up the IDE units to the integrated PCI adapter and the SCSI drives to an AdvanSys AdvanSCSI ABP-930 bus-mastering PCI adapter. To test speed, we performed tasks in several Windows 3.1 and Windows 95 business and graphics applications.

Different Strokes...

What did we find? The kind of hard drive you should buy depends on what you'll use it for: Our tests show that for typical business applications—word processing and spreadsheet programs—IDE drives, which are standard in most new PCs, provide the

most attractive combination of low price, good capacity, and solid performance. The latest generation of IDE drives (sold variously as Enhanced IDE or Fast-ATA-2, depending on the vendor) are rated to transfer

short bursts of data at rates as fast as 16.7MB per second, and the fastest IDE drives we tested—the Seagate Medalist 2140 and the Quantum Fireball 1280—compared favorably to even the fastest among the SCSI drives in all except the difficult Adobe Photoshop test. Granted,

they aren't as flexible as SCSI drives (only two can be connected to each adapter), but they'll plug right into your current local bus drive adapter.

SCSI hard drives are more expensive than IDE units—costing about \$50 or more extra per gigabyte, plus another \$100 to \$300 for a SCSI adapter—and they offer little or no performance advantage for the most common applications. But

How to Find Your Best Deal

rices can vary quite a bit depending on where you buy. Computer superstores and membership warehouses generally offer attractive deals, but the lowest prices often come from mail-order firms and some local dealers. Before buying make sure the drive has a valid manufacturer's warranty—retail kits can have different warranties from drives sold to system integrators. Also, if buying a new system, don't assume the drive has a longer warranty than the PC. The typical warranty on an end-user IDE drive is 3 years, and most SCSI products come with a 5-year warranty. You'll also want to ask how warranty service is handled. Many vendors will immediately send you a replacement, and HP touts its 24-hour Express Exchange service for a failed drive.

You probably already have an IDE adapter in your PC, but remember that you'll need to buy an adapter to use with the SCSI drives. And make sure you have the right kind of cable, mounting hardware, and installation instructions. If you're adding rather than replacing a drive, you must have a 3½-inch internal bay for most drives. The new ¾-inch-high Quantum Bigfoot 5¼ inch form factor models are a rarity: They're designed to work in the same bay with most CD-ROM drives.

they're perfect for more demanding jobs, such as disk-intense graphics work, server-based storage, large databases, and desktop publishing. Even in less demanding applications using Windows 95, a SCSI drive,

Specs Meet Specsmanship

anufacturers love to quote numbers, but real-world performance varies widely, so it's best to take all of them with a grain of salt. Here are some plain-English explanations.

Average seek The average milliseconds it takes a drive's heads to find requested data.

Cache on drive A hard drive's cache or buffer ranges from as little as 64K to as much as 2048K on the drives covered here. All the drives can cache both reads and writes. The jury is out on how much effect on-disk cache has on performance in the desktop environment, where software caching is almost always in play. Our tests show no direct correlation between cache size and performance.

Contact start-stop cycles (CSS) The manu-

facturer's prediction of the number of times you can expect to start up the drive before the heads may damage the disk platters.

Fibre channel Fast SCSI-3 drives that use a serial, rather than parallel, interface.

G shock rating Pay attention to this spec if you live in earthquake country. It tells you how well the drive should take a jolt; higher should indicate more shock resistance.

Multiword DMA Direct Memory Access, or DMA, is another way to let IDE drives transfer data to system RAM without CPU intervention; multiword DMA allows more data to be transferred at once.

SMART-compliant A so-called SMART-compliant drive can predict impending failure and send a warning message to the system.

such as the 2140MB HP SureStore 2000LP SCSI-2 drive that aced our toughest tests, should still boost your productivity if you work regularly with multimegabyte files or do complex multitasking. And even with transfer rates as high as 20MB per second, SCSI-2 isn't the top of the food chain: The new Ultra SCSI standard allows for transfer rates up to 40MB per second, and fibre channel, the fastest type of SCSI, is spec'd at an amazing 100MB per second.

SCSI drives are better than IDE drives for heavy workloads because they tend to run at higher rpms—the single most important factor in performance—and have larger on-disk buffers. SCSI drives have faster seek times and can read and write data more quickly. You can further improve SCSI performance in intense multitasking environments, such as a busy server or a Windows 95 system executing multiple programs and tasks, by using a bus-mastering adapter. These more advanced adapters

Tips for Hard Drive Upgrades

Dump Your Old Drive Don't try to salvage a small, slow, tired drive. Difficulties hooking two dissimilar drives together are common.

Brand Loyalty Pays If you're hooking two IDE drives together as master-slave, purchase the same brand: It's your best bet to make sure the two drives will work together.

Surf the Web for Drive Info Most drive manufacturers have World Wide Web and BBS sites where you can quickly track down drive specs, jumper settings, cable types, and the like—a great resource for after-hours problems.

Check Your BIOS If your PC is more than a year old, ask your system vendor if your BIOS

supports current IDE drives. If not, you'll either need to upgrade your BIOS or make sure your new drive comes with a utility that allows access to partitions larger than 528MB. For ISA installations, a \$39 adapter from GSI offers automatic configuration and needs no software drivers (800/486-7800).

Set Up Your Big Drive to Save Space Using just one drive letter (or partition), can waste 100MB or more per gigabyte. However, if you use more than one drive letter, setting partitions below 1024MB, then the size of each file cluster drops from 32K to 16K. That can save 16K every time you store a small file.

relieve the CPU of most of the work of controlling reads and writes, thus enabling a significant edge in overall speed. Desktop SCSI cards have the added advantage of allowing you to hook up as many as seven drives to each adapter for extra storage.

As a group, the four SCSI hard drives we tested won the performance race by a mere

FOUR REASONS WHY PORTABLES

Satellite

When it comes to price, performance and value, nothing comes close to the Satellite® Series. These feature-rich models make it possible for everyone to have power and performance in an inexpensive notebook.

Satellite Pro

With Satellite Pro™you can get affordable CD-ROM and portability in a multimedia notebook. This series offers the advanced features and power usually found in much more expensive machines.

Satellite, Satellite Pro, Portégé and Tecra. Quite possibly the best reasons there are for buying a portable computer. Four distinct Toshiba notebook lines assure that whatever your needs, there's one uniquely suited to you. Toshiba portables offer uncompromised

PORTÉGÉ®

The award-winning Portégé® Series defines high performance in ultraportable computers. At under five pounds, these super-lightweight notebooks are packed with features you'd only expect from full-size computers.

TECRA

Tecra[™]embodies the absolute latest and greatest in portable technology. With the fastest Pentium[®] processors and most innovative features on the market, Tecra notebooks are the ultimate in power and performance.

quality, and are recognized by the computer industry for technical superiority. And, Toshiba has award-winning customer service and support. That's why Toshiba sells more portables than anyone in the world. Need any more reasons? Call 1-800-457-7777 for more information or a dealer near you.

4 percent over their six IDE rivals. In the Word 7.0, Excel 7.0, and Paradox tests, even the fastest drives were unable to gain a significant advantage over their slowest competitors. But as the tests got harder, the SCSI units picked up the pace. On our two most disk-intensive tests, using Photoshop and Picture Publisher, the SCSI drives beat the IDE devices by 15 percent. Rpms were also a differentiator on these tests: For example, the pace-setting HP SureStore-2000LP SCSI drive and the 2113MB Sea-

gate Medalist 2140 IDE drive, which both spin at 5400 rpm, were noticeably faster than the other drives on the Picture Publisher test and almost twice as fast as the slowest IDE drive (the 4480-rpm HP Sure-Store 1600A). Ironically, the 2147MB Seagate Cabo CFP2107 SCSI drive took about 40 percent longer on this test than the two fastest drives, despite its 7200 rpm, probably because its track density isn't as high as the leaders'. (The closer data is packed, the more efficiently it can be read and written.)

But the same drive managed the top score on the Photoshop test, outshining the slowest unit, the 3600-rpm Seagate Cabo CFS-1621A IDE drive, by about 30 percent—indicating this SCSI drive does a better job handling large files than smaller files.

Despite the large differences on the individual disk-intensive tests, overall results were very close: The fastest hard disk we tested was the HP SureStore 2000LP SCSI drive, which outperformed the slowest IDE unit by only 9 percent overall. The

The IDE drives we tested all performed well with business applications. From left to right: The Seagate Cabo CFS1621A, Fujitsu M1614, HP SureStore 1600A, Quantum Fireball 1280, Seagate Medalist 2140, and Western Digital Caviar AC31600.

1060MB Seagate Hawk 2LP 1GB and 1280MB Quantum Fireball 1280 SCSI drives were second and third. A tight pack of IDE and SCSI products were close behind,

and the Fujitsu, Seagate, and HP IDE drives brought up the rear.

One drive we tested, the 1280MB Quantum Fireball, is available in both an IDE

and a SCSI version. Both spin at 5400 rpm, and their performance was very similar. Only on the Picture Publisher test did the SCSI version take a 6 percent edge.

SCSI-2 devices are designed to handle disk-intensive apps. Left to right: the Seagate Cabo CFP2107, HP SureStore 2000LP, Quantum Fireball 1280, and Seagate Hawk 2LP 1GB drives; and the Adaptec AHA 2920 and AdvanSys AdvanSCSI ABP930 (bus-mastering) adapters.

Ready, Get Set...

We had no trouble installing any of these drives in our Micron P90 Millennia. Most of the drives provided fairly spartan manuals, and HP's SureStore 1600A IDE kit included just a foldout installation sheet. The exceptions were the Seagate Hawk

and Medalist drives, which each came with a 33-page booklet, and the HP SureStore 2000LP SCSI drive, which provided indepth specification and installation guides. Western Digital also did a good job, including a quick installation guide along with a comprehensive manual detailing BIOS settings and operating systems support. The setup utilities for all the drives are straightforward. The SCSI drives are particularly easy to install, thanks to their support for SCAM (SCSI Configured AutoMatically, the SCSI component of the Plug and Play specification). SCAM relieves you of hav-

STORAGE HARD DISKS

ing to worry about vexing technical details like setting SCSI IDs and termination.

None of the drives was noisy, although the 1090MB Fujitsu M1614 IDE drive stood out as the quietest by far. If you're used to hearing your drive clicking away, you may even find this one a bit unnerving. The HP and Seagate SCSI drives also impressed us as quieter than usual.

The Shapes of Drives to Come

Drives will continue to gain in capacity and speed. But can costs per megabyte keep dropping? That remains to be seen, although Quantum has now managed to

reduce costs to a mere 15 cents a megabyte in its new Bigfoot IDE drives. The company says this 54-inch drive spins a larger disk at a fairly low 3600 rpm, making it less expensive to build. However, the company says the Bigfoot's disk diameter helps keep performance high. Some other vendors may follow suit by fielding similar products, although 31/2-inch drives should continue to be the mainstream.

In the next few years, expect the division between inexpensive IDE drives and highperformance SCSI products to become more distinct as people use their PCs for more graphics-intensive work. Ultra SCSI is likely to gradually replace SCSI-2, as there is little penalty in manufacturing cost attached to its higher-performance SCSI technology. But because of their even more advantageous price/performance balance, IDE drives will remain the most popular over at least the next two to three years.

SOFTWARE SUITES FOR WINDOWS 95

To borrow very loosely from Forrest Gump, office software suites are like a box of chocolates: You never know what you're going to get. Will it be a box full of winning applications, or a bundle that will leave a bitter taste in

your mouth? In our December review of Microsoft Office 95, the only Windows 95 application suite available at the time, we found a product that was slower than before and a trifle boring as an upgrade (see "Microsoft Office 95: Who Needs It?"). Our advice was to wait and see what you could get with one of Office's yet-to-ship competitors, SmartSuite or PerfectOffice. But after testing Office 95 and SmartSuite 96 in this head-to-head review for usabili-

overall, and, taken as a whole, it's a superior group of applications.

It's possible that the newly rechristened Corel WordPerfect Suite (formerly known as PerfectOffice) could prove to be the best of the three suites

when it ships sometime this summer. But that's pretty iffy. Although WordPerfect Suite consists of a larger number of applications (including WordPerfect, Quattro Pro, Presentations, Envoy, Netscape Navigator, CorelFlow 2.0, Starfish Software's Sidekick and Dashboard, and a whole slew of fonts and clip art images) it lacks both a database and the personal information manager InfoCentral. Furthermore, in the beta version we looked at, Quattro Pro and

Can Lotus SmartSuite 96 unseat Microsoft Office 95? For most users, the answer is no. Here's why.

ty, features, and speed, we can say conclusively that the pickings are still slim. The biggest incentives to buy SmartSuite 96 are its team computing tools, implemented the most heavily in Word Pro. Office 95 is still a long way from offering the kinds of benefits these utilities give workgroups who need to collaborate on documents. But in almost all other ways, Office 95 is simply the better suite.

ED INTED

It's faster than SmartSuite (if not it's old Windows 3.11 self), it's easier to use

Presentations weren't exactly balls of fire compared to those in Office and SmartSuite. To see how SmartSuite 96 stacks up to Office 95, we conducted in-depth performance tests and hands-on usability evaluations of both suites. To test speed, we hand-timed common tasks in all the apps except the schedulers. We also timed how long it took to perform some data sharing chores, such as embed-

ding a spreadsheet chart object in the word processor. To see what kind of

the apps except the schedulers. We all took to perform some data sharing chedulers. We all took to perform some data sharing chedulers.

WINDOWS 95 SOFTWARE SUITES

performance an upgrader might expect, we tested not only the new Windows 95 suites, but also their previous versions (Office 4.3 and SmartSuite 4.0), under both Windows 3.11 and 95. To determine how people with varying levels of hardware might fare, we tested on four configurations—a 66-MHz 486DX2 and a Pentium-90, both tested once with 8MB of RAM and again with 16MB.

To gauge usability, we brought eight users into our Test Center to perform some common integration chores. All testers had used

prior versions of either Smart-Suite or Office. Tasks included running through each suite's tutorial, creating appointments and to-do items in the schodulers, using shortcuts such as those in the SmartCenter and Office Shortcut Bar, and linking spreadsheet data to word processing documents.

In the end, Microsoft Office 95 emerged as the better suite, for several reasons. Its most obvious advantage—its cohesive look and feel and the ability to use Win 95 features across apps—comes from its fully 32bit application base. Unlike SmartSuite 96, which is still a mixed bag of Windows 95 programs (Word Pro 96, Freelance Graphics 96, and Approach 96) and older 16-bit holdovers (1-2-3 release 5.01 and Organizer 2.1), Office 95 has had a full suite of 32-bit programs since it shipped last August.

When pitted application to application, Office 95 comes out on top. All of its core programs—word processor, spreadsheet, and database—have an

edge in features over SmartSuite's. Lotus's Word Pro, for instance, is a nice effort with some impressive new tools and productivity enhancements. But many of Word 7.0 for Windows 95's tools are slicker. For example, Word 7.0's AutoFormat feature corrects format inconsistencies—such as different types of bullets—as you type; in Word Pro, you have to run Check Format manually.

SmartSuite's database, Approach 96, has added so many bells and whistles—including a real programming language—that it now seriously competes with Office's Access. But Access still has more complete features, with better SQL access, spreadsheet integration, and other tools that make it more attractive to power users.

The biggest gap can be seen in the two suites' spreadsheets. In the features footrace, Excel has become a speck in the distance while 1-2-3 struggles to make it out of the starting block. If 1-2-3 is ever to catch up to Excel's developments in both basic and highend tools—importing and pivot tables, to name two—Lotus will have to work hard and fast.

SmartSuite 96's second-tier apps have more luck holding their own against Office 95's apps. The 16-bit Organizer, for instance, appears at first to be the underdog to Office's slick new Schedule+ personal information manager. But Organizer is a little easier to use than Schedule+ and even bests it by adding basic tools every PIM should have, like the ability to take free-form notes. But one of the

> biggest reasons to buy Smart-Suite is for its presentation graphics. Office's PowerPoint is great, but the new interface on SmartSuite's Freelance Graphics brings impressive new ease to creating and revising presentations.

Slow and Slower

We complained about Office 95's speed in our December review, but SmartSuite 96 manages to be even slower. Not only is SmartSuite slower overall than its previous version, but almost every application in it lags behind its Office 95 counterpart, especially Word Pro, which took up to three times as long to print, regardless of computing platform or amount of RAM. Only Freelance Graphics held its own except in printing, probably because it doesn't have Power-Point's multithreading.

SmartSuite will run on a 486 equipped with 8MB of RAM, but we think you'll find some operations unbearably slow. For acceptable performance—espe-

cially in Word Pro-we recommend the fastest machine you can get your hands on, with at least 16MB of RAM. Upgrading RAM made a big difference in SmartSuite's tests: Adding 8MB of RAM for a total of 16MB on our 486DX2-66 gave us an overall performance boost of 46 percent; on our Pentium-90, it boosted speed 58 percent.

Do You Know the Way to OLE?

Each generation of office suites gets a little closer to that Holy Grail of bundled business applications: easy data sharing. But the features for those data sharing operations have to get easier to use before the average user will benefit. According to our usability testers, Office 95 makes it easier to share data than SmartSuite 96 (see "SmartSuite 96 Lags Behind Office 95 in Usability"), but Office still has its share of problems. The option of using Windows 95's Taskbar to drag and drop information has made sharing data between applications easier in both of these suites. But using Object Linking and Embedding—which lets you embed data from other applications and update them using dynamic links—can still be a pain because the suites do such a poor job of explaining how to use it. SmartSuite's inadequate help screens, for instance, prevented some testers from successfully creating a link between a 1-2-3 spreadsheet range and Word Pro.

In fact, some of our testers had trouble grasping the suites' two biggest data sharing tools: Office's Binder, and Word Pro's tabbed document divisions. Both provide a seemingly simple way to col-

lect OLE-compliant documents in one place for easier organization and launching. In Binder you place documents in a single file; in Word Pro you attach documents to tabs. But Binder's support for a limited number of applications (mostly from Microsoft) confused some people, who couldn't understand why only a few programs were listed as available. And Word Pro's scheme of linking files (instead of combining them into one file like Binder does) stymied some testers

who did not know they had to update file names and locations in Word Pro manually if those things changed.

Neither One's a Charm

With only two Windows 95 suites to choose from, and neither one a blockbuster, where do you go from here? If you already upgraded to Windows 95 and want a suite now, it's a pretty easy choice.

For all the reasons we've mentioned, Office 95 has the edge. For \$599, you get five applications: Access, Excel, Power-Point, Schedule+, and Word. SmartSuite 96's main charms are its team computing features and its price. For \$399, you get six applications (including the ScreenCam utility). If you don't mind waiting a few months for the 32-bit versions of 1-2-3 and Organizer (the package includes free upgrade coupons), the savings you get from buying Smart-Suite now might be worthwhile.

Word Pro 96

Looks Great, but Less Satisfying

PROS: Tabbed document sections, all-in-one InfoBox formatting tool, powerful group editing features, Ask the Expert help system

CONS: Lack of multithreading slows down performance, limited document templates At first blush, Word Pro 96 looks like it could be a Word killer. It

not only beats Word 7.0 in workgroup features, it also has an inviting new interface and lots of productivity tools sure to attract individual users as well. However, the excitement over all those great fea-

WINDOWS 95 SOFTWARE SUITES

tures will soon fade as you sit and wait for Word Pro 96 to load, open files, and print. Unable to match the speed of Word 7.0—or even its Windows 3.1 counterpart in some operations—Word Pro suffers from one of the biggest destroyers of promising software: slow performance. That's the major reason it doesn't make any real strides against word processing champ Microsoft Word.

Family Ties

The first thing you'll notice about Word Pro is the SmartSuite family resemblance. It sports the same interface elements as Approach and Freelance—tabbed pages, movable SmartIcon palettes, a refined menu structure, and the InfoBox formatting tool. The tabbed division feature helps to organize long documents by divid-

Methodology Tests were conducted on a Micron Millennia Pentium-90 (with an 850MB IDE hard drive and a 2MB Diamond Stealth64 graphics controller), and on a Gateway 486 DX2-66v (with a 320MB IDE hard drive and an ATI Ultra Pro Mach 32 graphics controller). We installed the default configuration of Windows for Workgroups 3.11, ran our tests, then installed the default configuration of Windows 95 and ran our tests again. Tests were done by hand. Timing ended when we regained control of the cursor.

SmartSuite 96 Integration: How It Works

compete with the fully 32-bit Office 95. But for a Windows 95 office suite saddled with two 16-bit applications (Organizer and 1-2-3), SmartSuite 96 does a fair job of integrating information. It's significantly better at this than before and even manages to challenge Office in a couple of important areas. Unfortunately, as in Office 95, linking applications and sharing information takes longer than in previous versions, as do most other tasks. Our usability testers also had nits to pick with the steps that both suites require users to take to share data.

Integration for All

Despite their disparate interfaces, Smart-Suite's 16-bit and 32-bit applications offer a fair amount of interaction. For example, you can create Approach forms and reports from within 1-2-3, and you can drag and drop data from 1-2-3 into Word Pro or Freelance. A new feature lets you access Organizer's Address Book and Calendar directly from SmartCenter, the suite's all-in-one data repository tool.

Although we liked SmartCenter better than Office's similar but less talented Shortcut Bar, it's still not entirely clear why anyone would want to use these tools in addition to Windows 95's Start menu. Both the Smart-Center and Shortcut Bar are easier to maintain than the sprawling Start menu, but most users probably won't go to the trouble of

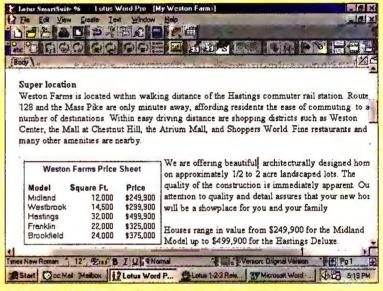

learning a new interface. In addition, our usability testers found the number of toolbars cluttering the screen confusing and in most cases turned them off.

Still, the SmartCenter can prove to be a

useful tool. You can store applications, documents, and folders according to their functions. You can also add multiple folders to a single drawer, much as you would in a real file cabinet. In Office, you can only create additional toolbars on which to store these items. The Smart-Center also displays the name alongside each file icon; In Office you must point to each icon to determine its name.

mentation is cleaner: Its default is to paste only a copy of the source data.

When our testers tried to establish an active link between a range of spreadsheet cells and a word processing document, both

SMARTSUITE 96 OFFERS INTEGRATION among all its applications, including the 32-bit Word Pro and 16-bit 1-2-3.

Compounding Trouble

Both SmartSuite 96 and Office 95 let you create compound documents, but they haven't done a very good job of showing you how to do it. For instance, when you drag and drop data between applications in Office 95—say from Excel to Word—you have to remember to hold down <Ctrl> as you drag, or Office will cut the data from Excel and paste it into Word. When you return to Excel, you'll find a disturbing hole in your worksheet. SmartSuite's imple-

suites flopped. Neither SmartSuite nor Office makes it clear that you use the Edit • Paste Special command to create the link. So most of our testers turned to the only command that resembled the task at hand, Insert • Object (which only inserts a copy of the file). Turning to the help system wasn't of much use either: Both SmartSuite and Office required users to dig through a stack of help screens before they could find the correct information. —Reid Goldsborough

800-833-447 800-338-156 ing a file into sections. The InfoBox is likely the biggest improvement. It lets you assign fonts, apply line spacing, and set indents, all from a single point—and it remains on screen while you work.

Similar to Freelance and Approach, Word Pro provides a number of SmartMasters that help you quickly create documents such as business proposals and newsletters. But Word Pro's mostly blank SmartMasters aren't as useful as those found in Freelance, which come with plenty of canned content to customize. Word Pro's templates are also inferior to what you'll find in Word 7.0. In addition to offering a better selection of templates, Word also provides document wizards, which automate document creation. For instance, to create a document, you just activate a wizard and fill in a series of

dialog boxes. When you're done, Word creates a document based on your choices.

Go Team Computing

Word Pro's strongest feature is its ability to streamline the most onerous of collaborations—the document edited by committee. Word 7.0's revision marking and text highlighting tools are dandy, but they're no match for Word Pro's array of options.

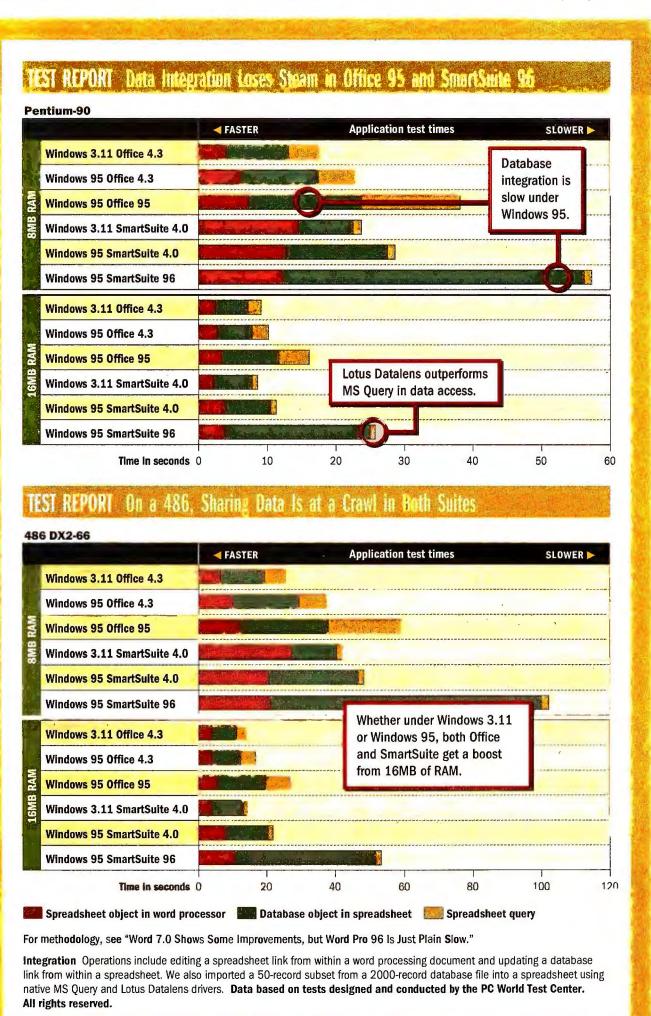

Word Pro's TeamReview command allows you to assign specific editing rights to collaborators and indicate whether to store revisions in a separate version or in the original document. Team-Mail lets you send a document to a group of editors in sequence, via either cc:Mail or Microsoft Mail.

TeamConsolidate is by far the easiest way to manage input from other users. You simply distribute your document, and as your coworkers complete their changes, they send the file back. You then use TeamConsolidate to merge the changes into one file, with each edit marked and annotated with the reviewer's name.

What Price Speed?

No doubt about it: Word Pro 96 has lots of nifty new features going for it. But Word 7.0 has something Word Pro doesn't: speed you can live with. We recommend you wait for the next version, when Lotus gets another chance to make it right.

Freelance Graphics 96

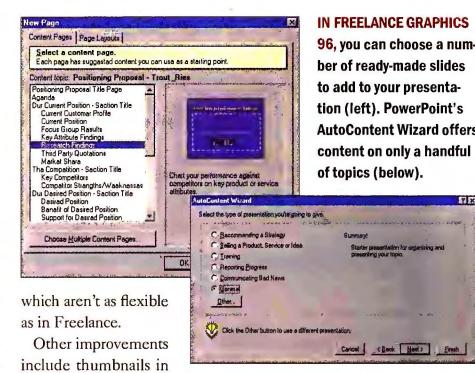

Better Than PowerPoint

PROS: Streamlined interface, content-specific SmartMasters, diagramming tools **CONS:** Poor performance

Topping presentation rival Microsoft PowerPoint 7.0 for Windows 95 is no easy feat. But Freelance Graphics 96 has done so in two key areas: creating presentation content and revising it. Power-Point still excels in presentation delivery, with easier screen-show features and faster printing. But our performance tests reveal that there is one area where Freelance is just like PowerPoint—its slower across the board compared to the previous version.

Freelance's improved interface includes tabs, which make it easier to switch between views, and a Guide Me icon that offers context-sensitive help. Drawing and text tools appear only as you need them, and formatting is streamlined via the InfoBox. In comparison, PowerPoint relies on a number of different dialog boxes.

One of the best features in Freelance is its new Content Smart-Masters, each of which contains detailed suggestions on over 30 different topics. PowerPoint's AutoContent Wizard looks anemic in comparison: It provides content for only 7 presentation topics,

the Outliner, which show what your slides look like as you edit the text, and the much-improved drawing tools, which feature dragand-drop text shapes and sticky connectors (similar to those in Visio Corporation's Visio). Like its SmartSuite companions, Free-lance includes team computing tools. With TeamReview, a group of Freelance users can annotate a presentation. You then view the revisions by name and accept or reject each edit. Note that Team-

Review won't work if you don't have an e-mail system (Lotus expects a fix in the next release.)

Although Freelance provides more multimedia templates than PowerPoint, it's not as easy to add special effects in Freelance. In PowerPoint, you click a button to add sound and animated effects; in Freelance you must add them yourself.

Unlike PowerPoint, however, Freelance enables you to distribute your presentations via the World Wide Web. (According to Microsoft, an Internet publishing tool will be available for both PowerPoint and Excel by the time you read this.)

Play or Pass?

Freelance Graphics 96 is an ideal choice for anyone who creates presentations. However, our performance tests show that, like PowerPoint 7.0, Freelance is slower than its predecessor. But, Freelance's new interface and content-rich SmartMasters make it a worthwhile upgrade.

SmartSuite 96 Lags Behind Office 95 in Usability

Task	Lotus SmartSuite 96	Microsoft Office 95	Comments 1=Worst 5=Best
Sharing data among applications	(3.1)	4.3	Office 95 is the hands-down winner here. Linking a spreadsheet to a word processing document and performing a mail merge with a database file were onerous in SmartSuite 96.
Managing contacts and appointments	4.2	4.4	Lotus Organizer got slightly better marks than Schedule+ overall. However, keeping track of contacts in the Address drawer was confusing because the Address drawer and Organizer file aren't automatically linked.
Using program or file shortcuts	3.6	(3.9)	Although users found it easier to organize programs and files with the drawers in SmartSuite's SmartCenter, they found it more difficult to customize the SmartCenter than the Office Shortcut Bar.
Getting help	(3.8)	3.6	Even Office 95 users had to admit that SmartSuite's help is a little bit better than Office's.
Impressions of overall usability	3.7	4	It's a close call, but after completing our tests, even users who had previously tried SmartSuite preferred working with Office 95.

Methodology We asked eight typical users to perform a variety of common tasks and then rate how easy each task was to perform on a scale of 1 to 5. Each tester had experience with Windows 3.1 versions of SmartSuite or Microsoft Office. Two SmartSuite and two Office users were assigned to test each suite.

Sharing data among applications Tasks included linking a spreadsheet to a word processing document, editing the contents of a linked spreadsheet, performing a mail merge, and using each suite's compound document tools.

Managing contacts and appointments Tasks included using each suite's personal information manager to book an appointment, create a to-do item, locate a phone number, and add an address.

Using program or file shortcuts SmartSuite tasks included adding a SmartCenter drawer, assigning a program to a drawer, and adding an application to the SuiteStart toolbar. Office tasks included adding a folder to the Office Shortcut Bar and adding an application to the Programs Shortcut Bar.

Getting help Testers rated the suites' tutorials, context-sensitive help, and other features.

Impressions of overall usability Testers were asked to rate their experiences learning the suites, using suite features, and using the individual applications. The score is not derived from the ratings given for individual tasks.

Approach 96

Much Better, but Still No Access

PROS: Savable search queries, increased programmability with LotusScript, security rights can be assigned to database files, increased Notes support

CONS: Limited speed improvements

Approach was unique as far as personal databases went. It was a step above simple flat-file database programs because it was relational, yet it wasn't robust enough to compete with the likes of

Access. But now a new programming language, improved security features, and a slew of new time-savers team up to help Approach 96 finally compete more closely with Access. In a blow-by-blow features comparison, however, Access is still the more powerful database. Access is also faster; like its suitemates, Approach has slowed down. The only task in which Approach excelled was sorting.

Instant Database Success

One of Approach's strong points has always been the ease and speed with which users could create

a database. Approach 96 makes it even easier with SmartMaster Applications, a collection of ready-made database apps that can help you manage everything from product orders business contacts to music collections. If you don't need an entire application, you can select from dozens of handy SmartMaster Templates, each consisting of an empty data file and ready-to-use forms and tables.

But Approach's SmartMaster Applications and Templates aren't nearly as flexible as Access's Database and Table Wizards. For instance, when you use a SmartMaster Application or Template to start a new project, you can't tailor the database as it's being created, as you can in Access. Instead, you have to modify the file structures, delete unwanted forms and reports, and remove the sample data after Approach has done its work.

Access has another unique setup feature that is especially helpful for database novices. You can create a new file by typing data directly into a *data sheet* (a table of rows and columns similar to a spreadsheet). When you save the file, Access assigns field types based on the characteristics of the data you entered. This feature, along with others, will likely extend Access's reach into the novice database user market that has long been Approach's domain.

Picks and Pans

The ability to save queries, always a standard feature in Access, was missing in earlier versions of Approach. Now, not only can you save queries, but Approach's new Find Assistant simplifies the task of building them. Although it's similar to Access's step-by-step Query Wizard, the Find Assistant is less structured and easier to use. You simply pick the type of query you want to create (a basic find, duplicates, top/bottom values, and so on) from within a single tabbed dialog box, define the selection

criteria using simple drop-down menus, and then view a description of the query in plain English. You can switch to a different query type at any point simply by clicking the appropriate tab. By contrast, in Access you must choose a specific query wizard such as Simple Query Wizard, Find Duplicates Query Wizard, or Find Unmatched Query Wizard.

One annoyance: You'll find you still can't base an Approach report on a query, as you can in Access. When you want to report

on selected records, you have to remember to activate the query each time you switch to the report view.

A Touch of SQL

Approach has always been adept at data access, allowing you to open and join files created in other programs. In Approach 96, you can access data from nearly any type of file format, including spreadsheets, other databases, and text sources. With the new SQL Assistant, you can formulate queries for SQL data directly from Approach. Although the SQL Assistant is easy to use, it is not as powerful as Access's SQL tools. Approach limits you to Select statements; Access allows more complex SQL commands.

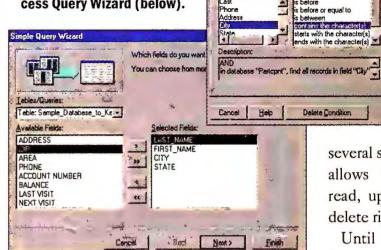

On the spreadsheet integration front, both Approach and Access let you create forms and reports right from 1-2-3 or Excel, respectively. However, Access raises the bar a level by allowing you to attach a worksheet directly to an Access database. Such a feature effectively brings together the power of both products—combining the extensive calculation abil-

ities of Excel with Access's data management prowess.

Lotus has also implemented its team computing strategy in Approach 96. With TeamSecurity, you can control access by assigning passwords, on either a group or individual basis, to the data and specific reports in your database. Access is more flexible, however. In Approach, you can only say whether a user can modify a database or use it in read-only mode. Access, on the other hand, goes

Until now, Approach has consistently lagged

behind the competition in programming tools. Its macro facility was adequate for automating routine tasks, but it just wasn't flexible enough to handle custom database applications. Approach now includes LotusScript, an object-oriented programming language that lets you create custom applications. LotusScript is similar to Visual Basic in its complexity, but its simplified interface makes application development easier. Unlike Access, which uses separate windows for browsing, editing, and debugging scripts, the

Script Editor provides a single interface for creating and editing scripts. In addition, the Smart-Master Applications contain plenty of code you can peruse to get familiar with the language.

Access Users Shouldn't Switch

For Access users who may be wondering if Approach would be a better choice for their database projects, the answer is no. Unless you've been struggling to get things going and really need the less complicated interface of Approach, you're better off sticking with Access and its bigger cache of tools. If you're already an Approach user running Windows 95 on a Pentium with plenty of RAM, the new Find Assistant alone makes it worth upgrading to SmartSuite 96 for this version of Approach. Otherwise, it's the same old story: It's better to wait for the next release to see if there's any improvement in performance.

1-2-3 in Limbo

Can It Catch Up to Excel?

PROS: Easy-to-use graphs, ability to route worksheets to others, tracks multiple versions of worksheets

CONS: 16-bit application

Will 1-2-3 for Windows 95 transform the original spreadsheet from also-ran to industry leader? Frankly,

it's a long shot. SmartSuite 96 ships with the old 16-bit version,1-2-3 release 5. Compared to Excel 7.0 for Windows 95, it's beginning to look a bit long in the tooth. If Lotus plans to renew the competition, it has its work cut out for it. The one area where 1-2-3 has a shot at besting Excel is performance. Our tests reveal that in those tasks where Excel 7.0 was faster, it wasn't faster by much.

The Ever-Widening Feature Gap

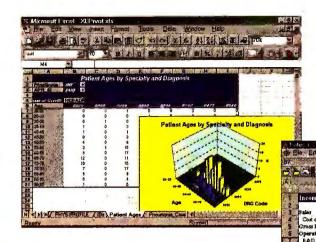

Lotus and Microsoft have charted radically different courses in developing their spreadsheets over the past few years. While Microsoft has made steady progress improving the feature set and basic functionality of Excel, Lotus has concentrated on adding group productivity tools. 1-2-3 release 4.0 introduced the excellent Version Manager to facilitate group what-if modeling; Release 5.0 added range routing and better integration with Approach and Notes, and tossed in data maps for good measure.

But Lotus has neglected the fundamental improvements that would give users a compelling reason to upgrade. The fact is, Excel 7.0 surpasses 1-2-3 in most areas. In some cases, Excel provides components that are indispensable for building sophisticated worksheets. Excel's arrays permit efficient, formula-based solutions to a host of problems, and range names with formula references, along with the offset() function, give Excel users more flexibility in creating worksheets. Microsoft has also implemented similar features more thoroughly. For example, 1-2-3's cross-tabulation feature doesn't approach the versatility of Excel's pivot tables.

Building on Strength

Yet 1-2-3 does have some notable strengths to build on. Its graphs, though lacking features such as curve fitting and error bars, are easy to create and edit. Its 3-D worksheet structure is the most coherent of any spreadsheet available today, and the database query tools offer useful methods for extracting records from a database. The Version Manager is a uniquely useful tool, and along with range routing and tie-ins with Notes, 1-2-3 permits development of applications that can't be duplicated in other suites.

Judging from the advance information available so far, improvements planned for 1-2-3 for Windows 95 will build on these core strengths: TeamConsolidate will allow multiple users to edit copies of a worksheet and then combine them into an integrated model. Other improvements include the InfoBox, an outlining feature, and new assistants to simplify tasks. LotusScript, a programming language that will rival Microsoft's VBA, will also be included.

Endgame or Competition?

In the long run, it would be much better for all of us if Microsoft's domination of the PC applica-

tions market were challenged by vigorous, creative competitors. But when it comes to spreadsheets, Microsoft has raised the bar very high. To engage the hearts and minds of spreadsheet users, 1-2-3 for Windows 95 must not only continue its workgroup strategy, it must also offer credible responses to Excel's major innovations. Can Lotus do it? I'm looking forward to the beta.

Organizer 2.1

Tired but True

PROS: Link related items between sections, record text in Notepad section, add contacts and appointments from the desktop via the SmartCenter

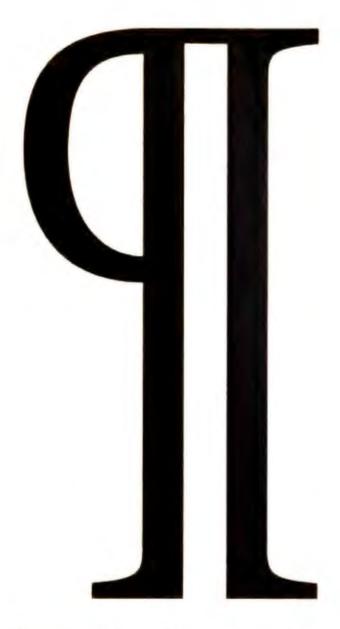

CONS: 16-bit application

Poor little Organizer. Maybe we ought to start calling it Cinderella. Without the attention lavished on its SmartSuite stepsisters, Organizer, like 1-2-3, is starting to look a bit dated. Yet it still holds its own in this suite and even surpasses Schedule+ in functionality.

Our TextBridge Pro scanning software even reads the characters you don't see.

If you've ever scanned text, you know. Getting tabs, margins and paragraph breaks right is just as important as getting words right. Because without format, you might as well retype the whole thing.

Scanning pages with TextBridge® Pro 96 OCR software is just like putting the original document straight into your PC. Headers, columns, cell tables, text and all. You get a formatted document you can work with right away.

TextBridge Pro scans text directly into any word processing program with superior accuracy. It's also designed for Windows 95, and runs on Windows NT and 3.1. In addition, TextBridge Pro includes SoftQuad's HoTMetaL light 2.0,

the SmartCenter. But unlike the Office Shortcut Bar, which merely launches Schedule+; the SmartCenter lets you add an appointment or book a contact right from the desktop.

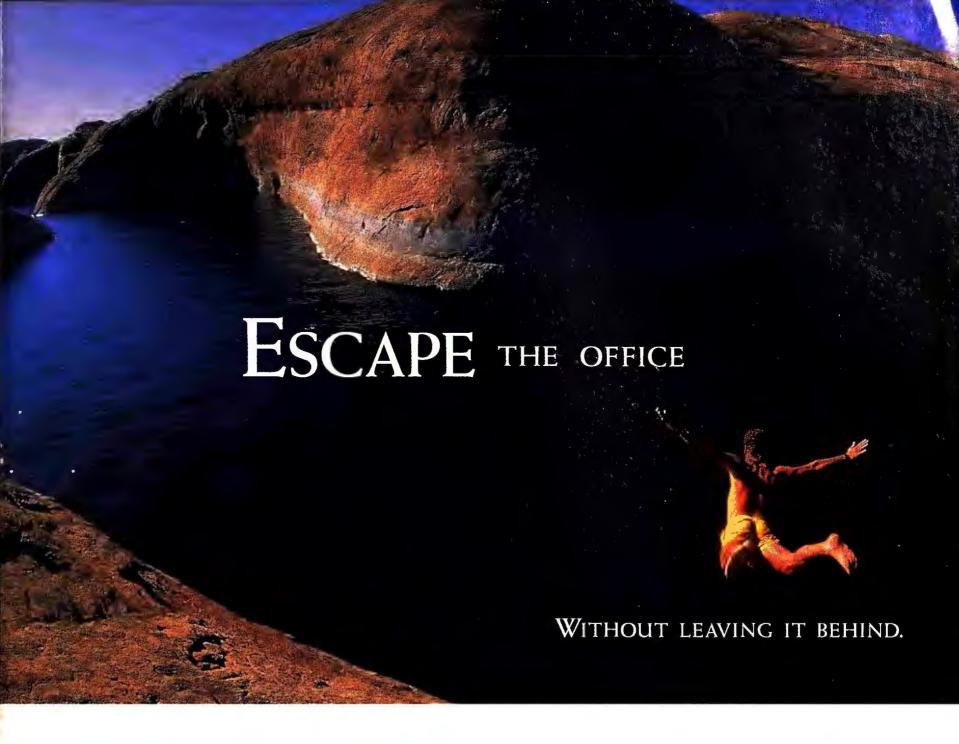

Organizer 2.1 and Schedule+ also differ in some basic tools. You can record free-form notes in the Notepad section; you can also create links between any items in your file, such as to-do items or phone calls with contacts in the Address Book. On the other hand, the task manager in Schedule+ is as sophisticated a project planner as you might ever need, with percent-complete and delegation features. Organizer's planning tool is much simpler, resembling a fold-out calendar more than it does project management software.

A Better Version on the Way?

A Windows 95 version of Organizer, called Organizer 97, should be available by June. However, Organizer 97 will not include group calendaring and scheduling functions. Instead, you'll have to wait for an as-yet-unnamed product, due to be released in the third quarter, for those features. Notes 4.2 (due sometime midyear) will also include a calendar and scheduling application. While this is welcome news for Notes users, the implications for Organizer users are unclear. In any case, Organizer is still one of the best PIMs around, despite lagging behind its Windows 95 companions.

et-savvy candidates have a powerful new medium for reaching an educated, high-income electorate. Trouble is, they don't know what to do with it.

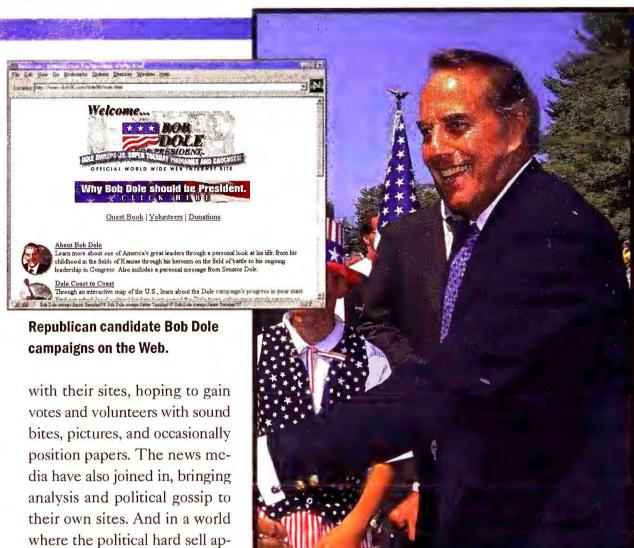

In 1932, Franklin D. Roosevelt transformed U.S. politics by flying to Chicago and accepting the Democratic Party's presidential nomination over the newest mass medium, radio. In 1960, Richard Nixon and John F. Kennedy redefined presidential campaigns when they squared off for their first televised debate.

Click forward to 1996.

The U.S. election process is on the verge of a new technological era. The Internet is spreading like crabgrass, and politicians are taking note. With the World Wide Web, candidates and their managers have found an effective new way to reach educated, high-income citizens—exactly the kind of people who are most likely to vote. Better yet, they can address the electorate directly, without going through what they see as prying, nay-saying reporters with a nasty habit of pointing out candidates' flip-flops and half-truths.

"1996 is the test-drive year for politics on the Internet," says Gary W. Selnow, a professor at San Francisco State University's School of Business. Selnow is researching a book on the topic, although he doesn't plan to begin writing until after the November election. "The real rollout will be in the year 2000. But the '96 campaign will shape it, sculpt it," he adds.

So far this year, it seems as if everyone is getting into the act. Candidates for the presidency and other offices are littering the Web

pears to be the only rule, you can even find reasoned, nonpartisan information from groups

that want to see an informed electorate.

Messages and Propaganda

By definition, official campaign Web sites are one-sided and sanitized, extolling all their candidate's virtues and mentioning none of the shortcomings. Consider the site of Senate Majority Leader Bob Dole (http://

www.dole96.com)—one of the best candidate sites on the Web. In addition to all the stuff a visitor would expect—Dole speeches and position papers, and a pitch for funds and volunteers—there are trivia quizzes, audio and video clips, and even screen savers and wallpaper for downloading. Users can create their own "Dole for President" posters and send postcards to friends telling them about the site.

President Clinton has yet to roll out a campaign site (with no significant opponent running against him in the primaries, why should he?), but

he already has a powerful presence on the Net. Showing what a huge advantage incumbency can be, Clinton and Vice President Al Gore are the leading men of the august White House home page (http://www .whitehouse.gov), one of the most popular sites on the Web. Technically the site is nonpartisan, since it was created with taxpayers' money, but you never really doubt who the stars are.

In addition to the candidates' sites, the parties have their own Web sites. The Republican National Committee page (http://www.rnc.org) is the most visually sophisticated, with a virtual Main Street—click the newsstand, for instance, and you'll get a list of official Republican Party publications. On the other hand, the Democratic National Committee's Web site (http://www .democrats.org) features a "Newt Gingrich hangman's game" plus the more pedestrian online petitions and factual information. "We've been very aggressive on the Internet," says DNC spokesperson David Seldin.

The candidates and their handlers are fishing for more than votes—and some of them are catching volunteers. In the Dole site's first two months online, more than 700 Web surfers signed up to work for the senator's campaign. It's an "important measure of how effective our site has been," says Dole

press secretary Nelson Warfield. RNC spokesperson Virginia Hume says that more than 8000 people signed the site's guest book in its first few months of operation, and 2500 have been added to the party's mailing list. According to the DNC's Seldin, "Some [citizens] aren't plugged into traditional political networks but are plugged

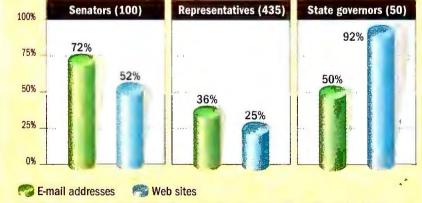

into the Internet. We're getting a lot of new people."

Virtual Campaign Offices

The sites may prove useful to the candidates and their organizations, but do they really further political debate? Are the candidates giving us anything more substantial than slow-motion versions of their 30-second campaign commercials? "Their home pages are like campaign offices, waiting for people to come in," says Jim Warren, a Northern California computer activist and champion of the First Amendment. According to Warren,

How Wired Is the Government?

In a perfect online world, all elected officials would have e-mail addresses and their own World Wide Web sites. Slowly but surely, we're getting there.

PC World has put elected officials' e-mail addresses and URLs online (http://www .pcworld.com/may96/politics, or send e-mail to politics@pcworld.com).

the sites don't even measure up to TV commercials. "A commercial reaches out to viewers" by the millions, he argues, while a home page attracts few who aren't already well disposed toward the candidate. "What a waste!"

Warren contends that campaigning on the Internet will not live up to its full potential until candidates go beyond viewing the medium as another advertising opportunity and open themselves up to participating in genuine online debate. But he doesn't think it will happen easily. "Openness poses a problem for traditional campaign managers," Warren points out. "They want to control the campaign's message."

Warren recommends that campaigns employ staffers or volunteers to spend time on relevant newsgroups, talking up the Web sites and posting the candidate's position papers. He also suggests that the campaigns

The Republican Party's Web site has added thousands to the party's mailing list.

send messages to moderated mailing lists on various issues. "This is like direct mail, but much more targeted," he says.

But what Warren would really like to see is presidential candidates engaging in an ongoing online debate. The candidates themselves or staff members could discuss issues and answer questions from other candidates or voters. But such a proposal would require candidates to adopt a degree of openness that they increasingly seek to avoid.

One early attempt to hold a real online debate ran afoul of federal election laws. Last November, CompuServe proposed offering free accounts to all candidates for state or federal office. This would have

given them access to all the service's forums and chat rooms, plus the Internet. "We saw it as a place for them to explain their platforms and talk directly to people," says CompuServe's Daphne Kent. But CompuServe was scared off by a wire service report quoting a spokesperson for the Federal Elections Commission as saying that the offer would amount to an illegal in-kind campaign contribution. CompuServe put its plans on hold and asked for an FEC ruling.

If the idea is approved, Kent says, CompuServe would "want to do an online conference with the candidates."

Warren has proposed a similar program. He's interested in forming a network of home pages put together by major newspapers, on which candidates could engage in a running debate over a period of days or weeks. He'd also like to set up newsgroups where political reporters could offer running

commentary on what the candidates are saying, and voters could comment on the candidates and the journalists.

Keeping Control

But a freewheeling debate, one that would subject candidates to unfettered questioning from their opponents and voters over an extended period, runs directly counter to the current trend in American politics. Today, presidential candidates limit their appearances to carefully controlled public events and a few almost as well controlled "debates," for which they cram like college students before a final exam. But if people like Warren succeed in steering the Internet

Officially nonpartisan, the White House site still manages to promote the president and VP.

choice. Whereas TV is controlled by a few huge corporations, the Internet still consists of millions of autonomous sites. And the Internet's constituency, which is estimated at 12 million Americans of voting age, consists largely of well-educated, prosperous

citizens. These may be just the people who want to get beyond slogans and deep into the nitty-gritty of candidates' positions.

If they want to be able to reach these people, campaigns may have to open up and be

willing to take a few risks. "It will be interesting to see if the Internet produces a structural change in the circuitry of politics," says John Nerone, a historian of communications at the University of Illinois at Urbana-Champaign. "Will it cut out journalists" by allowing for direct contact between politicians and voters? "And

will it further erode the role of political parties [as radio and television did]?"

Left in the Dust

But if the Internet becomes vital, what does that mean for America's poor, who are less likely to have Internet access and who already vote in smaller numbers than other groups? "A lot of people are going to be left in the dust on all of this," says Professor Selnow. "You have to remember that 30 percent of people are still without cable TV. It will be a long time before everyone has the type of online access we would like to see." But Warren disagrees. "Using that rationale, we shouldn't publish books because the poor can't afford books. We can put PCs in libraries and community centers for people to use. Anyone who wants access to the Net can get it."

toward open debate, candidates may be forced to change their ways.

Is this likely? Why should a political system so adept at limiting debate on television allow it online? It may not have a

Over the course of a month, I faxed questionnaires, called to follow up, refaxed, called, waited, called again, faxed again, asked nicely, begged, threatened—all to no avail. To be fair, some lesserknown candidates—Libertarians Harry Browne, Irwin Schiff, and Rick Tompkins, and Republican Morry Taylor—did cooperate. But the bigleague candidates had no interest in sharing their views.

President Clinton couldn't respond, his office said, because he had not officially declared his candidacy. Buchanan and Lamar Alexander declined to participate, pleading lack of resources. Senator Dole's office never committed one way or the other. Forbes ignored us entirely.

lobbying groups and radio talk show hosts calling on citizens to flood government offices with faxes, e-mail messages, or phone calls to push elected officials to act on specific issues.

Such "meetings" haven't happened yet, but on a local level, online democracy is taking root. Dozens of cities, many grouped together as Free-nets under the umbrella of the Cleveland-based National Public Telecomputing Network, help people do business with city hall, engaging in online conversations with public officials.

Not that city leaders are necessarily happy about the process. According to Gail Featheringham, director of teledemocracy at the network, "a lot of politicians are scared to death of this. They don't like to make immediate responses to people."

Among those championing the concept of electronic town meetings are futurists Alvin and Heidi Toffler in their recent book Creating a New Civilization: The Politics of the Third Wave (Turner Publishing, 1995, 404/885-4114): "Using today's far more advanced computers, satellites, telephones, cable, polling techniques, and other tools, not to mention the Internet and other communications networks, an educated citizenry can for the first time in history begin making many of its own political decisions."

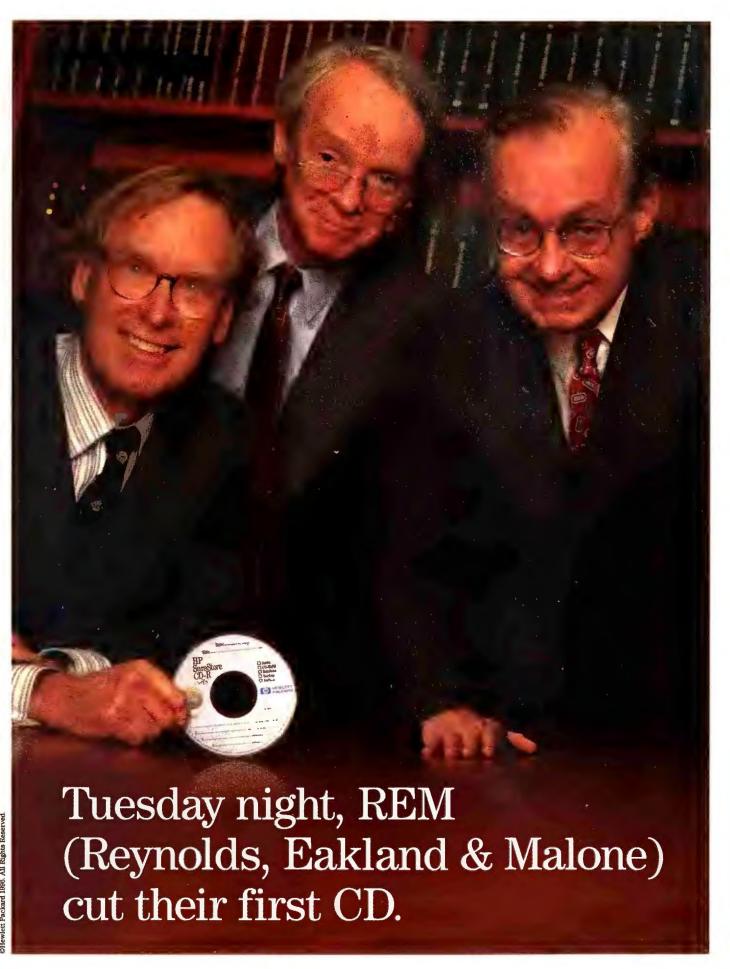

Such a suggestion dismays others. "I

would be horrified to see...a national town meeting," says Warren. "These would be much too susceptible to demagoguery."

"We live in a republic," adds Selnow. "The Founding Fathers established a republic for a damned good reason. Not everyone can be informed on every issue. That's why we elect people." Online democracy, he warns, would result in some "very dangerous, stupid decisions." But Selnow says he isn't going to lose any sleep over such a possibility. "Even if online voting happens, I won't live to see it. This would be way off in the future."

Politicians have long known how to use radio and television to their benefit—the 30-second commercials, the even shorter sound bites timed for the evening newsand there's no doubt that they'll become just as adept at using the World Wide Web. But if a few determined citizens work hard enough, they could also make the Net a safe place for meaningful political dialogue. And that would benefit everyone.

Introducing the HP SureStore CD-Writer

After creating countless records, these attorneys finally got in tune. They'll testify that the HP SureStore CD-Writer is the best way to keep client records or virtually anything else. With a generous 650MB of capacity and millions of CD-ROM players worldwide, CD is the ideal way to store and distribute information.

Case in point: archiving business and client data is simple and cost effective. Transferring large files is inexpensive and universally accepted. Playing and distributing electrifying multimedia presentations leaves the client totally impressed. And your competition defenseless.

The HP SureStore CD-Writer comes complete with everything you need to cut your own CDs, including a comprehensive software suite and recordable CDs. And with automated installation, you'll be storing evidence and more in minutes.

The verdict is in. HP SureStore CD-Writer is the way to cut it in business. For more information, call 1-800-826-4111, extension 1482.

New Standard of Power

Several major vendors—including Dell, Micron, and Gateway—have begun shipping most of their desktop systems with 6X CD-ROM drives. (At press time, Dell's high-end OptiPlex line still carried the 4X CD-ROM drive as the standard.) Word has it that 4X drives will be phased out across the board by the end of the year. Faster CD-ROM drives mean smoother audio and video for multimedia presentations—but if you're working with mainstream consumer titles and games, many of which are designed to work adequately even on 2X CD-ROM drives, you might save a little money by purchasing your system with

a quad-speed CD-ROM drive. For instance, at press time a Dell Dimension system would cost \$100 less if you requested it configured with a 4X CD-ROM drive.

Reader Feedback Sways the Top 20s

Computer companies' reliability and service scores, based on fax-back responses from our readers and our own research on service and support policies, count for 40 percent of our overall rating for desktops. So our charts will record small ups and downs over time, such as the 2-point drop in Compaq's service rating this month. It's still a good score, but it could sink lower depending on what we hear from readers who have bought the latest Presario line of mul-

generally have their own help desks and IS departments [to handle questions]," unlike the Presario line's home users. Sweney recommended that Presario customers take their problems to one of Compaq's numerous online forums to get a response within 24 hours at no cost. But a sampling of messages that *PC World* culled from several Compaq forums suggests that getting quick help from Compaq these days—paid or online—is a dicey proposition at best (see this month's *Consumer Watch* for full details).

We looked at three new Presarios this month—the 9240, a \$3393 P-133; the 9250, a \$3094 P-150; and the 9660, a \$3593 P-166—but none of them made the chart. All are nicely configured and elegantly designed, but they performed dismally. The P-166, for example, turned in a PC WorldBench score of 164—about

the speed of the average Pentium-120 running our test suite.

A couple of errors in information we received from the vendor caused the HP Vectra VL Series 4 5/133 to drop ten rungs in the Power chart. We downgraded the company's service rating 5 points after we discovered it offers only 11 hours of technical support each weekday, not 24 hours as HP had previously reported. Though still quite good, HP's service rating is now the lowest on the Power Desktops Top 20. We also discovered HP had priced the Vectra VL Series 4 5/133 without a monitor; with a monitor, its price rose \$418. Due to an editing error, we mistakenly reported in April that Dell had slashed almost \$800 from its Dimension XPS P166c. In fact, the \$4299 price for this PC configured with 32MB of RAM has dropped only about \$150. As a result, it lands in seventh place on the Power chart this month, no longer a Best Buy.

It All Adds Up: The Top 20 Overall Rating

uying a computer involves numerous complex decisions. There's price, of course—how much should you spend? And how fast a CPU should you choose? How much RAM and what size hard drive? And what about the type of monitor, the software bundle, and the vendor's support policies? Then there are the amenities like sound card, speakers, modem, and CD-ROM drive. How can you be sure it all adds up to a good machine?

That's where our Top 20 overall rating comes in. We look at everything, down to the nitty-gritty details you might not think about, like number of free expansion slots and drive bays, and quality of documentation. We give brownie points if a case has easy-open latches that let you access the interior without using a screwdriver. With notebooks, we check for extras like a carrying case included with the price, or a time-out feature that disables itself when you use AC power. With 35 or more systems to test each month, we can't examine all components in depth (for Instance, we don't put a system review desktop's monitor and modem through the same rigorous tests we run for our Top 10 Monitors or Modems reviews), but we do check all the Items that factor Into our ratings.

For desktops, the overall rating comprises performance (our PC WorldBench score), price, features, reliability, and service and support. For notebooks, we add design, battery life, and weight. Price and reliability count the most when we score budget machines; for power contenders, we weight performance and reliability most heavily. (For exact weightings, see the small print at the bottom of each Top 20 chart.)

The range for the overall rating generally runs from about 60 to 100. A system must score well—typically 80 or above—to make it onto the chart. Those scoring over 90 are the cream of the crop. You can't compare ratings across charts (power desktop to power notebook, for instance); each chart's PCs are compared to a different group of machines. (All the budget notebooks, for instance, are rated against an average derived from the budget portables currently in our database.) But you can use ratings to compare systems within a chart.

A Notebook That's Also a Printer

The most interesting notebook this month, Canon's NoteJet IIIcx, didn't make the chart, largely due to its \$6699 price and 2.3-hour battery life. But its 11.4-pound chassis houses a color ink jet printer and a monochrome scanner. The output isn't the best, but you can't beat the convenience.

Compaq has cut free support to the bone for these new models—you now pay \$35 per question even for installation and configuration problems. Top 20 Power Desktops

THREE NEW PENTIUM-166 SYSTEMS EARNED spots on our Power Desktops chart this month, bringing the total number of P-166s on the list to seven. Hewlett-Packard's Vectra VL Series 4 5/166 MT, debuting in 11th place, is not quite as fast as the Dell Dimension XPS P166c (whose PC World-Bench score of 208 is the fastest we've seen), and its configuration isn't as sophisticated. But it's a nice machine that would have placed higher if HP's service rating hadn't dropped. Dell's OptiPlex GXMT 5166, debuting in 15th place, is the P-166 version of Dell's corporate line. It's expensive, but its built-in ethernet makes it a good value for networked offices. NEC's PowerMate P166, in 17th place, is the second-slowest P-166 on the list, but the least expensive after Micron's P166 Millennia.

Dell Dimension XPS P133c

LAST REVIEWED: March 1996

PROS: 512K of secondary cache, 28.8-kbps fax-modem, great service and reliability

CONS: On/off button too close to the floppy eject

The Dell Dimension XPS P133c has hit a sweet spot for power systems: While it can't entirely match the performance sizzle of the Dell Dimension XPS P166c that's lower on the chart, its PC WorldBench score of 193 is still among the fastest we've seen from a P-133. It also costs a cool \$1270 less than its sibling; \$3029 is very attractive for a PC with 16MB of EDO RAM, a 1080MB hard drive, a 17-inch monitor, and sound and speakers. Dell also now ships all Dimension models with 6X CD-ROM drives. It's backed by round-the-clock tech support and priced with a three-year warranty. And Dell's reliability and service ranks among the best.

Micron P133 Millennia

LAST REVIEWED: March 1996

PROS: Well built, 1624MB hard drive, full multimedia, strong warranty

CONS: Some similarly priced systems have larger monitors

Micron dropped the price on the P133 Millennia by \$99 this month, and at \$2749 it's now the least expensive Power Desktop Best Buy. For \$280 less than the Dell Dimension XPS P133c, you get a bigger hard drive (1624MB), and the same 16MB of EDO RAM, 256K of secondary cache, and 6X CD-ROM drive. One major trade-off is the monitor: The lower price buys you a 15-incher of so-so quality, whereas Dell includes a better 17-inch display.

The Dell P-133 also noticeably outperforms the Micron in our Windows 95-based test suite. Micron's excellent on-screen help includes photos and videos of basic hardware maintenance. The improved warranty now covers the CPU and main memory for five years and the rest of the system for three years. Our latest reader survey gives a ringing endorsement to Micron's reliability.

Dell Dimension XPS P120c

LAST REVIEWED: March 1996

PROS: 512K of secondary cache, 28.8-kbps fax-modem, great reliability and service

CONS: On/off button is poorly positioned

At \$2979—\$100 more than last month—this roomy multimedia minitower now includes a 6X CD-ROM drive, and it's still a solid Best Buy. But while this system has plenty to offer, the Power chart has shifted in favor of the faster machines ranked above it. Not that the P120c is slow—with a PC WorldBench score of 177, it's the fastest P-120 we've ever tested. It comes with 16MB of EDO RAM, a 1080MB hard drive, a 17-inch Dell monitor, and a Number Nine 9FX Motion 771 video board with 2MB of fast dual-ported VRAM. Dell also includes Microsoft Office Professional 95 and answers Windows 95 questions free for 30 days. Dell's highly rated reliability and service come with it, too.

.....

Micron P166 Millennia

LAST REVIEWED: April 1996

PROS: Ultrafast, good price, roomy hard drive, 6X CD-ROM drive

CONS: 15-inch monitor on test unit had noticeable flicker

The price on this P-166 powerhouse has dropped \$149 to \$2999—a whopping \$1647 less than the Micron P166 Millennia Plus in tenth place. It lacks the latter's SCSI storage options, but its 1280MB EIDE hard drive is certainly adequate for most business use, and it includes a 6X CD-ROM drive. With 16MB of EDO RAM and 256K of secondary cache, it's also one of the fastest systems you can buy. Micron's new warranty covers the CPU and main memory for five years and the rest of the system for three years, but labor is covered for the first year only. Micron has received high marks for reliability on our fax-back survey.

Dell OptiPlex GXMT 5133

LAST REVIEWED: April 1996

PROS: LAN ready, multimedia, 17-inch monitor, full three-year warranty on parts and labor **CONS:** Pricey for a Pentium-133

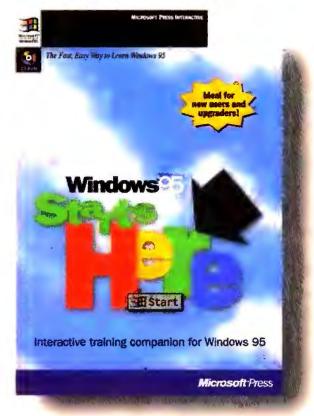

A \$448 drop in price catapults the Dell OptiPlex GXMT 5133 to Best Buy status. The \$3355 price is still high for a Pentium-133, but this minitower comes network-ready with built-in ethernet, and it's even a good stand-alone PC with 16MB of EDO RAM, 256K of pipeline-burst secondary cache, a roomy 1624MB hard drive, a quad-speed CD-ROM drive, and a good-looking 17-inch Dell monitor. The 2MB DRAM graphics and the 16-bit sound controllers are integrated onto the motherboard. The system scored 184 in our PC WorldBench suite—below the number one Dimension XPS P133c, but ahead of most other Pentium-133s we've tested.

HP Vectra VL Series 4 5/166 MT

NEW THIS MONTH

PROS: Solid performance, well constructed

CONS: Tech support is open 11 hours on weekdays only

A shoo-in entry to our Power chart, the HP Vectra VL Series 4 5/166 MT Pentium-166 minitower has a highly competitive \$3915 price. Equipped with 16MB of RAM and 256K of secondary

HP Vectra

cache, it turned in a PC World-Bench score of 197—a midrange mark compared to other Pentium-166s we've tested. The system also comes with a quad-speed Sony CD-ROM drive and a Creative Labs Vibra 16S sound card, but for the full multimedia experience you'll have to buy your own speak-

ers—this system doesn't come with any. This HP Vectra also falls a shade short of the ideal power contender: It lacks a modem, and it comes with just a 15-inch monitor when 17-inch models are becoming more common with power machines. However, this is a fine-looking display that performs well with the upscale Matrox Millennium graphics card and 2MB of WRAM.

Looking at this Vectra's sturdy construction and superior design, it's easy to understand why Hewlett-Packard systems top our reliability charts. The case is sturdy and cleanly finished, and you can tell that HP designed the impeccably arranged motherboard from the ground up. It provides unobstructed access to the SIMM slots, cache modules, and expansion slots (systems assembled from a collection of components often look cluttered inside). A vertical riser houses the expansion slots, and there are plenty to choose from: Two PCI and three ISA slots are free.

The printed documentation is also up to HP's usual high standards—sensibly organized, with clear explanations and helpful illustrations. You'll find that the online help is well designed and intuitively structured to boot. HP's telephone support, although limited to 11 hours on weekdays only, is top-notch: There's little or no wait, and you talk to capable technicians. Technical support is free for the duration of HP's three-year warranty on parts and labor.

Micron P150 Millennia

NEW THIS MONTH

PROS: Fast performance, bundles Microsoft Office Professional

CONS: Motherboard components block some slots

Pentium-150 CPUs are the underappreciated middle children of the Intel family: They aren't much faster than their less-expensive

Micron P150

Pentium-133 siblings, which makes a Pentium-166 PC a more logical buy. An exception is Micron's \$2898 P150 Millennia minitower, which ties Midwest Micro's P5-150 Office PC as the fastest Pentium-150 system we've tested—faster than some P-166 machines.

The P150 Millennia's solid con-

figuration includes 16MB of RAM, a Diamond Stealth graphics card with 2MB of VRAM, a 1.2GB hard drive, a sound card, a 6X CD-ROM drive, and a 15-inch MAG monitor. As a nice software bonus, you also get the Microsoft Office Professional suite on CD-ROM. All in all, this system presents an intriguing alternative to the P133 Millennia that's number two on the Power Desktops chart; the Pentium-133 model is \$149 cheaper and has a larger hard disk, but it's slower.

We have a few complaints about the P150 Millennia, but they're small ones: The on-screen help could be more comprehensive. Motherboard components block all three of the ISA expansion slots from accepting very long cards, and the Micron system's printed manual, though informative, lacks an index. To its credit, the company does provide adequate manuals for components such as the CD-ROM drive and monitor.

PC World readers responding to our fax-back survey on reliability and service give Micron high marks on all counts, and the company's support policies are nearly impeccable. Micron's round-the-clock phone support assures that help is at hand whenever you need it. The CPU and RAM that come with the system are covered for five years, and all other parts are covered for three years. Labor costs for repairs are free for the first year only, however. A number of other companies pick up labor costs for a full three years, among them Compaq and Dell (for its Dimension systems).

Micron P100 Millennia

LAST REVIEWED: March 1996

PROS: Good P-100 performance, includes Microsoft Office Professional 95

CONS: Some similarly priced systems have larger monitors

NEC PowerMate P133

LAST REVIEWED: March 1996

PROS: Good performance, 6X SCSI CD-ROM drive, big 1624MB hard drive

CONS: Some cable clutter inside case

Dell OptiPlex GXMT 5166

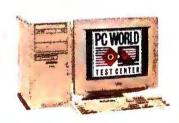

NEW THIS MONTH

PROS: Fast performance, uncluttered interior, ethernet port, nice documentation

CONS: Expensive

Dell designs its OptiPlex systems to appeal to corporate customers rather than price-conscious individual consumers, and it shows: This \$3549 Pentium-166 minitower is a system technician's delight. Expanding or repairing it should prove uncommonly simple, since all ports and interfaces, including an ethernet connector, are integrated onto the motherboard. This leaves the system's eight expansion slots free, and the interior is as neatly organized as Martha Stewart's kitchen. The outstandingly thorough documentation includes a thick troubleshooting guide.

Although this system trails Dell's blazing Dimension XPS P166c in speed, it's still the second-fastest on our Power Desktops chart.

Dell OptiPlex 5166

Both of these high-powered Dell configurations come with 32MB of RAM rather than the more typical 16MB. The OptiPlex also comes with a roomy 1.6GB hard drive, an S3-based graphics adapter with 2MB of VRAM, a quad-speed CD-ROM drive, a Creative Labs sound card, and a 17-inch monitor.

As usual with Dell, the system is backed by a top-notch service and support plan. Although a one-year warranty is still the standard for Dell, we priced the system to include an upgrade to a full three-year warranty and one year of free on-site service. You also enjoy round-the-clock phone support for the life of the system. The company consistently receives favorable mentions from *PC* World readers responding to our fax-back survey, especially with regard to the quality of its service.

You can find similar Pentium-166 configurations that cost less than the OptiPlex GXMT 5166, but this system's high level of refinement, fast performance, and built-in ethernet make it a strong candidate if you need a high-end network PC.

HP Vectra VL Series 4 5/133

LAST REVIEWED: March 1996

PROS: 3-D video acceleration, superb system reliability **CONS:** Limited expandability, adjusted \$3615 price is higher

NEC PowerMate P166

NEW THIS MONTH

PROS: Generous support, high-quality monitor and multimedia components, large hard drive

CONS: Mediocre performance, cramped interior

A power contender doesn't make the chart by performance alone. NEC's sleekly designed PowerMate P166 minitower is one of the slowest Pentium-166 systems we've tested, but a host of high-quality components backed by a solid reliability and service record earn it a place on the Top 20.

Considering its economical \$3399 price, this Pentium-166 is well equipped: It comes with 16MB of RAM, a generous 1624MB hard disk, a Matrox Millennium video card with 2MB of speedy Windows RAM, a 6X CD-ROM drive, a 16-bit sound card, and a pair of NEC

NEC P166

speakers that provide better-than-average sound. You also get a high-quality microphone, something few multimedia PCs provide. The monitor is NEC's 15-inch MultiSync XV15+, an improved version of the MultiSync XV15 that was a Best Buy on our Top 10 Monitors chart last month. The XV15+ adds digital controls and Level 2 Plug and Play compatibility.

The PowerMate's interior is a little crowded, however, with a morass of cables that prevents easy access to the SIMM sockets. The five available expansion slots are located on a vertical riser that plugs into the motherboard. The height of the CPU prevents you from inserting a long card in one of the slots.

NEC's first-rate service-and-support policies add to this system's allure: The company offers a three-year warranty on parts and labor, free on-site service for the first year of ownership, and phone support that's available 24 hours a day, seven days a week. NEC also garners compliments from our readers responding to our service and reliability survey. Even though the PowerMate P166 lags somewhat in performance, its otherwise strong configuration and generous service and support make it a good value.

Top 20 Budget Desktops

THE BUDGET CHART IS RAPIDLY GAINING POWER. Just one DX4-100 system remains this month, and the chart now includes two Pentium-133s, two Pentium-120s, and six Pentium-100s. The two most expensive of these powerful PCs cost just \$2299 with 16MB of RAM and 1GB or larger hard drives.

Two new systems, the Compaq ProLinea 575e and the Netis N500 Media, take positions in the middle of the chart this month. But it's the price changes—both up and down—that are chiefly responsible for shuffling the rankings. Several Pentium-based Netis machines that we tested in previous months make their first appearance on the chart because of price drops. We had to move the Austin PowerPlus 75 down 13 steps after correcting its price. The PowerPlus is by far the fastest Pentium-75 on the chart (27 percent faster than the baseline P75t Dell), but at \$2169 it's the second-most expensive.

Dell Dimension P75t

LAST REVIEWED: March 1996

PROS: Low price, nice 17-inch monitor, great service and support

CONS: On/off button looks like floppy eject, small hard drive

A Pentium-75 for \$2079 looks expensive until you see the 17-inch monitor and the 6X CD-ROM drive. (Dell has upgraded all Dimensions to 6X CD-ROM drives; the systems cost \$100 more than they would with 4X drives.) The 540MB hard drive is meager; we suggest spending \$80 more for the 1080MB drive. Our reliability and service polls consistently rank Dell among the best, as you'd expect with Dell's good tech support.

Vektron Multimedia P-100

LAST REVIEWED: March 1996

PROS: Fast Pentium-100 performance, great price, full multimedia

CONS: No weekend technical support

At \$1695, the Vektron Multimedia P-100 is one of the lowest-priced P-100s around, yet it's packed with a 1080MB hard drive, a quad-speed CD-ROM drive, and a 15-inch monitor, and it's the fastest Pentium-100 on the Budget Desktops chart. This unit would be number one if not for the minimal one-year warranty and Vektron's complete lack of weekend support.

DTK Quin 54M/P100

LAST REVIEWED: March 1996

PROS: Solid P-100 performance, 6X CD-ROM drive

CONS: Some cable clutter

This Pentium-100's price is now a very reasonable \$2090. This, along with above-average features, snares it a Best Buy. The full-size tower has ample room for additional drives and expansion cards. The system comes with a two-year parts-and-labor warranty.

Gateway 2000 P5-75

LAST REVIEWED: March 1996

PROS: Excellent price, good performance, three-year warranty

CONS: No sound or secondary cache

For just \$1609, this P-75 includes a 6X CD-ROM drive. However, you get just a basic 8MB of RAM, no secondary cache even as an option, and no sound. Gateway's system reliability rating has improved in recent months, and the company has been getting good marks for service in our fax-back poll.

ZDS Z-Station VP

LAST REVIEWED: April 1996

PROS: Well built, lots of room for expansion, three-year warranty

CONS: Sluggish performance for a P-75, no sound

Increased prices bumped two of last month's Best Buys off the chart. That turn of events elevated the \$1860 ZDS Z-Station VP— a strong number six in April. Like most ZDS PCs we test, this one is well designed, but its performance lagged behind most othe. PCs in its processor class. ZDS's system reliability rating is superior.

Compaq ProLinea 575e

NEW THIS MONT

PROS: Low price, tidy interior, high-quality support

CONS: Poor performance, no multimedia, only one free drive bay

The ProLinea 575e—a solidly built, if very basic system—has appeared on the Budget Desktops chart before. This updated configuration costs a low \$1754 and comes with a larger hard drive—630MB—but no secondary cache, so it lags behind most other Pen-

tium-75 PCs with 8MB of RAM. It also lacks multimedia.

The system's strongest point is its clean design; all ports, adapters, and RAM are integrated onto the motherboard. That's great for adding internal components, but other peripherals will have to compete for the one free external drive bay.

You get a three-year warranty, free

on-site service, and 24-hour phone help. These policies rank with the best in the business, as do Compaq 's service and reliability ratings.

Netis N500 Media

NEW THIS MONTH

PROS: Quick performance, large hard disk

CONS: No system manual, one-year parts warranty, SIMM sockets tough to access

This \$2048 P-100 compact delivers maximum performance for those on a budget. Its PC WorldBench score even beats some P-133s we've tested, and its configuration includes a 1625MB hard disk.

Netis's service and support policies are merely adequate, however. The system documentation is a collection of booklets that don't eater to end users. The warranty covers labor for three years but parts for just one. We haven't seen enough surveys from Netis customers to reach any firm conclusions about the quality of its service or the reliability of its PCs.

Netis N500 Media

Netis N5133DPS

NEW THIS MONTH

PROS: Fast; great price; big hard drive

CONS: One-year parts warranty

The N5133DPS didn't make the chart when we first looked at it in March, but with a price drop to \$2120, it's a more attractive

value. Well equipped, and with a PC WorldBench score of 185, it performs as well as pricier P-133s we've tested.

Only Netis's service and support policies lack strength. The warranty covers labor for three years but parts for just one. Technical support is available only 10 hours on weekdays and 6 hours on Saturday. And the check-up calls we've made to tech support have yielded mixed results. Furthermore, we haven't

received enough fax-back data from readers on Netis system reliability and service to assess those important factors.

Top 20 Notebook PCs

This month we review the extremes of what's available to notebook buyers. The Think-Pad 760C is a high-quality notebook from IBM. It's got the largest screen size available (12.1 inches diagonally), fine audio, and a keyboard that peaks in the middle for greater comfort. While its \$6184 price lies beyond the reach of average business users, it still has enough value to rank on our Power chart. At the other end of the scale, the Hertz Z-Optima 486 D100 X4E on the Budget chart boasts a very low price in exchange for cutting the frills—though to its credit, 16MB of RAM is unusual for a budget notebook. Hertz's track record for reliability and service is largely unknown to us, however.

The Toshiba Satellite Pro 400CDT and the WinBook XP5 P120 remain our Power Best Buys, and the Dell Latitude LX 4100D keeps the top Budget spot. Our new number two budget notebook is the Toshiba Satellite T2130CS. A slight rise in Toshiba's service rating nudges it above Dell's Latitude LX 4100T, a higher-end version of the 4100D and former number two Best Buy.

Power Notebooks

Toshiba Satellite Pro 400CDT

LAST REVIEWED: March 1996

PROS: Fast, good battery life, top-notch reliability, quad-speed CD-ROM drive

CONS: Its 9-pound carrying weight is on the heavy side

The \$3999 Toshiba Satellite Pro 400CDT is not cheap for a Pentium-75 notebook, but considering that the price includes 16MB of RAM, an 810MB hard drive, a quad-speed CD-ROM drive, and built-in sound and speakers—not to mention Toshiba's stellar reputation for reliability and service—it's well worth the investment.

As with all Toshiba notebooks we've seen, the quality of design and construction is excellent: The case feels solid, the keyboard and the embedded minijoystick pointing device are comfortable to use, and the bright 10.4-inch active-matrix screen supports 16.8 million colors. Battery life is good, but not outstanding, at 4.3 hours.

Toshiba's documentation for the Satellite Pro 400CDT is clearly written and well organized. Perhaps best of all, readers consistently

give Toshiba reliability high marks on our fax-back surveys, and the Satellite Pro is backed by a superb three-year warranty.

Our main complaint with this system concerns its carrying weight: With the battery installed, and including the AC adapter, the floppy drive, and the CD-ROM drive, the Satellite Pro weighs in at a shoulder-straining 9 pounds.

WinBook XP5 P120

LAST REVIEWED: April 1996

PROS: Ultrafast; huge hard drive, long battery life, 14.4-kbps fax-modem

CONS: One-year warranty, low reliability ratings

It's hard to argue with success, and when it comes to notebooks, WinBook has made its mark. This 7.4-pound Pentium-120 is the fastest notebook on our chart, and its \$3799 price is right on for a system loaded with 16MB of RAM, a huge 1295MB removable hard drive, a bright 10.3-inch color active-matrix screen, and a 14.4-kbps internal fax-modem. Battery life is impressive, too: The XP5 P120 lasted well over 6 hours in our tests.

The comfortable keyboard has good responsiveness and full key travel, and you have your choice of pointing devices: a minijoystick embedded in the keyboard, a touchpad built into the wrist rest, or an optional trackball you can swap for the touchpad. The system also features a infrared port, an internal microphone, built-in sound, and speakers with external volume control.

Service and support for WinBooks are decent. Toll-free support is available 11 hours every day. The warranty lasts just one year, however (an extension to three years costs \$299). In our ongoing fax-back survey, *PC World* readers give WinBook notebooks mediocre ratings for reliability. We haven't received enough reports on the company's service to gauge its quality.

Gateway 2000 Solo S5-90XL

PROS: A \$300 price drop elevates a notebook with excellent reliability scores **CONS:** Still quite expensive at \$5078

Dell Latitude XPi P90T

WinBook XP5 P75

LAST REVIEWED: March 1996

PROS: Fast for a P-75, 5-hour battery life, 814MB hard drive, 14.4-kbps fax-modem

CONS: One-year warranty, low marks for system reliability

NEC Versa 4080H

LAST REVIEWED: April 1996

PROS: Good P-120 performance, comfortable keyboard, 1080MB hard drive, quad-speed CD-ROM drive, 800 by 600 screen

CONS: Very expensive at \$4999, muted screen colors, fairly short 3.5-hour battery life

IBM ThinkPad 760C

NEW THIS MONTH

PROS: Strong performance and battery life, extra-large display, high-quality sound, comfortable keyboard, great software bundle

CONS: Expensive, swapping batteries is complex

As usual with IBM's innovative ThinkPads, just about the only thing wrong with this machine is its price: \$6184. Look on the bright side, though: The 8.2-pound 760C costs \$1200 less than the top-of-the-line ThinkPad 760CD and is nearly identical, except it lacks a CD-ROM drive and hardware-assisted MPEG video play-

back and has a smaller hard drive (720MB). But it does have the same gorgeous 12.1-inch active-matrix color screen—as big as you'll find on any notebook—and an ingenious keyboard that slants up from the sides and makes typing more comfortable.

The system's performance and 5-hour-plus battery life far surpass the

average for other Pentium-90 notebooks with 16MB of RAM. The 760C includes a 14.4-kbps fax-modem with answering machine features, and a built-in wavetable sound card that provides some of the best audio we've heard from a portable PC.

There are just a couple of minor irritations. Flipping up the key-board to swap batteries requires an unintuitive sequence of step's. Also, the AC adapter uses an odd, oversize connector that doesn't fit snugly into the PC.

In every other respect, this is a first-class notebook with first-class service policies: a three-year parts warranty (labor is covered for the first year), free on-site service, and round-the-clock phone support. Readers who responded to our fax-back survey give IBM high praise for system reliability. The winning combination of fast performance, an oversize screen, and high-quality audio makes this ThinkPad a natural for anyone who gives multimedia presentations on the road.

Austin Business Audio P-90

LAST REVIEWED: March 1996

PROS: Fast, well built; 720MB hard drive; fax-modem; built-in sound, speakers, and microphone **CONS:** Heavy (8.2 pounds); uncomfortable trackball; 3.5-hour battery life shorter than we like

Budget Notebooks

Dell Latitude LX 4100D

LAST REVIEWED: March 1996

PROS: Inexpensive, fast for a DX4-100, long battery life, excellent documentation

CONS: Somewhat dull screen, cramped keyboard

If you want good performance in an inexpensive notebook, don't overlook the Latitude LX 4100D. It costs only \$1928, and with 8MB of RAM it's faster than every other notebook on the Budget chart except its higher-end'sibling—the Latitude LX 4100T—and the new Hertz Z-Optima 486 D100 X4E.

We have some quibbles, such as the cramped keyboard. The centered trackball, however, rolls smoothly. The low price involves one major compromise: You get a small 420MB hard drive. On the other hand, the Latitude LX 4100D also features some nice extras, like a floppy drive that pops out for a second battery, and a number of useful system management utilities. The battery life of over 5 hours is among the best on the budget notebooks chart, and the price includes a 10.4-inch color dual-scan screen (although we wish it were brighter) and a three-year warranty. (If you opt for one-year coverage, the LX 4100D sells for just \$1799.) Dell's extensive documentation for the Latitude LX 4100D is first-rate.

Toshiba Satellite T2130CS

LAST REVIEWED: March 1996

PROS: Well designed and well constructed, low price, excellent reliability scores

CONS: Fairly sluggish performance, mediocre battery life

DX4-75s are still the mainstays of the budget notebooks chart. This month, a whopping \$400 price drop to \$1599 returns Toshiba's DX4-75 Satellite T2130CS to Best Buy status. It's still the fastest DX4-75 notebook on the chart. Its configuration is typical for a budget contender, with 8MB of RAM and a 503MB hard drive. The 3-hour battery life is fairly short. The 10.4-inch dual-scan color screen supports only 256 colors, although it is otherwise quite good. You can't display on both the built-in screen and an external monitor at the same time, however. That said, the 7.2-pound traveling weight is easy on the shoulder, Toshiba enjoys consistently high ratings for reliability, and the company's three-year warranty is exemplary. We especially liked the well-written documentation that came with the system.

Dell Latitude LX 4100T

LAST REVIEWED: March 1996

PROS: Fastest notebook on the budget chart, 16MB of RAM, 810MB hard drive **CONS:** Fairly high \$2699 price

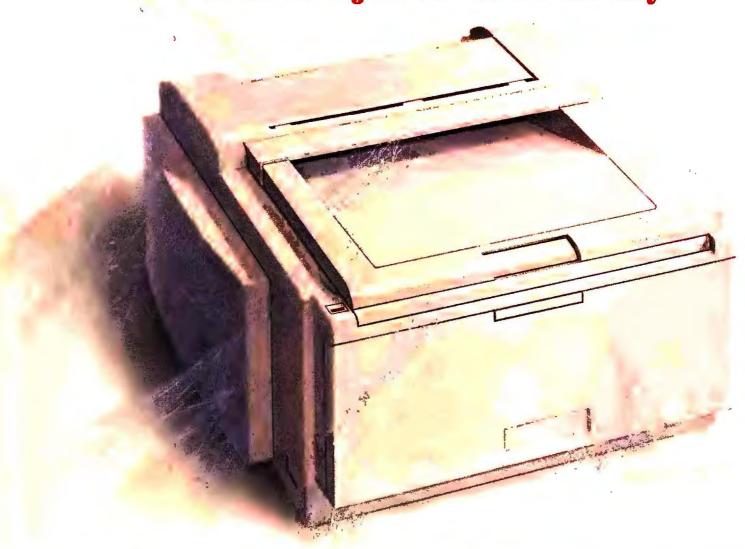

NEC Versa 2000D

LAST REVIEWED: March 1996

PROS: Excellent \$1599 price, nice color dual-scan screen, 5-hour battery life **CONS:** Very slow performance for a DX4-75; tiny 360MB hard drive

Did you pay all that money for a printer to have it just sit there all day?

Printers are no small investment. And chances are that most of them sit around doing very little for all but a few minutes a day. How would you like a cost effective way to get more productivity out of this investment?

Well, take a look at the Lumina 2000 multifunction peripheral. It's a full-featured plain paper fax, PC fax, scanner and copier. The best part is that because it prints using your existing laser, inkjet or color printer—in fact, it doesn't even have a built in printer—you not only make better use of your current equipment, you also get better looking faxes. Plus, it's more economical than other multifunction peripherals because you aren't paying for another printer or any of the supplies that go with a fax machine.

And the Lumina 2000 is the ideal way to complete a home or remote office, delivering the benefits of an entire wall of office equipment at a fraction of the price.

Plain Paper Fax

The Lumina 2000 is a full-featured stand alone fax which can send and receive faxes even without your PC. If your printer is off (or out of paper), the Lumina will store faxes until your printer is online, and then print. Scan in a document and walk away. Scheduled transmissions, group and broadcast faxes are a snap. Plus, it has 152 speed dial options.

The Lumina will work with any HP PCL, Epson, or PostScript compatible printer, including those attached via a Novell® or Windows™ for Workgroups network. It's really easy to install and even easier to use.

Scanner

The Lumina 2000 can scan text, images or pictures (up to 400 dpi) into your PC for later review, editing and storage. OCR software lets you create text files from scanned documents and edit them in your favorite word processing application. It features a 30-page automatic document feeder. And the Lumina 2000 uses the Windows TWAIN standard, so you can scan into most graphic and document management programs.

PC Fax

Mix and match files from Windows applications and/or scanned images and fax them via Lumina. Create unlimited phonebooks from which you can schedule or broadcast fax. Forward faxes to a remote site. All without having to install any boards or cards. No need to open up your PC, or use up a serial port.

Copier

The Lumina 2000 is also a copy machine, with real copier

features. It collates, enlarges and reduces (from 25% to 250%), and handles up to 99 copies. And the output goes directly to your existing printer. To top it all off, the Lumina 2000 costs significantly less than other multifunction office machines.

Give us a call to find out more about how you can maximize your investment in

printers or complete your home office.

Lumina 2000. Because you already have a printer.

SYSTEMS TOP 20

Hertz Z-Optima 486 D100 X4E

NEW THIS MONTH

PROS: Outstanding price, good performance

CONS: Mediocre battery life, smallish display

Debuting this month at number five in the budget notebooks chart, the Hertz Z-Optima 486 D100 X4E is the first notebook we've seen from a company whose desktop systems we've reviewed many a time. It's a solid value for bargain hunters who are willing to make a few compromises. The reasonable \$2195 price buys you a DX4-100 with an impressive 16MB of RAM, a big 810MB hard drive, and an active-matrix color screen. Among this month's budget contenders, the Hertz landed a PC WorldBench score of 98, ranking second only to the 109 rating of the \$2699 Dell Latitude LX 4100T, also a DX4-100.

The tempting price comes at the expense of features beyond the basics, however. The system's ergonomics are generally pretty good, with a comfortable wrist-rest area, a marble-size trackball that works pretty well, and a keyboard that's fine except for an

unusually small spacebar. But you don't get built-in sound, an infrared port, or other equipment that's becoming standard on most notebooks. (Hertz does sell a \$295 CD-ROM/sound module that you can swap out with the system's floppy drive.)

At 8.2 pounds, the Hertz Z-Optima 486 D100 X4E is also heavy, especially

considering it has no built-in multimedia components to weigh it down. Its 9.5-inch color screen, while crisp and clear, is cramped compared to the larger displays of all but one of the other budget notebooks. And the 2.5-hour battery life is disappointing.

None of the *PC World* readers responding to our fax-back survey have commented on Hertz's reliability and service, but although the company is small, it has been in business for a number of years. Hertz's support package is adequate; it includes a warranty that covers parts for three years and labor for one year. Technical support is available weekdays only, however. If you want good performance, and you don't use multimedia or mind short battery life, the Z-Optima 486 D100 X4E is a good deal.

NEC Versa 2000C

LAST REVIEWED: March 1996

PROS: Nice-looking color active-matrix screen, 14.4-kbps internal fax-modem

CONS: Sluggish performance for a DX4-75, short 3.3-hour battery life

AST Ascentia 950N/75

NEW THIS MONTH

PROS: Built-in speakers and microphone, big hard drive, 5-hour battery life

CONS: Performance is slow for a Pentium-75

Our main complaint about the \$2455 AST Ascentia 950N/75 is its poor performance. If only this well-designed little Pentium-75 were faster, it would rank near the top of our budget notebooks

chart. Unfortunately, it runs more like a fast DX4-100 machine than a P-75. That fairly major knock delivered, we can find little else to fault. We tested this system in March, but at that time it was too expensive for the budget list. A \$544 price cut now makes it eligible.

AST really knows how to put together a classy notebook, and the company

has racked up an impressive collection of Best Buys in the last several years. Ascentia models in particular have done well in our reviews. The Ascentia 950N/75 has some of the features that attracted us to its predecessors. It weighs only 7.2 pounds, and it comes equipped with 8MB of RAM, a big 810MB hard drive, built-in sound and speakers, and an infrared port for wireless data transfer. In our tests, we appreciated the brightness and clarity of its 10.3-inch color active-matrix screen. The battery life is also good at more than 5 hours. You even get a three-year warranty. So although it's not as fast as you would expect a Pentium to be, this Ascentia is still a good value.

Compaq Contura 420CX

A recent study by PC Computing shed some surprising new light on the whole issue of human productivity and computers. It

found that one key way to unlock people's potential is

to make sure their computers have enough memory. Remarkably, the study found that adding just four megabytes of memory increased managers' productivity by 26%. Accountants and analysts improved by 12%, and administrative assistants by 11%. So, why Kingston memory? We test every cell on every chip on every

module. (On a 16 megabyte module, that's 128 million cells.) And Kingston makes customized memory for almost every PC, server, printer, and workstation out there. Our memory is designed to meet or exceed

the specifications set by leading computer manufacturers. Maybe that's why those manufacturers, and Fortune 1000 companies, use Kingston memory more than any other brand. For

These systems were tested along with the others but didn't score high enough to reach the Top 20 charts.

Acma sPower 133

PROS: Good documentation **CONS:** Slow, no weekend support

This \$2495 P-133 minitower was sluggish. Acma has pretty good documentation and a three-year parts warranty, but you pay for labor after the first year, and phone help is weekdays only. *Acma Computers*, 800/786-6888, 510/623-1212 Reader service no. 689

Compaq 5100e

PROS: Uncluttered interior, first-rate service and support CONS: Extremely slow, bare-bones setup, no free drive bays This \$2399 P-100 has 8MB of RAM and no secondary cache, so it lags behind most P-75s we've tested. It has no free external drive bays. Compaq's reliability and service are tops. Compaq Computer, 800/345-1518 Reader service no. 690

Compaq Presario 9240, 9250, 9660

PROS: Superb design, great documentation, top reliability **CONS:** Very slow performance, pay-per-call tech support

Three new Presarios are well designed, but see how they run: The \$3593 P-166 9660 is only as fast as an average P-120. The \$3393 P-133 9240 and the \$3094 9250 P-150 are even slower. And Compaq charges \$35 for support calls not involving defects. All have 15-inch monitors with detachable speakers and 28.8-kbps voice fax-modems. The 9250 and 9660 have 2140MB hard drives and 6X CD-ROM drives. The 9240 has a 1275MB hard disk and a 4X CD-ROM/rewritable optical combo. *Compaq Computer*, 800/345-1518 Reader service no. 692

Multiwave Ultra Power

PROS: Fast performance, full tower case

CONS: Mediocre support policies

Your \$2425 buys a speedy P-166 tower with wavetable sound, 6X CD-ROM drive, and a 17-inch display. But the vendor offers just a onc-year warranty and no free on-site service. *Multiwave Technology*, 800/234-3358, 818/330-7030 Reader service no. 693

Netis N5166 Home Office

PROS: Low price, wavetable sound card

cons: Mediocre performance, unimpressive documentation For \$2850, this P-166 minitower has it all: 16MB of RAM, a 1624MB hard drive, a 4X CD-ROM drive, a 14.4-kbps modem with voice mail, and wavetable sound. But it's slow, and Netis's warranty covers parts for only one year. *Netis Technology*, 800/577-7526, 408/263-0368 Reader service no. 694

NMC Expert Plus

PROS: Fast; 17-inch monitor; phase-change optical drive CONS: High price, crowded interior, no weekend support A phase-change rewritable optical/4X CD-ROM combo comes with the \$3499 price. This P-133 minitower is as fast as some P-150s we've seen, but the interior is messy, and our keyboard adapter kept coming loose. National Microcomputers, 800/800-4662, 801/265-3700 Reader service no. 695

PerComp P166 Professional

PROS: Strong multimedia features, good support policies

CONS: Slow; small hard drive

This \$2899 P-166 desktop has great specs: a 4MB WRAM Matrox graphics card, wavetable sound, Altec-Lansing speakers with subwoofer, and a 17-inch display. But it's one of the slowest P-166s we've tested. PerComp offers a three-year warranty and seven-day support. Percomp Microsystems, 800/856-6688 Reader service no. 696

Polywell Poly 5166P8

PROS: Fast; five-year labor warranty

CONS: Small hard drive, no free on-site service

Polywell's \$3095 minitower was fast, but the setup (16MB of RAM, 1080MB hard drive, sound card, 4X CD-ROM drive, 17-inch monitor) is typical for this price. The five-year labor warranty stands out. *Polywell Computers*, 800/999-1278, 415/583-7222

Reader service no. 697

Robotech Cobra XLT 166S

PROS: Good performance, generous multimedia configuration

CONS: Limited support hours

This P-166 tower costs a high \$3899, but performance is good. It comes with a 17-inch display, a 6X CD-ROM drive, wave-

table sound, and a 28.8-kbps voice modem. But a messy interior blocks expansion slots and SIMM sockets. Phone help is available business hours only. *Robotech*, 800/255-2215, 801/565-0645 Reader service no. 698

Sys Technology Performance P166T

PROS: Fast performance, high-end multimedia components

CONS: Meager support policies, unrefined design

This \$3799 minitower is among the fastest P-166 systems with 16MB of RAM. The nice setup includes a 1280MB hard drive, a Matrox video card with 4MB of WRAM, a 28.8-kbps modem, a 4X CD-ROM drive, sound, and a 17-inch monitor. But it's hard to maneuver inside, and Sys offers a mere one-year warranty with no on-site service or toll-free support. Sys Technology, 800/613-9963, 714/821-3900 Reader service no. 699

Sys Technology Performance Pro 150

PROS: Very fast; high-end multimedia bundle

CONS: Expensive, skimpy support policies

This \$4699 Pentium Pro 150 minitower finished our PC WorldBench tests about as quickly as the fastest P-166 machines, but it costs far more. It's similar to the Sys system reviewed above, except this unit has 32MB of RAM and a 15-inch monitor. Sys Technology's support policies are spare. Sys Technology, 800/613-9963, 714/821-3900

Reader service no. 700

AMS SoundPro DX4-75

PROS: Low price, three-year warranty

CONS: So-so sound, poor documentation, somewhat heavy For only \$2107 the SoundPro delivers a 10-inch color active display and a 540MB hard drive. The 3.3-hour battery life is adequate. But its sound is buzzy, and its speakers are weak. The trackball and mouse buttons feel cheap, and the bulky AC adapter contributes to a rather heavy traveling weight of 8.2 pounds. The printed manual is sketchy. AMS does offer a full three-year warranty. AMS, 800/886-2671, 818/814-8851 Reader service no. 701

Canon Innova Book 1100 P75, P75T

PROS: Fast performance, excellent on-screen documentation CONS: Poor battery life, streaky display, one-year warranty Both of these Pentium-75s have 8MB of RAM, 810MB hard drives, and clear built-in sound. The \$3499 P75 is fast, and it weighs just 6.6 pounds. Its 11.3-inch dual-

scan color screen looked streaky, however, and its 1.25-hour battery life is meager. The P75T, which weighs 7.6 pounds, has an 11.1-inch color active screen that can display 65,536 colors at 800 by 600 resolution. But its battery life of 46 minutes is abysmal, and its \$4649 price is very high.

Canon's one-year warranty is brief, but tech support is open long hours and weekends. Canon Computer Systems, 800/848-4123, 714/438-3000 Reader service no. 702

Canon Innova Book 1100 P90

PROS: Large hard disk, excellent on-screen documentation CONS: Short battery life, streaky display, one-year warranty This 7.4-pound Pentium-90 notebook is almost identical to the Innova Book 1100 P75 and P75T. At \$4199, it costs \$700 more than the InnovaBook 1100 P75, but it's only slightly faster. It has the same short battery life (1.25 hours) and the same poor screen. Canon Computer Systems, 800/848-4123, 714/438-3000 Reader service no. 704

Canon NoteJet IIIcx

PROS: Built-in printer/scanner, roomy display

CONS: Mediocre battery life, high price, one-year warranty It's a notebook! It's a printer! It's a scanner! The newest addition to Canon's unique NoteJet line includes a built-in color ink jet printer and gray-scale scanner. Their quality is decent, but performance is slow. This 11.4-pound system is more luggable than it is portable, but it still fits into a briefcase. The pricey \$6699 NoteJet comes with a P-90 CPU, 8MB of RAM, an 810MB hard disk, and an 11.8-inch color active screen. Performance is typical for the system's CPU class; the 2.3-hour battery life is mediocre. Canon Computer Systems, 800/848-4123, 714/438-3000 Reader service no. 705

Compaq LTE 5100 Model 810 CTFT

PROS: High-quality display and sound

CONS: Slow, expensive

Compaq's LTE 5100 notebook comes in two flavors, each P-90s with 8MB of RAM standard. In April we tested a version with 16MB of RAM, a 2X CD-ROM drive, and the fastest P-90 notebook PC WorldBench score we'd seen. The \$5399 LTE 5100 Model 810 CTFT we review this month has 8MB of RAM and no CD-ROM drive (you can add one for \$389). It comes with a 10.4-inch color active screen, good built-in sound, and Compaq's strong service and reliability. But it's pricey, and compared to its peers it's slow. *Compaq Computer*, 8001 345-1518 Reader service no. 706

SYSTEMS TOP 20

HP OmniBook 5000 CTS

PROS: Large hard disk, very fast, video and MIDI ports

CONS: High price, so-so battery life

This \$6295 P-120 is the fastest notebook we've tested—and it might have made the power notebooks chart if it weren't so expensive. It doesn't have a CD-ROM drive, but it has 16MB of RAM; a 1280MB hard disk; a 10.5-inch color active screen; decent sound; ports for a monitor and MIDI devices; and a large, easy-to-use trackball. Its 3-hour battery life is only half what some P-120s can manage, though. HP offers a full three-year warranty and free on-site service. Hewlett-Packard, 800/752-0900, 303/635-1000 Reader service no. 707

Twinhead SlimNote 6150TX

PROS: Fast, inexpensive, has CD-ROM drive

CONS: Poor battery life, skimpy manuals, one-year warranty
This \$3200 Cyrix 5x86-based notebook
performs like a comparably equipped Pentium-90 but costs several hundred dollars
less. It has a crisp 10.5-inch active-matrix
color screen, a CD-ROM drive, and builtin sound. But its 1.3-hour battery life is
brief compared to other Cyrix 5x86 notebooks we've tested. And its 9.8-pound traveling weight is heavy, even considering the
multimedia features. Twinhead's warranty
for parts and labor is just one year, with no
weekend support. Twinhead, 800/995-8996,

408/945-0808 Reader service no. 708

ZDS Z-Note GT

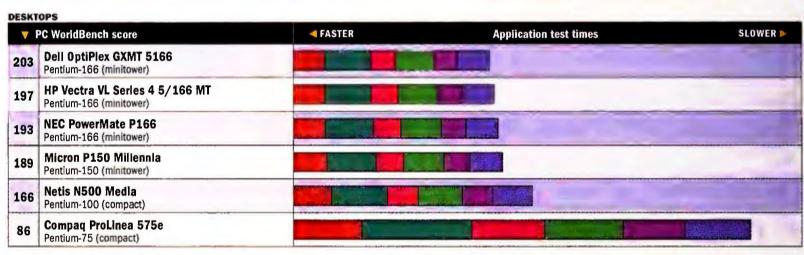

PROS: Excellent performance, large hard disk, CD-ROM drive,

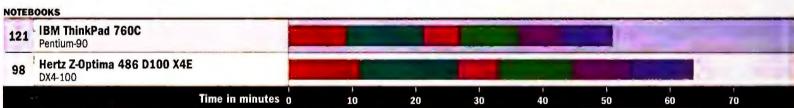

highly customizable, strong support policies

CONS: Poor battery life, terse documentation

It costs a whopping \$5268, but this 9.2-pound multimedia system is the fastest P-90 notebook we've tested. It has a massive 1330MB hard drive, and a bay that can hold either the included floppy drive, a 2X CD-ROM drive, or a second hard disk or battery. That battery option is vital considering the Z-Note's dismal 1.5-hour battery life. We also thought the built-in speakers sounded faint. ZDS's support policies are top-notch. Zenith Data Systems, 800/582-0524, 847/808-5000 Reader service no. 709

This Month's Contenders

Systems are arranged in order of overall performance from best to worst, based on the normalized, weighted scores from six tests.

IPC WORLDBERG

Methodology We test each system as supplied by the manufacturer. All tests are performed under Windows 95 configured with an HP LaserJet IV as the default printer. We disable any power-saving features. We set the video resolution to 800 by 600 in 256 colors, using the

supplied video driver where possible. We load the test applications and files and the test automation software and scripts.

Word 7.0 for Windows 95 (25 percent of weighting)

We open multiple documents, format text, copy and paste, close files, scroll, and save files. We also change document views, insert text, check spelling, repaginate, count words, print preview, and mail merge.

Excei 7.0 for Windows 95 (20 percent)

Using a variety of worksheets including an automobile statistics sheet, a multisheet federal income tax workbook, a variable-rate mortgage worksheet, and an analysis of life insurance policies, we perform common functions and tasks including opening a file, formatting, data entry, sorting, recalculation, data query, print preview, printing, and saving the file.

Picture Publisher 6.0 for Windows 95 (15 percent)

Using an assortment of graphics, we perform functions including opening and saving files, zooming, scrolling, palette changes, posterization, image masking, hue shifting, feathering, and copying and pasting.

Paradox 5.0 for Windows (15 percent)

We simulate an order entry system. We import tables and post a series of orders, looking up customer and product data in the process. We perform a variety of queries, edit data, and create reports.

WordPerfect 6.1 for Windows (15 percent)

We open different-size files, search for text, change fonts, enter text, save files, and jump to a particular page. We also check spelling, copy and paste, scroll, change document views, and insert one file into another.

1-2-3 release 5 for Windows (10 percent)

Same functions as the Excel test.

Chip off the Old Block TI's microLaser PowerPro/ 12 follows in the footsteps of the microLaser Power-Pro, taking second place with fast performance and good PostScript output. Web page—what would you get? The Tektronix Phaser 550, a new color laser that uses an HTML-based utility called PhaserLink to communicate with a variety of computers on a network without installing platform-specific software. To check on the printer's status, just use your Web browser. It's a first for printers—or any hardware peripheral that we know of.

The Tektronix and the two other new color lasers we review this month, the HP Color LaserJet 5 and the QMS magicolor CX/32, have many strong points; however, they couldn't shake the triumvirate that continues to rule the color chart. HP's DeskJet 1600CM maintains the top spot. At arm's length, its output is almost indistinguishable in quality from competing lasers', yet it costs thousands of dollars

less (\$1999). The Apple Color LaserWriter 12/600 PS and the Lexmark Optra C are slower and more expensive than most other color lasers we've seen, but their output quality is the best of them all.

On our monochrome chart, the fast, capable Lexmark Optra R+ is still the Best Buy. But there's a new number two printer: Texas Instruments' 12-ppm microLaser PowerPro/12 takes up where its predecessor, the TI microLaser PowerPro (now discontinued), left off—with snappy performance and good output. We also looked at the 8-ppm version of this printer, the TI microLaser Pro/8.

A Family of Winners

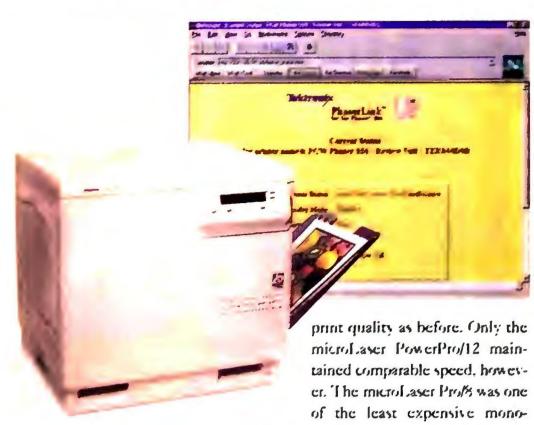

With the same PC and Mac connectivity options but less RAM (3MB) than before and slightly less powerful processors, TI's \$1439 microLaser PowerPro/12 and \$1169 microLaser Pro/8 cost less than the old line they replace, and both gave us the same good laser

chrome workgroup printers we've tested, but it was also one of the slowest, so it didn't make the chart.

Businesslike HP Color Laser

HP's new \$5995 Color LaserJet 5 barely missed our chart. The colors, text, and gray scale it produced on pie charts and other common documents should suit HP's mainstream business audience. But output quality suffered on more complex graphics, and diagonal lines came out surprisingly jagged. HP's toner bottle refills save mone; compared to the self-contained cartridges you replace on most printers; just be patient as you empty the bottles into the printer's reusable cartridges so you don't spill the contents.

QMS's \$6799 magicular CX/32 is expensive, but it comes fully equipped with an internal hard disk.

49-MHz CPU (25 MHz is more common) with 32MB of RAM (8 to 20MB is the usual range). While these enhancements don't do much for the magicular CX/32's monochrome print speed, the unit wowed us by printing our full-page color photograph faster than any other printer we've tested—in a little over 2 minutes. And unlike many color lasers we've reviewed (including those currently on the chart), the CX/32 prints on envelopes. Unfortunately, the unit's output quality isn't quite as good as that of the Apple and Lexmark printers.

This is also why yet another attractive printer was kept off the chart. The \$5945 Phaser 550. Tektronix's newest incarnation of its flagship color laser, gave us good text, line art, and gray-scale output at 600 dpi. It had rich color quality, but the textures on our test photograph looked flat. It comes with just 8MB of RAM (its predecessor came with 20MB), but if you add another 16MB of RAM (for an additional \$1195), the Phaser 550 is capable of true 1200-by-1200-dpi print resolution.

To test the Phaser 550's Web page-like Phaser-Link network utility, we hooked our review unit into the Novell network at our office and sent it a print job. Then, in Netscape 2.0, we entered the printer's IP address just as you would enter a URL to dial in to a Web site. There we could see the printer's "busy" status and print settings. And we didn't have to load a separate network utility on our workstation.

New Big-Screen Best Buy: Samsung SyncMaster 20GLs

Big Screen, Small Ticket Samsung's 20-inch Sync-Master 20GLs costs a modest \$1269, but the low price doesn't compromise text and image quality.

ou've got a powerful new Pentium PC, a rapid-fire graphics card, and piles of fancy software. So why aren't you more productive? The answer may be right in front of your eyes. Viewing all those programs and documents simultaneously on screen without clutter or scrolling can be difficult-even on a 17-inch monitor. If you're ready to take the plunge and buy a really big monitor, check out our new Best Buy, Samsung's SyncMaster

20GLs, which debuts in second place on this month's chart. We expected some design compromises in a 20-inch monitor (18.75-inch actual viewable screen area) that costs only \$1269—bad color quality or blurry text, at the least. We did have some problems deciphering the on-screen controls, but the

screen looked much better than we expected. It displays small italic type, multiple rows of numbers, and color pictures with surprisingly good detail. Concerned about eyestrain? Paired with the right graphics card, the 20GLs can refresh at a rapid 100 Hz at 1024 by 768 or a respectable 77 Hz at 1280 by 1024.

The MAG MX21F costs \$1700 (down \$100 from our January review), which is several hundred dollars more than the 20GLs, but it's still our top monitor because of its superior display quality. Focused text and brilliant graphics make this big 21-inch monitor (with an actual viewable screen area of 19.15 inches) an excellent value.

Methodology We tested the monitors at a resolution of 1024 by 768 dpi, color depth of 65,536 colors, and a vertical refresh rate of 75 Hz. We used a Pentium-90 PC with 16MB of RAM and a Diamond Stealth64 PCI graphics card with 4MB of DRAM. For more Information about all products in this table, circle reader Color 21/88 has the best overall text and picture quality of all the monitors on the chart. So what's it doing buried in eighth place? At \$2795, the 21/88 is the most expensive display we've tested yet. With a

viewable screen area measuring 19.65 inches, this 21-inch monitor is designed particularly for people who use high-speed document management workstations or do precision CAD work. For \$895 extra, Cornerstone bundles a PCI card that sharpens text legibility and color graphics on low-resolution scans so you can decipher tiny details on important documents. According to Cornerstone,

this card for the

Constant Con

Looking Sharp Cornerstone's documentmanaging Color 21/88 has image quality that can't be beat, but this 21-inch behemoth costs a sky-high \$2795.

Color 21/88 enables you to quickly flip through 20 scanned documents per minute, easing the task of sorting through volumes of documents (we did not test this feature). The Color 21/88 is equipped with a comprehensive selection of onscreen and push-button controls that make it easy to adjust the monitor with precision. To adjust, say, horizontal position, just press a button and an on-screen menu shows you the exact adjustment

level. Submenus of more advanced options also allow you to tweak image geometry settings such as pincushion, image tilt, and barrel distortion.

Graphics look great on ViewSonic's PT810—colors

are not oversaturated and flesh tones look particularly realistic—but the relatively high price (\$2195) and so-so text quality score land this 21-inch monitor (19.2-inch viewable screen area) in ninth place. Small letters, particularly italics, are not quite as legible as the text on the other Top 10 screens we've tested. You can quickly fine-tune the display using a combination of front-panel control buttons and an on-screen

menu, but we found the menu a tad rigid. The PT810 offers a full assortment of on-screen menu choices, but you have to hunt a bit when toggling to the control you want to adjust. For example, if you push the control button too many times while scrolling down, you have to return to the top and scroll to that menu option on the second pass.

IBM's \$2149 P200 brings up the rear in tenth

place. If you spend a lot of time reading off a screen, you'll appreciate the great text display. The 6-point type in our spreadsheet and presentation tests was sharply focused and readable across the entire screen, achieved in spite of the Trinitron tube's notorious, faintly visible double lines. (The lines are caused by two fine wires inside the tube that hold the Trinitron's aperture grille in place. Most people, us included, find them easy to ignore after a while.) Scanned photographs also looked very good—bright and detailed—despite the monitor's large .31mm stripe pitch. Also noteworthy: The 20-inch P200 has an actual viewable area of 19.1 inches, is capable of high refresh rates, and sports easy-to-use buttons and on-screen controls that give you plenty of monitor adjustment options. Advanced controls—such as

trapezoid, image tilt, and color convergence—are easy to locate, and it didn't take us long to perfect the image geometry, tilt the image to make it level, or fiddle with color balance.

Out of Sight

High prices or mediocre display quality keep the other four monitors we tested off our chart. The 21-inch Samsung SyncMaster 21GLs looked just as good to us as its sibling in second place, the 20-

inch 20GLs. But an additional \$800 is too much to pay for the added Level 2b Plug and Play support, faster refresh rates, and slightly larger viewable screen area of 19.3 inches.

The 20-inch IBM G200's use of a less expensive tube makes it more affordable (\$1699) than its Trinitron-based P200 sibling in tenth place, but its viewable display area is a half-inch smaller, and display scores are predictably less impressive. Our staff of judges gave the G200 lower marks for fuzzy text near the edges of the screen, and slightly fogged color graphics. On the plus side, like the P200, the G200 got good marks for its comprehensive yet simple to adjust on-screen menu controls. We also looked at the 20-inch Apple MultipleScan 20 (\$2149) and the 21-inch Philips Brilliance 21 (\$2499). Both monitors offer just over 19 inches of viewable screen area and a full array of on-screen controls. Unfortunately, the combination of so-so display quality, high prices, and less intuitive control panel schemes keeps these two contenders off our chart.

For the next few months we'll concentrate the Top 10 monitor rankings on the more popular 15- and 17-inch markets and recap this list in the fall.

Why a Higher Capacity Hard Drive is Important This chart illustrates how much hard drive space an average computer user would require over a three year period (over 2 GB). A Western Digital high-capacity, high-performance hard drive lets users efficiently run more of today's software — and tomorrow's.

Western Digital didn't have to sacrifice performance to break the 2 CB barrier. These new hard drives offer 5,200 RPM spindle speed and sub 12-millisecond seek times. And, of course, Western Digital's award-winning quality and reliability.

2.1 CB and 2.5 CB hard drives. We've got them. You're going to need them. Because if you think today's applications eat up storage, wait till you see tomorrow's.

Terminator 64 Is Back With a Video Twist

Hercules Terminator Grows Up The new Terminator 64/Video has all the features of a good video-enabled board for much less, but it's slow.

ast summer the Hercules Terminator 64 topped our chart, thanks to its fast Winidows acceleration and sub-\$200 price. This month the next-generation Terminator 64/Video claims the number eight spot with its combination of inexpensive EDO DRAM and full-motion video acceleration. In our tests, the \$179 Terminator 64/Video

was the slowest Top 10 board in both graphics and business applications, and its Windows 3.1 drivers didn't support the VESA standard 75-Hz refresh rate at 1024 by 768. For sheer value, though, the Terminator 64/Video is a good board, and it can accept lowcost MPEG playback and TV tuner daughtercards.

None of the other three boards we tested this month are Top 10 material. The \$179 Genoa Phantom 64 V2001 comes close, but it was even slower than the Terminator 64/Video. To its credit, the Phantom 64 has a smooth, Windows-based installation and an intuitive software utility that uses a tabbed interface to organize video settings.

We also tested Reveal's new \$199 SpeedCat Jaguar VC800, which proved especially easy to use. Its Plug and Play installation was flawless and its documentation easy to follow, but the board was slow, and it lacks the extra features, like video acceleration, that we see on most new boards today.

Colorgraphic's Mega Lightning is designed for people who use two monitors. This fast, ultra-highend, \$1295 board has two S3 Vision968 chips and 4MB of VRAM for driving two graphics systems. We understand its high price, which is reasonable for this type of board, but its poor install routine, sparse documentation, and weak utilities are major drawbacks.

Cardinal's Voice Modem: Talk Is Cheap

Voice Modem for the Masses: Cardinal's \$209 modem lets vour PC serve as an answering machine, and it lets you alternate between voice and data during a call.

he sole addition to our chart this month is Cardinal's MVP288XV external modem. For its low \$209 price it has a great feature set, most notably its voice-mail abilities, MNP-10EC cellular protocol, and Flash ROM for easy upgrading. Only mediocre per-

formance kept the MVP288XV low on the list.

Microcom's DeskPorte 28.8P and Motorola's ISG Lifestyle 28.8 remain our external modem Best Buys, mostly due to their excellent performance and competitive prices. We took a look at three external modems we've tested previously, this time with updated firmware, but none made the chart. In all respects the BocaModem MV V.34 is solid-but not outstanding. MultiTech's \$189 2834ZDX has good throughput and connected at 28.8 kbps more than three-quarters of the time. But it has a meager feature set—you don't find cellular support, Flash ROM upgradability, or security features. Price is competitive and performance acceptable in the \$199 Hayes Accura 288, but it too has only the basics.

Zoom's V.34C modem is now in its third month as a PC Card Best Buy-it's still the fastest and cheapest in our roundup. None of the new PC Cards we tested landed on the chart. TDK's DF2814 nearly made it, thanks to stellar performance, toll-free support, a friendly \$270 price, and goodies such as Flash ROM and MNP-10. A difficult Windows 95 installation held it back, though. TDK's DF2814 Global Class is pricey at \$399, but it allows you to optimize your modem setup—using the included set of phone line connectors—in a variety of countries. Piiceon's Dispatcher 28.8 is solid but does not excel in any area. Boca's MV.34PC is very affordable, but apart from MNP-10, extras are few.

Methodology We tested each modern using a pair of identical units, one at each end of a simulated public-service telephone network from Telecom Analysis Systems. We tested throughput and connect rates using a variety of file types and line conditions outlined in the Telecommunications Industry Association's TSB-37A and 38 specifications. We used vendor-supplied initialization strings. The more expensive a modern, the more importance we give price in the unit's overall rating. The overall rating includes ratings for price (3 to 20 percent), features and ease of use (32 to 38 percent), performance (40 to 46 percent), and support (8 to 13 percent). HELP LINE Q & A

One Virus Scan Per Day Is Plenty

Recently, the information service people in my company have gone berserk over the threat of computer viruses on the network. They insist that everyone run antivirus scanning

software every day, and the way they've implemented this is to launch the program from the autoexec.bat file. Unfortunately, they also insist on having the program check every file.

This process is tedious enough to endure once each day, but if your computing experience is like mine, a day without at least one reboot is a rarity. Are there some commands I could add to auto-exec.bat that check to see if the file has already been processed once that day?

Stan Mitchell, Rex, Georgia

A Your coffee consumption must be going through the roof. Still, your IS gurus proba-

bly have good reason for the heightened virus scanning. Despite the availability of excellent antivirus software, traditional executable file and bootsector infectors are alive and well, abetted by a new crop of viruses transmitted via documents, e-mail, and the Internet. You're being a good "netizen" by not disabling the antivirus software or limiting the scope of its search.

The commands in FIGURE 1 should do what you want and keep the IS folks happy. Just add these lines to your autoexec.bat file, replacing the line 'rem (antivirus program commands go here)' with the lines that currently launch your antivirus program. The autoexec.bat file will scan your hard disk for viruses only the first time it runs.

Put That Fax Machine to Work, and Put Your Wallet Away

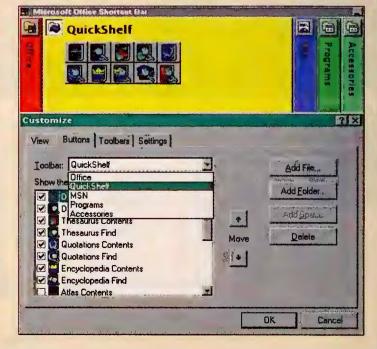

In the January issue, you advised a reader who wanted to scan and print using his fax machine to buy the Scan-By-Fax interface product ["Put That Fax Machine to Work"]. While this device is no doubt a convenience, I've been doing the same thing for years using nothing but a phone cable between the fax machine and my computer's fax-modem. Both are (and must be) connected to a single phone line.

Customize Office 95's Shortcut Bar for Faster Access to Your Work

One of the best but least-appreclated features of Microsoft Office 95 is the Shortcut Bar, which can be customized in a number of ways. Just right-click in a blank area of the Shortcut Bar and select Customize from the resulting menu to add or remove applications, enlarge their icons, or add up to eight toolbars, including ones for Accessories, the Microsoft Network, and the QuickShelf applications that come with Microsoft's Bookshelf.

You can place the Shortcut Bar anywhere on the screen, and you can auto-hide it whenever you start an application. I keep mine on the left side of the screen. It doesn't obscure anything because when programs maximize, they adjust so that they don't overlap with toolbars. My Shortcut Bar includes a copy of each application I have on my desktop, plus Explorer, File Manager, and the Control Panel.

FIGURE 1: SCAN FOR VIRUSES ONCE (and only once) per day by adding this code to autoexec.bat.

To scan a document, I place the page in the fax machine, lift its receiver, and press any digit on its keypad. This clears the dial tone and prevents any incoming calls. To send the document to the computer, I simultaneously press the send button on the fax machine and select the manual receive command in my fax program on my PC.

To print I simply reverse the process: I dial a single digit in my fax program's manual dial window, then tell it to send the document. I then pick up the fax machine's handset and press Start. Christopher Kessell,

Flying Windows 95

In a past issue of *PC World* someone submitted a tip for changing the Windows logo in the Flying Win-

dows screen saver to any other symbol. The only thing I remember from the tip is that the screen saver gets the Windows logo by looking at the last character of the Wingdings font, and that by replacing that character with another one (even another character in the same font) you can come up with a very different screen saver.

Are there any shareware programs that let you manipulate the char-

acters in a font? And does the tip work under Windows 95? I'd love to modify this screen saver, but I'm not ready to shell out big dollars for a font editor.

Raunak Desai,

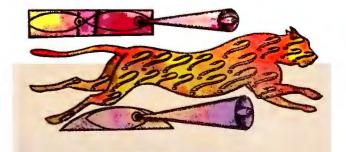

Roselle Park, New Jersey

A The tip, published in the May 1995 Star-Dot-Star ("Fly out a Different Window"), works fine under Windows 95. But to my knowledge, there's no such thing as a shareware or public-domain font editor.

Last year's tip suggested using Corel-Draw's font-manipulation skills to replace the Windows logo in the Flying Windows screen saver, and that advice still holds. Here's a recap:

- 1. Back up the Wingdings font file wingding.ttf.
- 2. Create a new character in Corel-Draw, or select a different character from Wingdings or another font file (see FIGURE 2 on the next page).
- 3. Export your new character to wingding.ttf and assign it character number 255.

For more complete instructions, search CorelDraw's help system for fonts: creating, then creating Adobe Type 1 & TrueType fonts.

The latest version of CorelDraw is 6.0, but you can still buy version 3.0 for as little as \$50 from mail-order houses. If that's too much to spend on a one-time tweak, ask a friend or coworker who uses CorelDraw if you can borrow his or her computer for a few minutes.

You can also use a more costly font editor to change the last character of the Wingdings font, but if you own a copy of one of those and know how to use it, you probably didn't read this far.

Quelling QuickTime File Association

I use both QuickTime and MPEG digital video viewers (because both types of files are on the Internet), and in and of themselves they work great. For .mpg files I use Vmpeg 1.7, and for .mov files I use Apple's QuickTime for Windows 2.03—the latest version I could find on the Internet.

Unfortunately, if I view a QuickTime clip with QuickTime's Player, MPEG clips mysteriously become associated with the QuickTime program, rather than with Vmpeg. The opposite is also true: If I reassociate .mpg files with Vmpeg, .mov files become associated with that program. Since Player doesn't know what to do with MPEG clips, and Vmpeg is incapable of playing QuickTime movies, what should I do? Russell Harris, Overland, Missouri

A The blame falls on the otherwise excellent (and free) QuickTime for Windows, which claims both the .mov and .mpg extensions as its own. The

simplest way around the problem is to rename your MPEG clips with another Vmpeg-compatible file name extension, such as .m1v. But that won't help if your MPEG files are on a CD-ROM or an Internet server. To convince Windows that .mov and .mpg files are different breeds, you'll have to do a little Windows Registry editing.

But first, rename an .mpg file on your hard disk with the .m1v extension. It doesn't even have to be an MPEG clip; a dummy file will do. Then associate it with the Vmpeg player in the Windows Explorer: Select View • Options, click the File Types tab, and click the New Type button. In the Add New File Type dialog box, enter MPEG video in the 'Description of type' field, enter m1v in the 'Associated extension' field, and click New. In the New Action dialog box, enter open in the 'Action' field, and enter the path to the MPEG player in the 'Application used to perform action' field. Close all the dialog boxes.

Before you edit the Registry, make backup copies of the following files in the Windows folder: user.dat, user.da0, system.dat, system.da0. (If you don't see these files, choose View • Options in My Computer or Explorer, click the View tab, select Show all files, and click OK.) Start the Registry Editor by selecting Start • Run and entering regedit. Click HKEY_CLASSES_ROOT\.m1v in the left-hand pane, double-click (Default) in the right-hand pane, press <ctrl>-C to copy the Value data field to the Clipboard, then click Cancel. Next, click HKEY_CLASSES_ROOT\.mpg, double-click (Default), and press <Ctrl>-V to replace the QuickTime Frame-PlayerClass string with the MPEGrelated string copied from the m1v key.

Exit the Registry Editor and restart Windows. Your .mpg files should now be associated with Vmpeg and your .mov files should be associated with QuickTime. Be sure not to use Explorer to associate either file type with a viewer, though. Despite your Registry handiwork, associating one file type with a particular viewer will still associate the other type as well.

Corrections to Adding a Second Hard Disk

Judging from the number of responses to "How to Add a Second Hard Disk in Windows 95" (February), installing a new hard disk as drive C: is something almost everybody wants to do. Unfortunately, I left out some important information in steps 7 and 9, which several alert readers noticed.

Step 7 instructs you to disable virtual memory before copying the contents of the old drive to the new one. If you don't do this, xcopy will fail when it encounters the virtual memory swap file, win386.swp. If you have 12MB of memory or more installed, no problem. If you have less than that, you'll find the Disable virtual memory check box grayed out.

To make the tip work on a system with less than 12MB of memory, move the swap file to the new drive instead of disabling it. To do so, follow the steps as printed in February up to the point where you're instructed to select the Disable virtual memory check box; select another drive from the Hard disk list instead. Click *OK*, *Yes*, *Close*, and *Yes*, then restart Windows.

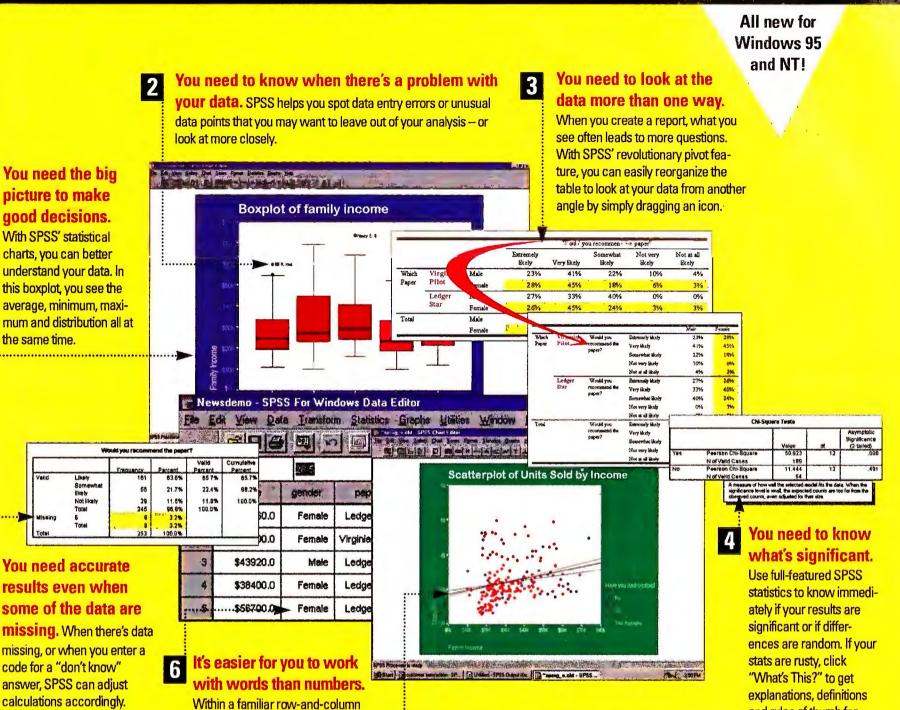

In step 9, I left out an important parameter in the xcopy command. If you try to copy the contents of your existing hard disk to the new (and nearly empty) drive, you'll get an Access Denied error when xcopy encounters the read-only msdos.sys file copied there in step 4. If you know your way around xcopy, you probably figured out that you need to add the /r parameter to allow xcopy to overwrite read-only files. The xcopy command should read xcopy c:*.* /e /h /k /r d:, where d is the drive letter of the new hard disk.

I apologize for any inconvenience these errors may have caused.

Automating Subtotals With Data Table Commands in Any Spreadsheet

I'm using Excel to store lists of evaluation data that I need to summarize according to training teams. At first I thought Excel's subtotal feature would be perfect for this, but I'm finding it's a pain in the neck. Every month I have to insert the subtotals (they're actually averages), format them, print the report, then remove the subtotals before I add more data or sort the list for a different report.

Can I set up a subtotals report that I don't have to re-create every month? Sandy Jernigan,

Monks Corner, South Carolina

A There are several solutions to this standard problem of summarizing spreadsheet data in groups. You could use Excel's pivot tables, but the slick-

est method is an old trick that uses the Data Table feature, a part of every major spreadsheet since 1-2-3 release 1A, in conjunction with the database average function—daverage in Excel, and @davg in 1-2-3 and Quattro Pro.

A data table shows how the results of one or more formulas are affected by the changing values of an input cell. When the input cell is the criteria cell of a database function (that is, when it restricts the formula to certain records), each result summarizes a different subset of the data. In Excel, the data table is an array formula that is recalculated dynamically as the data changes. In 1-2-3 and Quattro Pro, you must issue a command to recalculate the data table.

To build the Excel model, which has several refinements unique to Excel, follow the steps outlined here and illustrated in **FIGURE 1**.

- 1. Enter your data in range A1:D12.
- 2. Enter the labels for the input cell (F1), and for the data table (F4:F7).
- 3. Use the *Insert Name Define* command to define the criteria range, **F1:F2**, and the database range, **=offset(\$A\$1,0,0**, **counta(\$A:\$A),4)**. This offset formula makes the Database range dynamic so that it expands to include any new data appended to the bottom of the range.
- 4. In cell G4, enter =daverage(database, "Score 1",criteria), and in cell H4, enter =daverage(database, "Score 2",criteria). Assign cell G4 a custom format that replaces the formula result with the label 'Score 1': Select G4, select Format Cells, choose Custom, type "Score 1" (including the quotation marks), and click OK. Repeat these steps for cell H4.
- 5. Create the data table: Select range F4:H7, select *Data Table*, specify **F2** as the Column Input Cell, and click *OK*.

The formula in G4 calculates the average of the values in column C that match the criteria in F2. The formula in H4 does the same for column D. The data table (F4:H7) uses the values in F5:F7 as alternative inputs for F2; thus, the values in G5:G7 represent the Score 1 averages for the three teams, and the values in H5:H7 represent the Score 2 averages for those teams.

In Quattro Pro, the dynamic range name trick won't work, so assign the name database to range A1..D12. In cell G4, enter the formula @davg(database,2, criteria), where 2 represents the offset number of the Score 1 column, or column C. In cell H4, enter the formula @davg(database,3,criteria), where 3 is the offset number of the Score 2 column, or column D. To format a cell so that it displays the label 'Score 1' or 'Score 2', right-click the cell and select Block Properties. Select the Numeric Format tab, click *User Defined*, and in the Formats Defined box, enter T'Score 1' or T'Score 2', including the single quotes. To create the data table, select range F4:H7, and then select *Tools • Numeric*

Control Excel's Cell Pointer During Data Entry

My brother and I bought a computer together, and on his recommendation I switched from 1-2-3 to Excel 95. Whenever I press <Enter> to put something in a cell, the pointer moves down to the next cell. This is driving me nuts! My brother loves this feature, but I hate it. How do I turn it off? Tyrone Poussaint,

Baton Rouge, Louisiana

Good question! Another reader, Chuck Pasek of Parsons, Kansas, has a solution: Select Tools • Options, click the Edit tab, and uncheck 'Move Selection after Enter'.

If you don't want to turn off the feature permanently, you can temporarily override it by pressing <Ctrl>-<Enter>. (Warning: If you have preselected a range, this keystroke copies your entry into all selected cells.)

Because you're running Windows 95, you and your brother can each have it your own way. From the Taskbar select Start • Settings • Control Panel, doubleclick the Passwords icon, then select

the User Profiles tab. Select the button that begins Users can customize their preferences, and click OK. Now, each time you start Windows, you'll be prompted for a user ID and password. You and your brother can each create your own Windows 95 setup. And since Excel 95 is designed to run under Windows 95, you can each customize Excel by selecting Tools • Options. Whenever you start Excel, the preferences you specify become the defaults.

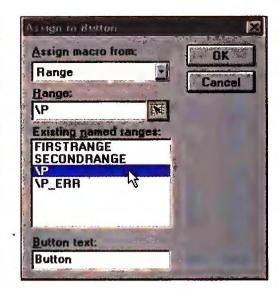

Printing Hidden Sheets in 1-2-3

I have a 1-2-3 file with three sheets. To keep users from messing around with the formulas or data, I keep two of the sheets hidden and seal the file with a password for good measure. But alas, I've found I must unhide the sheets before I can print reports that are located on them. Is there some way to print from the hidden sheets? John Poweska, Lorain, Ohio

There's no way to print a report A from a hidden sheet in 1-2-3, so I wrote the macro in FIGURE 2 (available as 5hss2.wk4 on PC World Online) to do the job. The macro unseals the file, unhides the hidden sheets, and prints a range from each one. Then it hides the sheets and reseals the file. It also has an error-trapping feature that reestablishes security in case of an error. The macro should be placed on a hidden sheet to conceal the password from users.

To see how it works, create a file with four worksheets. Double-click the sheet D tab and name it Macros. Then enter the statements shown in Figure 2. With the Range Name command, assign the name \p to cell B1, and the name \p_err to cell B9. On sheet B, create the name firstrange; on sheet C, create the name secondrange. Go to sheet A, and click the button tool to cre-OK ate a macro button. In the Assign to Button dialog box, shown above, select Range in the 'Assign macro from' list, and choose P in the 'Existing named ranges' list. Change the button text if you wish, then click OK.

To run the macro, go to sheet A and

click the button, or press <Ctrl>-P. Once you're sure the macro works, go to the macros page, select Style • Hide, click *Sheet*, then click *OK* to hide the sheet.

Here's how it works:

{onerror \p_err} causes the macro to resume at B9 if it causes an error or if the user presses <Ctrl>-<Break> while the macro is running, thus rehiding the confidential data.

{file-unseal "password"} unprotects the file so that the macro can unhide and print the sheets. Substitute your own password for the one used here.

{select A:A1} brings sheet A into view if it wasn't visible already.

{windowsoff} conceals the remaining macro activity from the user's view.

{show-sheets B:A1..C:A1} unhides the sheets to be printed.

{select firstrange} selects the first range to be printed, from sheet B.

{select-append secondrange} adds the second print range to the selection.

{print selection} prints the two ranges. {hide-sheets B:A1..C:A1} rehides the confidential sheets.

{file-seal "password"} reseals the file, using the same password as above.

{select A:A1} displays sheet A.

THE NEW STANDARD STANDARD IS HERE

ONE SCSI DRIVE BOTH 4X CD-ROM AND REWRITABLE OPTICAL

It's the Phasewriter Dual™ with PD technology from Toray and it transcends existing standards with more flexibility than any other optical drive. Phasewriter Dual reads CD-ROMs at quad speed and reads or writes to optical disks at a blistering .87 MBytes/second transfer rate. Just drop a CD-ROM into our new Phasewriter Dual or switch to a 650 MByte single-sided rewritable disk for portable data exchange. The Phasewriter Dual is setting new standards with higher capacity and CD-ROM compatibility at a much lower cost.

And it's Fast, Fast, Fast!

Plug this drive into any platform hardware or network and you're ready to go. The single front loading tray holds CD-ROMs or Toray's CD-size rewritable optical (PD)disks. Because it is a SCSI drive, the software identifies and mounts either media automatically.

WORD PROCESSING Q&A

Creating Ruled Paper in WinWord

My children are forever asking me for lined paper to use for writing practice, but it seems like there's never any in the house. Is there a way I can create a blank document in Word 6.0 with horizontal lines? Your answer will help bring peace to my home office. Kenneth Shapiro, Microsoft Network

A Interesting question! There are several answers, but I'll give you the easiest. Just follow the steps listed below and shown in **FIGURE 1** in either WinWord 6.0 or Word for Windows 95.

- 1. In a new, blank document, select *File Page Setup*, change all four margins to 0.5 inch, then click *OK*.
- 2. Select Format Borders and Shading. In the resulting dialog box, click the center horizontal line area of the Border frame example to insert a line. Select a line style from the Style frame, or leave it at the default setting of 3/4 pt, and click OK.
- 3. Click the *Font Size* drop-down list and choose a larger than normal font size. There are 72 points per inch, so if you want the lines to be spaced about 3/8 inch apart, choose 24 points.
- 4. Press **<Enter>** to add lines until the page indicator in the status bar shows

that you've reached page 2. Then press <Backspace> until you return to page 1.

5. Print a test sheet to check your dimensions. If you need to adjust spacing, select *Edit* • *Select All* and change the font size. Add or delete lines to fit the page, if necessary. When you're satisfied, save the document with a distinctive file name, print as many copies as your kids need, and remind them to dot their *i*'s and cross their *t*'s.

Automatically Place File Name in WinWord 95 Footer

How do I get WinWord 95 to automatically insert the current file name in a document's footer? I know how to do this manually, but I'd like to make this automatic for all documents. Arcadio Ramirez, America Online

A Not a problem. All you do is add the footer and file name code to your normal.dot template in WinWord. To do this, select File • Open. In the Open dialog box, choose Document Templates (*.dot) in the 'Files of type' list. Switch to the templates subdirectory of the msoffice directory (or to the template directory of the winword directory if you aren't using Microsoft Office), and double-click normal.dot.

Select View • Header and Footer to display the Header and Footer toolbar, and click the leftmost button on the toolbar (shown below) to switch to the footer area of the document.

Now, select *Insert*•*Field*. Choose *Document Information* in the 'Categories' list of the Field dialog box, and choose *FileName* in the 'Field Names' list (see **FIGURE 2**), then click *OK* to insert the field in the footer.

FIGURE 2: PUT YOUR FILE NAME WHERE YOUR FOOTER IS by modifying Win-Word's normal.dot template.

Apply any desired formatting, such as centering, to the inserted field, then select *File • Save* to store your changes. From then on, all your documents will automatically include a footer containing the document's file name.

WORD PROCESSING Q&A

Manual Feeding in WinWord

Is there a way to force WinWord 6.0 to pause after printing each page of a document? I sometimes need to print on special paper that will not feed from my laser printer's automatic paper tray, so I need to print each page, then have WinWord pause while I insert a sheet into the manual paper feeder.

Ryan Boone, Chantilly, Virginia

A It's easy to make WinWord print from your printer's manual feed tray. Select File • Print, then select Options in the Print dialog box. In the Options dialog box, choose Manual Feed from the 'Default Tray' list, then click OK. Back in the Print dialog box, click OK to begin printing. Your printer will prompt you to insert each page.

When you want to change back to automatic feed, select *File Print*, click *Options*, select the original setting from the 'Default Tray' list, and click *OK*.

Automating Repeated Phrases in WordPerfect Documents

WordPerfect 5.1 for DOS let me temporarily store a repeatedly used phrase as a variable by pressing <Ctrl><PgUp> and assigning the phrase a number. Pressing <Alt> plus the number inserted the phrase in the text.

I've upgraded to version 6.1 for Windows, and I can't find that feature. Is it gone? If so, is there a replacement? Jacob Ninan, Bangalore, India

A That feature is indeed absent from WordPerfect for Windows, but the new Abbreviation feature is a good substitute. It lets you create a list of abbreviations for often-used phrases and keeps it permanently available for all your documents, instead of temporarily as in WordPerfect 5.1 for DOS.

To create an abbreviation, highlight the phrase you want to abbreviate, select *Insert* • *Abbreviations*, then click *Create* in the Abbreviations dialog box.

In the Create Abbreviation dialog box, type a short, easy-to-remember abbreviation for your entry, and click *OK*. Just be sure it's not an actual word.

FIGURE 3: WORDPERFECT'S ABBREVIA-TIONS FEATURE lets you recall oftenused phrases with a few keystrokes.

For example, for the phrase Amalgamated Construction Inc., you might enter the abbreviation ACI.

You can create as many of these abbreviations as you like, so you can set one up every time you type something you'll need again (see **FIGURE 3**). Click *Close* to return to your document.

To insert a phrase into a document, type its abbreviation and press **<Ctrl>-A**. Abbreviations are case-sensitive: If you created your abbreviation in uppercase, you must type uppercase letters to expand it. If you forget an abbreviation, select *Insert* • *Abbreviations*, choose the abbreviation from the list in the Abbreviations dialog box, then click *Expand* to insert the term at the cursor location.

Speeding Up Word Pro 96

I just upgraded from Lotus Ami Pro 3.1 to Word Pro 96 for Windows 3.1 and have noticed that the new program is much slower, especially when starting, loading, and saving files, and during many normal editing operations. I'm running Word Pro on my 66-MHz 486 DX/2 with 8MB of RAM. Is there anything I can do to make it faster? Don Litvin, Brook Park, Ohio

Our tests of Word Pro 96 for Windows 95 show a similar slowdown (see "War of the Words: Lotus Word Pro vs. Microsoft Word," March). We can't rewrite the program, of course, but here are some steps you can take

to speed up either version of Word Pro:

- 1. Upgrade your memory to 16MB of RAM. For Word Pro to run at all, 8MB is the bare minimum. Even an upgrade to 12MB will help a lot.
- 2. Select File User Setup Word Pro Preferences, click the General tab, and change the *Undo Levels* setting from 100 to a smaller number—I suggest 10.
- 3. In the same dialog box, click the Disable drop-down list and check any option you don't need—good candidates are SmartCorrect, Small file format, and Welcome Dialog (see FIGURE 4). Windows 95 users whose documents don't contain OLE objects might also mark OLE Automation and OLE unless required. Click OK. The options you checked will remain disabled until you remove the check marks.
- 4. With a document open, select *View Show/Hide*. If *Misspelled Words* is checked, click it to disable the as-youtype spelling checker.
- 5. Select *View Draft*. This speeds up editing, but you'll lose the ability to see exactly how your documents will print.

Lotus has promised an update release for the Windows 3.1 version that should increase performance, but at press time had not announced when.

Using *Internet With An Accent*, You Can Browse, Publish & E-mail In Any Language.

(Well, Almost.)

When you're on the Web, do foreign languages look like something from another planet? Chances are, they seem positively alien under English Windows.

At least, they did. With *Internet with* an *Accent*, you can read and author Web pages in your language, and over 30 others, taking full advantage of the Internet's potential.

Internet with an Accent includes

Mosaic[™], a multilingual browser, and a Netscape

upgrade. Multilingual Mailpad[™], an e-mail

WINDOWS Q&A

Printing Any Text to a File

I have a financial application that can generate reports only to the printer, not to the screen or to a file. Is there a way I can tell Windows to print this information to a file?

Michel Martineau, Montreal, Quebec, Canada

A Yes indeed. In fact, printing to a file is a great way to add text-only exporting to any Windows application, and it works in Windows 3.1 and 95.

Here's what to do in Windows 3.1. In the Windows Control Panel, double-click the *Printers* icon. Click *Add* and

select Generic/Text Only from the list of printers. Click Install and follow the prompts to install this driver; you may need your Windows installation disks. Next, select the Generic/Text Only driver from the list of installed printers and click Connect. From the ports list, select FILE: and click OK. Exit the Control Panel. In your application's Print menu, turn off any header, footer, and page number options, and select Generic/Text Only from the list of printers. Windows will prompt you to type a path and name for your text file. Once you have your text file, you may need to do some editing and formatting in a

> word processor, but you'll get most of the information the way you want it.

To do the same in Windows 95, choose Start • Settings • Printers and double-click the Add Printer icon. Click Next in the Add Printer Wizard window. Select Local printer, and click Next. From the Manufacturers list, select Generic. 'Generic/Text Only' will be highlighted in the Printers list. Click Next. select FILE: from the Available ports list, and click Next. Type a name for the printer or use the default. If you plan to use this feature often, select Yes to make it your default printer. Then click Next. Select Yes or No in response to the test page prompt, and click Finish. If necessary, Windows will prompt you for a disk or CD-ROM to finish the installation. If you

asked for a test page, specify a name and location for the text file that will be created when you click OK. As in Windows 3.1, remove any extraneous print formatting like page numbers. Then tell your application to use this printer for files you want exported to text.

Customizing Right-Mouse Menus for All Your Windows 95 Files

I prefer to have Windows 95 hide three-letter file extensions, but occasionally I need to change a file's extension—from file.doc to file.txt, for example. Windows won't let me do this with the normal rename functions. I have to either use a DOS window or change my View Options in Explorer. Is there an easier way to change extensions when I want, but keep them hidden most of the time?

Eric McAdams, Washington, D.C.

A You can add this function to the menu you see when you right-click a file name. In fact, by editing Win 95's Registry, you can add programs and batch file commands to the right-mouse menu for *any* file type. This method lets you easily access programs that act on most file types, such as file viewers or compression utilities like PKZip. You can also add to the right-mouse menu any batch files you use often, such as one that formats floppy disks (see "Adding a New Command to Your Right-Mouse Menu" for an illustration of this technique).

In your case, let's start by creating a batch file that can rename file extensions. In Notepad or another text editor, create a batch file with the following two lines (the paths can differ but it's easier if you use the same location for all files described here):

@echo ren %1 %%1 > c:\windows\r.bat start c:\windows\r.pif

Save this batch file with a name like renamer.bat in a convenient location like the Windows folder. Open Explorer or

I/O. NOW MORE IMPORTANT THAN EVER.

My Computer, find renamer.bat, and customize it by right-clicking its icon and choosing Properties. Click the Program tab, and from the Run drop-down list, choose Minimized. Check Close on exit, then click OK. Windows creates a special Shortcut file known as a PIF, or program information file, in the same folder. Find that file at the bottom of the list of files—it's called Renamer and create a copy of it by right-clicking it, dragging it with the right mouse button to a new spot in the same folder, and choosing Copy Here. Name the copy r. Right-click this new Shortcut file and choose Properties. Click the *Program* tab. In the box at the top, type a prompt like Type a file name & extension, and in the command line box, type c:\windows\r.bat ?. Then click OK.

How does it work? The first line in renamer.bat creates a batch file called r.bat that includes the name of any currently selected file (represented by %1) and adds a variable placeholder for the new name (%%1). The second line runs the Windows Shortcut you create

a couple of steps later. The ? in that Shortcut's command line prompts you for a new file name, then passes that new name to the placeholder in the r.bat file, which then renames the file. Both renamer.bat and r.bat should run relatively invisibly as buttons on the Taskbar and then disappear when they're done (thanks to the Run: Minimized and Close on exit options).

To put this newly created feature on your right-mouse menu, you'll have to edit the Windows Registry. As always, before you do, make a backup copy of these files in the Windows folder: user.dat, user.da0, system.dat, and system.da0. (If you don't see the files, choose View • Options in My Computer or Explorer, click the View tab, select Show all files, and click OK.)

Start the Registry Editor by choosing Start • Run, typing regedit, and pressing **Enter**. Click the plus sign next to HKEY_CLASSES_ROOT to expand that branch, and select the * folder at the top of the list. As you might guess, this entry represents all file types.

Choose Edit • New • Binary Value. Name this value EditFlags, and press < Enter>. Double-click the new value; if it's still selected, press < Enter> again.

Type **02 00 00 00** (without the spaces; the Registry Editor adds them automatically). This change will let you specify functions for all file types in Explorer's Options dialog box. Now exit the Registry Editor.

In Explorer or My Computer, choose View Options and click the File Types tab. Select the * file type, which should be at the top of the list, and click Edit. Click New to add new actions. In the Action box, type the wording you want to appear on your right-mouse menu. Don't use 'Rename' alone, since that function already exists. Instead, type something like Rename with e&xtension. The & underlines the following letter, x, and makes it a keyboard shortcut; put the & elsewhere if you want a different shortcut. In the 'Application used to perform action' box, type c:\windows\renamer.bat (your path may differ). Click OK, then click Close twice.

Now when you right-click a file you'll see your 'Rename with extension' entry. Choose it, and a window will prompt you for the new file name. Type the name in the Parameters box (but no path information—the DOS rename command doesn't like that), adding quotation marks around your new file name if it includes any spaces. Then click *OK*. Renaming a file like this often makes it appear in a new place in the folder, but you shouldn't have any trouble finding it.

You follow the same basic steps in the Registry and the File Types tab for any program or batch file you want to add to the right-mouse menu. To apply this technique to a DOS commandline utility, see the following item.

If you're not flowcharting with allCLEAR™ you're wasting your time.

Are you responsible for documenting your company's policies and procedures? Are you preparing your company to meet ISO 9000 or other standards? If you are, demand an intelligent flowcharter, not drawing software in disguise.

We've got a simple solution that will cut your flow charting time by as much as 80 percent. Introducing allCLEAR — the only intelligent flowcharter that's truly automatic.

With allCLEAR create presentation-quality flowcharts. process flows, deployment charts, fishbone diagrams, and others in a fraction of the time vou're spending now, simply by describing your process in plain English. Or, if it's graphics you prefer use the intelligent drag and drop templates. And unlike drawing based flowcharters, allCLEAR lets you generate a 10 page diagram in seconds by dropping complete flowchart structures, not one box at a time.

allCLEAR allows you to easily customize your diagrams. Choose from over 180 shapes or design your own with

the Shape Editor, multiple diagram and line styles.

No problem. You can use the technique described in the preceding item to add a zipping batch file to your right-mouse menu. First, in Notepad or another text editor, create the following two-line batch file (substituting your own path to pkzip.exe): The first line is @echo c:\zip\pkzip.exe -a %%1 %1 > c:\windows\zipme.bat, and the second is start c:\windows\zipme.pif.

Save this file in the Windows folder with a name like zipper.bat. Then create PIFs for both zipper.bat and zipme.bat: Right-click zipper.bat and choose Properties; click the Program tab, select Minimized from the Run drop-down list, and click Close on exit. Click OK. Copy the Shortcut, zipper, and name the resulting new Shortcut zipme. Right-click this Shortcut, choose Properties, and click the Program tab. In the top

box, type the prompt Type name of .zip file to use, and in the command line box, type c:\windows\zipme.bat ?. Click OK.

Now follow the instructions in the previous tip for modifying the Windows Registry. Then in Explorer choose View • Options, click the File Types tab, and create a new action for the * file type. Name the action &Add to zip file and type c:\windows\zipper.bat at the 'Application used to perform action' prompt. Close all dialog boxes.

Now right-click any file and choose Add to zip file (or whatever you named your command). When prompted, type the full path and name of the .zip file you want the selected file added to. The downside to this method is that you can add only one file at a time to a .zip file. To use wild cards to add multiple files, you'll need to do more typing:

Choose Start • Run, type zipper followed by a file specification—for example, zipper c:\doc*.doc. Then press < Enter>. You're all set to make some quick zips.

Make Notepads for All Occasions

Is it possible to put more options (*.bat, *.ini, *.sys) in the 'Files of type' section of Notepad's File Open dialog box? I use Notepad in Windows 3.1 to edit system files, and it would be nice if that could be made easier.

Samuel Bible, CompuServe

A Unfortunately, you can't add to the list of file types in the File Open dialog box in Windows 3.x. However, if you prefer clicking icons to typing file specs, you can create multiple versions

of Notepad to edit various file types.

You do this by editing notepad.exe. When editing text in any executable file, you must add exactly the same number of characters you remove: If the file is one character larger or smaller than the original, it won't work.

First, start Windows Write. Open notepad.exe in the Windows directory. When prompted, click No Conversion. Choose Find • Replace. Type *.txt in the Find What box, and type *.ini in the Replace With box. Click Replace All, then Close. You can also search for Text Files and replace it with something like Sys. Files (include the period or an extra space so the number of characters is the same). Then choose File • Save As and name the file ini_edit.exe.

Repeat these steps to create a Notepad version for sys files, bat files, and so on. You can create icons for each version in Program Manager and launch whichever one you need.

The One-Minute Taskbar Workout

The Windows 95 Taskbar can speed through your little chores if you know how to use it. This workout will have you clicking in all the right places.

Manage windows: Right-click a blank area of the Taskbar for a menu that makes quick work of window management—tiling, cascading, minimizing, auto-hiding, or even undoing your last menu choice.

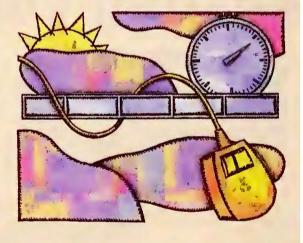

Customize the Start menu: To get a window showing the Start Menu folder, right-click the Start button and choose Open (for a My Computer-style window) or Explore (for an Explorer-style window); or choose Find instead of the slower Start • Find • Files or Folders.

Bring up hidden windows: Left-click an application button to bring that application to the front and make it active.

Manage hidden windows: Right-click an application button to perform basic window management on the application—the Close command is especially handy.

Set the time: Left-double-click the clock (or right-click the clock and select Adjust Date/Time) to reset the computer's clock and calendar.

Get the date: Hold the mouse pointer over

the clock for a couple seconds to see the day of the week and the date.

Set the volume: If you have a sound system installed, left-click the speaker icon next to the clock to see a pop-up volume control with a mute option.

Customize audio: Right-click the speaker icon to see a pop-up menu for displaying the Volume Control dialog or the Audio properties sheet.

Manage printing: While printing, left-double-click the printer icon to check printing status and reorder, pause, or cancel jobs waiting to be printed.

Check print status: While printing, hold the pointer over the printer icon for a couple seconds to get a quick status report.

DATA MANAGEMENT Q&A

Sending Letters to Select Customers

I keep my customer and sales information in Access 7.0 and want to send letters to all who haven't placed orders in the last six months. Should I create the letters in Microsoft Word or in the Access report designer?

Al Jackson, Atlanta

A It's quicker to create the letter in Word and then merge it with the addresses from selected records in Access. Likewise, if your data is stored in Paradox, you can merge it with a letter created in Word or WordPerfect. Approach's Form Letters feature lets you create the letter in Approach, then combine it with selected records. I'll outline the steps for all three programs.

Access: You can start Word's Mail Merge Wizard from Access to create your letters. First you'll want to create a query to select inactive customers.

Open a new query window with your customer table and add the fields you want to include in the letters. Also include the field that will allow you to select inactive customers with criteria like <= Date() - 180. Then save the query as Inactive Customers.

In the Database window, click the *Queries* tab and highlight *Inactive Customers*, then start Word by clicking the down arrow next to the OfficeLinks button and selecting *Merge 1t* (in Access 2.0, click the *Merge 1t* button).

In Word, type your letter. When you reach a spot where you want to include a field from the Access query, place the cursor at the insertion point, click *Insert Merge Field*, and select the field from the drop-down list. When you finish the letter, choose *Tools • Mail Merge* and click *Merge* twice to create the merge document and return to Access.

Paradox: Paradox 7's Merge Expert

helps you create a letter (or any other type of document) in Word, WordPerfect, or Paradox itself. In earlier versions of Paradox for Windows, you'll need to create the letter within Paradox; instructions are given a little later on.

If you want to compose your letter in WordPerfect, you have to run a query to select the inactive customers before you invoke the Merge Expert. You also have to rename the answer table, since the expert won't work directly with an answer table. After renaming the table, click Merge Expert and follow the steps, selecting the renamed table in step 3.

If you're using Word, you don't have to run a query. Just pick your customer table in step 3 of the Merge Expert, choose *Tools* • *Mail Merge* in Word, and in step 3 of the Mail Merge Helper dialog box, click *Query Options*. On the Filter Records page, enter your customer selection criterion and click *OK*. Click *Merge* in the Mail Merge Helper.

In earlier versions of Paradox for Windows, you can create a letter within Paradox, but there's no expert to help. Still, it's not hard. In Design mode, open a new report based on the query that selected the inactive customers, and use the Text tool to create a text object to hold the letter. Type the letter, pressing <F5> where you want to insert a field. Paradox inserts an undefined field object in the text object. Click outside the text object, then click twice on the new field object to select it. Right-click it, choose Define Field, and select a field from the list or click the ellipses to select from the Define Field Object dialog box.

Approach: In version 3.0 or Approach 96, choose *Create Form Letter* and step through the tabbed Form Letter Assistant. In the Design window, type the letter, selecting *Text Insert Field Value* (in Approach 3.0, *Text Insert Field*) where you want to insert a field.

To print letters for inactive customers only, click the tab for your form letter (under the SmartIcons), then click the

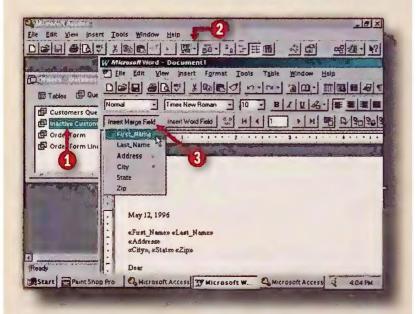

Find button. (In Approach 3.0, go into Browse mode first.)

Enter the criteria to select the inactive customers, and press **<Enter>**. Approach will print letters for those records only.

Use Access Records in a WinWord Letter

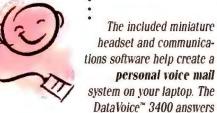

- In the Access Database window, highlight the query you used to select the records that you want to use in your letter.
- O Click the down arrow next to the OfficeLinks button and select Merge It to start the Mail Merge Wizard.
- 1 Type your letter in Word clicking the Insert Merge Field button wherever you want to insert an Access field and then choosing the field. When you're finished, choose Tools Mall Merge and click Merge twice to do the merge and return to Access.

IN THE ACCESS DATABASE WINDOW, highlight a query and click the OfficeLinks (or Merge It) button to launch Word and create a letter.

HTML 101: Learning to Write a Web Page

Can you recommend some books or other resources for learning how to create a page on the World Wide Web? *David Perryman*, *New York*

A Yes, try the free program Web Wizard: The Duke of URL, by ARTA Media Group. You can download the 16-bit or 32-bit version from ARTA's Web site (http://www.haleyon.com/artamedia/webwizard/welcome.html), select web16bit.exe or web32bit.exe; or from PC World Online (webwiz.zip).

Web Wizard asks you a few questions, then produces a simple home page complete with graphics, text, and links to other pages. Creating a page takes just 5 minutes; all you need to do is upload the applicable files to your directory on your Internet service, and you're on the World Wide Web—no HTML coding required.

If you're still itching to learn HTML coding, I recommend the books *Teach Yourself Web Publishing With HTML in a Week* (Sams Publishing, 1994, \$25, 800/428-5331) and *Teach Yourself More Web Publishing With HTML in a Week* (Sams Publishing, 1995, \$29), both by Laura Lemay.

The casiest way to master enough HTML coding to build your own Web page is to see how it's been done on other pages. If you use Netscape Navigator, you can read the HTML

coding for any page you log in to by heading to the *View* menu and selecting *Source*. If you use Compu-Serve's Mosaic browser, click *Document Source* in the *File* menu.

Jumping Into the MUD

I've been hearing a lot about MUDing on the Internet. What is it? Jamieson Andrews, Daly City, California

A MUD, which refers to multiple user dimension, multiple user dungeon, or multiple user dialogue, describes a

fantasy/role-playing game played on the Internet. You log on to a MUD computer via Telnet; take on the persona of a character you create or receive over e-mail; then ramble around the MUD site, exploring rooms, chatting with other characters, fighting monsters, and solving puzzles.

There are many different kinds of MUDs, from combat-oriented to warm and fuzzy. There are MUDs in which players learn English as a second language, and there are MUDs in which scientists exchange their research findings. Some MUDs can be accessed via the World Wide Web (see **FIGURE 1**).

To learn more, log in to the MUD Connector (http://www.absi.com/mud/). You should also get copies of frequently asked questions by sending an e-

dozen readers responded to "Automate Internet Log-Ons in Windows 95" (Online, February). They pointed out that a scripting tool that can automate Internet SLIP/PPP log-ons is hidden on the Windows 95 CD-ROM. Archive America Online Messages

America Online's FlashSession stores all your e-mail so you can read it later when not connected

to the service. However, it doesn't take long for AOL's mail queue to grow, causing the feature to slow down.

You can archive your old AOL messages by heading to the AOL directory called idb. There you'll find files with names that begin with your screen name and end with the extensions .arh, .pnd, and .mal. For instance, if your screen name is JSanchez, the files will be named isanchez.arh, isanchez.pnd,

and isanchez.mal. Archive these files with a compression utility like PKZIP, then delete the original files.

To read your e-mail later, when you're not connected to AOL, rename any new files that AOL has created with .arh, .pnd, and .mal extensions—for example, new.arh, new.pnd, and new.mal.

Then just unzip the

HARDWARE Q&A

Is the Zip Drive Zippy Enough?

I need more disk space. Instead of upgrading my hard disk, I'm considering buying an Iomega Zip drive. It connects via the PC's parallel port or a SCSI card and has 100MB cartridges. At about \$200 for the drive and \$20 per cartridge, the price seems right. But is it fast enough to run programs?

Jason Minahan, Internet

A Swapping cartridges instead of swapping drives sounds like a good idea, doesn't it? The Zip drive is compact and light, which makes it great for carrying big files on the road, and it's so popular that you're sure to find other Zip drives in many locations. Unfortunately, in our tests, the Zip drive was too slow for running programs without frustration (see "Incredible Expanding Drives," March). And you can find much faster solutions if you're looking for a removable-media drive with virtually infinite storage capacity.

For the same price per drive and per cartridge, consider the SyQuest EZ135, a SCSI drive that runs about 50 percent faster than the Zip drive and holds 135MB per cartridge. You won't get hard disk speed, but you'll come close. If you're willing to pay more, Iomega's

new \$499 Jaz drive, a SCSI device, actually matches the speed of the average hard disk. It also uses huge 1GB cartridges that go for only \$99 a pop. If the Jaz and future devices like it pan out, they may well offer the storage solution we've all been seeking.

The Great Disk Debate: EIDE Versus SCSI

I want to replace my 540MB hard disk with a 1.2GB model. Should I get a SCSI drive or an Enhanced IDE drive? What's the difference?

Antonio Osuna, Caracas, Venezuela

A For most PC users, the important difference between Enhanced IDE (EIDE) and SCSI is price rather than performance (for more details on SCSI-versus-EIDE performance issues, see the article "A Gigabyte Drive for \$199?" as well as the table below).

SCSI drives cost at least 10 percent more than EIDE drives. Also, while most of today's PCs come with a builtin EIDE interface that any EIDE drive can plug into, they aren't likely to include a SCSI interface card, so add another \$50 for a cheap SCSI card.

SCSI's advantages emerge when you try to connect multiple devices, such as a fast tape backup drive, a scanner, or most important, another hard disk. You can connect up to seven.

But configuring SCSI drives can be a pain. You must make sure each device has a unique SCSI ID, a number from 0 to 7 that you set on the device itself. Then you must plug in a terminating resistor (or flip a switch) to mark the end of the SCSI chain. If you connect an external and an internal device to the same interface card, you'll have to remove the terminating resistors from the card and make sure resistors for both devices have been installed.

If you're running DOS or Windows 3.1, you may need to load an Advanced SCSI Programming Interface universal driver in config.sys and add a driver specific to each SCSI device, which can lead to conflicts. But if you're running Windows 95 or just hooking up hard disks, the process is fairly smooth.

With EIDE, you can add only one more drive to the same connector. (Most new PCs come with two connectors, for a total of four drives.)

Hanging two drives off the same cable can be frustrating, though, even if you remember to use jumpers to configure the first as master and the second as slave. Sometimes, old IDE drives and newer EIDE models refuse to operate on the same interface. And if you've hooked two drives to the same PCI or VL interface, EIDE's speed may be limited by the slowest device on the cable. So if one drive supports EIDE's Programmable I/O Mode 3 and another supports Mode 4,

Choosing the Right Hard Disk: EIDE Versus SCSI

Capacity	Expansion	Performance	Installation
Cheaper cost per megabyte	Connector usually on motherboard, no extra cost	New systems put EIDE interface on fast PCI bus	Very easy installation if adding only one drive
Older systems require work-around to break the "528MB" limit	Two-drive limit per connector	Requires special driver for 32-bit disk access under Windows 3.1 and 3.11	Occasional compatibility or performance problems when two drives are on one cable
Larger maximum capacity	Seven devices can connect to one interface card	No performance degradation as devices are added	Wide array of devices can connect to interface
Costs at least 10 percent more per megabyte than EIDE	Requires extra-cost interface card in most systems	Daisy-chaining different SCSI devices may cause incompatibilities	Device ID numbers and terminating resistors complicate setup
	Cheaper cost per megabyte Older systems require work-around to break the "528MB" limit Larger maximum capacity Costs at least 10 percent more per megabyte than	Cheaper cost per megabyte Connector usually on motherboard, no extra cost Older systems require work-around to break the "528MB" limit Larger maximum capacity Seven devices can connect to one interface card Costs at least 10 percent more per megabyte than Connector usually on motherboard, no extra cost interface card Requires extra-cost interface card in most	Cheaper cost per megabyte Connector usually on motherboard, no extra cost interface on fast PCI bus Older systems require work-around to break the "528MB" limit Larger maximum capacity Seven devices can connect to one interface card Costs at least 10 percent more per megabyte than Connector Usually on motherboard, no extra cost interface on fast PCI bus Requires special driver for 32-bit disk access under Windows 3.1 and 3.11 No performance degradation as devices are added Daisy-chaining different SCSI devices may cause

WHEN YOU'RE SELECTING A DISK DRIVE, the EIDE-versus-SCSI decision has little to do with performance and a lot to do with price, convenience, and compatibility.

Looking For A Data Compression Utility for Windows? There Is Only One Choice.

PKZIP for Windows

Save \$20 and get PKZIP for Windows for \$29 until April 30, 1996. Plus \$6 shipping & handling per item in the US and Canada.

The growth of the Internet and the increased use of World Wide Web browsers is creating a greater need to compress data files. Saving disk space and saving on-line phone charges are big benefits of compressing data files with PKZIP® for Windows. PKZIP for Windows compresses files an average of 50-70% with many large text and database files compressing well over 90%. PKZIP's simple point-and-click interface lets you easily compress one file or all files on an entire hard drive, and store them in the .ZIP file. PKWARE® provides the best and fastest data compression technology on the market, try it and see!

PKZIP for Windows allows you to easily open files created with PKZIP for DOS Version 2.04g. PKZIP is also compatible with Windows 3.1 or higher and Windows 95.

Use PKZIP compression whenever you are:

At Home

The Internet contains many .ZIP files you can access through a World Wide Web browser. PKZIP also lets you archive files such as the digitized family photo album or annual budget in .ZIP files, saving you space on your hard drive.

On the Road

Use .ZIP files when sending email, storing presentations, or transferring files between your office PC and your laptop.

At the Office

Network and system administrators save space on their servers and reduce traffic over the intranet or corporate network using .ZIP files.

Data compression is as important now as it was when hard drives were small and modems were slow. New software applications and the files they create continue to grow in size. Intranet and Internet traffic are growing at a phenomenal rate. These growing trends make zipping and unzipping data files an important utility for everyone who uses a personal computer.

Software developers, save disk space and media costs with smaller executables. You can distribute your software in a compressed form with PKLITE
Professional PKLITE Professional gives you an extra option to compress files so that they cannot be expanded by PKL-ITE. This discourages reverse engineering of your programs. Price \$146

Put Compression Into YOUR Application

The PKWARE Data Compression Library products allow you to incorporate data compression technology into your software applications. The application program controls all the input and output of data. allowing data to be compressed or extracted to or from any device or area of memory, PKWARE Data unpression Library products do not create ZIP files.

The all-purpose Data Compression Algorithm compresses ASCII or binary data quickly. The routines can be used with most ompilers. Separate DOS DOS32 Windows, OS/2, Win37

both will likely top out at the slower Mode 3. (Some EIDE interfaces correct this.)

If your system lacks an EIDE-compliant BIOS, it will recognize only 528MB of your new 1.2GB drive. The best solution is to buy a card with its own EIDE BIOS; or upgrade the system BIOS, if possible.

Many people opt for the less expensive software solution provided by OnTrack's Disk Manager or Micro House's EZ Drive, which come free with most drives. Both packages require a driver and increase the possibility of software conflicts, and they put the hard disk parameters in the first sector, so if that sector goes bad, you're dead. My advice: Get Promise Technology's new driverless EIDE Max if you can't upgrade your system BIOS to EIDE.

Finally, if you want 32-bit disk access for your big EIDE drive under Windows 3.1 or 3.11, you need to install a special driver via system.ini, another source of potential conflict if you have two IDE drives (see "Faster Windows With 32-Bit File and Disk Access," *Hardware*, July 1995).

Since you want to replace rather than

add a drive, you'll save money by going the EIDE route. If you have a newer system, you may also get the benefit of a fast PCI-based EIDE interface. To hook a SCSI drive to the PCI bus, you'd need a PCI SCSI card—for a few hundred bucks more.

Price/Performance for Pentium Pretenders

I'm about to buy a new motherboard and need some information on the NexGen chips. Is it true that a NexGen Nx586 P100 chip delivers the same performance as an Intel Pentium-133?

Jesse Pratt, Internet

A In fact, the Nx586 P100 is slightly slower than a 100-MHz Pentium because it runs at 93 MHz. NexGen had the bright

idea of marketing its 93-MHz chip as equivalent to a 100-MHz Pentium. The ploy worked until Intel introduced a new chip set (the satellite chips that support the CPU), which made the average Pentium-100 system several percentage points faster than the average Nx586-100 system.

NexGen recently introduced the Nx586 P120 and P133 chips, which *do* run at 120 MHz and 133 MHz, respectively—and they should run a bit faster than their Intel equivalents. But the Nx586 is not pin compatible with the Pentium and requires its own motherboard with an expensive secondary cache that runs at CPU speed. Alaris is one of a few companies that make Nx586 motherboards, which generally cost more than the best Pentium motherboards.

For an alternative to Intel, get a mother-board with the Cyrix 6x86. This chip runs about 20 percent faster than a Pentium at the same clock speed and plugs right into a Pentium socket. With a simple system BIOS change, the Cyrix 6x86 will run nicely in a wide range of Pentium mother-boards, and pricing is competitive.

Stacking SIMMs Isn't Simple

I'd like to add 8MB of memory to my 486DX2-66, but all eight of my 30-pin slots are filled with 1MB SIMMs. I've seen ads for adapters that let you put four 1MB, 30-pin SIMMs into one 30-pin SIMM slot. That would give me room to add two 4MB SIMMs. Do these adapters work? Marc Wheeler, Henderson, Texas

They can work, but be aware of a few A problems. First, you need room. As you know, in 486 systems you must fill 30-pin SIMM sockets four at a time. The adapters hold the SIMMs on one side, which must face away from adjacent SIMMs in that bank of slots. In other words, a SIMM adapter must go in an outside SIMM slot or it won't fit. Since you're installing two adapters, you'll have to order one "backmounted" adapter for the first slot and one "front-mounted" type for the last slot. The adapters still may not fit if a nearby power supply or other obstacle is too close to an outer slot, so check your system to make sure there's a SIMM's worth of clearance. If everything fits, the two 4MB SIMMS will go in the slots between the adapters.

Second, you must disable hidden refresh if your system has it. Hidden refresh allows a system to combine a refresh cycle with a memory read or write, but the performance boost is negligible. To turn it off, go into your CMOS setup utility and look for the hidden refresh menu item in "advanced" options. If you can't find hidden refresh, then your system doesn't have it and you don't have a problem. If you're not sure, call the PC manufacturer.

Not turned off by the hassle? SimmSaver sells a quality adapter for your purposes for \$49. Just make sure all ten SIMMs and both adapters are snug in their sockets.

INFORMATION SERVICES OPPORTUNITIES

Kellogg Company, a world leader in the manufacture of ready-to-eat cereals and convenience foods, "One of the Best 100 Companies to Work for in America," is looking for outstanding individuals to join our highly professional Information Services team.

The Information Services opportunities exist to provide a diversity of growth and developmental assignments in a number of potential areas which could include; performing business analysis for strategic business system solutions, providing UNIX and ORACLE technical support, providing information integrity and security programs and processes, developing strategic information architectures for business areas or processes and performing Local and Wide Area Network management, support and administration.

The incumbents' scope of responsibility will be determined based on capability, ambition and outstanding performance on increasingly challenging assignments that provide the kind of opportunities where one can reach their full potential.

These positions require a related Bachelor's degree, along with experience in business information management assignments. Additional requirements include strong interpersonal, oral and written communication skills and a high level of self-motivation, flexibility and leadership.

These opportunities currently exist at our World Headquarters in Battle Creek, Michigan, where recreation opportunities abound and beautiful homes are affordable.

Kellogg Company offers an excellent compensation package, liberal relocation assistance and growth based on performance.

If you are interested, ambitious and have an impressive track record of accomplishments, please send a letter and resume, with your salary history or expectations clearly stated, along with a copy of your most recent performance appraisal in complete confidence to: I/S Recruiter, Kellogg Company, One Kellogg Square, P.O. LEGAL NOTICE

SIEGEL V. SYNCRONYS, et al. Case No. 95 CH 12257

SUMMARY NOTICE OF CLASS ACTION AND PROPOSED SETTLEMENT

TO: ALL PERSONS WHO PURCHASED **SOFTRAM OR SOFTRAM95**

The purpose of this summary notice is to inform all Class Members of the proposed settlement of the lawsuit brought against Syncronys Softcorp. in the Circuit Court of Cook County, Illinois. As explained in detail in a notice of class action and proposed settlement which will be distributed by mail (the "Mailed Notice"), if you purchased SoftRAM or SoftRAM95 on or before March 15, 1996, you are a member of the Settlement Class and your rights will be affected by the legal proceedings in this action. You are encouraged to read this Notice and the Mailed Notice in their entireties. You have a right to request exclusion from the Settlement Class but you must do so by June 15, 1996 by following the procedures outlined in the Mailed Notice. If you do not request exclusion from the Settlement Class, the terms of the settlement and judgment will be binding as to you.

Generally, the proposed settlement, which has been preliminarily approved by the Court, provides that in exchange for releasing all claims against Syncronys Softcorp, and its distributors and retailers in connection with SoftRAM or SoftRAM95, Class Members may be entitled to (1) a full refund or a free software upgrade or free software, at the Class Member's election, and (2) coupons which may be used in connection with the purchase of other Syncronys products. A hearing will be held on June 24, 1996 at 10:30 a.m. before the Honorable Aaron Jaffe in Courtroom #2405, Circuit Court of Cook County, Illinois to determine whether the proposed settlement, including payment of attorneys' fees, is fair, reasonable and adequate, and whether a final judgment should be entered approving it and dismissing the lawsuit against Syncronys. You may appear personally or by counsel; if you do not appear you will be represented by Class Counsel. To object, you must file a written objection, received by the Court by June 15, 1996.

IF YOU BELIEVE YOU ARE A MEMBER OF THE SETTLEMENT CLASS AND HAVE NOT RECEIVED THE MAILED NOTICE, YOU SHOULD REQUEST A COPY BY TELEPHONE (1-800-335-4059). PLEASE DO NOT CONTACT THE COURT FOR INFORMATION. ALL QUESTIONS RELATING TO THE PROPOSED SETTLEMENT SHOULD BE DIRECTED IN WRITING TO THE PLAINTIFFS' CLASS COUNSEL, LARRY D. DRURY, ESQ., 180 NORTH LA SALLE ST., #2416, CHICAGO, IL 60601, OR BEN BARNOW, ESQ., 105 W. MADISON, 22ND FLOOR, CHICAGO, IL 60602.

UNEQUALED REPUTATION

Nobody knows drives like MegaHaus. We have specialized in storage solutions for over 8 years. Repeat business from satisfied customers is the backbone of our business. We satisfy our customers.

During the first year of your warranty, we replace: not repair, any defective items. All items receive lifetime technical support from our factory trained techs

SHIPPING

Our multi-million dollar inventory offers you the best diversity and availability in the market. We ship most orders the same day. Each order is checked at least four times for accuracy.

INSTALLATION

Anyone can sell a hard drive to you. We sell easy to install storage solutions. We spend countless hours researching the best solutions, then create our quick precise installation guides for each kit.

RECORDABLE CD ROM

The Death of Free Support

BY ROBERTA FURGER

isten carefully next time you're on hold for technical support. You may hear "Taps" playing.

After more than a year of grumbling about the high costs of providing technical support to home PC users, Compaq Computer has decided to quit giving it away. With the introduction of its new line (the Presario series 5200, 7200, 7600, 9200, and 9600), the Houston, Texas, company began charging customers for answers to *all* questions that aren't the direct result of a product defect.

That means unless Compaq determines

your problem stems from either broken hardware or buggy Compaq software (such as Compaq's Media-Pilot and Tab-Works interfaces), the answer will cost you. The charge? Thirty-five dollars per question. That's right, *per question*. Don't think you'll be able to rattle off a bunch of queries for a flat fee. Marie Morris of Everett, Washington, tried that when she had problems with her Presario 9546. "They told me I'd have to pay another \$35," Morris said.

Owners of earlier Presarios *should* still qualify for free hardware support, but have your credit card handy anyway: Under a

policy instituted January 1, all callers to Compaq's lines must give a credit card number to be connected with a technician. At the end of the call, the techie decides whether the question is chargeable. And that depends, in part, on which Presario you own—basically, the newer your computer, the more limited your free tech support. With no credit card, your phone support is limited to Compaq's 900 line, which costs up to \$30, at \$2 per minute. Online support is available on all major services and on the Internet.

Warranty coverage has also changed with the new Presario line. On-site service is now limited to 90 days from the date of purchase. (Owners of earlier models got one year.) The remaining nine months of coverage are handled on a carry-in basis.

WHERE COMPAQ LEADS ...

Although Compaq expects other PC companies to quickly follow its lead, so far only AST has shortened its warranty. Beginning with its spring line, all Advantage PCs come with a one-year warranty. Others are hinting at changes, though. NEC, for example, indicated that changes were afoot that would mean "less service and support for customers," according to a company spokesperson. Hewlett-Packard isn't making changes to its hardware support, but it will begin limiting free support on bundled software to 90 days after the first call.

For over a year, many PC companies have been charging for support on software—even when the package came bundled with the system. But it's often next to impossible to know what's causing a problem. Software conflicts are often disguised as hardware failures, and it can take days to figure things out. And what about out-of-date drivers or version incompatibilities? Compaq didn't have definitive answers to those questions, but according to Gus Kolias, Compaq's vice president of customer service, customers should expect to pay.

READ THE MANUAL, DUMMY

Driving the change is the way home PC owners are using technical support, according to Kolias. The lion's share of today's calls "go beyond the purview of why tech

support was put in place to begin with," he says. He adds that when customers call about how to use software or configure hardware, they aren't looking for technical support, they're looking for training. Compaq, along with just about every home PC maker, bemoans the seeming unwillingness of consumers to read a manual or access an online service to find an answer. "Because of the documentation, because of the time we take [simplifying] setup and use, we feel we have a pretty solid product," adds Compaq spokesperson John Sweney. "Buying a car and learning how to drive it are two different things."

Are consumers asking PC companies to act as tutors? There's no doubt that how-to questions make up a significant percentage of the calls to tech support lines. But a recent survey indicates that Compaq-along with other PC makers-shares some responsibility. In the NSI/Techtel Consumer Attitude Technology Survey last year, 41 percent of respondents found computer manuals "so confusing, they may as well be written in a foreign language." And 31

percent said they spend more time figuring out how to use a computer than using it.

The latter statistic would certainly ring true for Presario owners who've been posting messages on Compaq's America Online forum. Many express frustration both with Compag's decision to take credit card information up front and with its jam-

packed phone lines. Although the company is pushing customers to use its online support, more questions are posted than answers (see box below, "Get the Message, Compaq?"). Compaq's literature promises a 24-hour turnaround on all ques-

tions. Kolias admits it's more like 48, and notes, "We haven't always met that."

EXPENSIVE PROPOSITION

------NOTE: 21 percent of respondents to a recent survey agree computers could take over the world. 17 percent feel their computer Is out to get them. But 50 percent can't

true, which led callers to wonder if PC Distrib-

imagine a world without PCs.

No matter how you slice it, providing technical support and service is an expensive proposition. And just like software developers before them, computer manufacturers are scrambling to cut costs without losing customers. Charging for answers to

> tutorial questions seems reasonable and justified, but Compag's new policy of charging unless the product is defective goes too far.

PC manufacturers have made systems much easier to set up and use, but personal computers are still too trouble-prone for companies to sell consumers a \$2500 machine and then tell them, "you're on your own." At a minimum, they should provide 90 days of free technical support to help customers get up and running.

The history of computers is full of examples where Compaq led the industry in innovations. Let's hope this isn't one of them.

PASS THE GLASSES

Chinon's CyberShades look like the 3-D glasses used for watching 1950s horror flicks.

In fact, these are the cheapest, lightest virtual-reality headsets yet devised. Simply plug them into your parallel port and load a game from the enclosed CD-ROM; LCD shutters in each lens open and close to create the illusion of a third dimension. And they actually work—provided you don't mind chunky 320 by 200 resolution, annoying flicker, and bouts of vertigo. At press time the Shades supported only the games in the box-limited versions of Wolfenstein 3D, Descent, and four shareware titles. Stuck With It?

Jeffrey Larson of Vashon, Washington wrote us about a problem with his MidWest Micro laptop, which he chose based on a PC World review. He owned the computer for over a year, and it didn't work for seven months of that time. The company promised him a replacement model but-after waiting three months-Larson wrote to us asking if we could get him a refund. We contacted MidWest Micro on his behalf and were told that refunds can be issued only within 30 days of purchase. The company did, however, promise to send Larson a newer model laptop and renew his warranty for a year. Larson was unhappy with this arrangement. He wanted his money back. So we broached the question with MidWest Micro once again. This time the company agreed.

NOTE: The Consumer Information Center has a BBS (202/208-7679) where you can download more than 250 free federal publications on everything from eating right to buying a house.

FOR GIRLS ONLY

Boys, clothes, makeup; boys, friends, and more boys. That's what McKenzie & Co., a CD-

ROM game for 10-to-15-year-old girls, is about. In this story, players select from one of two characters: Kim, a "star gymnast and cheerleader," or Carly, "aspiring actress... bohemian...dedicated friend." Then the girls pick a guy to pursue (four of this program's six discs are devoted to these hunks). Players watch video clips of the girls and their friends—at school, at the mall, at slumber parties—then choose what to say and how to act. Walk right up to the cute boy, or play shy? The story develops according to these choices. Though the game attempts to discuss lofty issues, like being true to friends and family, it's about boys. Isn't there more to being a teenager than whether to date the cowboy or the GQ wannabe? —Roberta Furger

RABBIT REDUX

Remember that dog-eared collection of Beatrix Potter stories you treasured as a kid? Well,

Peter Rabbit and Benjamin Bunny have hopped onto CD-ROM, bringing with them much of the charm of the original books. The classic illustrations translate well to the computer, retaining a warmth as appealing to adults as to the 3- to 7-yearolds the disc targets. Highlighted text appears beneath each scene, and kids can explore Peter's world, hear nursery rhymes, and play games by clicking interactive hot spots. Unfortunately, the hot spots are relatively sparse, and the games—primarily simple picture identification and hand-eye coordination exercises—are likely to bore older kids. It doesn't help that performance on both a Pentium-75 and a P-90 was slow as a tortoise. -Anne Kandra

Online Vacations

The information highway meets the real one.

BY LINCOLN SPECTOR

need a vacation. Unfortunately, I have to write this column, so I'll have to postpone my trip to Pago Pago. In the meantime, I'll console myself by helping you plan your vacation. Some of my advice might even make your sojourn cheaper and more enjoyable.

If you're a Net head, stop first at Yahoo (http://www.yahoo.com). Once there, select Recreation • Travel. You'll find links to travel agents, airlines, resorts, and other fun stuff from cruises to recreational vehicles. If you're on America Online, click the Travel icon on the Main Menu opening screen or enter the keyword travel for a list of resources and services. CompuServe and Prodigy have their own travel sections (go travel on CompuServe; click the Travel button on Prodigy), but the ones on Yahoo and AOL are more comprehensive.

If you want real-life stories from other world travelers, Internet newsgroups are a great place to get advice, answers to your questions, and even leads on swapping homes with residents of foreign lands. Go to DejaNews (http://dejanews.com), set a filter that will search only the rec.travel.* newsgroups, and look for some appropriate words. For instance, if you want to know about hotels in Toronto, search for Toronto & hotel (that ampersand is important; without it, you'd get every listing with Toronto or hotel, which would provide you with reading material for the next five years).

If you're looking for something cheaper than a four-star hotel (but without fleas), you can probably find it through your modem. For instance, CompuServe offers an easily searchable, comprehensive database of bed-and-breakfast establishments throughout the United States and Canada, Lanier Bed & Breakfast Database (go inns).

AOL provides a similar service, Bed & Breakfast U.S.A. (keyword bed & breakfast), although it's not as easy to search and didn't seem to list as many places.

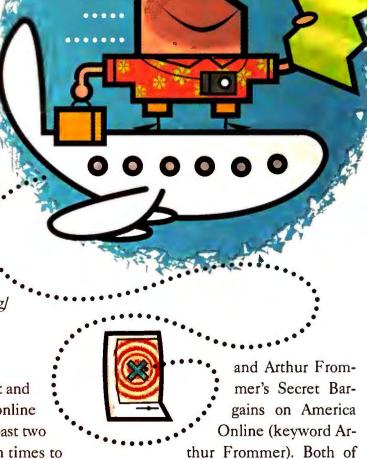

There's no comprehensive list of lodgings on the Net, but many hotels and B&Bs have their own Web pages, and you can usually find them by location. Check out *TravelAssist's The Register (http://www.travelassist.com/reg/reg_home.html).

FLYING WRONG

When it comes to picking a flight and buying tickets, however, the online world is of little help. Over the past two years, I must have tried a dozen times to make airline reservations online, and I always find myself going back to the phone. Maybe I'm a Luddite, but I just don't enjoy waiting while two computers talk over a slow modem line to get information a travel agent could have given me in half the time. And travel agents are usually better at finding bargains.

All the major airlines have their own Web sites, which are about as well thoughtout as their coach breakfasts. On the United Airlines site (http://www.ual.com), for
instance, you can read about the wonderful
new way you can buy tickets online. But
nowhere on the site can you actually *buy*those tickets! That requires either special
software or a CompuServe account, a fact
that the Web site never actually explains.

I did find two services that are possible exceptions: The Travel Discounters Web page (http://www.traveldiscounters.com)

them promise extra low prices, which they obtain through wholesalers and "secret" sources. Of course, I wasn't actually able to test them. (I failed to convince management at *PC World* that, in the interest of research, the magazine should reimburse me for a trip to Maui.) But they did quote prices for a San Francisco to New York round-trip that were \$75 to \$150 less than what any travel agency would give me. And each site is filled with suggestions and recommendations for low-cost travel that make them worth checking out even if you don't buy your tickets there.

My best advice for enlisting your PC to help make your vacation enjoyable? Leave the computer—and the modem—at home.

Cheap Speedups

There's a gold mine in your garage...

BY STEVE BASS

f you have a computer, you probably want more RAM. My mother did. But instead of schlepping her system to the vendor for the memory upgrade, I decided to save some money and do it myself. I'm glad I did, because I made a great discovery: With the right gadget, you can turn old RAM from an obsolete system into new RAM for your current one—at a cost that's next to nothing.

I've always been reluctant to mess with my system's RAM. Of all things about computers, RAM jargon has been the most confusing. But as it turned out, the hard part was figuring out what my system needed. Adding the new RAM was easy.

A few basics: Your system memory is almost certainly in standard SIMMs, little add-in cards that go in their own sockets. Pre-1993 systems usually have 30-pin SIMMs, and most later models, 72-pin SIMMs, which generally hold more RAM. The 30-pin SIMMs are about 3½-inches long, with one solid row of pins; 72-pin SIMMs are a touch over 4 inches and have two sets of 36 pins. You generally have to upgrade 30-pin SIMMs four at a time; depending on your system, 72-pin SIMMs can be upgraded one or two at a time.

IT'S A GARAGE SALE

The most expensive memory is shrinkwrapped SIMMs that you buy at a computer store. The cheapest is memory you already have. There's a chance you have a ton of memory in your garage just sitting around and gathering dust. I did—16MB worth of 30-pin SIMMs, conveniently located in two ancient 386 computers.

Well, you say, that's all very fine if your current computer uses the same 30-pin SIMMs as your old one. But you can't put 30-pin SIMMs in a 72-pin socket.

And I say: Oh yes, you can. I did itwith two converters, each of which transformed four 1MB 30-pin SIMMs into one 4MB 72-pin SIMM. The total cost: \$58 for an 8MB upgrade. Now we're talking discount!

A few things to remember: First, buy converters with buffers. With at least four SIMMs being addressed all at once, the buffer regulates the chips, preventing overloads. A converter that's simply a pass-through—I saw one at a swap meet for \$17—may lead to system crashes or worse, data corruption.

ALL THE RAM THAT FITS

And make sure the converter fits in your PC's case. Converters and computers come in dozens of shapes and sizes, and not every pair is a fit. For example, there's a \$59 converter that accepts eight 30-pin 1MB SIMMs, making it into one 8MB 72pin SIMM. That's big, and it wouldn't fit into my mother's system. The best bet: Call the company, get the measurements of their converters, and open your system's case, ruler in hand. Then make sure the company you buy the converter from has a flexible return or exchange policy.

The last issue is the speed of your old RAM. Even though memory itself doesn't wear out, chips slower than 80 nanoseconds (the higher the number, the slower the speed) aren't worth using anymore.

If the whole idea seems a bit intimidating, you can pay a little more to get a new guarantee with your old chips. A friend of

mine sent his 30-pin SIMMs to a company called Autotime, which removed the individual memory chips, tested them, and remounted them on 72-pin SIMMs. Because no extra gadget was involved, it made for a cleaner installation into the computer and some peace of mind. The cost? \$70 to transform four old 4MB 30-pin SIMMs into one new 72-pin 16MB SIMM—versus \$500 or more for new RAM. And Autotime provides a one-year warranty for the SIMM.

Of course, it's best not to need to add RAM at all. The next time I buy my mother a new system, I'm going to make sure it has 32MB of RAM to begin with.

ILLIETDATIONS. TOD DIGUT PUID

Recently, Stephen Taylor of North Carolina accidentally backed his car over his Dell Latitude XPi notebook. Don't ask. These things happen.

But as amazing as it may seem, his Dell Latitude notebook booted up immediately and sustained only minor damage. Which all leads to the moral of this incredible story: if you really want a notebook that can stand up to the daily rigors of the real world, get a Dell Latitude.

Because not only are Dell Latitude notebooks powerful and affordable. They also seem to be virtually indestructible.

Dell's featured computer artist is Mick Wiggins.

If you're impressed by Windows 95, you should see it running on the Dell Dimension XPS P133c and the Dell Dimension P100t. These Dell® systems were just judged the best for running Windows 95 by PC Magazine.

The experts reviewed 83 different desktops both high-end (120 and 133MHz) and mid-range (90 and 100MHz)—and the Dell systems swept both categories. In fact, they praised the Dell desktops, calling them "shining examples of what this award is all about."

The way these systems run Windows 95 is impressive. But the way these systems are priced is even more so.
